"Ye kin go West," he continued, as the Lewallen did not answer. "Uncle Rufe used to say thar 's a good deal to do out thar, 'n' nobody axes questions. Thar 's nobody left hyar but you 'n' me, but these mount'ins was never big 'nough fer one Lewallen 'n' one Stetson, 'n' you've got to go. I reckon ye won't believe me, but I 'm glad I did n't hev to kill ye. But you've promised to go, now, 'n' I 'll take yer word fer it." He turned his face, and the Lewallen knowing it from the sound of his voice sprang to his feet.

"Oh!—"

A wild curse burst from Rome's lips, and both leaped for the guns. The Lewallen had the start of a few feet, and Rome, lamed in the fight, stumbled and fell. Before he could rise, Jasper had whirled with one of the Winchester above his head, and his face aflame with fury. Asking no mercy, Rome hid his face with one arm, and waited, stricken faint all at once, and numb. One report struck his ears, muffled, whip-like. A dull wonder came to him that the Lewallen could have missed at such close range, and he waited for another. Some one shouted a shrill halloo. A loud laugh followed; a light seemed breaking before Rome's eyes, and he lifted his head. Jasper was on his face again, motionless; and Steve Marcum's

tall figure was climbing over a boulder toward him.

"Thet was the best fight I've seed in my time," he said coolly, "'n', Rome, ye air the biggest fool this side o' the settlements, I reckon. I hed dead aim on him, 'n' I was jest a-thinkin' hit was a purty good thing fer you thet ole long-nosed Jim Stover chased me up hyar, when, d— me, ef thet boy up thar did n't let his ole gun loose. I 'd a-got Jas myself ef he hed n't been so all-fired quick o' trigger."

Up at the root of the pine-tree Isom stood motionless, with his long rifle in one hand, and a little cloud of smoke breaking above his white face. When Rome looked up he started down without a word. Steve swung himself over the ledge.

"I heerd the shootin'," said the boy, "up thar at the cave, 'n' I could n't stay thar. I knowed ye could whoop him, Rome, 'n' I seed Steve, too, but I was afeerd —" Then he saw the body. His tongue stopped, his face shriveled, and Steve, hanging with one hand to the ledge, watched him curiously.

"Rome," said the boy in a quick whisper, "Is he daid?"

"Come on!" said Steve, roughly. "They'll be up hyar attar us in a minute. Leave Jas's gun thar, 'n' send that boy back home."

That day the troops came — young Blue Grass Kentuckjans. That night, within the circle of their camp-fires, a last defiance was cast in the teeth of law and order. Flames rose within the old court-house, and before midnight the moonlight fell on four black walls. That night, too, the news of young Jasper's fate was carried to the death-bed of Rome's mother, and before day the old woman passed in peace. That day Stetsons and Lewallens disbanded. The Lewallens had no leader; the Stetsons no enemies to fight. Some hid, some left the mountains, some gave themselves up for trial. Upon Rome Stetson the burden fell. Against him the law was set. A price was put on his head, his house was burnt, — a last act of Lewallen hate, — and Rome was homeless, the last of his race, and an outlaw.

XIII.

WITH the start of a few hours, and the sympathy of his people, one mountaineer can defy the army of the United States, and the mountaineers usually laugh when they hear troops are coming. For the time they stop fighting, and hide in the woods; and when the soldiers are gone, they come out again, and begin anew their little pleasantries. But the soldiers can protect the judge on his bench and the county-seat in time of court, and for these purposes they serve well.

The search for Rome Stetson, then, was useless. His friends would aid him; his enemies feared to betray him. So the soldiers marched away one morning, and took their prisoners for safe-keeping in the Blue Grass, until court should open at Hazlan.

Meantime, the spring came and deepened — the mountain spring. The berries of the winter-green grew scarce, and Rome Stetson, "hiding out," as the phrase is, had to seek them on the northern face of the mountains. The moss on the naked winter trees brightened in color, and along the river where willows drooped ran faint lines of green. The trailing-arbutus gave out delicate pink blossoms, and the south wind blew apart the petals of the anemone. Soon violets unfolded above the dead leaves; azaleas swung their yellow cups through the undergrowth; overhead the dogwood tossed its snowflakes in gusts through the green and gold of new leaves and sunlight; and higher still waved the poplar blooms, with honey ready on every crimson heart for the bees. Down in the valley Rome Stetson could see about every little cabin pink clouds and white clouds of peach and of apple blossoms. Amid the ferns about him shade-loving trilliums showed their many-hued faces, and every opening was thickly peopled with larkspur seeking the sun. The giant magnolia and the umbrella-tree spread their great creamy flowers; the laurel shook out myriads of pink and white bells, and the queen of mountain flowers was stirring from sleep in the buds of the rhododendron.

With the spring new forces pulsed the mountain air. The spirit of the times reached even Hazlan. A railroad was coming up the river, so the rumor was. When winter broke, surveyors had appeared, and, after them, mining experts and purchasers of land. New ways of bread-making were open to all, and the feudsmen began to see that he could make food and clothes more easily and with less danger than by sleeping with his rifle in the woods, and by fighting men who had done him no harm. Many were tired of fighting; many, forced into the feud, had fought unwillingly. Others had sold their farms and wild lands, and were moving toward the Blue Grass or westward. The desperados of each faction had fled the law or were in its clutches. The last Lewallen was dead; the last Stetson was hidden away in the mountains. There were left Marcums and Braytons, but only those who felt safest from indictment; and in these a spirit of hostility would live for years, and, roused by passion or by drink, would do murder now on one side of the Cumberland and now on the other; but the Stetson-Lewallen feud, old Gabe believed, was at an end at last.

All these things the miller told Rome Stet-

son, who well knew what they meant. He was safe enough from the law while the people took no part in his capture, but he grew apprehensive when he learned of the changes going on in the valley. None but old Gabe knew where he was, to be sure, but, with his own enemies to guide the soldiers, he could not hope to remain hidden long. Still, with that love of the mountains characteristic of all races born among them, he clung to his own land. He would rather stay where he was the space of a year and die, he told old Gabe passionately, than live to old age in another State.

But there was another motive, and he did not hide it. On the other side he had one enemy left — the last, too, of her race — who was more to him than his own dead kindred, who hated him, who placed at his door all her sorrows. For her he was living like a wolf in a cave, and old Gabe knew it. Her he would not leave.

"I tell ye, Rome, you've got to go. Thar's no use talkin'. Cote comes the fust Monday in June. The soldiers will be hyar. Hit won't be safe. Thar's some that s'picious I know whar ye air now, 'n' they'll be spyin', 'n' mebbe hit'll git me into trouble, too, aidin' 'n' abettin' a man to git away who air boun' to the law."

The two were sitting on the earthen floor of the cave before a little fire, and Rome, with his hands about his knees, and his brows knitted, was staring into the yellow blaze. His unshorn hair fell to his shoulders; his face was pale from insufficient food and exercise, and tense with a look that was at once caged and defiant.

"Uncle Gabe," he asked quietly, for the old man's tone was a little querulous, "air ye sorry ye helped me? Do ye blame me fer whut I've done?"

"No," said the old miller, answering both questions; "I don't. I believe whut ye tol' me. Though, even ef ye hed done it, I don't know as I'd blame ye, seein' thet it was a fa'r fight. I don't doubt he was doin' his best to kill you."

Rome turned quickly, his face puzzled and darkening.

"Uncle Gabe, whut air ye drivin' at?" The old man spat into the fire, and shifted his posture uneasily, as Rome's hand caught his knee.

"Well, ef I hev to tell ye, I s'pose I must. Thar's been nothin' pertickler ag'in' ye so fer, 'cept fer breakin' thet confederatin' statchet 'bout bandin' fightin' men together; 'n' nobody was very anxious to git hol' o' ye jes fer thet, but now —" the old man stopped a moment, for Rome's eyes were kindling — "they say thet ye killed Jas Lewallen, 'n' thet ye air a murderer; 'n' hit air powerful strange how all of a suddint folks seem to be gittin' down on a man as kills his fellow-creetur; 'n' now they means to hunt ye till they ketch ye."

It was all out now, and the old man was relieved. Rome rose to his feet, and in sheer agony of spirit paced the floor.

"I tol' ye, Uncle Gabe, thet I did n't kill him."

"So ye did, 'n' I believe ye. But a feller seed you 'n' Steve comin' from the place whar Jas was found dead, 'n' whar the dirt 'n' rock was throwed about as by two bucks in springtime. Steve says he did n't do it, 'n' he would n't say you did n't. Looks to me like Steve did the killin', 'n' was lyin' a leetle. He hain't goin' to confess hit to save your neck; 'n' he can't no way, fer he hev lit out o' these mount'ins — long ago."

If Steve was out of danger, suspicion could not harm him, and Rome said nothing.

"Isom's got the lingerin' fever ag'in, 'n' he's out 'n' his head. He's ravin' 'bout thet fight. Looks like ye tol' him 'bout it. He says, 'Don't tell Uncle Gabe'; 'n' he keeps sayin' it. Hit'll 'mos' kill him ef you go 'way; but *he* wants ye to git out o' the mount'ins; 'n', Rome, you've got to go."

"Who was it, Uncle Gabe, thet seed me 'n' Steve comin' 'way from thar?"

"He air the same feller who hev been spyin' ye all the time this war's been goin' on; hit's thet dried-faced, snaky Eli Crump, who ye knocked down 'n' choked up in Hazlan one day fer sayin' somethin' ag'in' Isom."

"I thought it — I thought it — oh, ef I could git my fingers roun' his throat once more — jes once more — I'd be 'mos' ready to die."

He stretched out his hands as he strode back and forth, with his fingers crooked like talons; his shadow leaped from wall to wall, and his voice, filling the cave, was, for the moment, scarcely human. The old man waited till the paroxysm was over, and Rome had again sunk before the fire.

"Hit 'u'd do no good, Rome," he said, rising to go. "You've got enough on ye now, without the sin o' takin' his life. You better make up yer mind to leave the mount'ins now right 'way. You're a-gittin' no more 'n' half-human, livin' up hyar like a catamount. I don't see how ye kin stand it. Thar's no hope o' things blowin' over, boy, 'n' givin' ye a chance o' comin' out ag'in, as yer dad and yer grandad usen to do afore ye. The citizens air gittin' tired o' wars. They keeps out the furriners who makes roads 'n' buys lands; 'n' they air ag'in' the law, ag'in' religion, ag'in' yo' pocket, 'n' ag'in' mine. Lots o' folks hev been ag'in' all this fightin' fer a long time, but they was too skeery to say so. They air talkin' mighty big now, seein' they kin git soldiers hyar to pectect 'em. So ye mought as well give up the idea o' stayin' hyar, 'less 'n ye want to give yo'self up to the law."

The two stepped from the cave, and passed through the rhododendrons till they stood on the cliff overlooking the valley. The rich light lay like a golden mist between the mountains, and through it, far, far down, the river moaned like the wind of a coming storm.

"Did ye tell the gal whut I tol' ye?"

"Yes, Rome; hit was no use. She says Steve's word's as good as yourn; 'n' she knowed about the crosses. Folks say she swore awful ag'in' ye at young Jas's burial, 'lowin' that she 'd hunt ye down herse'f, ef the soldiers did n't ketch ye. I hain't seen her sence she got sick; 'pears like ever body's sick. Mebbe she's a leetle settled down now — no tellin'. No use foolin' with her, Rome. You git away from hyar. Don't you worry 'bout Isom — I 'll take keer o' him, 'n' when he gits well, he 'll want to come atter ye, 'n' I 'll let him go. He could n't live hyar without you. But ye must git away, Rome, 'n' git away mighty quick."

With hands clasped behind him, Rome stood and watched the bent figure slowly pick its way around the stony cliff.

"I reckon I've got to go. She's ag'in' me; they're all ag'in' me. I reckon I've got to go. Somehow, I've been kinder hopin'—" He closed his lips to check the groan that rose to them, and turned again into the gloom behind him.

XIV.

JUNE came. The wild rose swayed above its image along every little shadowed stream, and the scent of wild grapes was sweet in the air and as vagrant as a blue-bird's note in autumn. The rhododendrons burst into beauty, making gray ridge and gray cliff blossom with purple, hedging streams with snowy clusters and shining leaves, and lighting up dark coverts in the woods as with white stars. The leaves were full, wood-thrushes sang, and bees droned like unseen running water in the woods.

And with June came circuit court once more — and the soldiers. Faint music pierced the dreamy chant of the river one morning as Rome lay on a boulder in the summer sun; and he watched the guns flashing like another stream along the water, and then looked again to the Lewallen cabin. Never, morning, noon, or night, when he came from the rhododendrons, or when they closed about him, did he fail to turn his eyes that way. Often he would see a bright speck moving about the dim lines of the cabin, and he would scarcely breathe while he watched it, so easily would it disappear. Always he had thought it was Martha, and now he knew it was, for the old miller had told him more of the girl, and had wrung his heart with pity. She had been ill a long while. The "furriners" had seized old Jasper's cabin

and land. The girl was homeless, and she did not know it, for no one had the heart to tell her. She was living with the Braytons; and every day she went to the cabin, "moonin' 'n' sorrowin' aroun'," as old Gabe said; and she was much changed.

Once more the old miller came — for the last time, he said firmly. Crump had trailed him, and had learned where Rome was. The search would begin next day, — perhaps that very night, — and Crump would guide the soldiers. Now he must go, and go quickly. The boy, too, sent word that unless Rome went he would have something to tell. Old Gabe saw no significance in the message; but he had promised to deliver it, and he did. Then Rome wavered; Steve and himself gone, no suspicion would fall on the lad. If he were caught, the boy might confess. With silence Rome gave assent, and the two parted in an apathy that was like heartlessness. Only old Gabe's shrunken breast heaved with something more than weariness of descent, and Rome stood watching him a long time before he turned back to the cave that had sheltered him from his enemies among beasts and men. In a moment he came out for the last time, and turned the opposite way. Climbing about the spur, he made for the path that led down to the river. When he reached it he glanced at the sun, and stopped in indecision. Straight above him was a knoll, massed with rhododendrons, the flashing leaves of which made it like a great sea-wave in the slanting sun, while the blooms broke slowly down over it like foam. Above this was a gray sepulcher of dead standing trees, more gaunt and specter-like than ever, with the rich life of summer about it. Higher still were a dark belt of stunted furs and the sandstone ledge, and above these — home. He was risking his liberty, his life. Any clump of bushes might bristle suddenly with Winchesters. If the soldiers sought for him at the cave they would at the same time guard the mountain paths; they would guard, too, the Stetson cabin. But no matter — the sun was still high, and he turned up the steep. The ledge passed, he stopped with a curse at his lips and the pain of a knife-thrust at his heart. A heap of blackened stones and ashes was before him. The wild mountain-grass was growing up about it. The bee-gums were overturned and rifled. The garden was a tangled mass of weeds. The graves in the little family burying-ground were unprotected, the fence was gone, and no boards marked the last two ragged mounds. Old Gabe had never told him. He too, like Martha, was homeless, and the old miller had been kind to him, as the girl's kinspeople had been to her.

For a long while he sat on the remnant of the burnt and broken fence, and once more the old

tide of bitterness rose within him and ebbed away. There were none left to hate, to wreak vengeance on. It was hard to leave the ruins as they were; and yet he would rather leave weeds and ashes than, like Martha, have some day to know that his home was in the hands of a stranger. While he thought of the girl he grew calmer; his own sorrows gave way to the thought of hers; and half from habit he raised his face to look across the river. Two eagles swept from a dark ravine under the shelf of rock where he had fought young Jasper, and made for a sun-lighted peak on the other shore. From them his gaze fell to Wolf's Head and to the cabin beneath, and a name passed his lips in a whisper.

Then he took the path to the river, and he found the canoe where old Gabe had hidden it. Before the young moon rose, he pushed into the stream and drifted with the current. At the mouth of the creek that ran over old Gabe's water-wheel he turned the prow to the Lewallen shore.

"Not yit! Not yit!" he said.

xv.

THAT night Rome passed in the woods, with his rifle, in a bed of leaves. Before daybreak he had built a fire in a deep ravine to cook his breakfast, and had scattered the embers that the smoke should give no sign. The sun was high when he crept cautiously in sight of the Lewallen cabin. It was much like his own home on the other shore, except that the house, closed and desolate, was standing, and the bees were busy. At the corner of the kitchen a rusty ax was sticking in a half-cut piece of timber, and on the porch was a heap of kindling- and firewood—the last work old Jasper and his son had ever done. In the Lewallens's garden, also, two graves were fresh; and the spirit of neglect and ruin overhung the place.

All the morning he waited in the edge of the laurel, peering down the path, watching the clouds race with their shadows over the mountains, or pacing to and fro in his covert of leaves and flowers. He began to fear at last that she was not coming, that she was ill, and once he started down the mountain toward Steve Brayton's cabin. The swift descent brought him to his senses, and he stopped half-way, and climbed back again to his hiding-place. What he was doing, what he meant to do, he scarcely knew. Midday passed; the sun fell toward the mountains, and once more came the fierce impulse to see her, even though he must stalk into the Brayton cabin. Again, half-crazed, he started impetuously through the brush, and shrank back, and stood quiet. A little noise down the path had reached his ear. In a moment he could hear

slow footfalls, and the figure of the girl parted the pink-and-white laurel blossoms, which fell in a shower about her when she brushed through them. She passed quite near him, walking slowly, and stopped for a moment to rest against a pillar of the porch. She was very pale; her face was traced deep with suffering, and she was, as old Gabe said, much changed. Then she went on toward the garden, stepping with an effort over the low fence, and leaned as if weak and tired against the apple-tree, the boughs of which shaded the two graves at her feet. For a few moments she stood there, listless, and Rome watched her with hungry eyes, at a loss what to do. She moved presently, walked quite around the graves without looking at them, came back toward him, and, seating herself in the porch, turned her face to the river. The sun lighted her hair, and in the sunken, upturned eyes Rome saw the shimmer of tears.

"Marthy!" He could n't help it—the thick, low cry broke like a groan from his lips, and the girl was on her feet, facing him. She did not know the voice, or the shaggy, half-wild figure in the shade of the laurel; and she started back as if to run; but seeing that the man did not mean to harm her, she stopped, looking for a moment with wonder and even with quick pity at the hunted face with its white appeal. Then a sudden spasm caught her throat, and left her body rigid, her hands shut, and her eyes dry and hard—she knew him. A slow pallor drove the flush of surprise from her face, and her lips moved once, but there was not even a whisper from them. Rome raised one hand before his face, as though to ward off something. "Don't look at me that way, Marthy—my God, don't! I did n't kill him. I swar it! I give him a chance fer his life. I know, I know—Steve says he did n't. Thar was only us two. Hit looks ag'in' me; but I hain't killed one nur t' other. I let 'em both go. Ye don't believe me?" He went swiftly toward her, his gun outstretched. "Hyar, gal! I heerd ye swore ag'in' me out thar in the garden—'lowin' thet you was goin' to hunt me down if the soldiers did n't ketch me. Hyar's yer chance!"

The girl shrank away from him, too startled to take the weapon; and he leaned it against her, and stood away, with his hands behind him.

"Kill me ef ye think I 'm a-lyin' to ye," he said. "Ye kin git even with me now. But I want to tell ye fust,"—the girl had caught the muzzle of the gun convulsively and was bending over it, her eyes burning, her face inscrutable,—"hit was a fa'r fight betwixt us, 'n' I whooped him. He got his gun then, 'n' would 'a' killed me ag'in' his oath ef he hed n't been shot fust. Hit's so, too, 'bout the crosses.

They 're thar on the gun. I made 'em; but whut could I do with mam a-standin' with the gun right thar, 'n' Uncle Rufe a-tellin' 'bout my own dad layin' in his blood, 'n' Isom 'n' the boys lookin' on! But I broke my oath, Marthy; I give him his life when I hed the right to take it. I could 'a' killed yer dad once, 'n' I hed the right to kill him, too, fer killin' mine; but I let him go, 'n' I reckon I done thet fer ye, too. 'Pears like I hain't done nothin' sence I saw ye over thar in the mill thet day, thet was n't done fer ye. Somehow ye put me ag'in' my own kin, 'n' tuk away all my hate ag'in' yourn. I could n't fight fer thinkin' I was fightin' you, 'n' when I saw ye comin' through the bushes jes now, so white 'n' sickly-like, I could n't git breath, a-thinkin' I was the cause of all yer misery. That 's all!" he stretched out his arms. "Shoot, gal, ef ye don't believe me. I 'm the only one now thet 's left, 'n' I 'd jes as liev die, ef ye thinks I 'm lyin' to ye, 'n' ef ye hates me fer whut I hain't done."

The gun had fallen to the earth. The girl, trembling at the knees, sank to her seat on the porch, and folding her arms against the pillar, pressed her forehead against them, her face unseen. Rome stooped to pick up the weapon.

"I 'm goin' way, Marthy," he went on slowly, after a little pause, "but I could n't leave hyar without seein' you. I wanted ye to know the truth, 'n' I thought ye 'd believe me ef I tol' ye myself. I 've been a-waitin' thar in the lorrel fer ye sence mornin'. Uncle Gabe tol' me ye come hyar ever' day. He says I 've got to go—'n' I reckon I 'll never see these mount'ins ag'in. I 've been livin' over thar on the Knob, lookin' over hyar, 'n' hopin' I mought come out o' the bushes some day 'n' live ag'in like other folks. But Uncle Gabe says ever'body 's ag'in' me more 'n' ever, 'n' thet the soldiers mean to ketch me. The gov'ner out thar in the settlements says as how he 'll give five hundred dollars fer me livin' or dead. He 'll never git me livin',—I 've swore thet,—'n' as I hev done nothin' sech as folks on both sides hev done who air walkin' roun' free, I hain't goin' to give up. Hit 's purty hard to leave these mount'ins. I 've been livin' like a catamount over thar on the Knob. I could jes see ye over hyar, 'n' I reckon I hain't done much 'cept lay over thar on a rock 'n' watch ye movin' round hyar. Hit 's mighty good to feel thet I 've seed ye, 'n' thet ye believe me, 'n' I want ye to know, Marthy, thet I 've been stayin' over thar fer nothin' on earth but jes to see you ag'in; 'n' I want ye to know

how I 've been a-thinkin' of ye, 'n' a-sorrowin' fer ye, when ye was sick, 'n' a-pinin' to see ye, 'n' mighty nigh starvin' fer ye, hopin' some day ye mought kinder git over yer hate fer me 'n'—"

He had been talking with low tenderness, half to himself, and with his face to the river, and he did not see the girl's tears falling to the porch. Her sorrow gave way in a great sob now, and he turned with sharp remorse, and stood quite near her.

"Don't cry, Marthy," he said. "I 'm sorry fer ye, 'n' God only knows whut I 'd give ef I 'd never been born. Hit 's hard to think thet I 've brought all this on ye when I 'd give all these mount'ins to save ye from it. Whut d' ye say? Don't cry."

The girl was trying to speak at last, and Rome bent over to catch the words.

"I hain't cryin' fer myself," she said faintly, and then she said no more; but the first smile that had passed over Rome's face for many a day passed then, and he put out one big hand, and let it rest on the heap of lustrous hair.

"Marthy, I hate to go way, leavin' ye hyar with nobody to take keer o' ye. Ye air all alone hyar in the mount'ins, 'n' I 'm all alone; 'n' I reckon I 'll be all alone wherever I go, ef ye stay hyar. I 've got a boat down on the river waitin' fer me, 'n' I 'm goin' out West whar Uncle Rufe use to live. I hain't good fer nothin' much, but, Marthy,"—he spoke almost huskily; he could scarcely get the words to his lips,— "I want ye to go with me. Won't ye?"

The girl did not answer, but her sobbing ceased slowly, while Rome stroked her hair; and at last she lifted her face, and for a moment looked to the othershore. Then she rose. There is a strange pride in the Kentucky mountaineer.

"Rome," she said, "as you say, thar 's nobody left but you, 'n' nobody but me; but they burned ye out, 'n' we hain't even yit." Her eyes were on Thunderstruck Knob, where the last sunlight used to touch the Stetson cabin.

"Hyar, Rome!" He knew what she meant, and he kneeled at the pile of kindling-wood near the kitchen door. Then they stood back and waited. The sun dipped below a gap in the mountains, the sky darkened, and the flames rose to the shingled porch, and leaped into the gathering dusk. On the outer edge of the quivering light, where it touched the blossomed laurel, the two stood till the blaze caught the eaves of the cabin; and then they turned their faces where, burning to ashes in the west, was another fire, the light of which blended in the eyes of each with a light older and more lasting than its own—the light eternal.

"DON'T CRY, MARTHY."

Phil Martin's Monotone

DRUSIL'S FAIRF'

DRUSIL'.

THERE was commotion on the Middle Beach. You must know there are three beaches, so called,—the Southern, the Middle, with which we are now concerned, and the Eastern,—which are simply pockets of disintegrated mussel-shells, cast up by the sea in clear spaces between the rocks.

On the Middle Beach was gathered an excited throng of men, women, and children, all talking at once, and at times pointing toward a knot of men bent over the well, the long sweep of which was describing eccentric curves and angles in the air.

In the confusion I could gather little to explain the unwonted excitement and activity on the part of the men, who for the most part are given to a practice which may be described as "laying back," and which one presently discovers to be the gentle art of doing nothing.

To all interrogations the one reply accorded was, "She's daoun in the well," which was at once contradicted by another, who cried:

"Hain't, neither!"

"Sh' is, too!"

"Hain't, neither, I tell ye!"

It was not until the well had been sounded and prodded for half an hour, first by the men, then by the women, and finally by an adventurous youth, who climbed down into it with wide-spread legs, that one Maria Liz appeared at the top of the lane, and, wildly waving her arms, announced in a grating nasal voice, "I found 'er in un'er the baid!" and then there was an excited scramble among the women to see who would reach the house first.

It then came out that—"Ye see, Drusil' she 's set ag'in' egstravagant livin', bein' dref-ful clus and savin', an' her folks allus wuz before her. Why, I 'member her paa 'way back in '62." And here followed a history of the author of Drusil's being, with which I will not delay the narrative in hand.

"Well, an' that's heaow she came by her clus ways; and now Fairf'—Fairf' 's drefful open-handed, Fairf' is. Ye see, Fairf' he's had a good charnce to secoor as fine a yoke of cattle as I ever see, an' I 've seen—" Here was interpolated a description of a certain yoke of cattle that the speaker had seen at the Lewiston Fair. "Well, Fairf' he goes to Drusil', and he up and tells her of the steers, a-p'intin' toward the advarntages into 'em, and 'lows that 't would

FAIRF'.

be a good thing for him to take the lawbster money, as was sot by, and go and git 'em short hand. Well, b' jolly! Drusil' she bucked ag'in' it, and sot up such a waxy opposin' of it, that Fairf' he gin up, and took out of the house, and baited two tub of trawl gear before he dast go nigh her ag'in. But them steer they kind of ha'nted Fairf's mind, and he could n't git shet of thinkin' of their silky hides and long, outda-cious horns of 'em; and then he see the profit that they was into 'em, with the luggin' of the winter wood, an' the haulin' of stone for the new wharf, an' it rankled into hees brains so thet he got so het up with the idee of losin' 'em, that for once he up gear and run before the wind to suit himself; and, b' jolly! he went and got the lawbster money out the cupboard, and went over ter Georgetown, and bought the steers, an' never let on to Drusil'. Well, sir, he did; and he come back, an' no one never knowed nawthin' about it; for Fairf' 's drefful silent when he sots out to be. Well, sir, yesterday the steers come. Yesee them when they hove them off 'n the schooner in the harbor, did n't ye? Neaow, ain't they handsome? Well, Drusil' she see them, too, out the winder, but of course she never mistrusted that Fairf' he had anythin' in 'em. Well, when Fairf'

he sot eyes on 'em ag'in he was jest a-bu'stin' with pride into him, but he was afeard to tell Drusil'; so he ups and goes out trawlin', first a-sendin' one of the boys up to tell Drusil' that the steers was a present to her. Well, sir, believe it, Drusil' she never opened her haid, but just sot and looked as if she had a-knowed it all along; but just as soon as the boy had got clear of the house, she writ a piece on a paper, sayin' that Fairf' hed deceived her, and thet she had hove herself into the well; and pinned it into the lookin'-glass so that Fairf' when he come in would see it. Well, sir, bimeby Fairf' he kind of sneaked in with a pail of water, to

pass things off peaceable; but they wa' n't no Drusil' around, and no supper sot out. Fairf' he kind of peeked around, and bimeby he see the piece writ on the paper stickin' in the lookin'-glass. He read it, and, b' jolly! he sot up a confusion; for Fairf' he 's drefful soft-hearted, and that piece was enough to skeer any man, neaow wa' n't it?

"Fairf' he took out ter the well, and acted like a crazy man; and, b' jolly! we was all pooty spent, as ye see. Well, bimeby Maria Liz (drefful hand for pokin', is Maria Liz) she was a-pokin' around in the house, and she heard

"THE GENTLE ART OF DOING NOTHING."

hard breathin', and, says she, it give her such a turn as she had n't had sence the night she mistook the lordnum for the Jamaiky ginger.

"Bimeby she peeked under the bed in the ac-cit [attic], and—there was Drusil'. B' jolly! she had n't been near the well either once. Them 's the ways of women," he added philosophically.

"Well," I said, "and what about the steers?"

"Oh, yes. Well, Fairf' he 'lowed that he 'd sell 'em out of hand, but if you 'll believe it, Drusil' she 's just as sot up with 'em now as Fairf' was before, and won't hear of a-partin' with 'em—an' them 's the ways of women," said he, giving a hitch to his oilskin trousers.

AT the top of the village, if one may so designate the collection of ancient houses huddled together beneath the graveyard on the hill, there lives the important personage of P'tit Matinic'. His freehold consists of a yellow, two-storied house, a hennery, a half ownership in a fish-house, with its accompanying privileges, a pair of wheels, forming part of an ox-cart, and the only ones, by the way, on the island. (I wish I could tell the story of the wheels right here, and an interesting one it is, too, but I started to describe the "Squire," and I must do so without more ado.) A pair of wheels, I say, and a better-half much given to gossip, and the pursuit of her own inclinations, one of which is the boiling of soap-fat, to the unspeakable disgust of her consort.

He first attracted my attention in the store, wherein are discussed nightly the affairs appertaining to P'tit Matinic'. He is perhaps between fifty and sixty, of large and muscular frame, nearly six feet in height, with a face as grave as can well be imagined—in color it is a reddish violet. His shirt-collar is generally open, and displays a neck at the base of which is visible a patch of crisp, iron-gray hair. At all times he wears a white shirt, in contradistinction to the other men, and from his ears dangle fine gold rings. In answer to my inquiry, it was made plain that he was Simon Tarbox, the educated man of P'tit Matinic', the arbiter of all disputes, from whose decision there could be no appeal. Here, seated upon a salt-cask in the store, he gravely smokes his pipe. Here he decides all matters referred to him, and plays the part of judge, as I have explained, in settling certain disputes between the islanders, which might otherwise breed ill feeling. Now it happened that I had been intrusted with rather a delicate mission to P'tit Matinic'. According to law, a justice was necessary upon the island; and, as I came through Port Cleeve, I was asked to find the proper man on the island, and to ask him to stand for election to that important office. Therefore, shortly after my arrival, I called upon Simon, stated my mission, and my confidence that he was the man of all men for the office of justice of the peace of P'tit Matinic' Grand Mahac plantation. How

shall I describe the expression that crept over that violet visage as the full import of my words dawned upon him, or the courtly wave of the hand with which he bade me be seated, or the bearing which he assumed in anticipation of the legal robes soon to be his? Begging to be excused for a moment, he left the room, returning soon after with an enormous gold chain, with pendent seals stretched across his bosom, and a pair of brilliant-hued carpet slippers upon his feet; it was then I noticed that one of his eyes was blue and the other brown, and that the pupil of the blue eye was very large and vertical, giving an indescribable appearance to his otherwise absolutely expressionless face. Between us we arranged for a public meeting at the school-house the next day, where and when his election would doubtless be consummated.

A placard was prepared and posted in the store, and the next day the men straggled up the hill by twos and threes, and soon the room was filled. Simon and I occupied the platform, where we prepared the slips of paper of yellow and blue for the voters, yellow denoting the ayes and the blues any possible opposition. Finally all was ready, and 'Fon' Smivvins and 'Lan' Levenseller were appointed to distribute and collect the votes. Simon stood up and exhorted each and all to conceal his vote, roll it up in a ball, and drop it into the box when it was passed around. The votes were cast in silence; the sunlight streamed through the small windows, throwing halos about some of the heads, bringing into relief certain horny hands with tattooed emblems thereon, and attracting attention to certain other flaring ears of vermilion illuminated by stray beams. The voting was over, and the votes were counted; only one blue paper pellet was cast, and Simon Tarbox was elected justice of the peace of P'tit Matinic' Grand Mahac plantation.

He arose, fumbled the massive chain in an impressive manner for a moment, cleared his throat, and, gazing at the ceiling, began:

"Fellow-citizens, ahem—we, ahem—are gathered here—ahem—what are we gathered here for? We are gathered here to exercise—ahem—our rights. What rights? Ahem—

why, our rights as free citizens of this island—ahem, ahem. You have been arsked to vote for a justice,—ahem,—and you have so done, so help you God. You have been arsked to select a man for that office, and you have seelected and eelectd,—ahem,—and that 's all there is to it. I don't say that ye have done well, but, b' jolly! you could n't have done no different, and no better; and now to finish in conclusion,—ahem,—I don't want no hard feelings toward the cuss that hove in that blue paper. I cal'late I know who he is, but bein' justice of the peace, I wun't take no 'count of it now, but if he ever comes before me in a criminal capacity, he 'll discover me to be the instrument of jestic with power into it.

"And I want to say that I 'm desirin' to see the youth of this island grow up good citizens,—ahem,—that is to say, ef they don't, they 'll find me on to 'em, b' jolly! And I want to see this island obeyin' the laws and regulations according to the authorities,—ahem,—as laid down in Blackstone." Here ensued an impressive pause, during which the speaker gazed severely at 'Lan' Levenseller, who squirmed in his seat, and, becoming conscious that his left leg, which was elevated in an easy position on the back of the bench before him, was not entirely respectful in its attitude, stealthily took it down, and hid it beneath its fellow-member, a proceeding which was regarded with judicial severity by the candidate, as a recognition of the proprieties which should obtain upon such an occasion. This breach upon the part of the unlucky Levenseller was witnessed by the assembled electors, and duly commented upon for months afterward. To add to the discomfiture of the unfortunate 'Lan', the candidate pointed his finger at him, slowly and impressively repeated, "As laid down in Blackstone," and cleared his throat with a tremendous ahem. "And now I pronounce Mr. Simon Tarbox, Esquire, Justice of the Peace of P'tit Matinic', and if any has got anything to say agi'n' it, let him say it now, or f'rever holt his peace. So be it."

ENGRAVED BY H. DAVIDSON.

THE NEW JUSTICE.

Apparently no one had anything to say, and the new justice sat down heavily, and spat upon the stove. Then the men withdrew from the school-house, and filed slowly down the hill to the store.

I HAD known P'tit Matinic' for many years, and thought that most of her secrets were mine: her bold coast-line, her heights, her wooded hill, and the schisms and petty quarrels of her people were plain to me. My painting had long since ceased to interest them, and had left only a mild wonder in their minds that one who seemed to show sense in other particulars should give himself up to such a childish pursuit. Their discussions of men and things in the store were free and uninterrupted by my presence; indeed, they even permitted me to take part in their symposiums.

Now, one of my favorite walks and haunts was, and is, Gull Head, or Ol' Gull, as it is commonly called. In form it is not unlike the head of the bird for which it is named. I should say that it is two hundred feet high, and about as wide. It projects out into the sea, and is connected with the island by a thin, narrow neck of grass-covered rock.

In an easterly storm the shattered waves leap upon it, bounding, hissing in irresistible fury toward its bald crest, but are arrested, and poured down the sides before they reach it. Viewed from behind, it is not unlike the back of some huge marine monster rising from the sea, or, say, a creature of the barnacle kind. In color it is a deep purplish brown, dark blue in the hollows and ridges, growing lighter on the top from the presence of certain veins of mica, which are decorated with patches of a peculiar orange lichen. In no season of the year is the surface of Ol' Gull ever quite dry, but always damp and treacherous to the foot. If one fell there, it were certain death, for there was nothing to keep one from falling: and once in the sea, the mighty rollers of the Atlantic would grind and dash one's life out in a very few minutes, as I have seen them grind the body of a sheep that strayed too near the slippery side, and went rolling and bounding into the pale-green, boiling surf.

It was growing foggy upon the day of which I write, and the loneliness of the place was absolute; for the town is on the other side of the island, over the crest of the hill, and thus out of sight. A few gulls were wheeling and crying in the air above. Nothing else broke the stillness, save the boom of the sea, spurning and writhing among the hollows beneath Ol' Gull. Upon one occasion, when unobserved by the speakers, I

had overheard some talk about a cave under the rock; there was evidently something about it that was not intended for other ears, for when I made my presence known there was an embarrassed silence. What I heard was this:

"I tell ye, Sim Breeson 'll git ketched at it 'fore long, an' we 'll all be into it," said one, bringing down his hand on his knee with a sounding slap.

"Oh, durn gittin' ketched!" said another. "Gull cave can't be found; revenoo ain't never been here, as I know on, and I've lived here man and boy now sixty years come next lawbsterin'. S' long as it's dranked here, an' ain't sold, in short of—" Seeing me—"Oh, yes, salt's riz—and riz—an' 'll continoo to raise till ye can't see it fer the height of it"; and with that a pause, during which one after the other slouched away.

This it was that made me search for the cave. There are many such on P'tit Matinic'; some were reported unexplored. It was safe to enter one only at low tide, and then only for a few moments. If you were caught in another a minute after the tide, you must stay in its chill maw for five hours. This was the information imparted to me by the patriarch; but in it all was no mention of a cave under Ol' Gull.

It was a good ten minutes' walk over the crest of the hill from the town to the narrow neck that separated the main body of the island from Ol' Gull. As I reached it, I thought I saw a green dory below; but I dismissed the idea at once, for it seemed that no boat could live for a moment where my fancy pictured it; the rock here, as it descends to the water, is as smooth and rounded as the back of a hand, abrupt nowhere save where it descends giddily to the boiling surf. As I lay on the side of the rock, idly studying the action of the water, a piece of wreckage—the knee of a ship it was—came in on the breast of the long Atlantic roller, and glided toward and under the rock. I was sure it went under, for there was no shock or recoil where it should have reached the face of the rock; only a stealthy, gliding motion out of sight. What if this was the mouth of the cave? Why could I not, by means of a rope fastened to my waist and to the rock above, descend, and satisfy my surmise? In half an hour I had made my way to the village, secured a piece of rope, and was

again in the mist on the brow of the rock ; in ten minutes more I was slowly creeping down the face of Ol' Gull toward the water. Suddenly the rock fell away at an angle, and beneath this the water surged and flowed into an opening. I could see a steady inpour as each roller came up, but no outcome. I grew giddy as the water lifted its surface toward me, and fell away again, with mechanical regularity. It was ebb-tide, and I knew I had to wait only an hour or two, to discover whether there was a foothold there or not ; as to the return to the top of Ol' Gull, I had no thought. With my feet securely braced in a deep cleft in the rock, I half sat, half reclined.

The water fascinated me ; it rose and fell with seeming indolent, purposeless indifference.

With a suddenness that was startling, a dory, painted green, shot out of the fog ; there was a trawl tub in the bow, and a little white buoy with a black dot on it, that I knew at once for the patriarch's. Even if these had not been present, I should have recognized the squarely built figure in the yellow oil-skins, rowing with its back toward me, *directly at the face of the rock*. I was on the point of calling out to him when something tied my speech. The dory leaped forward, the man turned his head ; had he lifted his eyes he would have seen me in the cleft. I shrank back as well as I could without well knowing why. The man rested on his oars for an instant ; the swell came from beyond, and as it lifted the dory, the man rowed with all his strength under the rock beneath me.

It was plain that nothing could be done before the tide fell ; if there was any way of entering the cave other than by water, the falling tide would show it. Far off to the southward the sails of the mackerel fleet showed faintly, for the fog had passed to the north and east,

and the sea was unruffled, save that the long, clean-backed rollers which swept slowly shoreward staggered a little as they passed over the sunken ledges. Eastward, where the sky was lead-colored, long fangs of fog hung twisting and writhing, torn by the fresh southwest breeze, and deep from the bowels of the rock beneath me came a sound like a smothered snore as the water entered the opening—a sound like the hushed breathing of some hidden monster.

The tide was slowly falling ; in an hour there would be a fall of ten feet, and if there was a way into the cave over the kelp-covered rock, it would be at my command ; if not, well, I could try—distinctly I heard a shout from above, and then the slack rope attached to my waist was twitched. I slowly and carefully turned in the cleft, and, looking upward, saw against the sky the patriarch fumbling with the

THE HEAD OF OL' GULL.

ENGRAVED BY PETER AITKEN.

end of my line, which I had made fast to a small projection. "Come up!" he called out, motioning with his hand.

Up I went, hand over hand, and, breathless with the climb, reached the projection upon which he sat.

"Ye want to spit on yer hands, allus, when ye handles rope-yarn," he said sententiously.

(Pause.) "Say, mackerel's riz; see it into the paper. D' ye cal'late they 's gittin' any?"

pointing toward the sails of the fleet gathered on the horizon. I ignored the question.

"Ye don't say? Down there, eh? Is, eh? Cave? Sho, now!" I

intimated that I had seen him enter the cave in the dory, and that I was bound to explore it myself. He looked

me over slowly, and then once more studied the position of the mackerel fleet off shore. Suddenly he

turned, and brought his large, red, tattooed hand down on my knee. "Say, son, d'

ever you hear tell of the beast called the elephant, that 's got a nose hitched to his

head four foot long? Ye did. Well, now,

I cal'late a nose like that ain't healthy on to a human; to be shore, it 's drefful handy for pokin',—

on a animal,—but on a human it 's onnatural.

Say, son, says I, 't ain't healthy on a human, mark my word. Say, son, what be ye up to, anyway? Ye hain't revenoo, be ye?" The

hand on my knee tightened, and the gray eyes grew more piercing. "Hain't? Well, I 'll take yer word for it; but take my advice, as is given kindly—about the elephant's nose, and keep clear of Ol' Gull.

"Say, son, have a cigar, will ye? 'T ain't bad." He fumbled in the breast of his tarpaulin,

and brought forth a silver case, worn, but of pure workmanship. "They 's fresh, if ye likes fresh ones." It was an Emanuel Garcia about six inches long, and of as fine flavor as I have ever tasted.

"Good? Oh, yes; pooty good. Got some down to the house a leetle better. Say, son, hev a taste?" Again the fumbling hand in the pocket,

and a silver flask was produced, the exact counterpart of the cigar-case. "Take a swig? In the foggy weather it 's handy to have clus by ye; but I don't bawther it much. Be ye a jedge of liquor? No?" in a disappointed tone, taking the flask from me; then, "Well, let's be goin'; ther' ain't no more to see. Show's over here, and lights gittin' put out. Guess ye be a picter man, after all; and say, come over to the house to-night; I 'd like to show ye a picter, and git yer opinion on to it considering its merits."

He unfastened the end of the rope from the place where I had tied it, and with a circular motion well known to sailors cast it free, and it fell into the water below, and sank from sight.

Then, taking my arm ostentatiously in his, we carefully made our

way back to the village. As we parted he said, with a peculiar emphasis, "Better for ye to be seen comin' back with me, son."

That night I was sitting in his house looking in astonishment at the picture of a fresh, fair young girl in a gray gown, exquisitely painted, and signed—Carolus-Duran; and looking up in surprise, I saw the patriarch brush his hand across his eyes. "Gosh ee!" he said; "that cordial went the wrong way. Hey? Oh, that 's my Polly. She 's in Europe."

Francis Hopson Duran

"SAY, SON, WHAT BE YOU UP TO, ANYWAY?"

"SHE arsked me; yes, she did, sir, arsked me fair." Hise turned the copper bolt which he was beating out hot upon the face of the anvil, and eying it critically, gave it a couple of tentative taps with the hammer. Hise, otherwise known as Benjamin Harrison Levenseller, blacksmith of P'tit Matinic', was the genius of the island. "Why, sir," to me said nimble Sim Breeson upon one occasion, he of the prodigious boots and hat, "Hise—you let Hise take and git him a good nice *bolt*, and I don't car' what ye want, he 'll make it out for ye on th' anvil, Hise will; but, gosh! he carn't talk none to speak of 'thout it's in meetin'; and then when he gits deaown on his knees, b' jolly! th' ain't no one else kin have a charnce, 'cause he's a-goin' through it all from Genesis to Relations, Hise is. But ye git him off 'n *that*, where th' ain't none kin tech him, and where he kin walk round Scripter like a cooper 'round a carsk—*then* ye've got him. 'Cause Hise he's got a nateral impediment into his speech, Hise has, and he carn't git the words out what he's sensin', Hise carn't. But with his anvil, or in meetin', Hise is a square-rigger a-goin' free 'fore the wind, Hise is. What say? Oh, no; Hise ain't never merried yit; he's allus lived alone over in Lawbster Cove ever sence he come here a boy. My woman lets him have a bakin' o' bread occasion', an' a mess o' beans. He don't want much in the fancy cookin' way, Hise don't. Hey? Oh, yes; he 'll talk for ye, if ye patience him, and don't rile him by cuttin' in on him when he's tryin' to git the words out, Hise will. He kin talk better when he's a-hammerin' on his anvil; I cal'late he kind of shocks out the idees he's got into hees head, 'cause Hise he's full of idees, Hise is."

One evening in the late fall a schooner from Chebeague brought as a passenger a tall, wiry-looking woman, who, when she landed on the beach among the salt-barrels and upturned dories, inquired of the men the whereabouts of Benjamin Harrison Levenseller. She was directed to his house in the cove, and immediately rumors flew wild over the island; some of the men betook themselves in haste to their better halves to relate the strange occurrence of a visitor for Hise, and a woman at that. Others followed the woman up the hill, and ensconced themselves among the scrub-pines, from where they saw the visitor walk boldly up to the door of the little red one-story house in the cove, and enter

without knocking. For an hour the watchers waited, and then the visitor emerged, escorted by Harrison, lantern in hand, and hurried to the house of the justice of the peace, which they entered, closing the door behind them. I do not exaggerate when I say that the entire population of P'tit Matinic', with the exception of Sim Breeson, whose turn it was that night in the tower of the lighthouse,—men, women, and children,—was ensconced behind blinds of convenient houses, and out of doors in the shelter of rocks, and on the stone walls that lined the road to the house of the justice. One bolder than the rest walked up the stony path to the door, from which shone a brief gleam of light; and even I was beginning to feel the prevailing curiosity when Harrison and the woman emerged arm in arm. He stumbled in the gloom, and would have fallen, had not the woman held his arm. The two passed down the road between the hidden rows of questioning, eager eyes, past the store, which was deserted, and whose one forgotten kerosene lamp was giving out black smoke from a broken chimney, and up the hill to Harrison's house. "B'jolly!" said one individual who had followed them quite to the door, and then joined the throng which filled the store: "Hise he never opened hees haid, but the woman she talked a streak—could n't make out what 't was about, though. Then they went into the house and shet th' door." Here entered Fairf'. "Hise's merried—I see 'em—I stood up with 'em while the squire spliced 'em fer better er fer worse; that's what squire said, and I witnessed it. She's got the lines, too, and Hise he's spliced to her. I went up and told Drusil', but, b' jolly! she says 't ain't so, thet they's underhanded business about it—comin' here like that female woman did, and jest snatchin' Hise offhand, as if they wa'n't nothin' onnatural in it. And Hise he jest taggin' along and lookin' as if 't wuz the same as he'd been in the habit o' doin' every day. And she says, says Drusil', that they ain't goin' ter be no shivveree till it's all made plain and square. It's scan'lous, sech goin's on. It's *scan'lous* when a female kin come over here an' jist walk a man afore jestic 'thout hevin' it said out in meetin'; and, b' jolly! I hed to sign the paper too—an' she got it!" Amid all the excitement of the ensuing days Harrison preserved his equanimity. As usual, when the wind was fair, his old green boat could be seen over on the fishing-ground.

The mysterious woman who had so outraged the proprieties of P'tit Matinic' pursued the even tenor of her way. The neighbors held aloof from her: there was no interchange of courtesies, such as a measure of green peas, or a toothsome cucumber, from the neighboring gardens; but as far as one could see, this had no effect upon the intruder, and so matters progressed.

Little by little the novelty of the situation wore away, and finally Hise's woman, as she was styled, was accepted as an integral part of P'tit Matinic'. The following summer found me once more at the island, and I noticed that now the interloper was respectfully called Mrs. Levenseller, and her praises resounded in the community. Who was it that attended to Sol when he got his fingers caught in the cog-wheels of the lamp machinery at the lighthouse, and deftly dressed them? And who sat up night after night at the bedside of old Mother Fethran, the common scold, who was in the last stages of consumption? And who was it, pray, who discovered Fairf' off the Duck Rock, in a nor'easter, on the bottom of his swamped boat, and rowed out to him before any one else had discovered his danger? Mrs. Levenseller, to be sure. She was a pleasant-faced woman of the Northern type, large boned, with wide gray eyes. I will let Harrison tell the story for himself.

"Arsked me fair—what say? Oh, ee, yes. She hed to—for I never wa' n't no hand to train with gells. I d' know; I allus cal'lated that they wuz laughin' at me. Ye know I got this 'p-p-p-pediment in my haid; got idees enough, yes; but when I go to talk, 'thout it's singin' or preachin', I c-c-can't git it eaout. Yes; I see my fust over to Herrin'gut a-cruisin' by the post-office, and she turned and looked at me—b' jolly! when them big gray eyes of hern ketched mine—" Here ensued a paroxysm of chuckles and gasps. "Well, sir," he resumed, eying the copper bolt critically, and fitting the end of it carefully in a nut that he had made, "I allowed that I wanted that gell—but heaow ter git her? I knew I never dast spunk up to her. So I goes—ye wun't tell, will ye?—I know ye wun't, but them boys wants to find out all about it, so 's they kin set on the bar'ls in the store, and *orate* it—ever hear John B. Gough? I heard him over to Lewiston Fair. Neaow, John he—" I gently held him to the story in hand. "Oh, ee, yes. Well, I jest goes over to the bank where I hed four hundred an' sixty-two dollars salted down, and I says ter the jedge,—ye know the jedge?—'Jedge,' I says, slow-like, ye know, cause I got the 'p-p-p-p-pediment in my haid,—'Jedge,' I

says, offhand like that, 'they's a gell that I like over here, and I cal'late that she has a hankerin' after me—it's that there big-eyed Petersen gell. Neaow, I *dassent* say nawthin' ter her—but will ye favor me with her? Tell her thet I got four hundred an' sixty-two dollars salted down—and I got a house—and lot over on to P'tit Matinic', an' a boat, fishin' privilege, and thutty-four hogsheds o' fish—good house—four rooms furnished deaown-stairs, and a woodshed. Will ye answer for my character ter her, and say that I 'm waitin' fer an answer?' Well, sir, the jedge said he would, and took his hat, and went along, and I waited there. Bimeby he come in. I says, says I, 'Jedge, what luck?' says I. 'Why, Hise,' says he, a-layin' hees hand on my arm friendly-like—'Hise,' says he, 'she jest laughed, and said thet'—well, never mind the words she said; they wuz techin' words, a-makin' sport with my 'p-p-p-p-pediment. So thet 's the last gell I ever made up to."

"I don't understand," I said. "You got her after all, did n't you?"

"Got her? No, I did n't never git her; but I 've got her mother, and she arsked me, too. She came over on the schooner, and she comes straight up ter my house, and walks in. And I wuz makin' some coffee for supper. I says, 'Set down, Mis' Petersen,' I says. 'Howdy? Have some supper,' I says. An' after we had supper, she says, 'Harr'son,' soft like thet; and I looked up at her, and I see thet she had sumptin' on her mind. 'Harr'son,' says she, 'be ye lonesome?' An', b' jolly! my heart begin ter tremble; I knowed sumptin' wuz comin', an' I could n't git a word eaout. 'Harr'son,' she says ag'in, 'when ye comes home nights, there ain't no one to get ye a mess of vittles; there ain't no one to take your oil-clothes, and hang 'em up to dry nigh the stove; they ain't no supper sot out fer ye; and they ain't no worldly comforts in yer cup of life.' *Them's* the words she said—poetical, ain't they, now? 'Harr'son,' she says, 'I come over ter stay with ye—and with that she ups and takes my hand, and lays her haid on my westc't—'Harr'son, will ye hev me for your own wedded wife?' she says, an', b' jolly! I riz up and says, says I, 'I will! Le's go and get the squire.' An' now, sir, you 've got the whole story, and I hain't never regretted that big-eyed gell her daughter—pooty figger an' eyes she had, too, but she could n't stand my 'p-p-p-p-pediment; but sech idees is onhealthy, I mean them love idees, neaow, ain't they? Ye git yer haid all stirred up with thinkin', an' git *hel* with it, and it's onhealthy,—jest like book-readin',—neaow, ain't it?"

George Wharton Edwards.

OLD 'BIAS'S VISION.

WITH PICTURES BY E. W. KEMBLE.

There would have been a unique figure to a stranger who chanced to take the old Piney road, as he rested his white-wash brush in a lock, and leaned against the wormfence, ruminating, and apparently counting the pink and white cotton-blooms just over the bars. No stranger crossed that way, for the road had seen its best days, and there was a new cut a mile or so above, which left Piney altogether out of the march of progress.

But Brer Peter Henderson was not counting cotton-blooms, nor was he seeking the employment of his profession; alone, and unseen by the eye of man, he was wrestling with a problem which, for the time, was dark enough to shut out the mellow beauty of his surroundings. Brer Peter was noted for his piety, and he believed the cloak of sanctification had fallen upon him as softly as velvet wings unfold from the shroud of a worm, and that he could do no sin. That there were some scoffers who, heretofore, had not agreed as to the genuineness of his purple had been a matter of small moment, but since the occurrences of the night before, it did matter much. It was not so entirely a question of conscience, but rather how much of that dark proceeding had been uncovered. Certain of his associates he could depend on, for they were in his debt, but — and Brer Peter groaned in bitterness of spirit. Nearly ten hours had elapsed since that eventful time; somebody must have heard something, and, being overcome with morbid curiosity and sickening unrest, Brer Peter resolved to make a cautious investigation. Only one eye had beheld the struggle, and the world should still look on a saintly mantle.

He shouldered the brush with the air that his little world knew so well, but his courage flickered a little at a turn half a mile farther on as he heard the "thrub, thrub" of a washboard, and he cleared his throat as the figure at the tub did not even turn.

"Mornin', Sis Hobson!"

"Dat you, Brer Peter? How 's you an' yer folks? Take a cheer, an' make yerself natchel."

"Don't keer if I does, Sis Hobson," said Brer Peter, narrowly scanning the woman's face through half-closed eyes. "Me an' de ole 'oman mighty porely dese days, thank Gord. 'Bleeged, Mis' Hobson; don't keer if I does stop a minute." He set his brush carefully

against the fence, and lighted his cob pipe, tilting his chair against the hopper, into the shade of a peach-tree, with a grunt of satisfaction. "We has fallen on mighty onsartin times, Sis Hobson."

"Mighty onsartin," and Sis Hobson flecked a speck of suds off her expansive bosom and went on with her washing.

"Dey do say, Sis Hobson, as how Parson 'Bias done seed a vision, an' heard a call fer ter prophesy," continued Brer Peter.

"Don't say so!" said Sis Hobson.

"An' dey do say as how he 's stirrin' things up powerful," and Brer Peter, more at ease, settled back in his chair. "My May Ann were over at a dance at Duck Pon', and she say whilst dey was er-dancin', he come limpin' in, er-beatin' time ter de fiddle wid his stick, though he never knowed it, an' er-givin' out dat dancin' were made fer de off foot er Satan, dat he heard er call fer ter prophesy, an' he gwine speak."

"Sho! what he got on his min' now, Brer Peter?"

"He tell 'em dey gwine hear de doom at de 'stracted meetin'; dat de time ain't come yit. Dey do say, Sis Hobson, dey gwine hear sumpen dat 'ill call up all de mo'ners, bred-erin an' sisterin."

"Sho! sho!" and the washboard was musical again.

The conversation was commonplace for quite a while, and mostly on his part, and Brer Henderson was disappointed, for the woman skillfully parried each advance, and only a direct question would give the desired information.

"Well, it 's mighty comfer'ble here, Sis Hobson, but dis ole nigger ain't no lily er de valley ter set here an' look putty."

"What yer hurry, Brer Peter?" came from the tub.

"Gotter be gwine," and Brer Peter rose and leaned against the tree; both owner and brush were akin in leaning propensities. "Whar Brer Jason?"

"Gone."

Brer Peter shifted his weight to the other leg. "Dey do say as how dey carried yer ole man off ter Boliver ter jail."

"Yas," said Sis Hobson, evasively.

"What mought it be fer?"

"Crap-shootin'." ¹

Then the silence was broken only by the

¹ A favorite gambling game among negroes.

rhythmic "thrub, thrub" of the washboard, and the "puff, puff" of Brer Peter's pipe, sending its gray circles lazily through the early summer air.

"We has fallen on mighty onsartin times, Sis Hobson," ventured Brer Peter. "Po' Brer Jason! But we all got de splinter somewhar, lack de 'Postle Paul." Brer Peter winced a little behind his biblical reference, for his

he 's boun' ter be er nigger! You cain't chalk out dem rings of er coon!"

"Yaw!" laughed Brer Peter, encouragingly, "dat am er mighty putty figger, Sis Hobson."

"Now, what I washin' dese fingers plumb inter de bone fer? Ter git dat Jason out'n jail 'fore 'stracted meetin' begin; dat 's what fer."

"SANCTIFIED! . . . GO 'WAY, PETER HENDERSON!"

own wife Marcy had a grievance against him. "But de pra'r am dat grace mought erboun', Sis Hobson."

"Yas; an' you men is all de cause of it," said Sis Hobson, taking her arms out of the suds, and placing them akimbo on her hips; for her heart was sore, and her lips were opened at last. "I tell you, Peter Henderson, my ole man 's good ter me, as fer as good goes, fer he ain't never lay de weight of his han' on me; but he ain't worth de wroppin's of my finger. Um! de harder we 'omans works, de harder we have ter work!"

"Dat grace mought erboun'," murmured Brer Peter, cautiously, watching for a rising tempest.

"I tell you what it is," she continued, "er nigger 's boun' ter be er nigger. You kin white-wash him twel you w'ar yer brush out, an' put broad clorf an' er b'iled shirt on him, but I 'low

"Dat grace mought erboun'," murmured Brer Peter through his pipe-stem.

"Um! nigger don't know 'nough ter turn de tub up when it rain. White folkses kin give de back er dey han' ter de law, but er nigger! He go put his ole flat gizzard foot plumb into de middle of it—he gotter go shoot craps an' git jailed—um!"

Brer Peter leaned harder against the tree. "De sin, de sin, er dis worl'! Sis Hobson, does you happen ter know who were wid Brer Jason when he were took?"

Sis Hobson's check apron went to her eyes. "Hit were 'twixt midnight an' day; my Jason mought er run, too, if it had n't been for his game leg. We was gwine over ter Sis Chaney's dis very day, an' I seed de new moon through de trees over my lef' shoulder; but I sot an' wait fer Jason all night, twel I hear ole Speckle cackle 'bout her

egg: hins is just lack 'omans, Brer Peter; when dey 's got anything on dey min', dey just open dey moufs an' let it out plum loud. Well, I don't know nuffin, twel here come Brer Jackson an' Brer Adam, an' say dat Jason done been cotch crap-shootin'." Sis Hobson paused and sobbed.

"Hit 's all in de Lord's good time, Sis Hobson," said Brer Peter, solemnly. "Man's boun'ter git inter trouble sho 's de chaff fly up'ards, but de glory gwine shine brighter, Sis Hobson, it gwine shine brighter." Brer Peter coughed a little, and scraped the ground with his foot. "I heard dar were three niggers wid him when he were cotch — Caney Creek niggers," he tried to say indifferently.

"'Pear lack you knows er powerful sight erbout it, Brer Peter!" Sis Hobson set her lip hard, and there was a searching intonation in her voice.

Brer Peter, stung as with a "cottonmouth," was unmindful in his wrath of the threatening visage and flashing eye.

"Lord, Sis Hobson, what I gotter do wid crap-shootin', sinful, worfless niggers lack ole Jason? I just heard it. *My* work 's 'mong de sorrerin' an' de 'flicted, ever since I were kivered wid de sanctified mantle er spotlessness come two year ergo, an' I been er-wastin' dis precious word dis mornin' on yer worfless ole Jason!" Brer Peter during his harangue had briskly shouldered his whitewash brush as a preparatory act.

"Sanctified!" Sis Chloe Hobson fairly shouted. "Go 'way, Peter Henderson! Here you been er-settin' in my Jason's cheer, dat he cain't set in, po' creetur, an' er-bitin' him lack er creepin' snake! Here you is, you ole black hypercrite — yer done got one foot in the grave an' t' other got no business out! *You* sanctified! Dar ain't de littlest j'int er my Jason's littlest finger but 's wuth ever bone in yer worfless old carcass!"

Brer Peter Henderson regretted too late his loss of temper and of the usual invitation to dinner. "Good day, Sis Hobson; I ain't er-angered — de bowels er my sorer still yearns ter desufferin', Sis Hobson." No answer, and Brer Peter lingered a moment with a final, "Good day, Mis' Hobson; I hopes ter see you an' Jason at de'stracted meetin'." Fainter and fainter came the music of the washboard, now resumed, and Brer Peter gave a sigh of satisfaction. "She don't know nuffin'; but you had er mighty close call, ole man, if she *do* know; fer she were fightin' mad, mad ernough ter tell!"

During the colder months religious enthusiasm seems to hibernate in the average negro; churches and society meetings are regularly attended, and the show of interest is kept up, but the spirit is mildly latent. Possibly it is pleasanter to sit round a big fire on cold

nights, roasting "swee' 'taters" and goobers; or it may be that the transplanted blood and disposition are easily chilled, and require the warmth of the sun for proper development, as do other plants of nature. Be that as it may, when the days are heavy with heat and the nights are stifling with drowsy perfume, then religious fervor buds and bursts forth in the warmth, a genus peculiar unto itself. Through the towns file the uniformed processions of Pole-Bearers, Sons of Ham, Sisters of Zion, Courts of Esther, and Daughters of the Seven Stars, for many a perspiring mile; and in the rural districts the "laying by" of crops is followed by the making of bush arbors, the spreading of straw, the gathering of clans, and then the voice of the exhorter is heard in the land.

The protracted meeting opened on a Sunday, and the morning dawned hot and bright. All the roads leading into the little town were full of dusty vehicles coming from Duck Pond, Caney Creek, Piney, and surrounding settlements. Some were "critter-back," and some were in wagons; some jogged along behind a lazy plow-mule, others "gee-hawed and whoaed" to a yoke of patient oxen; and all were in gala attire — fathers, mothers, grandmothers, and children. Here flamed a red or green ribbon from town; there beamed a smiling black face, sweating copiously beneath a new pink calico sunbonnet; here a pair of rusty bare heels beat a tattoo against the side of a crowded wagon; there an honest pair of "gizzard feet" trudged along in the dust in all the agonies of "store-bought" cowskins. All were bent upon enjoyment and religious exaltation; all were bound for the "s'tracted meetin'." The spot chosen for the meeting was picturesquely beautiful. Beneath the arms of oak and beech, hugging the borders of a purling stream, were stretched seats of log and plank in two long rows, leaving a wide aisle up the center; and toward this spot the throng poured unceasingly. There greetings were exchanged, families reunited after a year's separation, agricultural prospects commented upon, and general good fellowship prevailed. There in the crowd were Jason and Chloe, the latter radiant in a red-and-yellow 'kerchief, the former awkwardly but proudly conscious of his "b'iled shirt" and new jeans bought by Chloe's hard-earned wages after she had paid his gambling fine. There, followed by the patient little Marcy, was Brer Peter, pompously expounding a knotty point of criminal law to an admiring listener. Then came a lull of the murmuring voices, a solemn dividing of the lines, the men on the one side, the women on the other, and a shaking of the restless children into their places, as the dusky patriarch of Hardeman limped slowly down the grassy aisle. No deep-throated organ was there to herald his

approach with the stately pulsing "March of Prophet"; no mullioned window poured its mellowed light upon the solemnly bended head: but the sunbeams drifted softly through the swaying leaves, playing at hide-and-seek in the grizzly, waving hair, and over in the plum thicket a mocking-bird suddenly burst forth in a flood of melody to his brooding mate.

Old Parson 'Bias turned, and slowly and in-

his song, and the pause following was oppressive in its intensity, when, slowly drawing his red bandana through his trembling fingers, the patriarch of Hardeman led his dusky followers in prayer.

The breast of nature was bared before her child, and through such humble medium the strange, mysterious soul lifted on high its untainted eloquence. Before proceeding, the eye

AT THE "STRACED MEETIN'."

tently viewed his gathered congregation; then his quavering voice broke upon the silence: "My brederin, an' sisterin, an' chillen in de faith: I has tarried wid you on dese sinful shores fer er long, long time; I has seen de sun rise on sorer an' set in triberlati'n; I has 'zorted ter you in yer youth, and has cried wid you when de gray hairs done come; I has worked wid you in slave-time, lack ole Moses start wid de chillen er Isrul, an' I has come out wid you, lack Joshway, inter de Promise' Lan'. Now de ole man stan' erfore you, maybe fer de las' time, wid one foot in de grave, brederin an' sisterin, dat gwine cotch us all. You has heared de ole man 'zort in time er peace an' pray in time er wah, twel de voice done fade erway lack de song er de locus' in de fall. Now in dese times er sinnin' an' fergittin', de ole man done heared er call, maybe fer de las' time, maybe fer de las' time, an' de ole man gwine fer ter tell it!"

The mocking-bird in the thicket had finished

of the old parson again intently searched his congregation. "I takes my tex' dis mornin', brederin an' sisterin, from de good Book whar it say, 'In dose days de young men shall dream dreams, an' de ole men shall see visions.' Long time ergo dar were er little boy name Sam'l who live in de house of er ole parson name Eli; an' he sleep in a room nigh him, 'ca'se Eli were ole an' sorter po'ly. One night Sam'l wake suddent lack; 'pear lack he hear sumpen call 'Sam'l!' an' he git up quick an' say, 'Farder Eli, you call me?' Ole Eli were deef, an' he git up on his elbow, an' 'low, 'I did n't call you, Sam'l; go ter sleep.' Bimeby he hear de call ergin, but Eli say ergin 't wa'n't him. Den Sam'l lay an' stedly, an' kick de kiver off, 'ca'se it were warm, an' he hear it ergin; den he say, 'Here I is, Lord!' 'ca'se he know it were de Lord done call him. I lackens myse'f ter-day, brederin an' sisterin, ter de infant Sam'l, 'ca'se ole age an' childhood is mighty nigh erkin; an' lookin'

inter de grave, I done heared er call ter de Jedgment. De Spirit done call three times, an' de ole man gwine prophesy."

Audible groans came from the front seats.

"Three times it call, 'Bias!' an' three times I answers, 'Here I is!' Oh, ter-day, brederin an' sisterin, here I is, er-callin' on you, 'fore it too late an' de sun go down on yer sin, brederin an' sisterin!"

Subdued groans.

"'Pear lack it were de early mornin', an' de Spirit taken me out ter a big place whar dar were a mighty getherin', an' I sees de grave open an' de dead walk out; I sees de getherin' er de los' tribes er Isrul, comin' from de norf, from de souf, from de east, and from de west—de air all curi's, lack er sun er blood were er-shinin' on de worl'. I looks up, an' de sky wuz all lined lack er gogerfy, cross an' criss-cross, an' dar were writ ercross it in fire de doom dat ever'body mought read — edication er no edication."

Groans from the sides.

"Dar dey were, er-formin' in a big percession dat gwine move bimeby. Nobody talk, ever'body skeered lack an' real ashy; I jine 'em, an' say to mysef, says I, 'Ole 'Bias don't know nobody here.' Den I looks up an' sees ole Marse's overseer er-totin' er de dead muel he whup ter death 'fore de war, an' 'pear lack ever'body got sumpen. Bimeby we hears er shoutin' 'way over yander fer de rocks an' de mountings ter fall, fer de waters ter rise an' kiver 'em, an' our crowd groan, 'Hab mercy!' Oh, brederin an' sisterin, we could n't 'zort den, it were too late, too late! Dar was er ridin' here an' dar er horses what got wings on 'em, an' strike fire when dey put dey foots down; but we could n't look. 'Way over yander were Gabul er-waitin' ter give de summons wid de big trumpet er-shinin' lack de full moon er-risin' on er summer's night; but we could n't look, brederin an' sisterin, we could n't look. Bimeby I seed er crowd er-comin', an' I knowed 'em. Dar were de sisterin in de front what tells tales on one another, an' rolls er lie under dey long tongue, an' it tastes sweeter dan de honey an' de honeycomb ter 'em — dar dey come, sisterin! an' er-follerin' ever sister kim er little, long snake, an' it bite de heels er dat sister, an' it gnaw de heels er dat sister, an' strike wid his fangs; but she cain't bruise his head, 'ca'se her tongue 's done black wid er lie —"

Groans from the men's side.

"I ain't call no name, sisterin, but de Lord know who were dar."

Sobs from one side, and groans from the other.

"Den de crowd comes nigher, an' dey all got sumpen dey tryin' ter hide; most all de niggers got pullets dat dey stole, an' dey tryin' hide 'em in dey pockets, but dey cain't hide 'em.

Oh, you hin-roost niggers, you cain't git shut of 'em in de last day! De moon good an' dark, an' de meat sweet an' juicy, but you cain't git shut of it in de last day!"

There was a visible cowering as old 'Bias continued, and a falling pin might have been heard.

"An' dar come Deacon Holly dar, er-puffin' an' er-blowin', er-draggin' dat yearlin' heifer he lied about in de cote — Deacon Holly dat 's 'zorted ter you many an' many 's de time. Oh, my brudder, you cain't hide dat heifer in de las' day!"

There was a painful collapse on the part of Deacon Holly, followed by prolonged groans.

"Den I seed Deacon Showers er-runnin' fitten ter kill, white and skeered — oh, Brudder Showers, you cain't hide dat shoat in de las' day! Yer coat 's too short, an' his legs too long, an' he squeal too loud fer ter drap him in de road — o-o-h, Brudder Showers, you c-a-i-n-t hide him in de las' day!"

Brother Showers leaned his head on his hands, and cried aloud.

"We 's a-a-l-l got sumpen we wanten hide, but dey a-i-n-t no hidin' in de las' day! Bimeby er little lizzard come er-creepin' in my han', 'ca'se we all got sumpen dat we wanten hide; but de Spirit done pity de ole man's sin, an' kiver ole 'Bias wid de mantle er charity — hab mercy on dese sinners! Bimeby I sees Brer Jason, an' de light 'pear ter darken, an' de moon riz slow, an' dar were three others wid him, er-comin' ter de Jedgment — o-o-h, my brederin', er-comin' ter de Jedgment!"

There was an ashen, stony look on three faces in the congregation, and Parson 'Bias continued:

"Brer Jason he hold de fine er de law in his han', an' keep his mouf shut, an' walk 'hine de others in de percession er de Jedgment — oh, my brederin, dat awful day! Den here come Brer Adam and Brer Jackson dat fotch de blessin' ter de mo'nin' 'oman; dey got sumpen dey tryin' fer ter hide — o-o-h, my brederin, what is it? De bag am big, an' de balls am little, but dem little crap balls dey gwine click loud in de las' day!"

One after the other the two heads dropped to the knees, and the knees slid to the ground.

"Dar were *one* other colored pusson walkin' 'hine Brer Jason. O-o-h, my brederin, who he be? He go 'bout comfortin' de sorrerin' an' de 'flicted — o-o-h, my brederin! He taken down de robes er de sanctification — o-o-h, my brederin! He eaten up de virtuals er de 'flicted an' de sorrerin' — o-o-h, my brederin, who he be? Who he be, brederin? He 's er-totin' er de horn er de crap-shootin' niggers, an' he cain't git shut of it in de las' day! He throw it in de water, but it float out ergin — oh, my brederin!

He put it in de groun', but de dirt won't kiver it, an' he tote it, an' he tote it, twel he white roun' de mouf; but de debil make him sweat, an' de debil make him groan—o-o-h, my brederin, who he be?"

Parson 'Bias paused to wipe the perspiration now rolling in little rivulets down his wrinkled face, and viewed with honest satisfaction his wailing congregation.

"De Spirit say, 'Look!' an' I turns, an' sees de face er de man what tote dat horn, an' I knows him. Oh, my brederin, you cain't hide dat horn in de las' day! Den de Spirit close my eyes, 'ca'se I don't want see no mo'. Oh, my brederin, if dar one sinner here dat know de Spirit's call, if dar one Christian here dat done fall from grace, let him come 'mongst de mo'ners whilst we sing dis hymn."

Softly old 'Bias lined out, "What shall we Do that Day," and in quavering tones it was taken up amid sobs and groans; Caney Creek, Piney, and Duck Pond had never before had such an awakening. The song with its dismal interlineations died away, and with blanched face, chattering teeth, and shaking knees, Brer Peter Henderson rose before the astonished congregation, his ministerial mien vanished, his personal pride crushed into the dust.

"Brederin and sisterin,—if I may be 'lowed ter call you dat on dis solemn 'casion,—we has fallen on mighty onsartin times." He paused, and something seemed to rattle in his throat; a silence followed his voice, and the usual, "Go on, go on, Brer Peter!" was unspoken.

"Brederin and sisterin, Parson 'Bias seed dat vision right. I, Peter Henderson, is de nigger dat tote dat horn, an' I makes dis 'fession now in de hearin' er you all, 'fore it's too late. I, Peter

Henderson, lead dem po' weak-kneed members er de faith inter de temptation an' 'citements er dat game. I l'arn it from er slick buck dat come from Memphis, an' we 's whooped 'em up many an' many 's de time, an' never got cotch, but de gourd dat go too often in de well bucket gwine git broke. I makes dis 'fession in de cause er 'ligion fer ter save my soul from de Jedgment. I has drag de sanctified robe er de promise inter de dus',—hab mercy on my po' soul!—an' make er money-changer er de sarvent er de Lord. I tells it all fer ter save my soul from de tormints er de las' day, fer it burn lack er fire, an' it cut lack er knife—hab mercy on my soul!"

Like a thunder-clap came the close of the confession.

"I burn ole Smif's gin, an' fire Caleb Jones's smoke-house; I taken de las' chicken off'n ever hin-roost in Piney, an' sol' 'em in Bolivar—here de money!" and a handful of silver quarters clinked on the boards, and rolled in the grass. "I has been er stingin' adder, er weasel 'mongst de chickens, an' er owl on de hin-roost—may de Lord hab mercy on my soul!"

Brer Peter sank down, cold and breathless, and some kindly voice raised the doxology, but ere the last note died away, Brer Peter Henderson was gone—"gone fer good."

Some declared that he had been taken from amongst them by supernatural means; others that, like Judas, he had gone out and killed himself. Poor little Marcy inclined to the latter opinion, and wore her mourning faithfully long after peace brooded over the three little settlements, and generations had occupied the hen-roosts undisturbed; for the old, familiar haunts knew Peter no more.

Virginia Frazer Boyle.

THE CLOSING CENTURY.

AS one who, roused from sleep, hears far away
The closing strokes of some cathedral bell
Tolling the hour, strives all in vain to tell
If denser grows the night, or pales the day—
So we, roused to life's brief existence, say
(We on whose waking falls a century's knell),
Is this the deepening dusk of years, the fell
And solemn midnight, or the morning gray?
We stir, then sleep again—a little sleep!
(Howbeit undisturbed by another's ring!)
For though, measured with time, a century
Is but a vanished hour tolled on the deep,
Yet what is time itself? 'Tis but a swing
Of the vast pendulum of eternity.

Henry Jerome Stockard.

A MARKET-PLACE IN SAMARKAND, AND THE RUINS OF A COLLEGE.

ACROSS ASIA ON A BICYCLE.

IV.—THE JOURNEY FROM SAMARKAND TO KULDJA.

ON the morning of November 16 we took a last look at the blue domes and minarets of Samarkand, intermingled with the ruins of palaces and tombs, and then wheeled away toward the banks of the Zerafshan. Our four days' journey of 180 miles along the regular Russian post-road was attended with only the usual vicissitudes of ordinary travel. Wading in our Russian top-boots through the treacherous fords of the "Snake" Defile, we passed the pyramidal slate rock known as the "Gate of Tamerlane," and emerged upon a strip of the Kizil-Kum steppe, stretching hence in painful monotony to the bank of the Sir Daria River. This we crossed by a rude rope-ferry, filled at the time with a passing caravan, and then began at once to ascend the valley of the Tchirtchik toward Tashkend. The blackened cotton which the natives were gathering from the adjoining fields, the lowering snow-line on the mountains in front of us, the muddy roads, the chilling atmosphere, and the falling leaves of the giant poplars — all warned us of the approach of winter.

We had hoped at least to reach Vernoye, a provincial capital near the converging point of the Turkestan, Siberian, and Chinese bound-

aries, whence we could continue, on the opening of the following spring, either through Siberia or across the Chinese empire. But in this we were doomed to disappointment. The delay on the part of the Russian authorities in granting us permission to enter Transcaspia had postponed at least a month our arrival in Tashkend, and now, owing to the early advent of the rainy season, the roads leading north were almost impassable even for the native carts. This fact, together with the reports of heavy snow-falls beyond the Alexandrovski Mountains, on the road to Vernoye, lent a rather cogent influence to the persuasions of our newly made friends to spend the winter among them.

Then, too, such a plan, we thought, might not be unproductive of future advantages. Thus far we had been journeying through Russian territory without a passport. We had no authorization except the telegram to "come on," received from General Kuropatkin at Askabad, and the verbal permission of Count Rostertsoff at Samarkand to proceed to Tashkend. Furthermore, the passport for which we had just applied to Baron Wrevsky, the Governor-General of Turkestan, would be available

only as far as the border of Siberia, where we should have to apply to the various governors-general along our course to the Pacific, in case we should find the route across the Chinese empire impracticable. A general permission to travel from Tashkend to the Pacific coast, through southern Siberia, could be obtained from St. Petersburg only, and that only through the chief executive of the province through which we were passing.

Permission to enter Turkestan is by no means easily obtained, as is well understood by the student of Russian policy in central Asia. We were not a little surprised, therefore, when our request to spend the winter in its capital was graciously granted by Baron Wrevsky, as well as the privilege for one of us to return in the mean time to London. This we had determined on, in order to secure some much-needed bicycle supplies, and to complete other arrangements for the success of our enterprise. By lot the return trip fell to Sachtleben. Proceeding by the Transcaspian and Transcaucasus railroads, the Caspian and Black seas, to Constantinople, and thence by the "overland express" to Belgrade, Vienna, Frankfort, and Calais, he was able to reach London in sixteen days.

Tashkend, though nearly in the same latitude as New York, is so protected by the Alexandrovski Mountains from the Siberian blizzards and the scorching winds of the Kara-Kum desert as to have an even more moderate climate. A tributary of the Tchirtchick River forms the line of demarcation between the native and the European portions of the city, although the population of the latter is by no means devoid of a native element. Both together cover an area as extensive as Paris, though the population is only 120,000, of which 100,000 are congregated in the native, or Sart, quarter. There is a floating element of Kashgarians, Bokhariots, Persians, and Afghans, and a resident majority of Kirghiz, Tatars, Jews, Hindus, gypsies, and Sarts, the latter being a generic title for the urban, as distinguished from the nomad, people.

Our winter quarters were obtained at the home of a typical Russian family, in company with a young reserve officer. He, having finished his university career and time of military service, was engaged in Tashkend in the interest of his father, a wholesale merchant in Moscow. With him we were able to converse either in French or German, both of which languages he could speak more purely than his native Russian. Our good-natured, corpulent host had emigrated, in the pioneer days, from the steppes of southern Russia, and had grown wealthy through the "unearned increment."

The Russian samovar is the characteristic feature of the Russian household. Besides a

big bowl of cabbage soup at every meal, our Russian host would start in with a half-tumbler of vodka, dispose of a bottle of beer in the intervals, and then top off with two or three glasses of tea. The mistress of the household, being limited in her beverages to tea and soup, would usually make up in quantity what was lacking in variety. In fact, one day she informed us that she had not imbibed a drop of water for over six years. For this, however, there is a very plausible excuse. With the water at Tashkend, as with that from the Zerafshan at Bokhara, a dangerous worm called *reshka* is absorbed into the system. Nowhere have we drunk better tea than around the steaming samovar of our Tashkend host. No peasant is too poor, either in money or in sentiment, to buy and feel the cheering influence of tea. Even the Cossack, in his forays into the wilds of central Asia, is sustained by it. Unlike the Chinese, the Russians consider sugar a necessary concomitant of tea-drinking. There are three methods of sweetening tea: to put the sugar in the glass; to place a lump of sugar in the mouth, and suck the tea through it; to hang a lump in the midst of a tea-drinking circle, to be swung around for each in turn to touch with his tongue, and then to take a swallow of tea.

The meaning of the name Tashkend is "city of stone," but a majority of the houses are one-story mud structures, built low, so as to prevent any disastrous effects from earthquakes. The roofs are so flat and poorly constructed that during the rainy season a dry ceiling is rather the exception than the rule. Every building is covered with whitewash or white paint, and fronts directly on the street. There are plenty of back and side yards, but none in front. This is not so bad on the broad streets of a Russian town. In Tashkend they are exceptionally wide, with ditches on each side through which the water from the Tchirtchick ripples along beneath the double, and even quadruple, rows of poplars, acacias, and willows. These trees grow here with remarkable luxuriance, from a mere twig stuck into the ground. Although twenty years of Russian irrigation has given Nature a chance to rear thousands of trees on former barren wastes, yet wood is still comparatively scarce and dear.

The administration buildings of the city are for the most part exceedingly plain and unpretentious. In striking contrast is the new Russian cathedral, the recently erected school, and a large retail store built by a resident Greek, all of which are fine specimens of Russian architecture. Among its institutions are an observatory, a museum containing an embryo collection of Turkestan products and antiquities, and a medical dispensary for the natives, where vaccination is performed by graduates of medi-

cine in the Tashkend school. The rather extensive library was originally collected for the chancellery of the governor-general, and contains the best collection of works on central Asia that is to be found in the world, including in its scope not only books and pamphlets, but even magazines and newspaper articles. For amusements, the city has a theater, a small imitation of the opera house at Paris; and the Military Club, which, with its billiards and gambling, and weekly reunions, balls, and concerts, though a regular feature of a Russian garrison town, is especially pretentious in Tashkend. In size, architecture, and appointments, the club-house has no equal, we were told, outside the capital and Moscow.

Tashkend has long been known as a refuge for damaged reputations and shattered fortunes, or "the official purgatory following upon the emperor's displeasure." One of the finest houses of the city is occupied by the Grand Duke Nicholas Constantinovitch Romanoff, son of the late general admiral of the Russian navy, and first cousin to the Czar, who seems to be cheerfully resigned to his life in exile. Most of his time is occupied with the business of his silk-factory on the outskirts of Tashkend, and at his farm near Hodjent, which a certain firm in Chicago, at the time of our sojourn, was stocking with irrigating machinery. All of his bills are paid with checks drawn on his St. Petersburg trustees. His private life is rather unconventional and even democratic. Visitors to his household are particularly impressed with the beauty of his wife and the size of his liquor glasses. The example of the grand duke illustrates the sentiment in favor of industrial pursuits which is growing among the military classes, and even among the nobility, of Russia. The government itself, thanks to the severe lesson of the Crimean war, has learned that a great nation must stand upon a foundation of something more than aristocracy and nobility. To this influence is largely due the present growing prosperity of Tashkend, which, in military importance, is rapidly giving way to Askabad, "the key to Herat."

That spirit of equality and fraternity which characterizes the government of a Russian *mir*, or village, has been carried even into central Asia. We have frequently seen Russian peasants and natives occupying adjoining apartments in the same household, while in the process of trade all classes seem to fraternize in an easy and even cordial manner. The same is true of the children, who play together indiscriminately in the street. Many a one of these heterogeneous groups we have watched "playing marbles" with the ankle-bones of sheep, and listened, with some amusement, to their half Russian, half native jargon. Schools are

FANTASTIC RIDING AT THE SUMMER ENCAMPMENT OF THE COSSACKS.

now being established to educate the native children in the Russian language and methods, and native apprentices are being taken in by Russian merchants for the same purpose.

In Tashkend, as in every European city of the Orient, drunkenness, and gambling, and social laxity have followed upon the introduction of Western morals and culture. Jealousy and intrigue among the officers and functionaries are also not strange, perhaps, at so great a distance from headquarters, where the only avenue to distinction seems to lie through the public service. At the various dinner-parties and sociables given throughout the winter, the topic of war always met with general welcome. On one occasion a report was circulated that Abdurrahman Khan, the Ameer of Afghanistan, was lying at the point of death. Great preparations, it was said, were being made for an expedition over the Pamir, to establish on the throne the Russian candidate, Is-shah Khan from Samarkand, before Ayub Khan, the rival British protégé, could be brought from India. The young officers at once began to discuss their chances for promotion, and the number of decorations to be forthcoming from St. Petersburg. The social gatherings at Tashkend were more convivial than sociable. Acquaintances can eat and drink together with the greatest of good cheer, but there is very little sympathy in conversation. It was difficult for them to understand why we had come so far to see a country which to many of them was a place of exile.

An early spring did not mean an early departure from winter quarters. Impassable roads kept us anxious prisoners for a month and a half after the necessary papers had been se-

cured. These included, in addition to the local passports, a *carte-blanche* permission to travel from Tashkend to Vladivostock through Turkestan and Siberia, a document obtained from St. Petersburg through the United States minister, the Hon. Charles Emory Smith. Of this route to the Pacific we were therefore certain, and yet, despite the universal opinion that a bicycle journey across the Celestial empire was impracticable, we had determined to continue on to the border line, and there to seek better information. "Don't go into China" were the last words of our many kind friends as we wheeled out of Tashkend on the seventh of May.

At Chimkend our course turned abruptly from what was once the main route between Russia's European and Asiatic capitals, and along which De Lesseps, in his letter to the Czar, proposed a line of railroad to connect Orenburg with Samarkand, a distance about equal to that between St. Petersburg and Odessa, 1483 miles. This is also the keystone in that wall of forts which Russia gradually raised around her unruly nomads of the steppes, and where, according to Gortchakoff's circular of 1864, "both interest and reason" required her to stop; and yet at that very time General Tcherniaeff was advancing his forces upon the present capital, Tashkend. Here, too, we began that journey of 1500 miles along the Celestial mountain range which terminated only when we scaled its summit beyond Bar-kul to descend again into the burning sands of the Desert of Gobi. Here runs the great historical highway between China and the West.

From Auli-eta eastward we had before us about 200 miles of a vast steppe region. Near

VIEW OF CHIMKEND FROM THE CITADEL.

the mountains is a wilderness of lakes, swamps, and streams, which run dry in summer. This is the country of the "Thousand Springs" mentioned by the Chinese pilgrim Huen T'sang, and where was established the kingdom of Black China, supposed by many to have been one of the kingdoms of "Prester John." But far away to our left were the white sands of the Ak-Kum, over which the cloudless atmosphere quivers incessantly, like the blasts of a furnace. Of all these deserts, occupying probably one half of the whole Turkestan steppe, none is

more terrible than that of the "Golodnaya Steppe," or Steppe of Hunger, to the north of the "White Sands" now before us. Even in the cool of evening, it is said that the soles of the wayfarer's feet become scorched, and the dog accompanying him finds no repose till he has burrowed below the burning surface. The monotonous appearance of the steppe itself is only intensified in winter, when the snow smooths over the broken surface, and even necessitates the placing of mud posts at regular intervals to mark the roadway for the Kirghiz post-drivers. But in the spring and autumn its arid surface is clothed, as if by enchantment, with verdure and prairie flowers. Both flowers and birds are gorgeously colored. One variety, about half the size of the jackdaw which infests the houses of Tashkend and Samarkand, has a bright blue body and red wings; another, resembling our field-lark in size and habits, combines a pink breast with black head and

ON THE ROAD BETWEEN CHIMKEND AND VERNOYE.

wings. But already this spring-tide splendor was beginning to disappear beneath the glare of approaching summer. The long wagon-trains of lumber, and the occasional traveler's tarantass rumbling along to the discord of its *duga* bells, were enveloped in a cloud of suffocating dust.

Now and then we would overtake a party of Russian peasants migrating from the famine-stricken districts of European Russia to the pioneer colonies along this Turkestan highway. The peculiarity of these villages is their extreme length, all the houses facing on the one wide

the Kirghiz than these to their conquerors, the *mir*, or communal system, is now penetrating these fertile districts, and systematically replacing the Mongolian culture. But the ignorance of this lower class of Russians is almost as noticeable as that of the natives themselves. As soon as we entered a village, the blacksmith left his anvil, the carpenter his bench, the store-keeper his counter, and the milkmaid her task. After our parade of the principal street, the crowd would gather round us at the station-house. All sorts of queries and ejaculations would pass among them. One would ask: "Are

THE CHINESE MILITARY COMMANDER OF KULDJA.

street. Most of them are merely mud huts, others make pretensions to doors and windows, and a coat of whitewash. Near-by usually stands the old battered telega which served as a home during many months of travel over the Orenburg highway. It speaks well for the colonizing capacity of the Russians that they can be induced to come so many hundreds of miles from their native land, to settle in such a primitive way among the half-wild tribes of the steppes. As yet they do very little farming, but live, like the Kirghiz, by raising horses, cows, sheep, and goats, and, in addition, the Russian hog, the last resembling very much the wild swine of the jungles. Instead of the former military colonies of plundering Cosacks, who really become more assimilated to

these gentlemen baptized? Are they really Christians?" On account of their extreme ignorance these Russian colonists are by no means able to cope with their German colleagues, who are given the poorest land, and yet make a better living.

The steppe is a good place for learning patience. With the absence of landmarks, you seem never to be getting anywhere. It presents the appearance of a boundless level expanse, the very undulations of which are so uniform as to conceal the intervening troughs. Into these, horsemen, and sometimes whole caravans, mysteriously disappear. In this way we were often enabled to surprise a herd of gazelles grazing by the roadside. They would stand for a moment with necks extended, and then scamper

STYLISH CART OF A CHINESE MANDARIN.

away like a shot, springing on their pipe-stem limbs three or four feet into the air. Our average rate was about seven miles an hour, although the roads were sometimes so soft with dust or sand as to necessitate the laying of straw for a foundation. There was scarcely an hour in the day when we were not accompanied by from one to twenty Kirghiz horsemen,

galloping behind us with cries of "Yak-shee!" ("Good!") They were especially curious to see how we crossed the roadside streams. Standing on the bank, they would watch intently every move as we stripped and waded through with bicycles and clothing on our shoulders. Then they would challenge us to a race, and, if the road permitted, we would endeavor to reveal some of the possibilities of the "devil's carts." On an occasion like this occurred one of our few mishaps. The road was lined by the occupants of a neigh-

boring tent village, who had run out to see the race. One of the Kirghiz turned suddenly back in the opposite direction from which he had started. The wheel struck him at a rate of fifteen miles per hour, lifting him off his feet, and hurling over the handle-bars the rider, who fell upon his left arm, and twisted it out of place. With the assistance

A LESSON IN CHINESE.

of the bystanders it was pulled back into the socket, and bandaged up till we reached the nearest Russian village. Here the only physician was an old blind woman of the faith-cure persuasion. Her massage treatment to replace the muscles was really effective, and was accompanied by prayers and by signs of the cross, a common method of treatment among the lower class of Russians. In one instance a cure was supposed to be effected by writing a

better room was answered by the question, if the one we had was not good enough, and how long we intended to occupy that. Evidently our English conversation had gained for us the covert reputation of being English spies, and this was verified in the minds of our hosts when we began to ask questions about the city prisons we had passed on our way. To every interrogation they replied, "I don't know." But presto, change, on the presentation of docu-

THE CUSTOM-HOUSE AT KULDJA.

prayer on a piece of buttered bread to be eaten by the patient.

Being users but not patrons of the Russian post-roads, we were not legally entitled to the conveniences of the post-stations. Tipping alone, as we found on our journey from Samarkand, was not always sufficient to preclude a request during the night to vacate the best quarters for the post-traveler, especially if he happened to wear the regulation brass button. To secure us against this inconvenience, and to gain some special attention, a letter was obtained from the overseer of the Turkestan post and telegraph district. This proved advantageous on many occasions, and once, at Auli-eta, was even necessary. We were surveyed with suspicious glances as soon as we entered the station-house, and when we asked for water to lave our hands and face, we were directed to the irrigating-ditch in the street. Our request for a

ments! Apologies were now profuse, and besides tea, bread, and eggs, the usual rations of a Russian post-station, we were exceptionally favored with chicken soup and *verainyik*, the latter consisting of cheese wrapped and boiled in dough, and then served in butter.

It has been the custom for travelers in Russia to decry the Russian post-station, but the fact is that an appreciation of this rather primitive form of accommodation depends entirely upon whether you approach it from a European hotel or from a Persian khan. Some are clean, while others are dirty. Nevertheless, it was always a welcome sight to see a small white building looming up in the dim horizon at the close of a long day's ride, and, on near approach, to observe the black and white striped post in front, and idle tarantasses around it. At the door would be found the usual crowd of Kirghiz post-drivers. After the presentation

of documents to the *starosta*, who would hesitate at first about quartering our horses in the travelers' room, we would proceed at once to place our dust-covered heads beneath the spindle of the washing-tank. Although by this dripping-pan arrangement we would usually succeed in getting as much water down our backs as on our faces, yet we were consoled by the thought that too much was better than not enough, as

they do at home. Rye, however, takes three years to reach the height of one year in America. Through the Russians, these people have obtained high-flown ideas of America and Americans. We saw many chromos of American celebrities in the various station-houses, and the most numerous was that of Thomas A. Edison. His phonograph, we were told, had already made its appearance in Pishpek, but

STROLLING MUSICIANS.

had been the case in Turkey and Persia. Then we would settle down before the steaming samovar to meditate in solitude and quiet, while the rays of the declining sun shone on the gilded eikon in the corner of the room, and on the chromo-covered walls. When darkness fell, and the simmering music of the samovar had gradually died away; when the flitting swallows in the room had ceased their chirp, and settled down upon the rafters overhead, we ourselves would turn in under our fur-lined coats upon the leather-covered benches.

In consequence of the first of a series of accidents to our wheels, we were for several days the guest of the director of the botanical gardens at Pishpek. As a branch of the Crown botanical gardens at St. Petersburg, some valuable experiments were being made here with foreign seeds and plants. Peaches, we were told, do not thrive, but apples, pears, cherries, and the various kinds of berries, grow as well as

the natives did not seem to realize what it was. "Why," they said, "we have often heard better music than that." Dr. Tanner was not without his share of fame in this far-away country. During his fast in America, a similar, though not voluntary, feat was being performed here. A Kirghiz messenger who had been despatched into the mountains during the winter was lost in the snow, and remained for twenty-eight days without food. He was found at last, crazed by hunger. When asked what he would have to eat, he replied, "Everything." They foolishly gave him "everything," and in two days he was dead. For a long time he was called the "Doctor Tanner of Turkestan."

A divergence of seventy-five miles from the regular post-route was made in order to visit Lake Issik Kul, which is probably the largest lake for its elevation in the world, being about ten times larger than Lake Geneva, and at a height of 5300 feet. Its slightly brackish water,

A STREET IN THE TARANTCHI QUARTER OF KULDJA.

which never freezes, teems with several varieties of fish, many of which we helped to unhook from a Russian fisherman's line, and then helped to eat in his primitive hut near the shore. A Russian Cossack, who had just come over the

snow-capped Ala Tau, "of the Shade," from Fort Narin, was also present, and from the frequent glances cast at the fisherman's daughter we soon discovered the object of his visit. The ascent to this lake, through the famous Buam

THE FORMER MILITARY COMMANDER OF KULDJA AND HIS FAMILY.

Defile, or Happy Pass, afforded some of the grandest scenery on our route through Asia. Its seething, foaming, irresistible torrent needs only a large volume to make it the equal of the rapids at Niagara.

Our return to the post-road was made by an unbeaten track over the Ala Tau Mountains.

turned the highest summit, the clouds shifted for a moment, and revealed before us two Kirghiz horsemen. They started back in astonishment, and gazed at us as though we were demons of the air, until we disappeared again down the opposite and more gradual slope. Late in the afternoon we emerged upon the

OUR RUSSIAN FRIEND AND MR. SACHTLEBEN LOADED WITH ENOUGH CHINESE "CASH" TO PAY FOR A MEAL AT A KULDJA RESTAURANT.

From the Chu Valley, dotted here and there with Kirghiz tent villages and their grazing flocks and herds, we pushed our wheels up the broken path, which wound like a mythical stairway far up into the low-hanging clouds. We trudged up one of the steepest ascents we have ever made with a wheel. The scenery was grand, but lonely. The wild tulips, pinks, and verbenas dotting the green slopes furnished the only pleasant diversion from our arduous labor. Just as we

plain, but no post-road or station-house was in sight, as we expected; nothing but a few Kirghiz kibitkas among the straggling rocks, like the tents of the Egyptian Arabs among the fallen stones of the pyramids.

Toward these we now directed our course, and, in view of a rapidly approaching storm, asked to purchase a night's lodging. This was only too willingly granted in anticipation of the coming *tomasha*, or exhibition. The milk-

VIEW OF A STREET IN KULDJA FROM THE WESTERN GATE.

maids as they went out to the rows of sheep and goats tied to the lines of woolen rope, and the horsemen with reinless horses to drive in the ranging herds, spread the news from tent to tent. By the time darkness fell the kibitka was filled to overflowing. We were given the seat of honor opposite the doorway, bolstered up with blankets and pillows. By the light of the fire curling its smoke upward through the central opening in the roof, it was interesting

A MORNING PROMENADE ON THE WALLS OF KULDJA.

A CHINESE GRAVEYARD ON THE EASTERN OUTSKIRTS OF KULDJA.

to note the faces of our hosts. We had never met a people of a more peaceful temperament, and, on the other hand, none more easily frightened. A dread of the evil eye is one of their characteristics. We had not been settled long before the *ishan*, or itinerant dervish, was called in to drive away the evil spirits, which

the "devil's carts" might possibly have brought. Immediately on entering, he began to shrug his shoulders, and to shiver as though passing into a state of trance. Our dervish acquaintance was a man of more than average intelligence. He had traveled in India, and had even heard some one speak of America. This fact alone

SPLITTING POPPY-HEADS TO START THE OPIUM JUICE.

was sufficient to warrant him in posing as instructor for the rest of the assembly. While we were drinking tea, a habit they have recently adopted from the Russians, he held forth at great length to his audience about the *Amerikon*.

The rain now began to descend in torrents. The felt covering was drawn over the central opening, and propped up at one end with a pole to emit the clouds of smoke from the smoldering fire. This was shifted with the veering wind. Although a mere circular rib framework covered with white or brown felt, according as the occupant is rich or poor, the

of burden. The men never walk; if there is any leading to be done it falls to the women. The constant use of the saddle has made many of the men bandy-legged, which, in connection with their usual obesity,—with them a mark of dignity,—gives them a comical appearance.

After their curiosity regarding us had been partly satisfied, it was suggested that a sheep should be slaughtered in our honor. Neither meat nor bread is ever eaten by any but the rich Kirghiz. Their universal kumiss, corresponding to the Turkish yaourt, or coagulated milk, and other forms of lacteal dishes, sometimes mixed with meal, form the chief diet of

THE CHIEF OF THE CUSTOM-HOUSE GIVES A LESSON IN OPIUM SMOKING.

Kirghiz kubitka, or more properly *yurt*, is not as a house builded upon the sand, even in the fiercest storm. Its stanchness and comfort are surprising when we consider the rapidity with which it may be taken down and transported. In half an hour a whole village may vanish, emigrating northward in summer, and southward in winter. Many a Kirghiz cavalcade was overtaken on the road, with long tent-ribs and felts tied upon the backs of two-humped camels, for the Bactrian dromedary has not been able to endure the severities of these Northern climates. The men would always be mounted on the camels' or horses' backs, while the women would be perched on the oxen and bullocks, trained for the saddle and as beasts

the poor. The wife of our host, a buxom woman, who, as we had seen, could leap upon a horse's back as readily as a man, now entered the doorway, carrying a full-grown sheep by its woolly coat. This she twirled over on its back, and held down with her knee while the butcher artist drew a dagger from his belt, and held it aloft until the assembly stroked their scant beards, and uttered the solemn bismillah. Tired out by the day's ride, we fell asleep before the arrangements for the feast had been completed. When awakened near midnight, we found that the savory odor from the huge caldron on the fire had only increased the attraction and the crowd. The choicest bits were now selected for the guests. These consisted of pieces

of liver, served with lumps of fat from the tail of their peculiarly fat-tailed sheep. As an act of the highest hospitality, our host dipped these into some liquid grease, and then, reaching over, placed them in our mouths with his fingers. It required considerable effort on this occasion to subject our feelings of nausea to a sense of Kirghiz politeness. In keeping with their characteristic generosity, every one in the kibitka must partake in some measure of the feast, although the women, who had done all the work, must be content with remnants and bones already picked over by the host. But this disposition to share everything was not without its other aspect; we also were expected to share everything with them. We were asked to bestow any little trinket or nicknack exposed to view. Any extra nut on the machine, a handkerchief, a packet of tea, or a lump of sugar, excited their cupidity at once. The latter was considered a bonbon by the women and younger portion of the spectators. The attractive daughter of our host, "Kumiss John," amused herself by stealing lumps of sugar from our pockets. When the feast was ended, the beards were again stroked, the name of Allah solemnly uttered by way of thanks for the bounty of heaven, and then each gave utterance to his appreciation of the meal.

Before retiring for the night, the dervish led the prayers, just as he had done at sunset. The

TWO CATHOLIC MISSIONARIES IN THE YARD OF OUR KULDJA INN.

praying-mats were spread, and all heads bowed toward Mecca. The only preparation for retiring was the spreading of blankets from the pile in one of the kibitkas. The Kirghiz are not in the habit of removing many garments for this purpose, and under the circumstances we found this custom a rather convenient one. Six of us turned in on the floor together, forming a semicircle, with our feet toward the fire.

PRACTISING OUR CHINESE ON A KULDJA CULPRIT.

"Kumiss John," who was evidently the pet of the household, had a rudely constructed cot at the far end of the kibitka.

Vernoye, the old Almati, with its broad streets, low wood and brick houses, and Russian sign-boards, presented a Siberian aspect. The ruins of its many disastrous earthquakes lying low on every hand told us at once the cause of its deserted thoroughfares. The terrible shocks of the year before our visit killed several hundred people, and a whole mountain in the vicinity sank. The only hope of its persistent residents is a branch from the Transsiberian or Transcaspian railroad, or the reannexation by Russia of the fertile province of Ili, to make it an indispensable depot. Despite these periodical calamities, Vernoye has had, and is now constructing, under the genius of the French architect, Paul L. Gourdet, some of the finest edifices to be found in Central Asia. The orphan asylum, a magnificent three-story structure, is now being built on experimental lines, to test its strength against earthquake shocks.

One of the chief incidents of our pleasant sojourn was afforded by Governor Ivanoff. We were invited to head the procession of the Cossacks on their annual departure for their summer encampment in the mountains. After the usual religious ceremony, they filed out from the city parade-ground. Being unavoidably detained for a few moments, we did not come up until some time after the column had started. As we dashed by to the front with the American and Russian flags fluttering side by side from the handle-bars, cheer after cheer arose from the ranks, and even the governor and his party doffed their caps in acknowledgment. At the camp we were favored with a special exhibition of horsemanship. By a single twist of the rein the steeds would fall to the ground, and their riders crouch down behind them as a bulwark in battle. Then dashing forward at full speed, they would spring to the ground, and leap back again into the saddle, or, hanging by their legs, would reach over and pick up a handkerchief, cap, or a soldier supposed to be wounded. All these movements we photographed with our camera. Of the endurance of these Cossacks and their Kirghiz horses we had a practical test. Overtaking a Cossack courier in the early part of a day's journey, he became so interested in the velocipede, as the Russians call the bicycle, that he determined to see as much of it as possible. He stayed with us the whole day, over a distance of fifty-five miles. His chief compensation was in witnessing the surprise of the natives to whom he would shout across the fields to come and see the *tomasha*, adding in explanation that we were the American gentlemen who had ridden all the way from America. Our speed was not slow, and fre-

quently the poor fellow would have to resort to the whip, or shout, "Slowly, gentlemen, my horse is tired; the town is not far away, it is not necessary to hurry so." The fact is that in all our experience we found no horse of even the famed Kirghiz or Turkoman breed that could travel with the same ease and rapidity as ourselves even over the most ordinary road.

At Vernoye we began to glean practical information about China, but all except our genial host, M. Gourdet, counseled us against our proposed journey. He alone, as a traveler of experience, advised a divergence from the Siberian route at Altin Imell, in order to visit the Chinese city of Kuldja, where, as he said, with the assistance of the resident Russian consul we could test the validity of the Chinese passport received, as before mentioned, from the Chinese minister at London.

A few days later we were rolling up the valley of the Ili, having crossed that river by the well-constructed Russian bridge at Fort Iliysk, the head of navigation for the boats from Lake Balkash. New faces here met our curious gaze. As an ethnological transition between the inhabitants of Central Asia and the Chinese, we were now among two distinctly agricultural races—the Dungans and Taranchis. As the invited guests of these people on several occasions, we were struck with their extreme cleanliness, economy, and industry; but their deep-set eyes seem to express reckless cruelty.

The Mohammedan mosques of this people are like the Chinese pagodas in outward appearance, while they seem to be Chinese in half-Kirghiz garments. Their women, too, do not veil themselves, although they are much more shy than their rugged sisters of the steppes. Tenacious of their word, these people were also scrupulous about returning favors. Our exhibitions were usually rewarded by a spread of sweets and yellow Dungan tea. Of this we would partake beneath the shade of their well-trained grape-arbors, while listening to the music, or rather discord, of a peculiar stringed instrument played by the boys. Its bow of two parts was so interlaced with the strings of the instrument as to play upon two at every draw. Another musician usually accompanied by beating little sticks on a saucer.

These are the people who were introduced by the Manchus to replace the Kalmucks in the Kuldja district, and who in 1869 so terribly avenged upon their masters the blood they previously caused to flow. The fertile province of Kuldja, with a population of 2,500,000, was reduced by their massacres to one vast necropolis. On all sides are canals that have become swamps, abandoned fields, wasted forests, and towns and villages in ruins, in some

of which the ground is still strewn with the bleached bones of the murdered.

As we ascended the Ili valley piles of stones marked in succession the sites of the towns of Turgen, Jarkend, Ak-kend, and Khorgos, names which the Russians are already reviving in their pioneer settlements. The largest of these, Jarkend, is the coming frontier town, to take the place of evacuated Kuldja. About twenty-two miles east of this point the large white Russian fort of Khorgos stands bristling on the bank of the river of that name, which, by the treaty of 1881, is now the boundary-line of the Celestial Empire. On a ledge of rocks overlooking the ford a Russian sentinel was walking his beat in the solitude of a dreary outpost. He stopped to watch us as we plunged into the flood, with our Russian telega for a ferry-boat. "All 's well," we heard him cry, as, bumping over the rocky bottom, we passed from Russia into China. "Ah, yes," we thought; "'All 's well that ends well,' but this is only the beginning."

A few minutes later we dashed through the arched driveway of the Chinese custom-house, and were several yards away before the lounging officials realized what it was that flitted across their vision. "Stop! Come back!" they shouted in broken Russian. Amid a confusion of chattering voices, rustling gowns, clattering shoes, swinging pigtails, and clouds of opium and tobacco smoke, we were brought into the presence of the head official. Putting on his huge spectacles, he read aloud the visé written upon our American passports by the Chinese minister in London. His wonderment was increased when he further read that such a journey was being made on the "foot-moved carriages," which were being curiously fingered by the attendants. Our garments were minutely scrutinized, especially the buttons, while our caps and dark-colored spectacles were taken from our heads, and passed round for each to try on in turn, amid much laughter.

Owing to the predominant influence of Russia in these northwestern confines, our Russian papers would have been quite sufficient to cross the border into Kuldja. It was only beyond this point that our Chinese passport would be found necessary, and possibly invalid. After the usual visés had been stamped and written over, we were off on what proved to be our six months' experience in the "Middle Kingdom or Central Empire," as the natives call it, for to Chinamen there is a fifth point to the compass — the center, which is China. Not far on the road we heard the clatter of hoofs behind us. A Kalmuck was dashing toward us

with a portentous look on his features. We dismounted in apprehension. He stopped short some twenty feet away, leaped to the ground, and, crawling up on hands and knees, began to *chin-chin* or knock his head on the ground before us. This he continued for some moments, and then without a word gazed at us in wild astonishment. Our perplexity over this performance was increased when, at a neighboring village, a bewildered Chinaman sprang out from the speechless crowd, and threw himself in the road before us. By a dexterous turn we missed his head, and passed over his extended queue.

Kuldja, with its Russian consul and Cossack station, still maintains a Russian telegraph and postal service. The mail is carried from the border in a train of three or four telegas, which rattle along over the primitive roads in a cloud of dust, with armed Cossacks galloping before and after, and a Russian flag carried by the herald in front. Even in the Kuldja post-office a heavily armed picket stands guard over the money-chest. This postal caravan we now overtook encamped by a small stream, during the glaring heat of the afternoon. We found that we had been expected several days before, and that quarters had been prepared for us in the postal station at the town of Suidun. Here we spent the night, and continued on to Kuldja the following morning.

Although built by the Chinese, who call it Nin-yuan, Kuldja, with its houses of beaten earth, strongly resembles the towns of Russian Turkestan. Since the evacuation by the Russians the Chinese have built around the city the usual quadrangular wall, thirty feet in height and twenty feet in width, with parapets still in the course of construction. But the rows of poplars, the whitewash, and the telegas were still left to remind us of the temporary Russian occupation. For several days we were objects of excited interest to the mixed population. The doors and windows of our Russian quarters were besieged by crowds. In defense of our host, we gave a public exhibition, and with the consent of the *Tootai* made the circuit on the top of the city walls. Fully 3000 people lined the streets and housetops to witness the race to which we had been challenged by four Dungan horsemen, riding below on the encircling roadway. The distance around was two miles. The horsemen started with a rush, and at the end of the first mile were ahead. At the third turning we overtook them, and came to the finish two hundred yards ahead, amid great excitement. Even the commander of the Kuldja forces was brushed aside by the chasing rabble.

Thomas Gaskell Allen, Jr.
William Lewis Sachtleben.

WALKING AS A PASTIME.

HE greatest foe to exercise is monotony, but even monotony can be overcome by making exercise contribute interesting thoughts, or by giving to the mind change of thought. This is done when one gets into a new environment. The great advantage of travel consists in the change of scene. Often the pleasantest part of a traveling trip of any kind is in the unforeseen episodes. In travel it is not the riding in the close cars, or the contact with strangers, so much as the diversion of the mind which makes it a recreation. If we could travel without the accompaniments of bad air, crowds, late hours, and irregular meals, we would gain in recreation. This is just what travel by walking does for us. In a walk the traveler has a change of environment or of scene every minute of the way. He is in a new hotel or a new house every night. He sees new faces, he becomes acquainted with the people of the country, and he knows the topography of it far better than if he were whirled through it on the cars.

Another way to make walking a recreation is by the study of history. It is a good plan, therefore, to read the local history of the region through which a trip is planned, and then, having seen the places of interest, to refresh the mind with the story of them. It is wonderful how alive history seems to the traveler who clothes its scenes with the images of by-gone years. History to the tramp who can appreciate it becomes a fact and not a myth.

Though tramping is of itself a recreation, it is made much more beneficial by company. With good companionship the hours pass swiftly, and fatigue is scarcely felt.

On one occasion I walked with an editor, who said that he did not care to make great distances, but only wished to be out of doors. It was in the springtime, and when we struck north he expressed anxiety about getting into snow; but though it lay in spots on the hillsides, the road was generally free from it. Finally, in Massachusetts, coming through a notch between hills, I saw considerable snow on the heights north of us, and, turning to my companion, said with emphasis, "There is your everlasting snow on the everlasting hills." The words were hardly out of my mouth when we heard a piping voice a little to one side say, "Amen." We supposed that the child who

uttered the pious ejaculation was only showing a proper respect for what she thought to be a biblical quotation.

On a trip taken in the spring, I climbed to a town in the hills of Berkshire County, Massachusetts. One of my companions had taken the degree of Ph. D. at one of the Eastern universities, and was known among us as "Doctor." A few days previous to the trip he had sprained his knee at tennis, and the tramp in the mud intensified the hurt. Having started, however, he refused to take our advice either to return home or take a conveyance of some kind. In the aforesaid town he dragged himself after us into the large room of the hotel, which served the purpose of bar-room, office, and sitting-room. There were two men present, either of whom would have made a good model for Rip Van Winkle. As our friend limped into the room, one of the men, addressing himself to me as a man nearer his own age than either of my comrades, said, "Has that man a cork leg?" "No," I replied; "he is only a little lame." "Well," he replied, "he walks as if he had had his leg cut off here"—making a line on his own leg under the knee. The second, encouraged by my willingness to talk, entered the conversation with, "I say, mister, is he a real doctor—I mean a physician?" In my answer I could not go into an explanation of the intricacies of the requirements of a doctor's degree, so I merely answered, "No, he is not a real doctor; but we call him so." "Oh, I see," said he; "he is a kind of a quack."

It shows the effect of a tramp upon the man of brain-work that the editor to whom I have referred complained on the trip of the bother and worry of his business, and said he almost wished he could get out of newspaper work. After seven days of out-door life, in rain and sunshine, we returned to New Haven. I met him down-town soon after, looking fresh and healthy, and I said, "How do you feel?" "Oh," replied he, "I can run seventeen papers now."

With a companion I was traveling from Marlborough, Massachusetts, toward New Haven, and, wishing to pass through a corner of Rhode Island, we had to take a long walk of over thirty miles before reaching our hotel at night. It was so dark that when we came to turns in the road one of us had to climb the mile-post, and strike a match, to see which direction to take. Finally we reached the hotel, and found it a rather barn-like structure. We were waited upon by

an old woman, who gave us a very good supper, and furnished us with a room with a fire in it. When we came to settle, we were told to go down to the bar-room, which we found full of loafers. The man who kept the bar and took the pay for our night's lodging was a companionable man, and in conversation with him one of us remarked upon the amount of forest, and asked him if there was any sport there. He, misunderstanding the question, said, "There used to be, but it is all broken up." To which his interlocutor replied, "You misunderstood me; I mean shooting." "Oh, yes," he said; "I understand. I thought you meant 'sport.' We used to have 'mills,' dog-fights, and all such things, but the officers of the government broke it up, and now it is very dull here. But we used to have lively times." When asked if he was the landlord, he said the landlord was in Arkansas, and he felt very anxious about things that he saw by the papers were happening down there—shooting, stabbing, etc. "Well," we replied, "what has that to do with your landlord?" Motioning with his hands as if he were dealing cards, and nudging us in the ribs, he said, "He is down there in this business, for he is one of our kind." We could only infer that the house had been a resort for shady characters, and that, as we came into the hotel after nightfall, we were supposed to be cracksmen, or gamblers of a higher grade. When, at the last, I mentioned to our hostess something extra which we had had, she replied, "Oh, you have been such pretty gentlemen, I shall not charge you for that." It is to be presumed that some of their guests of "our kind" had not been "such pretty gentlemen."

This mode of travel, besides being independent, has other advantages. No great preparations are needed for a trip. A vacation of a few days can be utilized by a man's swinging his pack on his back, and going off into the country. Owing to the continual change of abiding place, in three days, it often seems as if the traveler had been absent a week.

Another advantage is the light expense. In all other traveling trips the cost of mere locomotion is a great item. By walking, the change from place to place is made without paying any railroad or steamship fares, without paying any expressman or hackman, and without any of those unavoidable expenses which often make the cost of a trip a matter of anxious thought.

The greatest advantage is the tonic effect on the body and mind. This is due to the freedom from care, and to the natural life—the continual exercise in the open air, which stimulates the appetite, and causes a great demand for food. The amount of food consumed on one of these trips is generally three times what is taken at home. The stimulating action on the

skin, by the constant flushing of the pores in consequence of the exercise, and the baths required to keep one clean, bring into a state of healthy activity a part of one's system generally neglected by those living sedentary lives. In the coldest winter weather I often find, on closing a day's tramp, that my undergarments are wet with perspiration. Then, too, fatigue brings good sleep. Thus, with exercise, good food, free perspiration in fresh air, and plenty of sleep, a man takes nature's best tonics.

It must not be supposed that these tramps exercise only the legs and feet. If one carries a pack, the upper part of the body, and especially the muscles which hold the shoulder-blades, are thoroughly exercised. The back and the abdomen come in for their share, so that when the trip is over, and one goes about without his pack, it is not very hard to walk erect.

If a man wishes to begin the practice of tramping, I should advise him to take at first daily walks of at least four miles. After a little hardening of the muscles in this way, he should try the experiment of going for the whole day with a bag or knapsack; and, after a week or more, for two or three days. With this preliminary training, the candidate for walking will be ready for a longer tramp. But, above all things, let the beginner not do too much at once. After tasting the good effects of walking, I am quite sure that if a man has any love for nature in his soul, and any admiration for the beauties of scenery, he will not willingly forego the pleasure of tramping whenever he has opportunity to enjoy it.

Walking is a natural exercise. It is one which can be taken at any time. It is not like other exercises, in which there is danger of hurts or strain. The fatigue which walking brings on is a natural fatigue, if regularly followed. It strengthens the digestive organs. It drives the blood away from the tired brain, and is one of the best cures for nervousness.

These walks can be taken at all times of the year. The best seasons are spring and fall. The winter, though, is a pleasant time to walk, and all of my longest trips have been taken in mid-winter. I once walked over two hundred miles when the ground was covered with snow. One advantage of the winter trip is that the air is bracing. In the fall and spring, except in the early spring, the roads are generally better than in winter. But the season makes very little difference, because, if the weather renders walking difficult, one simply makes less distance in a day. As one of my companions says, "You can still keep out-of-doors, and get a great deal of walking to the square inch." In summer it is best to do most of the walking in early morning, and after four o'clock in the afternoon, lying by during the hot hours of the day. I

know of no better way of curing any tendency to rheumatism than by a tramp in hot weather. It has all the advantages of the Turkish bath without the disadvantages of the bad air. Even in inclement weather, flushing the pores of the skin with constant exercise will sometimes cure the worst case of rheumatism.

On one occasion a friend of mine who was troubled in this way, having appointed a certain time for a week's walk, came to me in great distress to say that he had such an attack of lumbago that he thought it dangerous to go. On my assuring him that if he would do as I told him, I would guarantee a cure, we started, though I must confess that when we struck a storm of snow and sleet, on the very first day, and the slush was deep enough to come over the tops of our shoes, even my confidence began to give way. But I kept my friend walking, and though he was very anxious to stop at some hotel long before we came to the day's end, we pushed through to Wilmington, Delaware, for the night. After drying off, changing our clothes, and having a good supper, the patient was no worse. The next morning his rheumatism was gone.

On another occasion I had been suffering from the only attack of neuralgia that I ever had. Having agreed to take a tramp, though it was midwinter, I started, taking with me some simple remedies. It stormed the first three days of the trip. After the first day I had no return of my neuralgia, and at the close of the trip I was entirely well, and have never had another attack. This is merely to show that nature is very kind to those who trust her. The best remedies for the ills "that flesh is heir to" are fresh air, exercise, and good food.

In winter most of the walking has to be done in the forenoon. On account of the shortness of the days there is very little time to walk in the afternoon, and the brisk air makes rapid walking more practicable than in either spring or summer. One peculiarity of winter walking is that if there is snow on the ground the feet are never blistered. The snow acts as a cushion against the ground, and prevents the heating of the feet.

The exhilaration of spirits can be illustrated by one or two cases in my experience. I have walked with a number of unusually solemn men, but, after two or three days of stimulating air, these same men have been guilty of shouting like boys. Certainly if anything can make men shout for joy it is to get on some hilltop from which one can see for miles and miles, and feel the blood course through the veins with a better stimulant than wine.

Once, after the preliminary trip by means of which the muscles had been hardened, a companion was ambitious to see what two old fellows could do. So we started from the Mas-

sachusetts line early in the morning, shaking hands across the line stone, and slept that night by the salt water, having walked across the State of Connecticut in one day, a distance of fifty-five miles. The secret of the exploit was in the fine preparation, and in the fact that our digestion was so good that we were able to assimilate our food. After all, a man is something like a steam-engine; he must have plenty of fuel in order to accomplish work. I do not advise exploits. I begin to feel as an old man expressed himself when on this last-mentioned occasion we stopped for dinner. He was sunning himself on the piazza of his hotel, and, on our presenting ourselves for dinner, was curious to know what two gray-haired men were doing walking. When we told him our ambition, and how much of what we aimed at had been accomplished, to conceal a smile he put his hand to his mouth, and said, "Well, I have heard of boys doing such things, but old men!" It was not necessary for him to finish. We understood the rest of the sentence; but he failed to understand how just such things keep old men young like boys.

It has been asked whether these trips are good for everybody. I say yes, with a reservation. It would be unwise for persons unaccustomed to walking to attempt to walk across the State of Connecticut in one day. Without the preparation which my companion and I had had for that trip, I have no doubt such a long walk would have been attended with bad consequences. As it was, we felt only the better for it.

Few people know how to walk correctly, and therefore walking is not to the great majority a means of recreation or a mode of travel. One hindrance to correct walking is improper footwear. Most persons have neither proper shoes nor proper socks. In consequence of wearing bad shoes from childhood, their feet are distorted. Perhaps not more than one out of four persons uses his toes in walking, and the toes are an important part of the means of locomotion. In walking once with a man of good physique I noticed that he walked entirely from his knees. By this I mean that he put one foot forward, and did not push himself with the toes of his other foot, but leaned forward and pulled the other foot after him. I found that he made no use of his toes, owing to his wearing badly made shoes from childhood.

At the age of twenty-one I was interested in a pamphlet "Where the Shoe Pinches." After reading it I procured lasts made on anatomical principles. Their use has prevented the usual deformity of the foot. Some fourteen years ago, and after I began regular walking, I found even these lasts faulty, and had another pair made. As I progressed in the know-

ledge of walking, I found even the second pair of lasts unsatisfactory. In order to obtain a correct form for my shoes I made plaster casts. In a box large enough to contain both feet I made a partition, and covered the bottom with a layer of putty. Then I put each foot in the putty, thus making an impression. Into the impression I poured plaster-of-Paris. On lasts formed from these models I obtained the best possible shoes.

The modern shoe is made partly for use and partly for show. The part that is for show is the heel. The heel is an unnatural device. It inclines the foot forward, stubbing the toes, and it also brings the weight of the body too far forward, necessitating an unnatural crook in the knees. After twelve years of walking I discarded the heel from walking-shoes, though so far deferring to fashion as to keep it for wear in the cities, and going to the expense of having two pairs of lasts made on the models referred to—one pair for heeled and one for heelless shoes.

INCORRECT FORM OF WALKING-LAST.

If any person interested in having a correct shoe will take the trouble to examine the various lasts on which shoes are made, he will find that they have the form of the last in the figure labeled "incorrect form." Ten chances to one they will be of worse form, being pointed so as to pinch the toes. A correct shoe for walking can never be made on such lasts. They are meant for heeled shoes. If a shoe without a heel is made on this kind of last, the foot will not rest flat, but will turn up at the toes.

By using a correct last, the sole of the foot from heel to toe will rest flat, as nature intended it to do, and the weight of the body will be distributed over the whole surface. In the shoe made on a bad last the weight is brought unevenly on different parts of the foot. In a long walk this uneven distribution of weight makes a great difference in the fatigue of the foot.

A laced shoe is to be preferred to any other.

CORRECT FORM OF WALKING-LAST.

Another improvement which I made was in doing away with the lining of the shoe. Still another improvement was in dispensing with all pegs. Hand-made shoes are generally "lasted" with wooden pegs. When the last is pulled out of the shoe the pegs stick up inside around the edge of the insole like so many nails. The shoemaker cuts them off with a knife, and then rasps them down. After the shoe has been in use some time, and the leather becomes dry from wear, these pegs work up, and are one cause of the blistering of the feet. I found that a shoe could be manufactured without the use of these wooden pegs, so that when the shoe was taken from the last there was nothing to blister the feet, or, in other words, so that the insole could be made perfectly smooth. To obviate the discomfort caused by seams in the shoe, I have each of my shoes made of one large piece of leather, with an additional small piece set in on one side, as shown in the accompanying cut.

DRAWN BY AUGUST WILL.

CORRECT FORM OF WALKING-SHOE.

Another frequent cause of discomfort in walking is the sock. Most socks are manufactured with seams, and are pointed at the toe. These seams on a long day's tramp will cause blisters. If a person who wishes to become a walker will exercise care in the selection of his socks, he can obtain them without seams and square-toed. Woolen socks are to be preferred to cotton ones.

To travel properly, the walker must have two pairs of shoes, one pair made with light uppers and soles, the other pair with heavy uppers, heavy soles, and "bellows" tongue. In addition to the convenience of having shoes adapted to the weather, the change of shoe after a long walk is a great relief.

The next thing to be considered is the knapsack, or pack; for this mode of travel is an independent one, and the traveler carries his own luggage. The lighter the pack, the less labor to carry it. The best pack is made of carriage leather without a single piece of board, or stiffening of any kind. In this pack sufficient change of clothing can be carried for a two weeks' trip, if the trumper takes advantage of the opportunity to have washing done when he stops for the night. The principal part of the lug-

gaze is underwear and socks. In the matter of clothing, novices err on the side of too much rather than too little. For daily wear a flannel shirt is better than any other.

The exercise of walking, even in severe weather, is sufficient to warm the person without extra clothing. I never carry a rubber coat or cape. An umbrella is sufficient protection from the weather at all times, besides furnishing a convenient staff.

There are certain particulars in the care of the person, both on the tramp and after the walk for the day is over, the advantages of which I was long in learning. In the first place, on a long tramp I make it a principle to start out early, never doing more than twenty miles the first day. Walking with novices, I endeavor to begin in the afternoon, if possible, so as to give rest to their weary muscles after only a few hours of exercise. The third day is always the trying one; it seems to take about seventy-two hours to get to the critical point of fatigue. I have never known any one to pass the third day, and keep on walking, without making a successful pedestrian, and every man who has failed in a walk has failed the third day.

It is also one of my principles to rest at least once in eight miles,—in the afternoon once every hour,—and in this rest to take a reclining position. In fact, part of the enjoyment of the trip comes from selecting for a place of rest some outlook where one can find a good view, and enjoy the scenery. Not only is the body rested, but the mind is refreshed as well, while the circulation of the blood is equalized. When the weather is warm, it is well before dinner to obtain a room, and to make a thorough change of clothing. The time taken for this change gives another rest, and also better enables the digestive powers to assimilate the food. This delay sometimes seems a waste of time when one is anxious to reach a particular point, but the beauty of this kind of travel is that one need not be in a hurry. In the evening it is also well to take a complete bath before supper. If the tramp has been a very hard

one, and the person is very much fatigued, it is wise to avoid cold water; if warm water is not to be had, it is better to take a dry rub-down. This regular friction of the skin at least once a day, and, if possible, twice, takes the soreness out of the muscles. It acts as a counter-irritant by drawing the blood to the surface.

In all kinds of exercise the food is what furnishes the power. It is, therefore, of the first importance to keep the digestive organs in good condition. To this end, the walker must be careful not to drink much water on an empty stomach before dinner, or at night before supper. Some young pedestrians, whom I have been unable to convince, have had to learn from hard experience that drinking much water at the close of a tramp deranges the digestive system. If the walker feel very thirsty, and must have something, let him rinse his mouth two or three times, and gargle his throat with cold water. When he goes to the table, he had better content himself with weak tea, and not too much of that. On the walk he can drink with impunity all he wants, but not near the close of the tramp, or just before a meal.

A person can make the most progress, and make it with the greatest comfort, by taking the longest part of the day's walk before noon. After getting into condition to make long distances, if he wishes to walk twenty-five miles in a day, he had better walk fifteen miles before dinner, and ten miles after, rather than reverse the order of the distances. The physical powers are in their best condition in the morning.

After a long experience I have set the limit of sixty miles for the first two and one half days of a long tramp—a limit not to be exceeded except in a case of necessity. For persons beginning to take walks it is wise to set a lower limit. In general, if a walker is in doubt whether he should take a greater or less number of miles for the first three days, let him take the less number. By observing a few precautions at the beginning of a tramp, the whole trip will be made comfortable, and a greater distance can be covered in a given number of days, if the first three days are taken easily.

Eugene Lamb Richards.

DOCTOR AND PRIEST.

NO leech can cure, how great soe'er his wit;
Tissue he cannot heal, nor the bone knit:
Life's secret means his splint and draft supply,
Nature then cures—or bids the patient die.

Wise through thy creed, dream not, presumptuous man,
'T is thine to save that which thou didst not plan:
Serve thou a mightier force than it or thee,
And each soul's self shall that soul's savior be.

Dora Read Goodale.

MAVERICK.

TRAVELING BUTTES is a lone stage-station on the road, largely speaking, from Blackfoot to Boise. I do not know whether the stages take that road now, but ten years ago they did, and the man who kept the stage-house was a person of primitive habits and corresponding appearance named Gilroy.

The stage-house is perhaps half a mile from the foot of the largest butte, one of three which loom on the horizon, and appear to "travel" from you, as you approach them from the plains. A day's ride with the Buttes as a landmark is like a stern chase in that you seem never to gain upon them.

From the stage-house the plain slopes up to the foot of the Big Butte, which rises suddenly in the form of an enormous tepee, as if Gitche Manito, the mighty, had here descended and pitched his tent for a council of the nations.

The country is destitute of water. To say that it is "thirsty" is to mock with vain imagery that dead and mummied land on the borders of the Black Lava. The people at the stage-house had located a precious spring, four miles up, in a cleft near the top of the Big Butte; they piped the water down to the house, and they sold it to travelers on that Jericho road at so much per horse. The man was thrown in, but the man usually drank whisky.

Our guide commented unfavorably on this species of husbandry, which is common enough in the arid West, and as legitimate as selling oats or hay; but he chose to resent it in the case of Gilroy, and to look upon it as an instance of individual and exceptional meanness.

"Any man that will jump God's water in a place like this, and sell it the same as drinks—he'd sell water to his own father in hell!"

This was our guide's opinion of Gilroy. He was equally frank, and much more explicit, in regard to Gilroy's sons. "But," he concluded, with a philosopher's acceptance of existing facts, "it ain't likely that any of that outfit will ever git into trouble, s' long as Maverick is sheriff of Lemhi County."

We were about to ask why, when we drove up to the stage-house, and Maverick himself stepped out, and took our horses.

"What the— infernal has happened to the man?" my companion, Ferris, exclaimed; and

our guide answered indifferently, as if he were speaking of the weather:

"Some Injuns caught him alone in an out-o'-the-way ranch, when he was a lad, and took a notion to play with him. This is what was left of him when they got through. I never see but one worse-looking man," he added, speaking low, as Maverick passed us with the team: "him a bear wiped over the head with its paw. 'T was quicker over with, I expect, but he lived, and *he* looked worse than Maverick."

"Then I hope to the Lord I may never see him!" Ferris ejaculated; and I noticed that he left his dinner untasted, though he had boasted of a hunter's appetite.

We were two college friends on a hunting-trip, but we had not got into the country of game. In two days more we expected to make Hagar's Hole, and I may mention that "hole," in this region, signifies any small, deep valley, well hidden amidst high mountains, where moisture is perennial, and grass abounds. In these pockets of plenty, herds of elk gather and feed as tame as park pets; and other hunted creatures, as wild but less innocent, often find sanctuary here, and cache their stolen stock and other spoil of the road and the range.

We did not forget to put our question concerning Maverick, that unhappy man, in his character of legalized protector of the Gilroy gang. What did our free-spoken guide mean by that insinuation?

We were told that Gilroy, in his rough-handed way, had been as a father to the lad, after the savages wreaked their pleasure on him; and his people being dead or scattered, Maverick had made himself useful in various humble capacities at the stage-house, and had finally become a sort of factotum there and a member of the family. And though perfectly square himself, and much respected on account of his personal courage and singular misfortunes, he could never see the old man's crookedness, nor the more than crookedness of his sons. He was like a son of the house, himself; but most persons agreed that it was not as a brother he felt toward Rose Gilroy. And a tough look-out it was for the girl; for Maverick was one that no man would lightly cross, and in her case he was acting as "general dog around the place," as our guide called it. The young fellows were shy of the house, notwithstanding the attraction it held. It was likely to be Maverick or nobody for Rose.

We did not see Rose Gilroy, but we heard her step in the stage-house kitchen, and her voice, as clear as a lark's, giving orders to the tall, stooping, fair young Swede, who waited on us at table, and did other work of a menial character in that singular establishment.

"How is it the watch-dog allows such a pretty sprig as that around the place?" Ferris questioned, eying our knight of the trencher, who blushed to feel himself remarked.

"He won't stay," our guide pronounced; "they don't none of 'em stay when they're good-lookin'. The old man he's failin' considerable these days,—gettin' kind o' silly,—and the boys are away the heft of the time. Maverick pretty much runs the place. I don't justly blame the critter. He's watched that little Rose grow up from a baby. How's he goin' to quit bein' fond of her now she's a woman? I dare say he'd a heap sooner she'd stayed a little girl. And these yere boys around here they're a triffin' set, not half so able to take care of her as Maverick. He's got the sense and he's got the sand; but there's that awful head on him! I don't blame him much, lookin' the way he does, and feelin' the same as any other man."

We left Traveling Buttes and its cruel little love-story, but we had not gone a mile when a horseman overtook us with a message for Ferris from his new foreman at the ranch, a summons which called him back for a day at the least. Ferris was exceedingly annoyed: a day at the ranch meant four days on the road; but the business was imperative. We held a brief council, and decided that, with Ferris returning, our guide should push on with the animals and camp outfit into a country of grass, and look up a good camping-spot (which might not be the first place he struck) this side of Hagar's Hole. It remained for me to choose between going with the stuff, or staying for a longer look at the phenomenal Black Lava fields at Arco; Arco being another name for desolation on the very edge of that weird stone sea. This was my ostensible reason for choosing to remain at Arco; but I will not say the reflection did not cross me that Arco is only sixteen miles from Traveling Buttes—not an insurmountable distance between geology and a pretty girl, when one is five and twenty, and has not seen a pretty face for a month of Sundays.

Arco, at that time, consisted of the stage-house, a store, and one or two cabins—a poor little seed of civilization dropped by the wayside, between the Black Lava and the hills where Lost River comes down and "sinks" on the edge of the lava. The station is somewhat back from the road, with its face—a very grimy, unwashed countenance—to the lava.

Quaking aspens and mountain birches follow the water, pausing a little way up the gulch behind the house, but the eager grass tracks it all the way till it vanishes; and the dry bed of the stream goes on and spreads in a mass of coarse sand and gravel, beaten flat, flailed by the feet of countless driven sheep that have gathered here. For this road is on the great overland sheep-trail from Oregon eastward—the march of the million mouths, and what the mouths do not devour the feet tramp down.

The staple topic of conversation at Arco was one very common in the far West, when a tenderfoot is of the company. The poorest place can boast of some distinction, and Arco, though hardly on the highroad of fashion and commerce, had frequently been named in print in connection with crime of a highly sensational and picturesque character. Scarcely another fifty miles of stage-road could boast of so many and such successful road-jobs; and although these affairs were of almost biennial occurrence, and might be looked for to come off always within that noted danger-limit, yet it was a fact that the law had never yet laid finger on a man of the gang, nor gained the smallest clue to their hide-out. It was a difficult country around Arco, one that lent itself to secrecy. The road-agents came, and took, and vanished as if the hills were their copartners as well as the receivers of their goods. As for the lava, which was its front dooryard, so to speak, for a hundred miles, the man did not live who could say he had crossed it. What it held, or was capable of hiding, in life or in death, no man knew.

The day after Ferris left me I rode out upon that arrested tide—those silent breakers which for ages have threatened, but never reached, the shore. I tried to fancy it as it must once have been, a sluggish, vitreous flood, filling the great valley, and stiffening as it slowly pushed toward the bases of the hills. It climbed and spread, as dough rises and crawls over the edge of the pan. The Black Lava is always called a sea—that image is inevitable; yet its movement had never in the least the character of water. "This is where hell pops," an old plainsman feelingly described it, and the suggestion is perfect. The colors of the rock are those produced by fire; its texture is that of slag from a furnace. One sees how the lava hardened into a crust, which cracked and sank in places, mingling its tumbled edges with the creeping flood not cooled beneath. After all movement had ceased, and the mass was still, time began upon its tortured configurations, crumbled and wore and broke, and sifted a little earth here and there, and sealed the burnt rock with fairy print of lichens, serpent-green and orange and rust-red. The spring rains left shallow pools

which the summer dried. A few dim trails wander a little way and give out, like the water.

For a hundred miles to the Snake River, this Plutonian gulf obliterates the land—holds it against occupation or travel. The shoes of a marching army would be cut from their feet before they had gone a dozen miles across it; horses would have no feet left; and water would have to be packed as on an ocean, or a desert, cruise.

I rode over places where the rock rang beneath my horse's hoofs like the iron cover of a manhole. I followed the hollow ridges that mounted often forty feet above my head, but always with that gruesome effect of thickening movement—that sluggish, atomic crawl; and I thought how one man, pursuing another into this frozen hell, might lose himself but never find the object of his quest. If he took the wrong furrow, he could not cross from one blind gut into another, nor hope to meet the fugitive at any future turning.

I don't know why the fancy of a flight and pursuit should so have haunted me in connection with the Black Lava; I suppose it must have been the desperate and lawless character of our conversation at the stage-house.

I fell completely under the spell of that skeleton flood. I watched the sun sink, as it sinks at sea, beyond its utmost ragged ridges; I sat on the borders of it, and stared across it in the gray moonlight; I rode out upon it when the Buttes, in their delusive nearness, were as blue as the gates of amethyst, and the morning was as fair as one great pearl: but no peace or radiance of heaven or earth could change its aspect more than that of a mound of skulls. When I began to dream about it, I thought I must be getting morbid. This is worse than Gilroy's, I said; and I promised myself I would ride up there next day and see if by chance one might get a peep at the Rose that all were praising, but none dared put forth a hand to pluck. Was it indeed so hard a case for the Rose? There are women who can love a man for the perils he has passed. Alas, Maverick! could any one get used to a face like that?

Here, surely, was the story of Beauty and her poor Beast humbly awaiting, in the mask of a brutish deformity, the recognition of Love pure enough to divine the soul beneath, and unselfish enough to deliver it. Was there such love as that at Gilroy's? However, I did not make that ride.

It was the fourth night of clear, desert moonlight since Ferris had left me: I was sleepless, and so I heard the first faint throb of a horse's feet approaching from the east, coming on at a great pace, and making the turn to the stage-house. I looked out, and on the trodden space

in front I saw Maverick dismounting from a badly blown horse.

"Halloo! what's up?" I called from the open window of my bedroom on the ground-floor.

"Did two men pass here on horseback since dark?"

"Yes," I said; "about twelve o'clock: a tall man and a little short fellow."

"Did they stop to water?"

"No, they did not; and they seemed in such a tearing hurry that I watched them down the road—"

"I am after those men, and I want a fresh horse," he cut in. "Call up somebody quick!"

"Shall you take one of the boys along?" I inquired, with half an eye to myself, after I had obeyed his command.

He shook his head. "Only one horse here that's good for anything: I want that myself."

"There is my horse," I suggested; "but I'd rather be the one who rides her. She belongs to a friend."

"Take her, and come on, then, but understand—this ain't a Sunday-school picnic."

"I'm with you, if you'll have me."

"I'd sooner have your horse," he remarked, shifting the quid of tobacco in his cheek.

"You can't have her without me, unless you steal her," I said.

"Git your gun, then, and shove some grub into your pockets: I can't wait for nobody."

He swung himself into the saddle.

"What road do you take?"

"There ain't but one," he shouted, and pointed straight ahead.

I overtook him easily within the hour; he was saving his horse, for this was his last chance to change until Champagne Station, fifty miles away.

He gave me rather a cynical smile of recognition as I ranged alongside, as if to say, "You'll probably get enough of this before we are through." The horses settled down to their work, and they "humped themselves," as Maverick put it, in the cool hours before sunrise.

At daybreak his awful face struck me all afresh, as inscrutable in its strange distortion as some stone god in the desert from whose graven hideousness a thousand years of mornings have silently drawn the veil.

"What do you want those fellows for?" I asked, as we rode. I had taken for granted that we were hunting suspects of the road-agent persuasion.

"I want 'em on general principles," he answered shortly.

"Do you think you know them?"

"I think they'll know me. All depends on how they act when we get within range. If they

don't pay no attention to us, we 'll send a shot across their bows. But more likely they 'll speak first."

He was very gloomy, and would keep silence for an hour at a time. Once he turned on me as with a sudden misgiving.

"See here, don't you git excited; and whatever happens, don't you meddle with the little one. If the big fellow cuts up rough, he 'll take his chances, but you leave the little one to me. I want him—I want him for State's evidence," he finished hoarsely.

"The little one must be the Benjamin of the family," I thought—"one of the bad young Gilroys, whose time has come at last; and Sheriff Maverick finds his duty hard."

I could not say whether I really wished the men to be overtaken, but the spirit of the chase had undoubtedly entered into my blood. I felt as most men do, who are not saints or cowards, when such work as this is to be done. But I knew I had no business to be along. It was one thing for Maverick, but the part of an amateur in a man-hunt is not one to boast of.

The sun was now high, and the fresh tracks ahead of us were plain in the dust. Once they left the road and strayed off into the lava, incomprehensibly to me; but Maverick understood, and pressed forward. "We 'll strike them again further on. D— fool!" he muttered, and I observed that he alluded but to one, "huntin' water-holes in the lava in the tail-end of August!"

They could not have found water, for at Belgian Flat they had stopped and dug for it in the gravel, where a little stream in freshest time comes down the gulch from the snow-fields higher up, and sinks, as at Arco, on the lip of the lava. They had dug, and found it, and saved us the trouble, as Maverick remarked.

Considerable water had gathered since the flight had paused here and lost precious time. We drank our fill, refreshed our horses, and shifted the saddle-girths; and I managed to stow away my lunch during the next mile or so, after offering to share it with Maverick, who refused it as if the notion of food made him sick. He had considerable whisky aboard, but he was, I judged, one of those men on whom drink has little effect; else some counter-flame of excitement was fighting it in his blood.

I looked for the development of the personal complication whenever we should come up with the chase, for the man's eye burned, and had his branded countenance been capable of any expression that was not cruelly travestied, he would have looked the impersonation of wild justice.

It was now high noon, and our horses were beginning to feel the steady work; yet we had

not ridden as they brought the good news from Ghent: that is the pace of a great lyric; but it's not the pace at which justice, or even vengeance, travels in the far West. Even the furies take it coolly when they pursue a man over these roads, and on these poor brutes of horses, in fifty-mile stages, with drought thrown in.

Maverick had had no mercy on the pony that brought him sixteen miles; but this piece of horse-flesh he now bestrode must last him through at least to Champagne Station, should we not overhaul our men before. He knew well when to press and when to spare the pace, a species of purely practical consideration which seemed habitual with him; he rode like an automaton, his baleful face borne straight before him—the Gorgon's head.

Beyond Belgian Flat—how far beyond I do not remember, for I was beginning to feel the work, too, and the country looked all alike to me as we made it, mile by mile—the road follows close along by the lava, but the hills recede, and a little trail cuts across, meeting the road again at Deadman's Flat. Here we could not trust to the track, which from the nature of the ground was indistinct. So we divided our forces, Maverick taking the trail,—which I was quite willing he should do, for it had a look of most sinister invitation,—while I continued by the longer road. Our little discussion, or some atmospheric change,—some breath of coolness from the hills,—had brought me up out of my stupor of weariness. I began to feel both alert and nervous; my heart was beating fast. The still sunshine lay all around us, but where Maverick's white horse was climbing, the shadows were turning eastward, and the deep gulches, with their patches of aspen, were purple instead of brown. The aspens were left shaking where he broke through them and passed out of sight.

I kept on at a good pace, and about three o'clock I, being then as much as half a mile away, saw the spot which I knew must be Deadman's Flat; and there were our men, the tall one and his boyish mate, standing quietly by their horses in broad sunlight, as if there were no one within a hundred miles. Their horses had drunk, and were cropping the thin grass, which had set its tooth in the gravel where, as at the other places, a living stream had perished. I spurred forward, with my heart thumping, but before they saw me I saw Maverick coming down the little gulch; and from the way he came I knew that he had seen them.

The scene was awful in its treacherous peacefulness. Their shadows slept on the broad bed of sunlight, and the gulch was as cool and still as a lady's chamber. The great dead desert received the silence like a secret.

Tenderfoot as I was, I knew quite well what must happen now ; yet I was not prepared — could not realize it — even when the tall one put his hand quickly behind him and stepped ahead of his horse. There was the flash of his pistol, and the loud crack echoing in the hill ; a second shot, and then Maverick replied deliberately, and the tall one was down, with his face in the grass.

I heard a scream that sounded strangely like a woman's ; but there were only the three, the little one, acting wildly, and Maverick bending over him who lay with his face in the grass. I saw him turn the body over, and the little fellow seemed to protest, and to try to push him away. I thought it strange he made no more of a fight, but I was not near enough to hear what those two said to each other.

Still, the tragedy did not come home to me. It was all like a scene, and I was without feeling in it except for that nervous trembling which I could not control.

Maverick stood up at length, and came slowly toward me, wiping his face. He kept his hat in his hand, and, looking down at it, said huskily :

"I gave that man his life when I found him las' spring runnin' loose like a wild thing in the mountings, and now I've took it ; 'n' God above knows I had no grudge ag'in' him, if he had stayed in his place. But he would have it so."

"Maverick, I saw it all, and I can swear it was self-defense."

His face drew into the tortured grimace which was his smile. "This here will never come before a jury," he said. "It's a family matter. Did ye see how he acted ? Steppin' up to me like he was a first-class shot, or else a fool. He ain't nary one ; he's a poor silly tool, the whip-hand of a girl that's boltin' from her friends like they was her mortal enemies. Go and take a look at him ; then maybe you 'll understand."

He paused, and uttered the name of Jesus Christ, but not as such men often use it, with an inconsequence dreadful to hear ; he was not idly swearing, but calling that name to witness solemnly in a case that would never come before a jury.

I began to understand.

"Is it — is the girl —"

"Yes ; it's our poor little Rose — that's the little one, in the gray hat. She 'll give herself away if I don't. She don't care for nothin' nor nobody. She was runnin' away with that fellow — that dish-washin' Swede what I found in the mountingseatin' roots like a ground-hog, with the ends of his feet froze off. Now you know all I know — and more 'n she knows, for she thinks she was fond of him. She wa' n't, never — for I watched 'em, and I know. She

was crazy to git away, and she took him for the chance."

His excitement passed, and we sat apart and watched the pair at a distance. She — the little one — sat as passively by her dead as Maverick pondering his cruel deed ; but with both it was a hopeless quiet.

"Come," he said at length, "I've got to bury him. You look after her, and keep her with you till I git through. I 'm givin' you the hardest part," he added wistfully, as if he fully realized how he had cut himself off from all such duties, henceforth, to the girl he was consigning to a stranger's care.

I told him I thought that the funeral had more need of me than the mourner, and I shrank from intruding myself.

"I dassent leave her by herself — see ? I don't know what notion she may take next, and she won't let me come within a rope's len'th of her."

I will not go over again that miserable hour in the willows, where I made her stay with me, out of sight of what Maverick was doing. Ours were the tender mercies of the wicked, I fear ; but she must have felt that pity at least was near her, if not help. I will not say that her youth and distressful loveliness did not help my perception of a sweet life wasted, gone utterly astray, which might have brought God's blessing into some man's home — perhaps Maverick's, had he not been so hardly dealt with. She was not of that great disposition of heart which can love best that which has sorest need of love ; but she was all woman, and helpless and distraught with her tangle of grief and despair, the nature of which I could only half comprehend.

We sat there by the sunken stream, on the hot gravel where the sun had lain, the willows sifting their inconstant shadows over us ; and I thought how other things as precious as "God's water" go astray on the Jericho road, or are captured and sold for a price, while dry hearts ache with the thirst that asks a "draught divine."

The man's felt hat which she wore pulled down over her face was pinned to the coil of braids ; this had slipped from the crown of her head. The hat was no longer even a protection ; she cast it off, and the blond braids, which had not been smoothed for a day and a night, fell like ropes down her back. The sun had burned her cheeks and neck to a clear crimson ; her blue eyes were as wild with weeping as a child's. She was a rose, but a rose that had been trampled in the dust ; and her prayer was to be left there, rather than that we should take her home.

I suppose I must have had some influence over her, for she allowed me to help her to arrange her forlorn disguise, and put her on her

horse, which was more than could have been expected from the way she received me. And so, about four o'clock, we started back.

There was a scene when we headed the horses to the west; she protesting with wild sobs that she would not, could not, go home, that she would rather die, that we should never get her back alive, and so on. Maverick stood aside bitterly, and left her to me, and I was aware of a grotesque touch of jealousy — which, after all, was perhaps natural — in his dour face whenever he looked back at us. He kept some distance ahead, and waited for us when we fell too far in the rear.

This would happen when from time to time her situation seemed to overpower her, and she would stop in the road, and wring her hands, and try to throw herself out of the saddle, and pray me to let her go.

"Go where?" I would ask. "Where do you wish to go? Have you any plan, or suggestion, that I could help you to carry out?" But I said it only to show her how hopeless her resistance was. This she would own piteously, and say: "Nobody can help me. There ain't nowhere for me to go. But I can't go back. You won't let him make me, will you?"

"Why cannot you go back to your father and your brothers?"

This would usually silence her, and, setting her teeth upon her trouble, she would ride on, while I reproached myself, I knew not why.

After one of these struggles, when she had given in to the force of circumstances, still unconsenting and rebellious, Maverick fell back, and ranged his horse on her other side.

"I know partly what's troubling you, and I'd rid you of that part quick enough," he said, with a kind of dogged patience in his hard voice; "but you can't get on there without me. You know that, don't you? You don't blame me for staying?"

"I don't blame you for anything but what you've done to-day. You've broke my heart, and ruined me, and took away my last chance, and I don't care what becomes of me, so I don't have to go back."

"You don't have to any more than you have to live. Dyin's a good deal easier, but we can't always die when we want to. Suppose I found a little lost child on the road, and it cried to go home, and I did n't know where 'home' was, would I leave it there just because it cried and hung back? I'd take you to a better home if I knew of one; but I don't. And there's the old man. I suppose we could get some doctor to certify that he's out of his mind, and get him sent up to Blackfoot; but I guess we'd have to buy the doctor first."

"Oh, hush, do, and leave me alone," she said.

Maverick dug his spurs into his horse, and plunged ahead.

"There," she cried, "now you know part of it; but it's the least part — the least, the least! Poor father, he's awful queer. He don't more than half the time know who I am," she whispered. "But it ain't him I'm running away from. It's myself — my own life."

"What is it — can't you tell me?"

She shook her head, but she kept on telling, as if she were talking to herself.

"Father he's like I told you, and the boys — oh, that's worse! I can't get a decent woman to come there and live, and the women at Arco won't speak to me because I'm livin' there alone. They say — they think I ought to get married — to Maverick or somebody. I'll die first! I *will* die, if there's any way to."

This may not sound like tragedy as I tell it, but I think it was tragedy to her. I tried to persuade her that it must be her imagination about the women at Arco; or, if some of them did talk, — as indeed I myself had heard, to my shame and disgust, — I told her I had never known that place where there was not one woman, at least, who could understand and help another in her trouble."

"I don't know of any," she said simply.

There was no more to do but ride on, feeling like her executioner; but

Ride hooly, ride hooly, now, gentlemen,
Ride hooly now wi' me,

came into my mind; and no man ever kept beside a "wearier burd," on a sadder journey.

At dusk we came to Belgian Flat, and here Maverick, dismounting, mixed a little whisky in his flask with water which he dipped from the pool. She must have recalled who dug the well, and with whom she had drunk in the morning. He held it to her lips. She rejected it with a strong shudder of disgust.

"Drink it!" he commanded. "You'll kill yourself, carryin' on like this." He pressed it on her, but she turned away her face like a sick and rebellious child.

"Maybe she'd drink it for you," said Maverick, with bitter patience, handing me the cup.

"Will you?" I asked her gently. She shook her head, but at the same time she let me take her hand, and put it down from her face, and I held the cup to her lips. She drank it, every drop. It made her deathly sick, and I took her off her horse, and made a pillow of my coat, so that she could lie down. In ten minutes she was asleep. Maverick covered her with his coat after she was no longer conscious.

We built a fire on the edge of the lava, for we were both chilled and both miserable, each for his own part in that day's work.

The flat is a little cup-shaped valley formed by high hills, like dark walls, shutting it in. The lava creeps up to it in front.

We hovered over the fire, and Maverick fed it, savagely, in silence. He did not recognize my presence by a word — not so much as if I had been a strange dog. I relieved him of it after a while, and went out a little way on the lava. At first all was blackness after the strong glare of the fire; but gradually the desolation took shape, and I stumbled about in it, with my shadow mocking me in derisive beckonings, or contracting close to my heels, as the red flames towered or fell. I stayed out there till I was chilled to the bone, and then went back defiantly. Maverick sat as if he had not moved, his elbows on his knees, his face in his hands. I wondered if he were thinking of that other sleeper under the birches of Deadman's Gulch, victim of an unhappy girl's revolt. Had she loved him. Had she deceived him as well as herself? It seemed to me they were all like children who had lost their way home.

By midnight the moon had risen high enough to look at us coldly over the tops of the great hills. Their shadows crept forth upon the lava. The fire had died down. Maverick rose, and scattered the winking brands with his boot-heel.

"We must pull out," he said. "I'll saddle up, if you will—" The hoarseness in his voice choked him, and he nodded toward the sleeper.

I dreaded to waken the poor Rose. She was very meek and quiet after the brief respite sleep had given her. She sat quite still, and watched me while I shook the sand from my coat, put it on, and buttoned it to the chin, and drew my hat down more firmly. There was a kind of magnetism in her gaze; I felt it creep over me like the touch of a soft hand.

When the horse was ready, Maverick brought it, and left it standing near, and went back to his own, without looking toward us.

"Come, you poor, tired little girl," I said, holding out my hand. She could not find her way at first in the uncertain light, and she seemed half asleep still, so I kept her hand in mine, and guided her to her horse. "Now, once more up," I encouraged her; and suddenly she was clinging to me, and whispering passionately:

"Can't you take me somewhere? Where are those women that you know?" she cried, shaking from head to foot.

"Dear little soul, all the women I know are two thousand miles away," I answered.

"But can't you take me *somewhere*? There must be some place. I know you would be good to me; and you could go away afterward, and I would n't trouble you any more."

"My child, there is not a place under the

heavens where I could take you. You must go on like a brave girl, and trust to your friends. Keep up your heart, and the way will open. God will not forget you," I said, and may he forgive me for talking cant to that poor soul in her bitter extremity.

She stood perfectly still one moment while I held her by the hands. I think she could have heard my heart beat; but there was nothing I could do. Even now I wake in the night, and wonder if there was any way but one.

"Yes; the way will open," she said very low. She cast off my hands, and in a second she was in the saddle, and off up the road, riding for her life. And we two men knew no better than to follow her.

I knew better, or I think, now, that I did. I told Maverick we had pushed her far enough. I begged him to hold up and at least not to let her see us on her track. But he never spoke a word, but kept straight on, as if possessed. I don't think he knew what he was doing. At least there was only one thing he was capable of doing — following that girl till he dropped.

Two miles beyond the Flat there is another turn, where the shoulder of a hill comes down and crowds the road, which passes out of sight. She saw us hard upon her as she reached this bend. Maverick was ahead. Her horse was doing all he could, but it was plain he could not do much more. She looked back, and flung out her hand in the man's sleeve that half covered it. She gave a little whimpering cry, the most dreadful sound I ever heard from any hunted thing.

We made the turn after her, and there lay the road white in the moonlight, and as bare as my hand. She had escaped us.

We pulled up the horses, and listened. Not a sound came from the hills or the dark gulches, where the wind was stirring the quaking aspens; the lonesome hush-sh made the silence deeper. But we heard a horse's step go clink, clinking — a loose, uncertain step wandering away in the lava.

"Look! look there! My God!" groaned Maverick.

There was her horse limping along one of the hollow ridges, but the saddle was empty.

"She has taken to the lava!"

I had no need to be told what that meant, but if I had needed, I learned what it meant before the night was through. I think that if I were a poet, I could add another "dolorous circle" to the wailing-place for lost souls.

But she had found a way. Somewhere in that stony-hearted wilderness she is at rest. We shall see her again when the sea — the stupid, cruel sea that crawls upon the land — gives up its dead.

Mary Hallock Foote.

“HOME AG’IN.”

I ‘M a-feelin’ ruther sad,
Fer a father proud and glad
As *I* am — my only child
Home, and all so rickonciled!
Feel so *strange*-like, and don’t know
What the mischief ails me so!
‘Stid o’ *bad*, I ort to be
Feelin’ good *pertickerly* —
Yes, and *extr*y thankful, too,
‘Cause my nearest kith and kin,
My Elviry’s schoolin’ ’s through,
And I got her home ag’in —
Home ag’in with me!

Same as ef her mother ‘d been
Livin’, I have done my best
By the girl, and watchfulest:
Nussed her — keeful’ as I could —
From a baby, day and night, —
Drawin’ on the neighborhood
And the women-folks as light
As needssesity ‘u’d ‘low —
‘Cept in “teethin’,” oncet, and fight
Through black measles. Don’t know now
How we ever saved the child!
Doc *he* ‘d give her up, and said,
As I stood there by the bed
Sort o’ foolin’ with her hair
On the hot, wet piller there,
“Wuz no use!” and at them air
Very words she waked and *smiled* —
Yes, and *knowed* me. And that ‘s where
I broke down, and simply jes
Bellered like a boy — I guess! —
Women *claimed* I did, but I
Allus helt I did n’t *cry*,
But wuz *laughin’*, — and I *wuz*, —
Men don’t cry like *women* does:
Well, right then and there I felt
‘T ‘uz her *mother’s* doin’s, and,
Jes like to myse’f, I knelt
Whisperin’, “I understand.”
So I ‘ve raised her, you might say,
Stric’ly in the narrer way
‘At her mother walked therein —
Not so quite *religiously*,
Yit still *strivin’*-like to do
Ever’tthing a father *could*

Do he knowed the *mother* would
Ef she ‘d lived — And now all ‘s through,
And I got her home ag’in —
Home ag’in with me!

And I been so lonesome, too,
Here o’ *late*, especially, —
“Old Aunt Abagail,” you know,
Ain’t no company, — and so
Jes the hired hand, you see —
Jonas — like a relative
More — sence he come here to live
With us nigh ten year’ ago.
Still *he* don’t count much, you know,
In the way o’ company —
Lonesome, ‘peared-like, ‘most as me!
So, as I say, I been so
Special lonesome-like and blue,
With Elviry, like she ‘s been,
‘Way so much, last two er three
Year’ — But *now* she ‘s home ag’in —
Home ag’in with me!

Driv in fer her yisterday,
And we cut up all the way! —
Yes, and *sung*! — tell, blame it! I
Keyed *my* voice up ‘bout as high
As when — days ‘at I wuz young —
“Buckwheat-notes” wuz all they sung.
Jonas bantered me, and ‘greed
To sing one ‘at townfolks sing —
Down at Split Stump er High-Low —
Some new “ballet,” said, ‘at he ‘d
Learnt — about “‘ne Grapevine Swing.”
And when *he* quit, *I* begun
To chune up my voice and run
Through the what ‘s-called “scales” and “do-
Sol-mi-fa’s” I ust to know —
Then let loose old favorite one,
“Hunters o’ Kentucky!” *My*!
Tell I thought the boy would *die*!
And we *both* laughed — Yes, and still
Heerd *more* laughin’ top the hill;
Fer we ‘d missed Elviry’s train,
And she ‘d lit out ‘crosst the fields,
Dewdrops dancin’ at her heels,
And cut on up Smoots’s lane
So ‘s to meet us. And there in

Shadder o' the chinkypin,
 With a danglin' dogwood-bough
 Bloomin' 'bove her — see her now!
 Sunshine sort o' flickerin' down
 And a kind o' lightnin' all
 Round her new red parasol,
 Tryin' to git at her! — like
 / jumped out, and showed 'em how —
 Yes, and jes the place to *strike*
 That air mouth o' hern — as sweet
 As the blossoms breshed her brow
 Er the sweet-williams round her feet!
 White and blushy, too, as she
 "Howdied" up to Jonas, and
 Jieuked her head, and waved her hand.
 "Hey!" says I, as she bounced in
 The spring-wagon, reachin' back
 To give *me* a lift, "Whoop-ee!"
 I says-ee, "You 're home ag'in —
 Home ag'in with me!"

Lord! how wild she wuz, and glad,
 Gittin' home! and things she had
 To inquire about, and talk —
 Plowin', plantin', and the stock.
 News o' neighborhood, and how
 Wuz the Deem girls doin' now,
 Sence that air young chicken-hawk
 They was "tamin'" soared away
 With their settin'-hen, one day? —
 (Said she 'd got Mame's postal-card
 'Bout it, very day 'at she
 Started home from Bethany.)
 How wuz *produce* — eggs, and lard?
 Er wuz stores still claimin' "hard
 Times," as usual? And, says she,
 Troubled-like, "How 's Deedie — say?
 Sence pore child e-loped away
 And got back, and goin' to 'ply
 Fer school-liscence by and by."
And where 's 'Lijy workin' at?
 And how 's "Aunt" and "Uncle Jake?"
 How wuz "Old Maje" — and the cat?
 And wuz Marthy's baby fat
 As his "humpty-dumpty" ma?
 "Sweetest thing she ever saw!
 Must run 'crosst and see her, too,
 Soon as she turned in and got
 Supper fer us — smokin' hot —
 And the 'dishes' all wuz through."
 And sich supper! W'y, I set
 There and et, and et, and *et*! —
 Jes et *on*, tell Jonas he
 Pushed his chair back, laughed, and says,

"I could walk *his* log!" and we
All laughed then, tell 'Viry she
 Lit the lamp — and I give in!
 Riz and kissed her: "Heaven bless
 You!" says I — "*you 're* home ag'in —
 Same old dimple in your chin,
 Same white apron," I says-ee,
 "Same sweet girl, and good to see
 As your *mother* ust to be,
 And I got you home ag'in —
 Home ag'in with me!"

I turns then to go on by her
 Through the door — and see her eyes
 Both wuz swimmin', and she tries
 To say somepin' — can't — and so
 Grabs and hugs, and lets me go.
 Noticed Auntie 'd made a fire
 In the settin'-room and gone
 Back where her p'serves wuz on
 B'ilin' in the kitchen. I
 Went out on the porch and set
Thinkin'-like. And by and by
 Heerd Elviry, soft and low,
 At the organ, kind o' go
 A mi-anderin' up and down
 With her fingers 'mongst the keys —
 "Vacant Chair" and "Old Camp Groun'."
 Dusk wuz moist-like, with a breeze
 Lazin' round the locust-trees —
 Heerd the hosses champin', and
 Jonas feedin', and the hogs —
 Yes, and katyids and frogs —
 And a tree-toad, som'er's. Heerd
 Also whipperwills. My land!
 All so mournful ever'where —
Them out here, and *her* in there;
 'Most like 'tendin' services!
 Anyway, I must 'a' jes
 Kind o' drapped asleep, I guess;
 'Cause when *Jonas* must 'a' passed
 Me, a-comin' in, I knowed
 Nothin' of it — yit it seemed
 Sort o' like I kind o' *dreamed*
 'Bout him, too, a-slippin' in,
 And a-watchin' back to see
 Ef I *wuz* asleep, and then
 Passin' in where 'Viry wuz;
 And where I *declare* it *does*
 'Pear to me I heerd him say,
 Wild and glad and whisperin' —
 'Peared-like heerd him say, says-ee,
 "Ah! I got you home ag'in —
 Home ag'in with me!"

James Whitcomb Riley.

"HOME AG'IN WITH ME!"

THE COLEMAN COLLECTION OF ANTIQUE GLASS.

FIGURE 1.

THE world of the Mediterranean Sea, eighteen centuries ago, was rich in works of art and decoration beyond our experience, and beyond our flights of imagination. It is an effort which few of us can make with success to picture the wealth in beautiful art of a great city of the empire. The marbles have been burned to lime, the bronzes have been melted into *gros sous* or their equivalent, the stuccoes have crumbled from the walls, the paintings have gone down with their walls to ruin, the shattered pottery has been used in filling and grading and building, and its remaining fragments are of no value except for an inscription or an impressed name—mere potsherds, with now and then a scrap of antiquarian interest. The shattered glass alone contains in its very substance such beauty, and such completeness even in ruin, that its fragments are treasured up and studied. These broken bits point to a general use of vessels of decorative glass, used as we use porcelain for the finer vessels of table and toilet, and also a great abundance of objects of pure ornament, of wall-linings and floor-coverings, made of the same splendid material. No other substance is like that—beautiful in itself, in its very essence. Fragments of glass have often the

FIGURE 2.

value that fragments of pottery sometimes have—the partial figure, the incomplete pattern on the surface; and they have also what no pottery and no other artificial substance has—the beauty we generally think of as peculiar to natural stones, to agates, and to jaspers. As a collector fills his cabinet with pieces of precious and semi-precious stones, with here and there a piece which has, as it happens, a head or a piece of a head carved upon it, so the enthusiastic vitreologist collects glass as glass, loving its substance and its surface, its color and its texture, its translucency and its opacity, its set patterns and its vague cloudings; here and there a stamped or a wheel-ground pattern adds its own attractiveness, but the glass itself is the thing! Precious and beautiful is glass, even in fragments.

FIGURE 4.

Glass vessels of the Renaissance are certainly more picturesque and varied in form than those of Roman times, but in this peculiar and appropriate charm of colors and patterns in its substance the ancient glass stands first, and that without comparison. The ancient glass is far richer, also, in the patterns and figures engraved and ground upon the surface. In other words, the sixteenth-century man looked upon glass as a plastic material, a delightful thing to manipulate hot, and to see keeping its spirited outline, its graceful shape, when cold; but to the man of the second century glass was a material like onyx, in layers of contrasting color, or a material like moss-agate, with lovely patterns of color in its very substance—patterns to

FIGURE 3.

be revealed to sight by grinding down and polishing the surface. Pliny says, indeed, that clear glass was preferred; but that is merely the longing of the amateur for the unattained; very beautiful, nearly transparent, glass has come down to us from Roman times, but that does not prevent the colored sorts from being much the more carefully treated as decoration. The earlier workman had a graver taste in shapes than his successor of the sixteenth century; he sought simpler outlines and more rounded forms, and, as comforted with his love of the colored material, more substance and thicker walls to his vases. And therefore a collection of fragments of glass of the Roman centuries has a value which no future gathering of scraps of Venetian, French, or Bohemian can approach.

FIGURE 6.

The collection made by Mr. C. C. Coleman, an American artist living in Rome, explains all this. It includes specimens of that material in which scrolls of thin glass, like little pieces of paper rolled up and allowed to open again partly, are imbedded in the solid transparent mass. This is evidently of the very same workmanship as the onyx glass which there will be need to mention below, but with the thin sheets of whitish opaque material in small scraps, and rolled up, instead of lying flat and of the full size of the piece. This particular make has been copied at the modern Murano factories, but at heavy cost, for a saucer of it may cost five hundred *lire* in Venice. There are specimens of that glass in which are imbedded drops, as it were

FIGURE 5.

this is thickly set with flower-like figures of brilliant color, sometimes arranged in formal patterns, sometimes freely sprinkled through the solid substance. There are the lace-glasses, the many sorts of *vitro di trina*, as the modern makers call it, with thin white threads permeating the transparent paste. There are the solid-color glasses, opaque and hardly vitreous in their appearance, resembling *rosso antico*, or plain red jasper, so closely that one can hardly believe them to be glass. These pieces are sometimes used in free mosaic, inlaid one color in another, but not fused together; and sometimes they are set in metal like the blue glass of the Mykenæan epoch. There is black and dark-brown glass, with a strong vitreous luster like obsidian. There are the tiles and slabs of what might be called a solid and a homogeneous mosaic; mosaics of set pattern, made up of squares and polygons, and also those made of

FIGURE 9.

FIGURE 7.

FIGURE 8.

— round-headed, thin-tailed little entities, by hundreds and thousands. These in bright green, and fixed in a solid mass of a darker green, come struggling into light out of the half-inch-deep abyss, producing what might be called a mottled appearance, but for the vastly richer effect produced by the depth, and the vanishing into it, or emerging from it, of the worm-like little units. There are the various kinds of *millefiori* glass, as it is called at Venice, where the ancient patterns have been copied for three centuries;

this is thickly set with flower-like figures of brilliant color, sometimes arranged in formal patterns, sometimes freely sprinkled through the solid substance. There are the lace-glasses, the many sorts of *vitro di trina*, as the modern makers call it, with thin white threads permeating the transparent paste. There are the solid-color glasses, opaque and hardly vitreous in their appearance, resembling *rosso antico*, or plain red jasper, so closely that one can hardly believe them to be glass. These pieces are sometimes used in free mosaic, inlaid one color in another, but not fused together; and sometimes they are set in metal like the blue glass of the Mykenæan epoch. There is black and dark-brown glass, with a strong vitreous luster like obsidian. There are the tiles and slabs of what might be called a solid and a homogeneous mosaic; mosaics of set pattern, made up of squares and polygons, and also those made of foliated and lobed, quatrefoiled and cinquefoiled, flower-like units of ornament, looking very much like a freer and simpler Florentine mosaic, but compacted into the fused body of the glass. Figure 1 is a specimen of this class. Figure 2 is a single irregular flower, such as might be incrustated in marble or in stucco. Figure 3 is an unusually beautiful piece of much more delicate work, a mosaic of minute tesserae, all made solid by the unifying heat. Such work as

FIGURE 10.

this, in patterns of much larger scale and bolder design, was used for wall-linings as we moderns use ceramic tiles. Very many fragments of this kind of glass are included in the Coleman collection; it is a beautiful, a most effective, wall-decoration, which it behooves the moderns to restore to its place; for nothing can make it mechanical and stiff in appearance; machine-work is not applicable to colored-body glass. Then there are, of course, the more common patterns of spiral and wavy zigzag; such glass as the *amphorini* and the little jugs with spouts are made of, which are not rare in collections; glass that looks as if its many-colored constituents had been pulled out by an iron rake, much as "comb-marbling" is done on paper and the edges of books. This material is not so compact; the colored strips and strings of half-melted glass have not been able to coalesce so firmly. It looks as if it would break apart along the lines of separation of the colors, with comparative ease. And there are the many varieties of glass where the different colored masses are whirled and twisted together more loosely, more freely; much as some of the very recent Louis Tiffany glass vessels are composed.

But there is another kind of artistical glass in which this collection is rich—the glass of sculptured surface, pressed while hot, or ground or engraved when cold. Wall-tiles were made in this way, exquisite bas-reliefs, having indeed the peculiar look of the mold-formed surface rather than that which is carved by the tool, but hardly the worse for that. Still more delicate are the medallions stamped upon vessels, and those made separate for mounting, as jewels. Figure 4 is a Gorgon's head impressed with a die in the hot glass. Figure 5 is a profile of a youthful Bacchus made in the same way, an exquisite work of art. Figure 6 is a head in fine preservation, peculiar in the very modern treatment of expression. Figure 7 is a centaur, a strangely modeled horse-body, growing small where its equine character needs a greater girth, all to meet the human dimensions more readily. Figure 8 is a relief of Christian inspiration, apparently a rather barbarous piece of late Roman work. Such pieces as this are found in the catacombs near Rome, and in the south of Italy; they are nearly always the round bottoms of bowls or dishes which have been broken. Figure 9 is a bit of semi-architectural detail, an

FIGURE 11.

FIGURE 12.

FIGURE 13.

FIGURE 14.

FIGURE 15.

admirably designed sculptured ogee molding. All these are pressed or molded in the hot glass, and they show perfectly what extraordinary effects we might produce in this way for the decoration of buildings, within and without, at low cost.

Carved glass, ground, or "cut," by swiftly revolving wheels, and finished by tools such as are used by the gem-engraver, were a speciality of the artists of Roman times. Everybody has heard of the Portland vase in the British Museum—an amphora about ten inches high made originally of glass in two layers. The outer shell of opaque white glass has all been ground away except where the design of human figures and trees and rocks is left, a perfect cameo on a very large scale. There is an amphora in the Naples Museum as marvelous in workmanship, and probably more beautiful, than the British Museum vase: that piece is about thirteen inches high, also of blue body and white reliefs—a most elaborate composition. "Cameo glass" of very recent times is an imitation of such work, and is more deficient in artistic design than in workmanship. Fragments of a vase of this ware are included in the Coleman collection; a dancing faun with cymbals is preserved almost complete, and patterns of anthemion and ivy-leaf wreaths remain in good condition. In all the finer specimens of this ware the blue ground shows through the thin edges of the white relief, adding a great charm to the modeling, in a way familiar to us in a very modern ware, porcelain with *pâte-sur-pâte* decoration. Of such workmanship are the pieces shown in the illustrations now to be described. Figure 10 is part of the lip, or rim, of a large dish, the pattern left in relief as the white layer has been ground away elsewhere. Figure 11 is a fragment on which two heads and

a lecythus remain of a larger composition. Figure 12 is a tragic mask. All these are roughly worked, no great amount of pains having been spent upon them. It has not been thought necessary to complete the rounding of the parts, the proportion of the different reliefs; all has been left rather flat and uniform—a silhouette rather than a bas-relief. But there are many pieces of the most refined finish: figure 13, a group of two male figures, one of which holds a thyrsus, is a very complete piece of modeling; it has the look of a life-size bas-relief, small as it is. The sphinx with a caduceus, figure 14, is another admirable bit, and it is strange to see how careless the artist has been about cleaning up his background; he has left irregular traces of the white glass there, in the full conviction that they would make no difference—that his modeling was fine enough to bear all such little drawbacks. Figure 15 is a fragment of a bas-relief of real Hellenic beauty, and has

FIGURE 16.

a suggestion in it of the Parthenon frieze. Figure 16 is a head of Roman dignity, and (dare we say?) of Roman lack of amiability. The head is laureled: perhaps a comparison with coins might enable us to guess at the name of the personage represented. And now we come to reliefs in two colors, where the onyx-like glass has not been used merely to give a white relief upon a dark ground, but for the adornment of the sculpture itself. Figure 17 is

FIGURE 17.

FIGURE 18.

a head, of which the heavily dressed hair, in great rolls and ridges, is of very dark blue glass, and the face itself in opaque white. In this piece

a band of leaf-gold covers the fillet of white glass that goes around the head. Figure 18 is a Roman lady with another elaborate coiffure, the hair, in its tightly curled masses, is cut out of the dark glass, while the face and neck with the ear-ring and necklace are carved in the white material. This head is inclosed in an oval panel, slightly depressed below the general surface of the piece, and molded at the edge in a delicate frame.

There are in the Coleman collection perfect and unbroken bowls and vases, and some of these are of great beauty. But the charm of it is in the comparisons it makes possible among some thousands of specimens of almost every kind of ancient glass which is known to us. No collection of perfect vessels which exists, or which is likely to be brought together, could contain so many varieties of glass, and, for obvious reasons, perfect vessels could hardly afford such ample opportunity for study of make and texture, and of all the processes of manufacture.

Russell Sturgis.

LOVE IN MASQUERADE.

I DREAMED that love came knocking
 At your door one winter night,
 While the specter trees were rocking
 In a blast of savage blight.
 "Oh, I perish!" poor Love pleaded;
 "Ope the door, for love's dear sake."
 But although you heard and heeded,
 Still no answer would you make!
 Not one word of sweet replying
 Would your haughty lips have said,
 Even if Love had lain there dying,
 Even if Love had lain there dead!

Then I dreamed that Love o'er-ruled you;
 For in tenderest voice he cried,
 "Nay, dear lady, I sadly fooled you,
 Since I am not Love, but Pride."
 And you straightway oped your portals,
 With a merry and welcome nod,
 To that wiliest of immortals,
 To that masquerading god.
 Ah, you oped your portals lightly,
 Not for Love's, but Pride's, dear sake;
 Yet, O lady, if I dreamed rightly,
 Love soon taught you your mistake!

Edgar Fawcett.

"THEY WERE A PLEASING CONTRAST." (SEE PAGE 563.)

A BACHELOR MAID.

BY MRS. BURTON HARRISON,

Author of "The Anglomaniacs," "Sweet Bells Out of Tune," "Belhaven Tales," etc.

WITH PICTURE BY IRVING R. WILES.

III.

IT was the witching hour of dinner at the Antediluvian Club. The tables in the dining-room were, for the most part, occupied. Men dining alone, in eclipse behind one or another

of the favorite evening papers, eating or drinking intermittently the while, accounted for the disappearance from the reading-room of all the most desirable journals. Parties of two or three men — comfortable-looking bankers, brokers, lawyers, doctors, with snowy shirt-

fronts and complexions of mantling red — laughed and jested together, making the most of their hours of good cheer, free from professional or financial cares. Here and there, sitting alone, might have been seen a man to whom neither the current tidings of the outer world nor the society of his fellows offered a surcease of the pressure of affairs. Upon his brow lingered the never-relaxing lines of worry. By and by his place will be found vacant, and the other men will read paragraphs announcing his death from apoplexy or heart-failure, or — if the struggle has been particularly long and fierce, and the disappointment crushing — by suicide.

Among these groups no trace was seen of the familiar figure of "Johnny" Waters. Since time out of mind, this veteran had been a feature of the Antediluvian at its prandial function. He was a spare old bachelor, living, no one knew where or how — "over Chelsea way," some quidnunc, bolder than the rest, had ventured to assert.

Neither did any one know when Waters had possessed a new suit of clothes. He was, however, clean, if rusty, and his pocket, like the widow's cruse, was at no time entirely empty; it contained a few pieces of gold, which he had the habit of playing with, but never changed.

His diversions were an occasional game of billiards, pool, or cards, in which his adversaries were discreetly selected from among the feebler folk, who might be depended upon to pay the club-tax for the game, charged always to the player who loses.

An authority in gastronomy, the cooks and servants treated him with respect, the club frequenters bowed down to his dicta; and there was hardly a day when he did not dine well with and at the expense of somebody whose dinner he had ordered by special request. On occasions when an opportunity for this thrifty exchange of benefits did not present itself, Mr. Waters, after long waiting for an invitation, usually denied himself a dinner. Arriving at the club regularly at about five in the afternoon, it was his custom to order toast and a cup of tea — probably his first meal, so whispered the gossips, since the liberal repast over-night, superintended by him, and paid for by "the other fellow." As the dinner-hour drew near, and men, dropping in, went to the desk to inscribe their orders, he would be espied wandering about with a blameless expression of innocence upon his withered old face. What, then, more natural than that some would-be diner, assured of getting thereby the best the club contained, should ask "Johnny" if he were disengaged for dinner?

To-night, upon his absence the jokers chose to hang the time-honored story that he was

either walking in the square below, engaged in buckling up his belt, or else eating macaroni in a cheap Italian restaurant. But the morrow would see him at his post, renewed in hope.

It was at the period of the repast when most men's orders had been served that Mr. Robert Crouch — the opponent at billiards of Mr. Justice Irving — was wont to appear upon the scene.

Short, thick-set, breathing stertorously, with his waistcoat well exposed to view, his protruding eyes taking in the tables as he passed, Crouch had the offensive habit of slowly sauntering the length of the dining-room, scrutinizing every table, and gaging the social value of every man according to the dinner spread before him.

"Don't talk to me about him, sir," he had once observed regarding a local dignitary. "He's a pretender — a mere pretender. Why, when I met him just after he had ordered his dinner yesterday, and casually asked him what he was going to have, he said, 'Well, for one thing, woodcock.' And blame me, sir, if, when I passed up the room, I did n't see him in the corner pegging away at a blanked old prairie-chicken!"

Mr. Crouch, like Mr. Waters, did not object to being bidden to sit at the table of his friends. With all his bluster at the waiters, and all his braggadocio about living on the fat of the land, he was, when dining alone, generally observed to be attacking a slice from a joint, and a couple of baked potatoes.

To-night, having accomplished his customary espionage, and driven several quiet citizens to the length of a wish to strangle him for his impertinence, Mr. Crouch stopped before a table laid for two in the upper end of the room.

"Who's due here, Clarkson?" he asked of that gentleman, just come in to take his own bit of fish and some chops at the adjoining table.

"Don't know, I'm sure," answered Clarkson. "I'm late myself; just stopped a minute to enter a line in the complaint-book about the disgusting way these waiters breathe into one's back hair. If a man happens to be bald, as I am, it makes him sneeze, by Jove!"

"What was the complaint, yesterday?" said Crouch, facetiously.

"Oh, I don't remember. Probably that the floor of that wretched library shakes so confoundedly I can't digest when I go in to read after dinner."

"Who is this table reserved for?" asked Crouch, beckoning the head-waiter, who was not imposed upon by his large, authoritative manner.

"Mr. Gordon, sir," said the functionary, turning away at once.

"Alec Gordon? Who's he going to dine, I wonder? Quite a spread, to judge from the

forks and glasses! Have you heard they are putting Gordon forward for United States Attorney, Clarkson?"

"Fact?" said Clarkson, with animation.

"Yes. They are working it up among them; and by Jove! sir, with the luck that chap has, I should n't in the least wonder if he gets it."

"I'm for him, and here's to his success," said Clarkson, draining his glass of claret. "But even Gordon's luck goes under, sometimes. His engagement with Marion Irving is off, by mutual agreement. I haven't the pleasure of knowing the young lady personally, but she's a splendid creature to look at, and I condole with him over the loss of her."

"She's no loss to a man in his senses," said Crouch, with a sardonic laugh. "Why, she's draft, or nearly so, over 'women's rights'!"

"What extraordinary capers these females are up to, nowadays!" replied the cheerful Clarkson. "If you believe me, I got a notice from a committee of them, requesting me and 'all the *adult* members' of my 'household' to call somewhere to sign a petition to strike out of our State constitution the word *male* as a qualification for voters. Now, I have n't any household; but if I had, why should n't they ask my babies as well as my adults, if the thing is to put everybody on the same footing? Last year it was street-cleaning. All the pretty women went at you at dinners, and asked if you had influence with various 'bosses' whom they 'longed' to know. Well, they accomplished then what they set out to do, those charming creatures, I must confess; but why can't they rest on those laurels? The year before it was the abolition of ash-barrels. You could n't open your mouth to a girl at a party without having an ash-barrel thrust into it! They've had their dab at city politics; and as to the Higher Education of Women, the University Settlement, and the Kindergarten Association, those we have always with us—and we are allowed to buy tickets, or send checks for boxes for their entertainments, to an almost unlimited extent!"

"And Marion Irving is in the front rank of all this," put in Crouch, who did not relish having to listen to so long a disquisition. "What's more, she's got the Woman Question for a bee-in-her-bonnet, which lots of the others have n't. If I were Irving, I'd lock that girl up, or send her traveling with a keeper, or she'll end by coming to no good."

"Hush!" said Clarkson, warningly; but it was too late. Gordon, accompanied by a blond-bearded, smiling young man who had something foreign in his aspect, was close upon them, and must have heard every word of the close of Crouch's speech.

A surge of anger came over Gordon's face.

Wheeling quickly, he spoke in the offender's ear a few evidently stinging words, whereat Crouch, uncomfortably red, turned away, relieved by the coincident summons of a waiter to his modest meal served in a sequestered corner of the room.

"Ha! Clarkson," resumed Gordon, quietly, "I hope that cad has n't taken away your appetite. Come, after dinner, and let me make you known to my friend Baron Strémof, a Russian, just arrived."

"Charmed, my dear fellow, but what the deuce am I to speak in?" whispered Clarkson.

"English, of which he's a master," returned Gordon, going on to place his friend at table, and to introduce him to a plate of tiny oysters—a visible disappointment, as to size, for the new-comer.

"You had not—pardon me—a very agreeable moment in getting rid of the man who offended you," said Strémof, lightly. "But it was, at any rate, effectual. And these are the famed oysters—Blue Points, you call them. The flavor makes amends for their limited caliber."

"We eschew the large ones, purposely, when served in this way. For once, you will find America not anxious to illustrate her excellence by size."

"Oh, you will not find me agreeing with any slur put upon America," said Strémof, with delightful animation. "It has been the ambition of my life to visit your country. And your Exposition at Chicago has made of last summer an ineffaceable dream of beauty to me. At even this distance of time the White City appears to me amid a luminous haze concealing all the petty vulgarity that must, of necessity, attend upon such a spectacle. I am more than ever lost in wonder at the fresh vigor of its conception, and the enormous abilities displayed in carrying it out. But I believe, already, you astonishing Americans are checking each other for allusion to the crowning glory of your age. A young woman of Chicago told me I must no longer speak of the Columbian Fair—that it is, by now, 'a chestnut.' Fancy! how delicious! I wrote home this little anecdote, and with it I am confident of amusing my friends in Petersburg. Would she consider St. Peter's of Rome, or St. Mark's of Venice, 'a chestnut,' may I ask?"

There was no venom in the lively strictures of Strémof, whose buoyant enjoyment of the world and of himself made him pleasant company.

"If it has accomplished nothing else, the Fair has made us better known and understood by our friends from across the water," Gordon said. "And I think it has led them to understand, at last, that creation in art is possible to us."

"My dear friend," exclaimed the Russian, knocking over a glass of Sauterne in his enthusiasm, "who could fail to appreciate the fact that those splendid palaces of white 'staff'—built for a day, and already vanished into the fairy-land of dreams from which they came—typified the new birth of art from the virgin soil of America? What struck me most, after that, was the serious way in which the crowds, assembled to do it homage, received their impressions of your Fair. I thought those people from remote towns and villages, who had journeyed such immense distances, were especially interesting to watch. They seemed dazzled, oppressed, shy—but, through it all, proud and inspired. Henceforth, I thought, whatever they may read in their papers about the Old World, they will understand and enjoy. Some day they will bring their modernism to visit our antiquity—and, when they see our treasures, will not be ashamed because they have had nothing of that sort of their own. But here, as usual, I let my feelings run away with me. *I radote*, instead of doing justice to your menu."

"You say you have always had a wish to know us better," rejoined his host. "I can only regret you have put it off so long. Carroll's letter tells me you are amusing yourself by contributing studies, social and economical, of American affairs to some of your Russian journals. I wish I could enjoy them."

"I am indeed well protected by my language. But I am not afraid for any of my American friends to read them. They tell me, if anything, my letters are too uniformly *couleur de rose*. Yes, for some years before I came I had been gathering facts about you. Carroll, who is a charming fellow, and much liked in Petersburg, put me up to the books I must read to understand your social side. I wish you could see the bewilderment of an old countess with whom I go to take tea—who is by way of being an amateur in your literature—after I left with her a volume of American stories in dialect. 'But, my dear boy,' she said to me, 'as well expect my old teeth to crack nuts!'"

"And now," said Gordon, smiling, "I suppose you wish to find the originals of the types you have met in our novels."

"You have hit the mark! Here is my complaint—I have not met one of them. Where are they? In the ateliers of the writers, behind screens, supporting a mass of different costumes to be put on when the lay figure is required? Everybody I meet is conventional. I could do as well in London, Paris, Vienna, Rome, or by staying at home in Petersburg. Your clubs are superb, but the men in them are like those I see in such places abroad; your houses are little palaces, crowded with works of art. Your women, perpetually on the wing, sip sweets

from the fashions and customs of every country to bring home. Even in the far cities of the West I found furniture and costumes and modes of living like these here, and all under the eternal glare of electricity. Imagine a continent full of New Yorks! Your men, more original in thought and expression than your women, are fast becoming supercivilized. I am in despair. If I could only meet on the street a lady—Bloomer, *c'est ça, n'est-ce pas?*—in her trousers and pot-hat, I should be happier. But it seems to me that, even in London, the women are more fearless in action, in expression of opinion, than your women. I wish I could know an American unmarried woman of the sort I have dreamed of. I should not write about her in my notes for publication, *bien entendu*, but I should enshrine her in my heart."

"It would take me some time to explain to you the transition stage of society which is responsible for what you charge," said Gordon.

Strémof was silenced by his first introduction to terrapin. But not for long.

"This is wonderful!" he exclaimed. "I now confess to you, my friend, that it was with a species of resigned terror I tasted your national delicacy a moment since. Last year Carroll, who wished to make some acknowledgment of my father's friendship for him, ordered to be sent to our house, express from America, some terrapin in tins. I have since learned they had cooked and sealed it at the last moment before the fast steamer sailed, and had expedited it direct to Russia in the care of a friend, scarcely daring to hope it could arrive in good condition for immediate use. But my father, not understanding this, had his *maître d'hôtel* put the dainty away until the belated occasion of a dinner of ceremony to which poor Carroll was invited. The American dish came on; alas! it was left upon every plate! Poor dear Carroll, who did not in the least recognize it, had covered his portion with a piece of bread when he heard my father announcing to Count X—upon his right that this was the famous terrapin of North America! My dear friend, let me thank you," he added radiantly, extending his hand, which the amused Gordon shook. "You have not only saved Carroll's reputation, but you have given me new bliss!"

Over their coffee, Clarkson joined them, and their merry talk was prolonged till Gordon hurried Strémof off to hear Calvé in "Carmen," and to make acquaintances in the boxes of a number of his friends. It so happened that, for this night, a woman inclined to be gracious to Marion Irving had sent a note inclosing three tickets, and urging Marion to join her in her box, bringing "any friends" she might select.

Marion, who had no taste for the conversa-

tional patter that accompanies the opera of to-day, had been about to decline the offer — when she saw in the eyes of Sara Stauffer an expression interpreted as a craving for the music so little within her possibilities.

"I could take tickets in the parquette, or in a gallery where it will be possible to listen in peace," said Marion; but a girl, happening in at the moment, assured her of the impossibility of buying a seat for Calvé in "Carmen" at that late hour.

"It is just possible Mrs. Romaine won't be in her own box," she meditated; "if the fancy took her to go to see Sandow the strong man, or the trained animals, she would follow it, and leave the box empty. Yes, Sara, we will go."

Madame Stauffer, who had been waiting with a strange palpitation of anxiety at the heart, looked frankly delighted, and cried out with pleasure.

"I am hungering for opera," she went on. "But oh, Marion, you know my wardrobe! What have I fit to wear? There is a poor little white silk made long ago for a concert of the graduating class at Somerville. Perhaps, if I bought a lot of that soft white chiffon, and put it on in full ruffles around the neck —"

"I think so," said Marion, absently; then, remembering herself, "Dear Sara, how vexatious it is that a woman like you should be in the shackles of conventionality in dress. Why can't we soar out of these petty considerations? You are charming in the little black frock, with the black lace, and a red rose in your bodice."

"To accomplish what we seek, we should never let ourselves be remarked for singularity," said the teacher. "Therefore, darling, as we are driving out, if you will take me to some cheapish place to buy the chiffon —"

Marion, obedient to a certain point, directed her coachman to stop at the emporium where her own purchases of that sort were made. A fichu of fine white gauze, floating at a breath into a feathery mass, was found already made by skilled fingers, and was supplemented by new gloves of Sara's number, and the offer of a gift of Marion's best fan.

"How I rejoice in ordering these things to be charged to my own account," meditated the girl. "No more requests to step into the library to explain the items upon forgotten bills. But it surprises me that Sara should seem so glad to get them. I suppose it is only a refinement of the feeling she touched upon — her objection to illustrate women's rights by peculiarity of costume."

THEY were in the Romaines's box at the opera, alone, when Gordon came in to introduce Strémof. As Marion had predicted, the no-

tional owner of the premises had elected to remain at home, or to go elsewhere.

Gordon, who, designedly, had not seen Marion since their rupture, — having gone off on business of his firm for a "little American journey" to Salt Lake City, and having but just returned, — observed her with surprise in the company of this peculiar, but attractive-looking "woman in white," whom he could not remember having seen with her before.

For a moment he had hesitated in the lobby at the door of the box. Then, telling Strémof he was about to present him to a lady, young and unmarried, perhaps the best exponent among his acquaintances of the "unfettered American spirit" which Strémof aspired to meet, he opened the door into the anteroom.

Here, in the surrounding of crimson satin, decorated with mirrors in Florentine gilt frames, — for Mrs. Romaine knew well how to set off her fading looks, — they found the two women, who had retired, during an *entr'acte*, from the glitter of the auditorium.

They were a pleasing contrast, nestling toward each other, as women sit, upon the crimson cushions of a little couch. Sara, dark, lithe, sparkling, all in white; Marion in satin, as usual the color of her hair, with sleeves and scarf of a topaz yellow. Unconsciously, she had placed herself against her long coat of amber satin, with its many capes bordered with otter fur.

Strémof, the impressionist, seeing this artistic "composition" that might have been hung with effect on the line in the Salon of the Champ de Mars, was possessed with wonder that the two should be alone, when all the other women he had visited were subdividing their talk and attention between numerous male callers. He could hardly be expected to divine that it was the possession of the very independence of thought which he affected to be in search of that isolated the beautiful and distinguished Marion Irving from the class to which she belonged.

When Gordon entered the box, Marion blushed, and then, feeling that the higher woman would not have done so, blushed again at having blushed. Sara, perceiving as much, understood, before his name was mentioned, who this great manly fellow was. Immediately falling into conversation with Gordon, she rose, and returned to the front of the box with him, followed by Marion and Strémof.

Sara's boast was not exactly like that of Wilkes, the most ill-favored Englishman of his day, who said that, with a half-hour's start, he would not be afraid of the handsomest man in the kingdom; but she knew how to value this opportunity to make a first impression upon her friend's friend.

Although he and Marion were no longer

lovers, she had early realized the importance of Gordon's opinion to Marion, and to a more formidable power in the Irving household. She recognized that this strong, straightforward, clean-minded gentleman was not to be dealt with by any of the commonplace methods known to women who set themselves to attract men. She felt that he would not be easy to deceive. Hersupple spirit, confronting his, yielded to it for a moment, leaving her almost at a loss. Then, rallying, she determined to compel him, before she was done with him, to admire her talents, enjoy her society, respect her. Ah! poor Sara!

After Gordon had talked with Madame Stauffer during a longer time than is generally allowed in a visit of the sort, he changed places with Strémof. The latter, finding Marion attractive, had yet been baffled by her odd reserve. He was rather relieved to plunge into a merry war of wits with her companion. With the foreigner, versed in such arts, Sara could let her rare facility in conversation have full swing. She flew lightly ahead of him, putting Strémof on his mettle to keep up with her, and yet allowed him to perceive that he entertained her thoroughly. Like most strangers visiting America, he could not see the reason that, had he been an ordinary frequenter of New York society, would have made him give a cold shoulder to the little unknown woman who had no backing except Miss Irving's caprice in friendship. And there was one subject upon which they did not spar: Strémof, himself a brilliant musician, saw that in Sara he had met his match.

Thus, while their friends were in the stream of animated talk, Gordon and Marion profited by the first occasion for communication with each other since the breaking of their engagement. By the time he sat down by her she had regained her self-possession, and her glance, turned upon him, was full, free, and cordial.

"You have not told me how you like my friend?" she said, dropping her voice, after a few generalities and a description of his journey.

"I have been patching together my recollections of what you have said about your acquaintances at Somerville to try to place that rather dazzling person."

"In those days she was Sara Mills, a lecturer to our freshmen on English literature. After leaving Somerville, she married a German professor, a Dr. Stauffer, as clever, apparently, as she; but the marriage was not happy, and he died very soon. I can't say that Sara, as I see her now, in the least suggests the little Miss Mills I first met. She is the most protean of creatures, and fascinates every one."

"How did you come to find her again?"

"I saw in a woman's journal which I take that she had been obliged to stop work from

ill-health, and was in Washington; so I wrote to her,"—here Marion colored a little at the recollection of the subject of that first letter,—“remembering her as the most sympathetic person I ever knew.”

"It was a kind impulse to want to give her this glimpse of brightness in her life. I can't imagine a more wretched breakdown than one from teaching."

"Oh, but I don't deserve credit for pure unselfishness," said Marion, always sensitively truthful. "I wanted her for myself. I wanted guidance in certain paths. I have not explained to you that for some time past she has been a public lecturer on the Woman Question, and has appeared on many platforms about the country."

"Good gracious!" said Gordon, with a jump.

"Oh, yes. And I am proud of her courage, and pluck, and talent. I think, as I know her better every day, I could follow anywhere she may lead. And, after all, it is to you I owe the permission to have her come. My father told me that you advised it in the first place."

"I—oh! yes, I did," said the unfortunate young man, remembering his conversation with the judge.

"But you did not know I was going to capture such a *rara avis*, did you? It is a great pride to me to show you such a champion of our cause, one so fine, so intelligent, so truly a woman in all that is best."

"Our cause?" he repeated in a blundering attempt at an undertone that sounded like a groan.

"Don't speak so loud; you will be heard in the parquette," she said in smiling rebuke. "Yes, 'our cause'; for I am quite decided, now. I mean to work for them with all my might and means when Sara shall have decided in what way it will be best."

"Your father?" said Gordon, helplessly.

"That is, of course, our greatest obstacle; though Sara has won him over, in a way most surprising to me, to let her explain to him our aims and objects."

"Explain to *him*—" began Gordon, again, and stopped, feeling that he was not coming through this very brilliantly.

"Really, Alec, I never knew you so dull in taking an idea. Her logic, her reasoning faculties, would command any man's respect. There, the curtain is going up."

"May we stay a while longer?" he said, hating tremendously to leave her alone with his new foe.

"Certainly. We are deserted females, apparently. But when I have Sara to talk with, I never miss any one else."

Gordon, falling again into the chair behind hers, queried no more. The act progressed:

Calvé had come upon the scene; and upon her the attention of the great audience was focalized.

There was the *patio* of the little *fonderia* in which *Don Jose* lounged upon the edge of the table, while saucy *Carmen*, a rose dropping from her dark hair, her glances as full of fire as were her motions of sinuous grace, swaggered before her lover's eyes, or danced and sang for him in a voice as rich as wine.

But of this Gordon saw nothing. Perhaps, under the spell of that lovely voice, the captivating sensuousness of Bizet's music, he was impelled to feel for the girl, so near him that his breath stirred the loose tendrils of hair upon her neck, a new awakening of the tenderness of their old relation; and then a vague alarm for her, the instinctive idea that she needed his protection, had greatly shaken his resolve to think of her only as a sister. Already, in the short time since she had thrown off his loving yoke, she seemed to have not only receded far from him, but to be quieter, more content, nay, happier, than while he had been pouring out on her the best passion of his young manhood.

When the toreador came on, and strutted his brief space before the footlights, and sang his familiar, ringing song, Gordon was glad of the burst of applause that followed it. He started from his reverie, uncertain whether he had uttered an actual sound; but as nobody seemed to notice him, he felt relieved, assured that he had not.

"Oh, my love, my love," he was saying within himself, "you did not kindle such a fire in my breast, you did not feed it all these months when I believed you mine, to have it go out suddenly at your bidding."

As *Escamillo* came back on his recall, the antechamber of the box was invaded by new arrivals; and at the close of the repeat, Mrs. Romaine and two others came to the front. The greetings and explanations that ensued effectually broke up sentiment; and pledging himself to take Strémof to call at the Irvings's on the day but one following, Gordon and his friend took leave.

In the lobby he encountered no less a person than Mr. Justice Irving, hovering — rather uncertainly, it appeared to Gordon — around the door of the Romaines's box.

"I saw you looking after Marion, from the parquet," the judge explained hastily. "You know I never will spoil an evening of good music by sitting where people gabble, and Mrs. Romaine is notorious in that respect. She's just gone in, I see; so that Marion's all right. There's no call for me to show in there, I suppose?"

"None, if it bores you, I should think," said Gordon, introducing Strémof.

"Then I'd as well go back and get the rest

of this act in my seat below," said his honor, after extending a civil greeting to the stranger.

"May I see you on Sunday afternoon alone?" said Gordon. "I am promising myself the pleasure of introducing Baron Strémof to your daughter on that occasion, and, if you are free, I will try for a talk with you."

"Of course, of course," answered the judge.

Then he hastened off, and Strémof had to repeat a remark he made to Gordon before it was heard, so intent was the young man in looking after the vanishing figure of his sometime father-in-law-elect.

"You are in a brown study," said Strémof, gaily. "Let me thank you for the delightful opportunity you have given me in that last visit. Now that we have left them, I see that, with all her sparkle, the *petite* Madame Stauffer is less remarkable than the young lady in her charge. One could readily commit folly for a Madame Stauffer, but any wise man would choose to live for Mademoiselle Irving. Why does not one of your American sculptors — your great St. Gaudens, for instance — see in her the new Pallas of the coming woman's era?"

Gordon, indisposed to talk on this subject, proposed another call. As they threaded the half-circle of the lobby, various men, strolling outside, met them, and Strémof was quick to notice the tone and temper of the salutations bestowed on Gordon.

"You are like a hero returned," he said. "Every one welcomes you, and looks up to you. Pray, how long have you been out of town?"

"A fortnight," Gordon answered, and then wondered if that was indeed the length of time consumed by his journey. So much had happened since his departure, he felt that it must have been longer.

IV.

MRS. ROMAINE, who had never been beautiful, and was no longer young, — brusquely cordial in manner to those she fancied, abominably rude to the people she chose to ignore, — had a certain attraction of individuality that created for her a following of friends independent of her place and wealth.

Well-born, married to a prosperous and influential ruler of finance, she liked to take liberties with established things, which, when pushed too far, were usually atoned for by some entertainment from which society went away persuaded it could not have afforded to *stay* away.

On fairly good terms, as such things go, with her husband, she never failed to do herself the injustice of referring to him in public as an enemy of her peace, against whom her only protection was a series of needle-pointed sayings, repeated successively as "Mrs. Romaine's last." In actual fact, John Romaine — a man whose ambition

it was to accumulate millions, to be panoplied with the world's adulation, to have his schemes and ventures discussed in the newspapers with the admiration for success that tempers, if it cannot subdue, the audacity of the American press—had come to care very little for what his wife did or said. Prosperity had driven them asunder, and their lives under the same roof were lived very much apart. Liberal to indulgence, Romaine enjoyed the dashing exhibition of his riches as dispensed by her hands. At the pace they were going, he had no time to wish her other than she was. He had no time either to regret the loss of his children in infancy, to wonder what he might have conferred upon posterity. The present, the great powerful present, rushing over steel rails with its iron wheels, in the glare of electric light, was his, and he exulted in his ownership, nor asked for more.

Mrs. Romaine, who, Marion thought, fancied the Irvings principally because they were so indifferent to her, now spoke to Marion in her usual sleepy, very-much-bored voice.

"Glad you could come, I'm sure. Is n't that the judge I see down in the parquet—that shocking man who never fails to snub me? We would have been here earlier, but on the way Reggy Poole was possessed with the idea of stopping to hear Lizzy Linwood sing, and we went in a box, just for the lark, you know. But she bawled, and I soon got tired. Who is the woman you've got with you to-night?" she ended, looking over at Sara, and hardly troubling herself to subdue her voice.

Marion explained.

"That alters the case," exclaimed the hostess, with animation. "She is talking to Reggy now, so, in case I forget to mention it again, bring her to lunch with me to-morrow. Her subject, after socialism, is of all others the one that interests me now; if she's as clever as you say, why should n't we have an afternoon lecture for women, and let her 'give it' to the men? Poor creatures! I have a pet idea to promulgate, and perhaps I'll start it, then. I want to open a kindergarten for husbands, who are nothing but children, morally, as we all know. We will set for them object lessons in consistency, and teach them how not to get out of responsibility crab-wise. You shall be a teacher, your friend chief lecturer, and Loulie Kemp, there, *might* have sense enough to distribute slates, and amuse the very little husbands who won't want to be taught. (Never mind! She don't hear me.) And what shall we do with Reggy Poole? I can't leave him out, can I, when he's always at my heels? Oh, he's so much like us, we'd put a frock on him, and they'd never know the difference. Now, say you'll come to-morrow, my dear. I'm so afraid it will go out of my head."

To the invitation thus extended Marion had very little idea of paying serious heed. But when, next day, after breakfast, which Sara and she had fallen into the habit of having in her morning-room, the matter was casually mentioned, she found her guest of another opinion.

"That woman is helter-skelter, foolish, strained, perhaps," Madame Stauffer said reflectively; "but she is at present with us, and we must use any weapon we can lay hands upon."

"Do you think so, dear?" Marion asked protestingly. "I had set aside to-day to send for some girls I am sure you would be interested in, to come to lunch with us."

"And who are they, dear child?" asked Sara, sipping with satisfaction her cup of *café au lait*, her feet toasting on the brass fender before a blazing wood-fire.

"They are well-born working-girls. One of them addresses envelopes and sends out cards for women of society; the other makes lampshades, and reticules, and cotillon favors. One has a drunken father who oppresses her; the other a young brother she is trying to put through college. Both have been successful, and deserve to be. They are refined, intelligent, cheerful, suggestive. I am never with them (they are friends, and constantly together) without coming away refreshed. Then there is a journalist, whose life is a perfect romance—I meant to ask her, too, on the chance of getting her; and a stenographer whom I know you would enjoy. These are the recruits I would choose for our army—not faded, whimsical women of fashion like Mrs. Romaine."

"But Mrs. Romaine has great wealth and power, you tell me. We need means for everything, beginning with the endowment of more colleges."

"New York is hardly the place to seek for that," said Marion, with kindling eyes. "Boston, New Orleans, and other places were before us in offering to women advantages in education approximating those enjoyed by men; and New York, the metropolis in point of population and wealth, has only now begun to move in that direction. If Mrs. Romaine and her set would take hold of that idea, and make it the fashion, it might be different. But they won't; they are not broad-minded enough, far-seeing enough; they do not altogether fancy dandling a cause which their men turn into ridicule. I've seen it tried with them; you have n't. Believe me, by going to her you would only waste time, and sacrifice our aims as a toy for her passing amusement."

"But I think, my darling,"—and Marion had a dim sense that there was no use in trying to controvert one of Sara's "buts,"—"you must

be content to leave some things to my judgment, without questioning it. I know that among us, in council, we have often wished for opportunities such as this seems to promise, to spread the doctrine; and I cannot, in conscience, abandon it."

"I only felt that a few words from you would mean so much to these earnest girls I spoke of," said Marion, submissively.

"It is a satisfaction to me to work in more difficult channels, once in a while," answered the reformer, preparing for herself, with great daintiness of touch, an orange. "For so long my efforts have been directed to showing the intelligent proletariat of the country the enormous mental, moral, and material gain that will come to them from woman's universal right to the ballot, it is time I should handle the class that is smothered in the eider-down of luxurious indifference."

"Mrs. Romaine says she is a socialist," said Marion, with a smile not repressed by the dignity of the subject.

"Better and better!" exclaimed Sara. "At last I see the dawn of our opportunity. How I wish I could engage Mr. Gordon to let me explain to him our leading arguments, and hear some of his objections. Ah, my dear Marion, there is a man worth breaking lances with!"

"I never broke any with him," answered Marion, half quizzically.

"I suppose not. He was a lover, out and out, I don't doubt; as he is everything he sets out to be."

"It is too recent for me to talk about, even to you," said Marion, confused.

"Very well, I shall respect your feeling. But one thing, Marion,"—and Madame Stauffer leaned over, and looked scrutinizingly into her friend's face,— "after meeting him last night, you are quite sure you do not waver?"

"I shall never be anything to him again, if that is what you mean," said Marion. "Even if I were made of the weak stuff to play fast and loose with a man's love, he is not the one to put up with it. He is still my friend—my best friend. I should hate to pain him by carrying out any scheme the Cause laid down for me that he did not approve of. But I should do it, nevertheless. I could never submit to the control that, as a husband, I felt convinced he would exercise over me. Every now and then, during our year's engagement, I used to come upon phases of his character that revealed this to me. My father says one secret of Alec's success in public life is his inborn power to rule men. His fearlessness of speech startles, but carries the judgment of others with it; his belief in himself is infectious; his integrity is absolute—and his will sweeps over obstacles like a tidal wave."

To this Sara made a response that caused Marion to look at her in considerable surprise.

"A-a-h!" said the little woman, throwing her head back, half closing her eyes, and relaxing her slender body in her easy-chair. "If one dared let oneself go, what joy to be swept away by such a wave!" Then sitting up erect, and dipping her fingers into a finger-bowl, she flicked the water from them into the air. "You look at me as though I were a mad woman, Marion. Perhaps I am, dear child; but the truth is, when one has gone through my experience of battering around the world, there are moments of temptation to shut the eyes, and let somebody else fight one's battles—moments that come like the whispers of Apollyon to deter Christiana from following the right road. That's wretched femininity, I suppose—the weaker part we are all trying to live down. No matter. It's gone as it came. Such an indulgence makes me a traitor to my cause. Give me my casque and doublet, Marion, and help me to buckle them in place."

Just then there was heard a tap on the door of the morning-room—a timid tap, a deprecating summons.

"Come in," said Marion.

The door opened, and upon its threshold appeared the judge, in his top-coat, holding his hat in his hand.

"Marion, my dear,—good morning, Madame Stauffer,"—he began, looking from his daughter to her guest, as if he had casually become aware of the existence of that lady—"I thought I would mention that I am engaged this evening at a meeting of our dining-club, from which I cannot very well get off, and it would probably be too late upon my return to hope for Madame Stauffer's assistance with my new catalogue of the French and Italian books in my collection. But if on Monday evening it would not trouble Madame Stauffer to resume her important coöperation—"

"You are too kind, dear Judge Irving," said Sara, "but Marion knows that is the day fixed for my return to Washington."

The words were commonplace, but the sigh that escaped with them was pregnant with pathetic meaning.

"Monday? Impossible!" said the judge, with a return of his imperative manner. "That is,—he went on, as before,— "I don't know, of course, the engagements made for your valuable time, but I cannot suppose Marion has allowed you to feel that your visit to her has lasted long enough. As for me, I can only say that as long as you are willing to confer your—er—inestimable companionship upon my daughter, I shall—er—consider myself your debtor."

"There, Sara!" said Marion, exultingly. "I

told you papa feels as I do. We won't hear of your leaving us till after Christmas."

"What can I do but say yes, and thank you a thousand times?" cried Sara, dropping her eyes before those of the judge, while holding Marion's hand in her own. "This dear child, Judge Irving, is my sister of the heart; and you have made me so happy in feeling that I can be of some little, little use to you in your arduous brain labors."

The judge's ear was tickled by the phrase. He loved to think of himself as a victim to over-exercise of the mental faculties.

"It is — er — an immense gain to my work to have from you such intelligent apprehension of its scope," he said, in rotund speech.

"And we are going on, also, with my attempt to make you understand the real force and meaning of the mission I am, however unworthily, trying to sustain?"

"Far be it from me," quoth the judge, "to wish to raise a hand toward tearing down the veil of reticence with which every shrinking woman should surround her life before the public. But I concede what you have said as to what they can accomplish in school elections. More, I am hardly yet prepared to grant."

This concession, accorded with Jove-like dignity, fell upon Marion's ears with startling effect.

"Ah! but if you will only have patience with me," said Sara, in her winning voice, "I will not undertake to alter your opinions — ah, no! That would be far too much to aim for, too high an achievement in my life. But I will dare to hope you may end by thinking that justice and honor might do worse things than place in our hands the privilege of the ballot."

"We shall see; we shall see," said his honor, with an attempt at amiability having rather the effect of a grunt. But, as he bade them good morning and went off to court, Marion thought she had rarely seen her father wear such an animated expression of youth and interest in current things. With a sigh, she said to herself, "It is his manner of society, of course, that makes all women tell me what a delightful man he is."

When he had gone, she dared not speak of this to Sara, lest that clever person should see farther behind the veil than Marion intended her to penetrate. Why should his own child expose his weakness? And Sara, equally discreet, said nothing on her side.

MRS. ROMAINÉ, doing the honors of her stately dining-room with careless grace, rather "laid herself out," thought Marion, to be civil and gracious to Madame Stauffer. The other guests at luncheon were Strémof, who at the moment of introduction the night before had

been bidden by the hostess to come next day and make her better acquaintance; Miss Kemp, a colorless young woman serving to fill the vacant place in most of Mrs. Romainé's incomplete functions of life and society; and a pale, wild-eyed man dressed in threadbare clothes, who was introduced as "Herr Hofman, from Basle, a distinguished socialist," employed to come three times a week to "coach" Mrs. Romainé in the doctrines of his creed.

"Oh! you may smile," said the lady of the house, to Strémof, who had treated himself to a small indulgence of the nature designated, "but until I had Hofman's talks, life was quite empty. I am so enthusiastic about it I mean to become a member of the American Branch of the League, shortly. Until then I must be content to give money —"

"They also must be content, madame," said Strémof.

"And to talk to any one I meet whom I think I can influence. When I drive about to pay bills to my tradespeople, I cast a seed here and there. I have great hopes from an intelligent young plumber who has lately been at work in the house; and" — lowering her voice — "my butler and footmen are hotfoot after the new doctrine."

"And so, when the day comes that is foretold by Henry George," said Strémof, "which some one of the Scotch writers has described as a 'huge wedge driven through the middle of society, and on the underside of it the merchant princes eating the bread of poverty with their lowest dependents,' you are prepared to share all your present privileges?"

"There are some of my privileges I would not only share, but give away with rapture," she said — "the privilege of being bored to extinction by half my acquaintances, for example. But we are not here to talk about my 'mania,' as my husband pleasantly calls it. Madame Stauffer must tell us of *her* mission, that I think should march hand in hand with mine to the dawn of the New Day; and then Herr Hofman may be induced to follow."

"Not at table, if you don't mind," said Sara in a low, distinct voice. In her heart she resented the airy impertinence of Mrs. Romainé's mocking manner, the fact that she had been brought there to make entertainment, and was classed with the long-haired man with a dingy shirt-collar.

"Has temper," decided Mrs. Romainé, internally; then, turning away, she devoted herself to Strémof, leaving the others to take care of themselves.

"For once," thought Marion, "one of her 'menagerie luncheons,' as she styles them, is a distinct failure."

And so it proved. The affair languished,

until even Strémof, who had been making stupendous efforts to support the occasion, ceased to struggle, and went under.

"Goodness, how dull we are!" said the hostess, at last aware of the fact. "Let us go into the library, and smoke, and perhaps that will enliven us." And, rising abruptly, she led the way into a room where no vacancies appeared to mark the recent withdrawal from it of Mr. Romaine's treasures of books, now dispersed.

"My husband is bearing up under it as well as can be expected, thank you," she answered to Marion's inquiry as to how Mr. Romaine bore his loss of the famous library. "If there were a place to dispose of wives added to one's collection at vast expense, I suppose it would be my turn to go next. You know my husband does not illustrate — what Marx says, Herr Hofman — that 'the value of a commodity changes directly as the quantity, and inversely as the productive power, of the labor which realizes itself in that commodity.'"

"Ah, yes," rejoined her adviser, with entire solemnity; "you mean where he also says 'value is an immanent relation to socially necessary time of labor.'"

"This is not gay," remarked Strémof, *sotto voce* to Madame Stauffer. "Why should this lady, into whose cradle the good fairies seem to have poured all the gifts, be so sharp, so little restful? What a contrast to the old times when it was the chaplain or father confessor who made part of the domestic staff of the woman of place and fortune! Now she must have her spiritual director in socialism, *mon Dieu!* Is it so everywhere? Must I be ready on all sides to talk of new doctrines, new ideas, casting behind me the gossip, the pleasant nonsense, that is really the high art of conversation? But, no, I will not ask that of *you*, madame, since last night, when you gave me a glimpse, all too short, of your own brilliant powers. Tell me — and if I am indiscreet, silence me — about that beautiful sphinx who is in your charge — Miss Irving. She interests me. She perplexes me. Since last night, when we parted, I have been trying to solve her; but I do not succeed. Is she happy? Is she sad? What is the secret of that noble expression of infinite patience upon her broad brow? You smile — ah! I am always losing myself in my enthusiasms. But, I swear to you, for hours I have hardly thought of anything but that girl, and have dreamed of meeting her again. At table, to-day, she surprised two or three looks from me that I could see she did not fancy, and so I looked no more."

In a few words Sara told him the outline of Marion's history, of her engagement to Gordon, and its ending "by mutual consent."

"So?" said the young man. "And there is

absolutely no chance that she will take Gordon back?"

"None," said Sara.

They were sitting apart in an alcove by a rack containing an open portfolio of etchings at which neither looked. Strémof was struck with a certain expression passing, like the shadow from a bird's wing, over the speaker's face.

"Besides," she added, "Mr. Gordon is a man on the quick rise to power, to political fame. The world will soon afford him all the balm his spirit needs."

"He will be here presently," said Strémof, looking covertly at his watch. "We have an engagement to spend the afternoon together, to see some clubs and galleries, I believe; and he was not able to give the time to Mrs. Romaine for luncheon."

Simultaneously, a servant preceded into the room the subject of their conversation, on whose appearance Mrs. Romaine fairly clapped her hands.

"Now that you are come, we shall cease being at odds with one another," she exclaimed. "Here we are, a group of people, all clever and original except Loulie Kemp and myself, who want to be made so. What better opportunity for something I have long desired — to hear Gordon's views on the Woman Question? And, to lead the way to it, — for no one believes more in fair play than I do, — will not Madame Stauffer open with just a résumé, so that all can understand our platform about the ballot, which is, after all, the main object of our hopes?"

At an ordinary time, no proposition could well have been more distasteful to Gordon. But he had parted from Marion, overnight, in a sort of blank terror as to the gulf toward which, in his eyes, she was drifting. He knew she would never personally demand from him an expression of his views on the subject given. And he wanted to feel that, whether she recognized it or not, his hand had been stretched out to withhold her.

Sara Stauffer, on her side, was, as has been seen, vexed and out of spirits. But, on Gordon's arrival, her pulses had begun to stir with pleasure of the most agitating and least welcome variety. It was, indeed, a protest against her own infirmity of spirit that spurred her on to enter the arena against the young man who had so affected her. With eyes cast down, with the hesitancy of a child, she began an exposition of certain arguments so well known of late it were useless to rehearse them here. She gave a brief history of the "disfranchised" classes of humanity, beginning with those in England, then passing to the negro, and finally to the women of the States. The question of equal wages for equal labor was next touched upon, Madame Stauffer making the point that, until the power

of the ballot shall be accorded to women, this equality cannot exist, and that the first result of woman's "enfranchisement" will be the opportunity to receive pay commensurate to the value of her work.

She spoke simply, with an admirable choice of words, with trained ease and rhetorical method, with convincing earnestness. The predominant feeling of her little audience, when she had finished, was one of respect for the cause and the worker. Marion's heart swelled with pride in her champion; and stretching out her hand to Sara, the two sat thus, while Gordon rubbed up his wits for an answer.

"It is quite needless to tell you that I am tremendously at a disadvantage in this fray," he said pleasantly. "Madame Stauffer has brought the grace of her oratory to the support of her, evidently, long-considered conviction. She has, of course, the sympathy, and deserves the applause, of her audience.

"I cannot, however, share her views on this subject; and—though I have never attempted a discussion of this kind, or any formal discussion in such presence, and must throw myself upon your considerate indulgence in entering at all upon a disputation before you, now, and so unexpectedly—I venture, in the rough, upon some of the ideas that occurred to me while Madame Stauffer was speaking.

"When the 'women's rights' insisted on by our agitators of the last generation related to questions of married women's property rights; or to the amelioration of the condition of women, to be afforded by laws more liberal in the matter of divorce; or to the authority a woman should have over her children—the right feeling and the good sense of the community were every year more and more with the champions of the sex. But in matters of divorce, any woman in this country can now be readily relieved of the yoke of a conjugal relation which ought to be dissolved for any substantial reason; the law among us is everywhere rather too lax than too stringent in that regard. Women have now been constituted by our legislature joint guardians with their husbands of their children—with equal powers, rights, and duties, in regard to their children, with their husbands; though I think experience will show *that* to be a measure open to the objection I shall presently make to female suffrage—that it tends to prevent a proper headship in the family. In the State of New York, too, the rights of a married woman to her earnings and in her property of every kind, acquired whether before or after marriage, are now securely established. Our statutes make her control of her real estate, for instance, more complete than a married man's dominion in lands held by him; in his lands she still has her right of dower.

And in the other States of the Union those conditions have already been reached, or soon will be.

"The history of the growth and development of that legislation about the property of married women is, by the way, very interesting for this among many other reasons: Our statutes on those subjects have revolutionized the law among English-speaking peoples everywhere. The first of them, in the States which began with the common law of England, was enacted in Mississippi in 1839. It was crude, but was amended and broadened in 1846, while the first of the New York statutes was not adopted until 1848; in fact, the Mississippi Act of 1839 was passed for special application to a particular case—was promoted by a bankrupt suitor of a prudent and well-advised woman, who had great expectations of estates she was unwilling to expose to claims by the creditors of an insolvent husband. To relieve the situation, the aspirant for the lady's hand had the bill put through the legislature, avowedly to introduce, not the rule of the civil law of Louisiana, which is enlightened in such particulars, but the tribal customs of the Chickasaw Indians, who were still numerous in the neighborhood! The squaw, as you may know, is the head of the family; the chief traces his descent, not from his father, but through his mother.

"But when the question of 'women's rights' has come to relate only to a demand that woman be allowed to vote at public elections, and upon questions affecting government and the State, it is a very different kind of thing, and seems to me to be but a symptom of the general drift of the age we live in, through socialism to anarchy."

At this point of Gordon's remarks Herr Hoffman threw up his hands, with a resigned gesture, toward Mrs. Romaine, as who should say, "You see! As ever, we are misunderstood"; and Mrs. Romaine smiled back at him, consolingly.

"There never was, and never will be, government by all the people," went on the speaker. "Every form of government is necessarily more or less by representatives of the people. No system of government is or can be conducted by all the people by direct participation. Infants, for example, of either sex, are, like women, citizens—equally with men. But no one has ever proposed that infants be given the ballot to take part in actual administration of public affairs of the commonwealth. The line must be drawn somewhere between those who may exercise in person, and at the polls, the authority of a choice in prescribing the policies and designating the officers of government, and those who may not. The suffrage is not a natural right, like the right to life itself, but a privilege accorded

by society to those members of the body politic who are thought likely so to exercise that privilege as to advance the general welfare in doing it—a privilege conferred, not for the special benefit of the individual to whom it is given, or in the interest of the class merely to which that individual belongs, but for the advantage of the Republic itself. When that franchise was allowed to the recently emancipated negroes of the South, for instance, so hazardous an experiment was justified, not as a present to the black for his own sake merely, but as an expedient, intended to be a means in his hands for usefulness to us all. For the good and peace and prosperity of the whole country, it was considered wise to intrust to those who had been slaves a weapon of protection against the possible oppression of so numerous a class, left otherwise very much at the mercy of a reckless or resentful body of their former owners, who, unless held in check by the ballot, which could choose legislatures and executive officers of government, might indulge in practices destructive to the best interests of the nation,—of the residents in New England as well as of residents in Carolina,—practices inviting to civil strife, violence, and insurrection, as well as to other occasions for a general disturbance of the well-being of society. And we cannot even deal, in this matter, with women as a class by themselves; they have, and can have, no interests, as women and as a class, conflicting with, or different from, the interests of their husbands, fathers, brothers, and sons, as men and as another class. There are classes among women, as there are classes among men; but surely men and women are together and united in every interest which concerns the welfare of the community as a whole.

"It is therefore not true that by withholding from women the authority to vote in person they are deprived of a right, or denied their proper influence in administration—any more than it can be said that because, not being a senator or a representative in the Congress, I myself am not allowed to vote upon the passage of bills pending at Washington, I am deprived of a right to a voice in government. Though I never vote in person, in the House or in the Senate, I do vote there, every day, by my representative.

"The unit of the social state, to be considered in such a matter as this, is not the individual, but the family; and things that tend to develop and maintain well-ordered and harmonious families should be the first care of the Republic. Women, at every election, vote by their representatives, who, in any properly constituted domestic relation, feel, and respond to, and act under, the due influence of their womenkind in everything the latter are interested in."

"Pardon me, but is n't that more Utopian than Herr Hofman's vision of a new world under socialism?" said Mrs. Romaine, in her provoking little drawl. "But pray go on, Mr. Gordon. I am so glad to know that John Romaine is always thinking of me at the polls."

"I have just reached the special point I desired to make," Gordon resumed, with a smile. "In every government, whether of the State or of the household, there must be one head, or there will always be confusion. There are many individuals who now enjoy and exercise the electoral franchise whose participation in government could be dispensed with, to the advantage of the country. There are cases where the wife is the real head of the household, and where it would be better if the law recognized and dealt with her as such, and allowed her to exercise all the power of such a situation. But laws are rules of conduct provided, not for exceptional cases, but for all; and constituted as human nature is, society, the world over and in all ages since we emerged from savagery, has found that, as a rule, the man must be the head of the family. With understanding between them, the wife has a fit representative in her husband in the matter of voting. And where they differ so strongly as to make it useful to her as an individual, perhaps, to have her destroy his vote by voting against him, it is, in another and more serious aspect, and *as a rule*, a source of danger to the community to allow her the opportunity to do so. It would foment discord in every household where the husband and wife disagree, to confer upon woman the right to vote; all domestic headship and authority would be subverted. And when there is no longer a government in the households—the homes—of the land, there may soon be a subversion of all government; and anarchy will then have come."

When Gordon stopped speaking, he did not venture to look directly at Marion. He felt rather than saw her exchange glances with Sara Stauffer, who, with great tact, good-humor, and cleverness set herself to refute his argument.

Whether she did so to her own satisfaction, she was greatly applauded; and the hall-clock, striking four, broke up a sitting prolonged beyond expectation of any of them.

"How admirably she speaks! How well she has herself in hand!" Strémof remarked to Mrs. Romaine, as he was taking leave.

"I belong to a club of women," said the hostess, "who meet from time to time to discuss current topics of thought; and I assure you that, among them, Madame Stauffer would be only incidental, not phenomenal."

"Is Mademoiselle Irving among them?" asked the Russian, whose eyes had been wandering more than was good for him to the tall

girl in the black serge costume, sitting in such immovable earnestness through it all.

"She? Oh, no. We are not quite intense enough for her. Because I give dinners, and go to balls,—and spar with my husband, religiously,—Miss Irving thinks I have no place in serious thought. Good-by! So glad you were not bored by our impromptu duel. Sunday afternoons, remember! And you will let me send you a ticket for my box at the opera on Wednesday?"

"Did you tell me you had never met this Madame Stauffer until last evening, when I did?" Strémof asked Gordon, as the two men got into their hansom at the door.

"Never."

"And may I venture to ask whether you did not, until then, know of her relation to Miss Irving?"

(To be continued.)

Constance Cary Harrison.

POE IN THE SOUTH.¹

SELECTIONS FROM THE CORRESPONDENCE OF EDGAR ALLAN POE.

EDITED BY GEORGE E. WOODBERRY.

O piece of biography in the annals of literature has so unenviable a reputation as that memoir which Dr. Rufus W. Griswold, acting as Poe's literary executor, prefixed to the first complete edition of his works. Its authenticity

has been attacked from the time of its appearance, and no words of oburgation have been too harsh to characterize the man who penned it; at the same time very little of its substance has ever been invalidated. The papers on which it was based passed into the hands of Griswold's own executor, and have never been seen by any of Poe's later biographers. They have recently come, by inheritance, into the possession of Griswold's son, William M. Griswold of Cambridge, Mass., by whose permission the following account of them, with extracts, is given, in anticipation of their publication in full under his own editorship. It falls to his part to show in detail how they affect the reputation of his father as a biographer; but a word or two, in general, must be said here of their bearing on the original memoir.

The delicacy of Griswold's task was well understood at the time. A writer in "Holden's Magazine," in 1849 (said to be C. F. Briggs,

¹ The pictures on pages 580 and 582 were drawn by Albert E. Sterner, and are from the forthcoming complete edition of Poe's works to be published by Messrs. Stone & Kimball.

"They were friends in Miss Irving's college-days, but they have not met in years."

"Well, my dear friend, if you will permit me, I must felicitate you upon a conquest," said Strémof, gaily. "The little lady asks nothing better than to test, through you, the practical value of a head to her household."

"Absurd!" said Gordon. "Don't make me feel any more of an ass than I already do, after holding forth seriously on that theme in a drawing-room."

"But you did not convince Miss Irving," went on the audacious fellow. "Her face, as I watched it, was cold; her eye shone clear as polished steel."

"This club where we shall next stop—" began Gordon in a manner that admitted of no further trifling; and on he went, to fulfil his duty of cicerone, with a description that was cut short only by the stopping of the cab.

Poe's co-editor in the "Broadway Journal"), stated it very plainly:

A biography of Mr. Poe is soon to be published, with his collected writings, under the supervision of Rev. Rufus W. Griswold; but it will be a long while, if ever, before the naked character of the sad poet will be exposed to public gaze. There is a generous disposition on the part of those who knew him intimately to bury his failings, or rather personal characteristics, in the shade of forgetfulness; while nothing is dwelt upon but his literary productions.

He was a psychological phenomenon, and more good than harm would result from a clear, unprejudiced analysis of his character. But when will any one be found bold enough to incur the risk of an imputation of evil motives, by making such a revelation as the task demands?

The weightiest statement in respect to the actual work done by Griswold in the memoir is that of Mr. J. C. Derby, in "Fifty Years among Authors, Books, and Publishers," as follows:

The most important of all of Mr. Redfield's publications, however, were the works of Edgar Allan Poe. It was also through Mr. Griswold that he was induced to undertake the publication of Poe's works, now one of the most popular authors of the day. Dr. Griswold had offered the works to nearly all the leading publishers, who declined to undertake the publication. He finally persuaded Mr. Redfield to try the experiment of issuing two volumes first, which were published and had a fair sale—then the third, and finally the fourth, volume were added to complete the

works: The sale reached about fifteen hundred sets every year.

Mr. Redfield thinks great injustice has been done by certain critics to Rev. Dr. Griswold, in reflecting upon him as Poe's biographer. In a recent letter to me [Derby] he says:

"Griswold never received a cent for his labors. Poe named him as his literary executor shortly before he died, although they had quarreled not long before. Griswold's labor was no joke. Few men would have undertaken it with no hope of reward. It is fashionable nowadays to throw mud at him. Knowing, as I did, both of the men, and knowing, also, how assiduously Griswold labored to say everything he could in the biography in Poe's favor, it is very annoying to read these things. The matter of the biography was all read over to me, talked and discussed before printing, and I *know* he did his best to 'set down naught in malice.' He was obliged, as he thought, to state the facts in all cases, and he did state them, favorably as he could to Poe. I *know* he tried to do so. Now he is accused everywhere, by people who know nothing about it, of vilely slandering Poe. I had a better opportunity than any one else to know all about it, and I know he did not."

Griswold has not lacked other defenders, who were well acquainted with both men. In writing a biography of Poe some years ago, the present writer had occasion to investigate the charges made against Griswold. The result was a conviction that the documents he quoted were genuine, and that the impression he gave of Poe's character and career was just, while his errors were due to Poe's own falsehoods. The question of Griswold's discretion in his memoir is governed by the fact that Poe's defects and troubles were notorious at the time, and could not be concealed; the question of Griswold's motives is more difficult, but is now more easily to be judged. It is also fair to Griswold to add that the characterization he gave is that which has uniformly prevailed in tradition in the best informed literary circles in this country.

As will be seen, these papers fully vindicate Griswold's veracity in essentials, and sustain Redfield's view of his temper; it must also be allowed that, so far was he from blackening Poe's memory, he might easily have made a worse use of his opportunity had he been actuated by malice. It would seem that Griswold discharged his duty under his own conception of the difficulties and necessities of his task, with entire fidelity and honesty of purpose. It is a gratification that such tardy justice can be done to a man who has so long been vilified, though mainly by English writers, without sound critical grounds. Poe did not make a mistake in his choice. Griswold was by far the best man in the country to do the editorial work, which was, all things considered, the most important matter; and as regards the memoir, he is to be charged at most with errors

of judgment and lack of tact in stating unpleasant truths.

These papers yield no information in respect to the early years of Poe. A memorandum in his own hand, sent to Griswold, March 29, 1841, as the basis of a biographical sketch of himself, fastens upon Poe direct responsibility for that tissue of positive falsehoods and ungenerous misstatements which he intended to have pass as a true narrative of his youth up to the time of his final breach with Mr. Allan of Richmond, the gentleman who adopted him as a child. This story has already been sufficiently exposed. A letter from William Wirt, May 11, 1829, declining to advise him in respect to a poem, perhaps "Al Aaraaf," affords the earliest example of his habit of appealing to well-known literary men for counsel and recognition. The new material substantially begins with the correspondence between Poe, Kennedy, his first patron, and White, his first employer, which covers the period of his connection with the "Southern Literary Messenger," of which White was then editor. The manuscripts here followed are either originals or copies sent to Griswold to be used in his memoir. The letters tell their own story. At the time when they begin Poe had already in 1833 won his first success by taking the prize offered by the Baltimore "Saturday Visiter" for an original tale, and had thus interested Kennedy, the leading literary man of his vicinity, in his fortunes; but by the next spring, the death of Mr. Allan, who left him nothing, had thrown him permanently upon his own resources for support, and he was very poor, dejected, and in need of friendship.

POE TO KENNEDY.

BALTIMORE, November, 1834.

DEAR SIR: I have a favor to beg of you which I thought it better to ask in writing, because, sincerely, I had not courage to ask it in person. I am indeed too well aware that I have no claim whatever to your attention, and that even the manner of my introduction to your notice was at the best equivocal. Since the day you first saw me, my situation in life has altered materially. At that time I looked forward to the inheritance of a large fortune, and, in the mean time, was in receipt of an annuity for my support. This was allowed me by a gentleman of Virginia (Mr. Jno. Allan) who adopted me at the age of two years (both my parents being dead), and who, until lately, always treated me with the affection of a father. But a second marriage on his part, and I dare say many follies on my own, at length ended in a quarrel between us. He is now dead, and has left me nothing. I am thrown entirely upon my own resources, with no profession and very few friends. Worse than all this, I am at length penniless. Indeed, no circumstances less urgent would have induced me to risk your friend-

ship by troubling you with my distresses. But I could not help thinking that if my situation was stated — as you could state it — to Carey & Lea, they might be led to aid me with a small sum in consideration of my MS. now in their hands. This would relieve my immediate wants, and I could then look forward more confidently to better days. At all events receive the assurance of my gratitude for what you have already done.

Most respectfully, your obedient servant,

EDGAR ALLAN POE.

[NOTE BY MR. KENNEDY: This refers to the volume of tales sent to Carey & Lea — “Tales of the Arabesque,” &c., — being two series submitted for the prize, for which one was chosen, and two others at my suggestion sent to Carey & Lea. — J. P. K.]

The volume was “Tales of the Folio Club,” and was not published. The “Tales of the Arabesque,” etc., was a later book, issued in 1840.

KENNEDY TO POE.

BALTIMORE, December 22, 1834.

DEAR SIR: I have received your note, and should sooner have apprised you of what I had done, but that Carey's letter only reached me a few days ago as I was stepping into a carriage to go to Annapolis, whence I returned only a day or two since.

I requested Carey immediately upon the receipt of your first letter to do something for you as speedily as he might find an opportunity, and to make some advance on your book. His answer let me know that he would go on to publish, but the expectation of any profit from the undertaking he considered doubtful — not from want of merit in the production, but because small books of detached tales, however well written, seldom yield a sum sufficient to enable the bookseller to purchase a copyright. He recommended, however, that I should allow him to sell some of the tales to the publishers of the annuals. My reply was that I thought you would not object to this if the right to publish the same tale was reserved for the volume. He has accordingly sold one of the tales to Miss Leslie for the “Souvenir,” at a dollar a page, I think with the reservation above mentioned — and has remitted me a draft for fifteen dollars which I will hand over to you as soon as you call upon me, which I hope you will do as soon as you can make it convenient. If the other tales can be sold in the same way, you will get more for the work than by an exclusive publication.

Yours truly,

JOHN P. KENNEDY.

POE TO KENNEDY.

Sunday, March 15, 1835.

DEAR SIR: In the paper which will be handed you with this note is an advertisement to which I most anxiously submit your attention. It relates to the appointment of a teacher in a Public School, and I have marked it with a cross so that you may readily perceive it. In my present circumstances such a situation would be most desirable, and if your interest could obtain it for me, I

would always remember your kindness with the deepest gratitude. Have I any hope? Your reply to this would greatly oblige. The 18th is fixed on for the decision of the commissioners, and the advertisement has only this moment caught my eye. This will excuse my obtruding the matter on your attention to-day.

Very respectfully,

E. A. POE.

The following was partly printed with unimportant variation in the “Life of Kennedy.”

POE TO KENNEDY.

Sunday, March 15, 1835.

DEAR SIR: Your kind invitation to dinner to-day has wounded me to the quick. I cannot come — and for reasons of the most humiliating nature — my personal appearance. You may conceive my deep mortification in making this disclosure to you — but it was necessary. If you will be my friend so far as to loan me \$20, I will call on you to-morrow — otherwise it will be impossible, and I must submit to my fate. Sincerely yours,

E. A. POE.

POE TO WHITE.

BALTIMORE, May 30, 1835.

MR. T. W. WHITE,

DEAR SIR: I duly rec^d through Mr. Kennedy your favour of the 20th enclosing \$5: and an order for \$4.94. I assure you it was very welcome. Miscarriages of double letters are by no means unfrequent just now, but yours, at least, came safely to hand. Had I reflected a moment, I should have acknowledged the rec^d before. I suppose you have heard about Wm. Gwynn Jones of this place, late editor of the “Gazette.” He was detected in purloining letters from the office, to which the clerks were in the habit of admitting him familiarly. He acknowledged the theft of more than \$2000 in this way at different times. He probably took even more than that, and I am quite sure that on the part of the clerks themselves advantage was taken of his arrest to embezzle double that sum. I have been a loser myself to a small amount.

I have not seen Mr. Kennedy for some days, having been too unwell to go abroad. When I saw him last he assured me his book would reach Richmond in time for your next number, and under this assurance, I thought it useless to make such extracts from the book as I wished — thinking you could please yourself in this matter. I cannot imagine what delays its publication, for it has been some time ready for issue. . . . [The omitted passage was printed by Griswold.]

I read the article in the “Compiler” relating to the “Confessions of a Poet,” but there is no necessity of giving it a reply. The book is silly enough of itself, without the aid of any controversy concerning it. In your private ear, however, I may say a word or two. The writer “I” founds his opinion that I have not read the book simply upon one fact — that I disagree with him concerning it. I have looked over his article two or three times attentively, and can see no other reason ad-

duced by him. If this is a good reason one way, it is equally good another—ergo—he has not read the book because he disagrees with me. Neither of us having read it, then, it is better to say no more about it.

But seriously I *have* read it from beginning to end, and was very much amused at it. My opinion concerning it is pretty much the opinion of the press at large. I have heard no person offer one serious word in its defense.

My notice of your "Messenger" in the "Republican" was, I am afraid, too brief for your views. But I could command no greater space in its editorial columns. I have often wondered at your preferring to insert such notices in the "Republican." It is a paper by no means in the hands of the first people here. Would not the "American" suit as well? Its columns are equally at your service. . . . [The omitted passage was printed by Griswold.]

The high compliment of Judge Tucker is rendered doubly flattering to me by my knowledge of his literary character. Very sincerely yours,
EDGAR A. POE.

POE TO WHITE.

BALTIMORE, June 12, 1835.

MR. T. W. WHITE,

MY DEAR SIR: I take the opportunity of sending this MS. by private hand. Your letter of June 8th I rec^d yesterday morning, together with the magazines. In reply to your kind enquiries after my health, I am glad to say that I have entirely recovered—although Dr. Buckler, no longer than 3 weeks ago, assured me that nothing but a sea voyage would save me. I will do my best to please you in relation to Marshall's Washington if you will send it on. By what time would you wish the MS. of the Review?

I suppose you have received Mr. Calvert's communication. He will prove a valuable correspondent. I will send you on the "American" & "Republican" as soon as the *critiques* come out. What I can do farther to aid the circulation of your magazine I will gladly do—but I must insist on your not sending me any remuneration for services of this nature. They are a pleasure to me, and no trouble whatever. Very sincerely,
EDGAR A. POE.

I congratulate you upon obtaining the services of Mr. S. He has a high reputation for talent.

POE TO WHITE.

BALTIMORE, June 22, 1835.

MY DEAR SIR: I rec^d your letter of the 18th yesterday, and this morning your reprint of the "Messenger" No. 3. While I entirely agree with you and with many of your correspondents in your opinion of this number (it being in fact one of the very best issued), I cannot help entertaining a doubt whether it would be of any advantage to you to have the public attention called to this its second appearance by any detailed notice in the papers. There would be an air of irregularity about it—as the first edition was issued so

long ago—which might even have a prejudicial effect. For indeed the veriest trifles—the mere semblance of anything unusual or *outré*—will frequently have a pernicious influence in cases similar to this; and you must be aware that of all the delicate things in the world the character of a young Periodical is the most easily injured. Besides it is undeniable that the public will not think of judging you by the appearance, or the merit, of your Magazine in November. Its *present* character, whether that be good or bad, is all that will influence them. I would therefore look zealously to the future, letting the past take care of itself. Adopting this view of the case, I thought it best to delay doing anything until I should hear further from you—being fully assured that a little reflection will enable you to see the matter in the same light as myself. One important objection to what you proposed is the insuperable dislike entertained by the Daily Editors to notice any but the most recent publications. And although I dare say that I could, if you insist upon it, overcome the aversion in the present case, still it would be trifling to no purpose with your interest in that quarter. If, however, you disagree with me in these opinions, I will undoubtedly (upon hearing from you) do as you desire. Of course the remarks I now make will equally apply to any other of the back numbers.

Many of the contributors to No. 3 are familiarly known to me—most of them I have seen occasionally. Charles B. Shaw, the author of the "Alleghany Levels" (?) is an old acquaintance, and a most estimable and talented man. I cannot say with truth that I had any knowledge of your son. I read the Lines to his memory in No. 9 and was much struck with an air of tenderness and unaffected simplicity which pervades them. The verses immediately following, and from the same pen, gave evidence of fine poetic feeling in the writer. I will pay especial attention to what you suggested in relation to the punctuation &c. of my future MSS. . . . [The omitted passage was printed by Griswold.]

Immediately after putting my last letter to you in the P. O. I called upon Mr. Wood as you desired—but the Magazine was then completed. Very sincerely yours,
EDGAR A. POE.

I have heard it suggested that a lighter-faced type in the headings of your various articles would improve the appearance of the "Messenger." Do you not think so likewise? Who is the author of the "Doom"?

POE TO WHITE.

BALTIMORE, July 20, 1835

MY DEAR SIR: I duly rec^d both your letters (July 14th and 16th), together with the \$20. I am indeed grieved to hear that your health has not been improved by your trip. I agree with you in thinking that too close attention to business has been instrumental in causing your sickness.

I saw the "Martinsburg Gazette" by accident at Mr. Kennedy's—but he is now out of town and will not be back till the fall, and I know not where to procure a copy of the paper. It merely spoke of the "Messenger" in general terms of com-

mentation. Have you seen the "Young Men's Paper"—and the N. Y. "Evening Star"? As might be supposed, I am highly gratified with Mr. Pleasant's notice, and especially with Paulding's. What Mr. Pleasant says in relation to the commencement of "Hans Phaal" is judicious. That part of the Tale is faulty indeed—so much so that I had often thought of remodeling it entirely. I will take care and have the Letter inserted in all the Baltimore papers.

Herewith I send you a "Baltimore Visiter" of October 12th, 1833. It contains a highly complimentary letter from Mr. Kennedy, Mr. Latrobe, and Dr. Miller, of Baltimore, in relation to myself. The "Tales of the Folio Club" have only been partially published as yet. "Lionizing" was one of them. If you could in any manner contrive to have this letter copied into any of the Richmond Papers it would greatly advance a particular object which I have in view. If you could find an excuse for printing it in the "Messenger," it would be still better. You might observe that as many contradictory opinions had been formed in relation to my Tales, and especially to "Lionizing," you took the liberty of copying the Letter of the Baltimore Committee. One fact I would wish particularly noticed. The "Visiter" offered two Premiums—one for the best Tale & one for the best Poem—*both* of which were awarded to me. The award was, however, altered, and the Premium for Poetry awarded to the second best, in consideration of my having obtained the higher prize. This Mr. Kennedy and Mr. Latrobe told me themselves. I know you will do me this favor if you can—the manner of doing it I leave altogether to yourself.

I have taken much pains to procure you the Ink. Only one person in Baltimore had it—and he not for sale. As a great favor I obtained a pound at the price of \$1.50. It is mixed with Linseed oil prepared after a particular fashion, which renders it expensive. I shall go down to the Steamboat as soon as I finish this letter, and if I get an opportunity of sending it I will do so.

It gives me the greatest pain to hear that my Review will not appear in No. 11. I cannot imagine what circumstances you allude to as preventing you from publishing. The Death of the Chief Justice, so far from rendering the Review useless, is the very thing to attract public notice to the Article. I really wish you would consider this matter more maturely, and if *possible* insert it in No. 11. Look over "Hans Phaal" and the Literary Notices by me in No. 10, and see if you have not miscalculated the sum due me. There are thirty-four columns in all. "Hans Phaal" cost me nearly a fortnight's hard labour, and was written especially for the "Messenger." I will not, however, sin so egregiously again in sending you a long article. I will confine myself to three or four pages. Very sincerely yours,

EDGAR A. POE.

POE TO KENNEDY.

RICHMOND, September 11, 1835.

DEAR SIR: . . . [The omitted letter, to which the following is a postscript, was printed in the

"Life of Kennedy."] Mr. White desires me to say that if you could send him any contribution for the "Messenger" it would serve him most effectually. I would consider it a personal favor if you could do so without incommoding yourself. I will write you more fully hereafter. I see "The Gift" [Miss Leslie's Annual for 1836] is out. They have published "The MS. found in a Bottle" (the prize tale you will remember), although I not only told Mr. Carey myself that it had been published, but wrote to him to that effect after my return to Baltimore, and sent him another tale in place of it ("Epimanes"). I cannot understand why they have published it, or why they have *not* published either "Siope" ["Silence"] or "Epimanes" ["Four Beasts"].

Mr. White is willing to publish my "Tales of the Folio Club"—that is, to *print* them. Would you oblige me by ascertaining from Carey & Lea whether they would, in that case, appear nominally as the publishers, the books, when printed, being sent to them, as in the case of [Kennedy's] "H[or]se S[hoe] Robinson"? Have you seen the [Locke's] "Discoveries in the Moon"? Do you not think it altogether suggested by "Hans Phaal"? It is very singular, but when I first purposed writing a Tale concerning the Moon, the idea of Telescopic discoveries suggested itself to me, but I afterwards abandoned it. I had, however, spoken of it freely, and from little incidents and apparently trivial remarks in those "Discoveries," I am convinced the idea was stolen from myself.

Yours most sincerely,

EDGAR A. POE.

KENNEDY TO POE.

BALTIMORE, September 19, 1835.

MY DEAR POE: . . . [The omitted passage was printed by Griswold.] Can't you write some farces after the manner of the French Vaudevilles? If you can (and I think you can), you may turn them to excellent account by selling them to the managers in New York. I wish you would give your thoughts to this suggestion. More than yourself have remarked the coincidence between "Hans Phaal" & the "Lunar Discoveries," and I perceive that in New York they are republishing "Hans" for the sake of comparison. Say to White that I am over head in business, and can promise never a line to living man. I wish he would send me the "Richmond Whig" containing the reply to the defense of Capt. Reed. Tell him so.

I will write to Carey & Lea to know if they will allow you to publish the "Tales of the Folio Club" in their name. Of course you will understand that if they do not print them they will not be required to be at the risk of the printing expenses. I suppose you mean that White shall take that risk upon himself, and look for his indemnity to the sale. My own opinion is that White could publish them as advantageously as Carey.

Write to me frequently, and believe me very truly yours,

JOHN P. KENNEDY.

Part of the following important letter was paraphrased and printed by Griswold.

ENGRAVED BY T. COLE, FROM A DAGUERRETYPE.

REPRINTED FROM THIS MAGAZINE FOR MAY, 1880.

EDGAR ALLAN POE.

WHITE TO POE.

RICHMOND, September 29, 1835.

DEAR EDGAR: Would that it were in my power to unbosom myself to you in language such as I could on the present occasion wish myself master of. I cannot do it—and therefore must be content to speak to you in my plain way. That you are sincere in all your promises I firmly believe. But, Edgar, when you once again tread these streets, I have my fears that your resolve would fall through, and that you would again sip the juice, even till it stole away your senses. Rely on your own strength, and you are gone! Look to your Maker for help, and you are safe! How much I regretted parting with you is unknown to any one on this earth except myself. I was attached to you—and am still—and willingly would I say return, if I did not dread the hour of separation very shortly again.

If you could make yourself contented to take up your quarters in my family or in any other private family where liquor is not used, I should think there were hopes of you. But if you go to a tavern, or to any other place where it is used at table, you are not safe. I speak from experience.

You have fine talents, Edgar—and you ought to have them respected as well as yourself. Learn to respect yourself, and you will very soon find that you are respected. Separate yourself from the bottle, and bottle-companions, for ever! Tell me if you can and will do so, and let me hear that it is your fixed purpose never to yield to temptation. If you should come to Richmond again, and again should be an assistant in my office, it must be especially understood by us that all engagements on my part would be dissolved, the moment you get drunk. No man is safe that drinks before breakfast. No man can do so and attend to business properly.

I have thought over the matter seriously about the autograph article, and have come to the conclusion that it will be best to omit it in its present dress. I should not be at all surprised, were I to send it out, to hear that Cooper had sued me for a libel. The form containing it has been ready for press three days—and I have been just as many days deciding the question. I am your true friend,
T. W. WHITE.

POE TO KENNEDY.

RICHMOND, January 22, 1836.

DEAR SIR: Although I have never yet acknowledged the receipt of your letter of advice some months ago, it was not without great influence upon me. I have since then fought the enemy manfully, and am now in every respect comfortable and happy. I know you will be pleased to hear this. My health is better than for years past, my mind is fully occupied, my pecuniary difficulties have vanished. I have a fair prospect of future success—in a word all is right. I shall never forget to whom all this happiness is, in a great degree, to be attributed. I know that without your timely aid I should have sunk under my trials. Mr. White is very liberal, and besides my salary

of \$520 pays me liberally for extra work, so that I receive nearly \$800. Next year, that is, at the commencement of the second volume, I am to get \$1000. Besides this, I receive from Publishers nearly all new publications. My friends in Richmond have received me with open arms, and my reputation is extending—especially in the South. Contrast all this with those circumstances of absolute despair in which you found me, and you will see how great reason I have to be grateful to God—and to yourself.

Some matters in relation to the death of Mrs. Caroline Clemm, who resided at Mount Prospect, four miles from Baltimore, render it necessary for me to apply to an attorney, and I have thought it probable you would be kind enough to advise me . . . [so starred in the copy]. I should be glad to have your opinion in regard to my Editorial course in the "Messenger." How do you like my Critical Notices? I have understood (from the Preface to your Third Edition of "Horseshoe") that you are engaged in another work. If so, can you not send me on a copy in advance of the publication. Remember me to your family, and believe me with the highest respect and esteem,

Yours very truly, EDGAR A. POE.

KENNEDY TO POE.

BALTIMORE, February 9, 1836.

MY DEAR POE: . . . [The omitted passage refers to the Mrs. Caroline Clemm affair.] I am greatly rejoiced at your success not only in Richmond but everywhere. My predictions have been more than fulfilled in regard to the public favour for your literary enterprises. Let me beg you to set down this praise at its value. As nothing but an incentive to the utmost care and labour for improvement. You are strong enough now to be criticised. Your fault is your love of the extravagant. Pray beware of it. You find a hundred intense writers for one *natural* one. Some of your *bizarries* have been mistaken for satire—and admired too in that character. *They* deserved it, but *you* did not, for you did not intend them so. I like your grotesque—it is of the very best stamp; and I am sure you will do wonders for yourself in the comic—I mean the *serio-tragicomic*. Do you easily keep pace with the demands of the magazine? Avoid, by all means, the appearance of flagging. I like the critical notices very well. By the by, I wish you would tell White that he never sent me the November number.

Your letter assures me that you have entirely conquered your late despondency. I am rejoiced at this. You have a pleasant and prosperous career before you, if you subdue this brooding and boding inclination of your mind. Be cheerful; rise early, work methodically—I mean at appointed hours. Take regular recreation every day. Frequent the best company only. Be rigidly temperate both in body and mind—and I will ensure you at a moderate premium all the success and comfort you want. Will you do me a piece of business? . . . [The omitted passage refers to the recovery of a portrait.] Yours truly,

JOHN P. KENNEDY.

POE TO KENNEDY.

RICHMOND, February 11, 1836.

DEAR SIR: I received your kind letter of the 9th about an hour ago. . . . [The omitted passage refers to the portrait mentioned.]

You are nearly, but not altogether right in relation to the satire of some of my Tales. Most of them were intended for half-banter, half-satire — although I might not have fully acknowledged this to be their aim even to myself. "Lionizing" and "Loss of Breath" were satires properly speaking — at least so meant — the one of the rage for Lions, and the facility of becoming one, the other of the extravagancies of "Blackwood." I find no difficulty in keeping pace with the demands of the magazine. In the February number, which is now in the binder's hands, are no less than forty pages of Editorial — perhaps this is a little *de trop*. There was no November number issued. Mr. W. has increased my salary since I wrote \$104 for the present year. This is being liberal beyond my expectations. He is exceedingly kind in every respect. You did not reply to my query touching the "new work." But I do not mean to be inquisitive. . . . [The omitted passage refers to Kennedy's seal.] Most sincerely yours,

EDGAR A. POE.

WHITE TO POE.

January 17, 1837.

MR. POE: If it be possible, without breaking in on any previous arrangement, I will get more than the 1st portion of "Pym" in — though I much fear that will be impossible. If I had read even ten lines of Magruder's manuscript it would have saved me the expense of putting it in type. It is all words [illegible]. He will have to live a little longer in the world before he can write well enough to please the readers of the magazine. Touching Cary's piece, gratitude to him for pecuniary assistance obliges me to insert it.

You are certainly as well aware as I am, that the last \$20 I advanced to you was in consideration of what you were to write for me by the piece. I also made you a promise on Saturday that I would do something more for you to-day — and I never make even a promise without intending to perform it — and though it is entirely out of my power to send you up anything this morning, yet I will do something more sure, before night or early to-morrow — if I have to borrow it from my friends. Truly yours,

T. W. W.

The next persons of literary reputation to befriend Poe after Kennedy were Beverly Tucker of Virginia, the author of "The Partizan Leader," and John K. Paulding of New York. Their interest was called out by Poe's work in the magazine. The letters of Tucker are long and leisurely, and are here abridged by the omission of the less personal passages in which the ways of publishers and the decay of taste are the prominent topics. Those of Paulding are more fully given, as the matter is of bio-

graphical interest. There are also letters from Mrs. Sigourney and others, belonging to this period, but space does not permit their insertion.

TUCKER TO WHITE.

WILLIAMSBURG, Nov. 29, 1835.

MY DEAR SIR: . . . I am much flattered by Mr. Poe's opinion of my lines. . . . He will take this and other suggestions of mine kindly. I am interested in him, and am glad he has found a position in which his pursuit of fame may be neither retarded, nor, what is worse, hurried by necessity. His history, as I have heard it, reminds me of Coleridge's; with the example of Coleridge's virtues and success before him, he can need no other guide. Yet a companion by the way to hint that "more haste makes less speed" may not be amiss. Will he admit me to this office? Without the tithe of his genius, I am old enough to be his father (if I do not mistake his filiation, I remember his beautiful mother when a girl), and I presume I have had advantages the want of which he feels. Now, if by aiding you, I can aid him too to disencumber himself of the clogs that have impeded his progress, I shall kill two birds with one stone. Let me tell you then why in the critique I prepared for Green, I said nothing of his Tale. ["MS. Found in a Bottle."] It was because I thought that had been already praised as much as was good for him. And why? Because I am sure no man ever attained to that distinction to which Mr. P. may fairly aspire by *extravagance*. He is made for better things than to cater for the depraved taste of the literary vulgar, the most disgusting and impertinent of all vulgarians. Besides, I was disappointed in the tale; not because of the praises I had heard (for I make light of such things), but because Mr. P. had taught me to expect from him something more than the mere *physique* of the horrible. I had expected that the author of "Morella" on board the Flying Dutchman would have found a Dutch tongue in his head, would have thawed the silence of his shipmates, and have extracted from them a tale of thrilling interest, of the causes of that awful spell which has driven and still drives their ship careering safely through the innumerable horrors he has described. Cannot he rescue her yet from her perils, and send us another bottle full of intelligence of her escape, and of her former history? Cannot he, by way of episode, get himself sent on board of some fated ship, with letters from the spellbound mariners to their friends at home? Imaginations of this sort flocked to my mind as soon as I found him on her decks, and hence I was disappointed. I do not propose that he should work up these materials. He can do better in following the lead of his own fancy. But let him remember that fancy must be servant, not mistress. It must be made the minister of higher faculties. . . .

Now one word more. If Mr. P. takes well what I have said, he shall have as much more of it whenever occasion calls for it. If not, his silence alone will effectually rebuke my impertinence.

Yours truly,

B. T.

THE MASQUE OF THE RED DEATH.

TUCKER TO POE.

WILLIAMSBURG, December 5, 1835.

DEAR SIR: Your letter has just been received, and deserves my thanks. So far from needing apology, it has been taken as a favour, and I have been congratulating myself on the success of my attempt to draw you into correspondence. It is more creditable to your candour than to my criticism that you have taken it so kindly. . . .

Respectfully, and with the best wishes,

Your obedient servant,

[Signature torn off.]

TUCKER TO WHITE.

WILLIAMSBURG, January 26, 1836.

MY DEAR SIR: . . . Last night I received a letter from Mr. P. by which I learn that you may not feel as much confidence in his capacity for the duties of his station, as is necessary for your mutual comfort. This doubt he attributes in part to what must have been a misconception by you of one of my letters. That I have not admired all Mr. P's productions, as much as some others, and that his writings are not so much to my taste as they would be were I (as would to God I were) as young as he, I do not deny. Thus much I expressed, and this so freely as to show that, had I meant more, I would have said more. You only know me on paper, but I think you can read this point in my character at the distance of sixty miles. I was equally sincere, I assure you, in what I said in his praise. . . . I do not agree with the reading (or rather the writing and printing) public in admiring Mrs. Sigourney & Co., or any of our native poets except Halleck. In this I know I shall stand condemned. But I appeal from contemporaneous and reciprocal puffing to the impartial judgment of posterity. Let that pass. I only mention this to say that Mr. P's review of the writings of a leash of these ladies, in your last number, is a specimen of criticism, which for niceness of discrimination, delicacy of expression, and all that shows familiarity with the art, may well compare with any I have ever seen. . . .

Mr. P. is young, and I thought him rash. I expressed this full as strongly as I thought it. I now repeat it, and apply to him the caution given by the God of Poets and Critics to his son when he permitted him to guide the Chariot that lights the world.

"Parce, puer, stimulus, et fortiter utere loris."

. . . I write this letter at his request. . . .

[Signature torn off.]

PAULDING TO WHITE.

January (?) 1836.]

. . . [The body of the letter relates to his own affairs.]

P. S. Your Publication is decidedly superior to any Periodical in the United States, and Mr. Poe as decidedly the best of all our young writers. I don't know but that I might add all our old ones, with one or two exceptions, among which, I assure you, I don't include myself. . . .

PAULDING TO WHITE.

NEW YORK, March 3, 1836.

DEAR SIR: I duly received the Book containing the Tales by Mr. Poe heretofore published in the "Messenger," and have delayed writing to you on the subject until I could communicate the final decision of the Messrs. Harpers as to their republication. By the way, you are entirely mistaken in your idea of my influence over these gentlemen in the transactions of their business. They have a Reader, by whose judgment they are guided in their publications, and like all other traders are governed by their anticipations of profit or loss, rather than any intrinsic merit of a work or its author. I have no influence in this respect, and indeed ought to have none, for my taste does not exactly conform to that of the Public at present. I placed the work in their hands, giving my opinion of it, which was such as I believe I have heretofore expressed to you more than once, leaving them to their own decision.

The[y] have finally declined republishing it for the following reasons: They say that the stories have so recently appeared before the Public in the "Messenger" that they would be no novelty — but most especially they object that there is a degree of obscurity in their application, which will prevent ordinary readers from comprehending their drift, and consequently from enjoying the fine satire they convey. It requires a degree of familiarity with various kinds of knowledge which they do not possess, to enable them to relish the joke; the dish is too refined for them to banquet on. They desire me, however, to state to Mr. Poe that if he will lower himself a little to the ordinary comprehension of the generality of readers, and prepare a series of original Tales, or a single work, and send them to the Publishers, previous to their appearance in the "Messenger," they will make such arrangements with him as will be liberal and satisfactory.

I regret this decision of the Harpers, though I have not opposed it, because I do not wish to lead them into any measure that might be accompanied by a loss, and felt as I would feel for myself in a similar case. I would not press a work of my own on them, nor do I think Mr. Poe would be gratified at my doing so with one of his.

I hope Mr. Poe will pardon me if the interest I feel in his success should prompt me to take this occasion to suggest to him to apply his fine humor, and his extensive acquirements, to more familiar subjects of satire; to the faults and foibles of our own people, their peculiarities of habits and manners, and above all to the ridiculous affectations and extravagancies of the fashionable English Literature of the day, which we copy with such admirable success and servility. His quiz on Willis, and the Burlesque of "Blackwood," were not only capital, but what is more, were understood by all. For Satire to be relished, it is necessary that it should be leveled at something with which readers are familiar. My own experience has taught me this, in the failure of some efforts of my own formerly.

Be good enough to let me know what disposition I shall make of the work. I am respectfully,
Your friend and Servant, J. K. PAULDING.

THE FALL OF THE HOUSE OF USHER.

Harper & Brothers formally declined the volume of tales in a letter to Poe, June, 1836, on the same grounds alleged above.

PAULDING TO POE.

NEW YORK, March 17, 1836.

DEAR SIR: In compliance with your wishes it would afford me much pleasure to have proposed the publication of your book to some one respectable Bookseller of this city. But the truth is, there is only one other who publishes anything but School Books, religious works, and the like, and with him I am not on terms that would make it agreeable to me to make any proposition of this nature, either in my own behalf or that of another. I have therefore placed your work in the hands of Messrs. Harpers, to forward with a Box of Books they are sending to Richmond in a few days, and I hope it will come safely to hand.

I think it would be worth your while, if other engagements permit, to undertake a Tale in a couple of volumes, for that is the magical number. There is a great dearth of good writers at present both in England and this country, while the number of readers and purchasers of books is daily increasing, so that the demand is greater than the supply, in mercantile phrase. Not one work in ten published in England will bear republication here. You would be surprised at their [illegible] mediocrity. I am of opinion that a work of yours would at least bring you a handsome remuneration, though it might not repay your labors, or meet its merits. Should you write such a work, your best way will be to forward the MS. directly to the Harpers, who will be, I presume, governed by the judgment of their Reader, who, from long experience, can tell almost to a certainty what will succeed. I am destitute of this valuable instinct, and my opinion counts for nothing with publishers. In other respects you may command my good offices. I am
Dr. Sir, Your friend and Serv't,
J. K. PAULDING.

Poe left the "Messenger" about January 1, 1837, and arrived in New York at some time before June, as appears from a letter addressed to him in that city by Dr. Charles Anthon.

ANTHON TO POE.

NEW YORK, June 1, 1837.

DEAR SIR: I owe you an apology for not having answered your letter of the 27th sooner, but I was occupied at the time with matters that admitted of no delay, and was compelled therefore to lay your communication on the table for a day or two. I hope you will find what is written below satisfactory. Do not wait to pay me a formal visit, but call and introduce yourself. Yours truly,
CHAS. ANTHON.

"What is written below," it is interesting to discover, is that passage of Hebrew learning in

criticism of Dr. Keith's interpretation of some verses in Isaiah and Ezekiel, which Poe was accustomed to reprint as his own from the time of its first appearance in his review of Stephen's "Travels," where he inserted it textually as it here stands in MS. In 1838 he published "The Narrative of Arthur Gordon Pym" through Harper & Brothers, who wrote to him in respect to the printed English edition, February 20, 1839, when he was already settled in Philadelphia. No other document of this period remains, except a letter from James E. Heath, the author of "Edgehill," which is a natural pendant to the preceding White correspondence, and illustrates sharply the suspicion with which Poe usually regarded those who had once been his benefactors. The omitted portion contains a criticism of the then recently published "Fall of the House of Usher," which Poe had sent to the writer.

HEATH TO POE.

RICHMOND, September 12, 1839.

DEAR SIR: . . . I have had a conversation with White since the receipt of your letter, and took the liberty to hint to him your convictions of an unfriendly feeling manifested on his part towards you. I am happy to inform you that he disclaims the existence of any unkind feeling; on the contrary, professes that your prosperity and happiness would yield him pleasure. He is not aware of having spoken or written anything with a design to injure you, or anything more in censure or disparagement, than what he has said to you in person, when you resided here. I am inclined to think that you entirely mistake the man, if you suppose that a particle of malignity lurks in his composition. My long acquaintance with him justifies me in saying that I have known few men more disposed to cherish kindly and benevolent feelings towards their fellow-men than himself. He informs me that he will with pleasure admit a notice of the "Gentleman's Magazine" [on which Poe was then employed] in the "Messenger," and if possible in the October number. . . .

It gives me sincere pleasure to understand that your own good sense and the influence of high and noble motives have enabled you to overcome a seductive and dangerous besetment, which too often prostrates the wisest and best by its fatal grasp. The cultivation of such high intellectual powers as you possess cannot fail to earn for you a solid reputation in the literary world. In the department of criticism especially, I know few who can claim to be your superior in this country. Your dissecting knife if vigorously employed would serve to rid us of much of that silly trash and sickly *sentimentality* with which puerile and conceited authors, and gain-seeking booksellers are continually poisoning our intellectual food. I hope in relation to all such you will continue to wield your mace without "fear, favor, or affection." I subscribe myself sincerely your well-wisher.
[Signature cut out.]

DR. MORTON'S DISCOVERY OF ANESTHESIA.

MORTON'S INHALER.

IN the January number of *THE CENTURY* appeared a very interesting article by Miss Eve Blantyre Simpson, telling how her distinguished father discovered the anesthetic properties of chloroform in 1847. A year before that, however, the conquest of pain had been achieved, and in all the leading hospitals, both here and abroad, surgery was already robbed of its terrors by means of the inhalation of sulphuric ether.

Sir James Y. Simpson was, as all the world knows, a most eminent surgeon, but his chief claim to undying fame rests on his discovery that chloroform possessed properties similar to those which it had already been demonstrated belonged to sulphuric ether. But while he has been honored, the American who made the earlier and far greater discovery still sleeps "unthought of in obscurity." No statue of him has anywhere been erected, no bust of him adorns any of the halls of medicine or the hospitals, where it is due to him, to use the eloquent words of Dr. Oliver Wendell Holmes, that "the fierce extremity of suffering has been steeped in the waters of forgetfulness, and the deepest furrow in the knotted brow of agony has been smoothed forever."

Dr. William T. G. Morton was born August 9, 1819, on a farm in the township of Charlton, Massachusetts. His father having lost money in some commercial speculation, at the age of sixteen the boy, who had already determined to study medicine, had to leave school to earn his own living.

In one situation or another young Morton continued to support himself until he was twenty-one. He then came into possession of a little money left him by an aunt, which, added to what he had saved, it seemed to him could be made the means, by judicious husbanding, of enabling him to realize the wish that was still dear to his heart. He resolved to study dentistry, and to support himself by its practice while qualifying himself to become a physician. In due time he obtained his diploma, and, after one or two attempts elsewhere, opened an office in Boston, where his success was rapid.

It was customary among dentists at that time,

when fitting false teeth, to set them upon gold plates placed directly above the fangs of the old teeth. Dr. Morton obtained a new kind of solder for attaching artificial teeth to the plate, of the same character as the plate itself, thus preventing any galvanic action between them. But, to demonstrate satisfactorily its superiority, it was necessary to remove the roots of the decayed teeth. This, of course, was a painful process, and there were few persons with courage and stoicism sufficient to submit to the ordeal. It soon became evident to him that if his improved method were ever to become popular, he would have to find some way of preventing, or at least of greatly mitigating, the suffering caused by the extraction of the old roots. Thus, almost at the outset of his career, he was led to speculate and study and make experiments for the purpose of discovering some agency by which he could produce at least partial insensibility to pain.

He conducted these experiments with the energy and persistence that were characteristic of him. He tried all the opiates for alleviating pain that were then commonly used by physicians, even having recourse to mesmerism; but though he succeeded occasionally in rendering the pain less acute than it would have been had no medicines been employed, the net result of all his efforts was exceedingly discouraging.

Though the practice of dentistry had absorbed so much of his time and attention, and had opened up unsuspected fields for original research and experiment, Morton had by no means relinquished his purpose of becoming a physician. In March, 1844, he entered his name as a student of medicine in the office of Dr. Charles T. Jackson of Boston.

In July, 1844, a Miss Parrott of Gloucester, Massachusetts, called at his office to have a tooth filled. Because of its extreme sensitiveness, and her own keen susceptibility to pain, she could not at first endure the application of an instrument. To deaden the pain, Dr. Morton applied chloric ether to the affected part. Its use for such purpose was then no secret; other dentists had used the same preparation. Miss Parrott paid several visits to Dr. Morton's office, and he used the chloric ether freely, often keeping it sealed up in the hollow tooth. On introducing the instrument into the cavity of the tooth in search of the sensitive portion of the bone, he found that the patient experienced no

ENGRAVED BY R. G. TIETZE.

FROM AN AMBROTYPE.

W. J. G. Morton

pain whatever, and, much to his surprise, that the surrounding parts were benumbed.

"The idea instantly occurred to me," he said, in speaking of the matter "that if I could devise some means for bringing the whole system under the influence of ether, it would be a most valuable means of relief in more intense or more diffused pain." He lost no time in seeking to test, by actual experiment, the value of the idea that had flashed upon him. He repaired to his father-in-law's farm at Farmington, Connecticut, and applied chloric ether to insects, birds, and various small quadrupeds. But beyond contributing some additions to the long list of dumb martyrs to science, he accomplished nothing that had more than a negative value. Somewhat discouraged, but still firm in the faith that somewhere there must exist something by which

pain could be prevented, he returned to Boston, and a few weeks later matriculated at the Medical School of Harvard University.

Attendance at the clinical lectures, and at operations in the Massachusetts General Hospital, formed part of the course then pursued by medical students. It was a privilege of which young Morton gladly availed himself. Then was revealed to him how terrible was the sway which pain exercised over sensitive organizations, and how utterly incapable of controlling and subduing it were medical science and surgical skill. Again and again the great idea which he had conceived, that there was some way of shackling this awful monster of torture, stirred within him, and urged him to leave nothing undone to discover by what beneficent agency it could be accomplished.

To chemists some of the peculiar properties

of nitrous oxid gas, or "laughing-gas," as it was then commonly called, because of the peculiar effects produced by its inhalation, had long been known. In 1799 Sir Humphry Davy published an account of his researches and experiments with it, describing the relief it afforded him when suffering from headache and toothache, and making this remarkable suggestion: "As nitrous oxid, in its extensive operation, appears capable of destroying physical pain, it may probably be used with great advantage during surgical operations in which no great effusion of blood takes place."

It happened that on December 11, 1844, Dr. Horace Wells, a former partner of Morton in the dental business, for a brief period attended a private exhibition of the effects produced by laughing-gas given by C. Q. Colton at Hartford. While under the influence of the gas, one man stumbled, and bruised his shins badly, but was unconscious of any pain until the effects of the gas had passed off. Slight as was the incident, it made a profound impression on Dr. Wells.

As he was troubled at this time with an aching tooth, he decided to make a practical test of his theory on himself. He inhaled the gas while another dentist extracted the tooth.

"A new era in tooth-pulling!" he exclaimed. "It did not hurt me as much as the prick of a pin. It is the greatest discovery ever made."

After a few more or less successful experiments, in order to obtain something like an official indorsement of his methods, he repaired to Boston to give an exhibition of painless tooth-pulling in the presence of a number of physicians and medical students. Dr. Morton consented to assist him. Dr. Wells administered the gas, and extracted the tooth, but the patient, instead of remaining in blissful unconsciousness during the operation, screamed with pain. Some of the spectators laughed, and others hissed. The exhibition of "painless tooth-pulling" was a painful failure. For his participation in the affair Dr. Morton came in for no small share of ridicule.

Much discouraged, Dr. Wells returned to Hartford, and told his friends that no dependence was to be placed on the gas; that it did not produce the same effects in all cases. He abandoned his experiments, and soon relinquished the practice of dentistry, and busied himself with other pursuits. He narrowly missed making a great discovery. With a little more persistence, he would certainly have ascertained that his humiliating failure was due to the fact that he did not administer enough gas to produce complete anesthesia in all cases. As it was, it was left for others to discover how to administer it so as to render it available for the performance of minor operations requiring only a short space of time. More than fifteen years

elapsed before the "new era in tooth-pulling" by means of nitrous oxid gas, became a reality.

Though Dr. Wells's exhibition was a failure, it stimulated Dr. Morton to renewed exertions, apprising him as it did that he was not alone in seeking some means of subduing pain, and it suggested to him a new line of experiments in the application of ether. It was almost as volatile as nitrous oxid gas; why might it not, when inhaled, accomplish what the gas had failed to do? Its efficacy in producing local insensibility when applied to a mucous membrane he had already ascertained by experiment. If taken into the lungs, it would at once be applied to a surface of mucous membrane greater than existed in all the rest of the body put together. Moreover, it would reach the place most favorable for the dispersion of its benumbing properties through the system.

These were the ideas that flashed through his mind. But there were grave considerations which made him pause before rashly putting them to the test. He did not know, nor at that time did anybody else know, how far the inhalation of ether might be pursued with safety. Yet its inhalation for medical purposes was not infrequent. In a pamphlet published in 1795 mention is made of the beneficial effects produced by this means in the treatment of diseases. Dr. John C. Warren of Boston employed it in 1805 for relieving the last stages of pulmonary inflammation. But though, apparently, many physicians and chemists had been on the verge of discovering that the inhalation of sulphuric ether would produce insensibility to pain, they all failed to push their researches far enough. They seem to have concluded that its inhalation to the extent of producing unconsciousness would be attended by very serious, if not fatal, consequences, and they admonished practitioners to exercise extreme caution in administering it.

With characteristic intrepidity, Dr. Morton's first experiments were made upon himself. It occurred to him that ether, if combined with such narcotics as he had been in the habit of using in his practice, would probably produce insensibility to pain more speedily and assuredly than if used alone. He placed a mixture of ether and morphine in a retort, around which he wrapped a hot towel, and, with many misgivings, he inhaled the mixture. In a similar way he also inhaled a preparation of ether and opium. He was punished for his temerity by some splitting headaches, but when, emboldened by the discovery that no severer pains or penalties were imposed upon him, he gradually prolonged the periods of inhalation, he was rewarded by the perception of a distinct feeling of numbness pervading his body and limbs.

In the spring of 1846 he again posted off to the

MRS. ELIZABETH W. MORTON, 1845, AGED 18.

FROM A DAGUERRETYPE.

country, this time to his own place at Wellesley, to experiment on some denizens of the farmyard. He etherized a hen, and cut off its comb, the hen meanwhile making no protest, or indicating in any way that it had any personal interest in the proceedings. Still more satisfactory was an experiment tried on a favorite water-spaniel.

When Dr. Morton returned to Boston, he was so confident that he would succeed, that he determined to turn over the management of his office and practice to other hands, that he might devote himself exclusively to the prosecution of his researches and experiments. The sacrifice that this involved affords a measure of his faith. He had built up an enormous practice, his receipts having risen to \$20,000 a year, while his expenditures were \$10,000, and still he had found time to keep up his study of medicine, and to attend lectures.

There remained the crucial test, to ascertain, by administering ether to some human being,

whether it would really produce insensibility to pain, as it had apparently done in the case of the spaniel. He promised two of his assistants, William P. Leavitt and Thomas B. Spear, five dollars apiece if they could find a man who would take the ether, and submit to having a tooth drawn while under its influence. They made search, but failed to find one.

He succeeded at last in inducing the two assistants themselves to inhale the ether from a handkerchief. But with each of them in turn the sensation of drowsiness at first induced rapidly passed away, and they grew violently excited. Much puzzled was Dr. Morton to account for results so unexpected, until he had a sample of the ether analyzed, and discovered that, unlike that with which he had previously experimented, the ether, which he had obtained at a wholesale drug-house, contained twenty-five per cent. of free alcohol.

After obtaining some chemically pure sul-

phuric ether, on September 30, 1846, Dr. Morton returned to his office determined to test its efficacy on himself. He shut himself up alone in a room to make the experiment. It was an act revealing courage of a high order, and a sublime faith. The annals of science and medicine contained no record of the effects of ether when inhaled to the extent of producing complete unconsciousness. Hints there were not a few that to inhale it was to invite grave injuries and possibly death itself.

It was an heroic act, but with modest simplicity Dr. Morton describes it in his memoir to the Academy of Arts and Sciences at Paris.

Taking my tube and flask [he wrote], I shut myself up in my room, seated myself in the operating-chair, and commenced inhaling. I found the ether so strong that it partially suffocated me, but produced no decided effect. I then saturated my handkerchief, and inhaled it from that. I looked at my watch, and soon lost consciousness. As I recovered, I felt a numbness in my limbs, and a sensation like nightmare, and would have given the world for somebody to come and arouse me. I thought for a moment I should die in that state, and that the world would only pity or ridicule my folly. At length I felt a slight tingling of the blood in the end of my third finger, and made an effort to press it with my thumb, but without success. At a second effort I touched it, but there seemed to be no sensation. I gradually raised my arm, and pinched my thigh, but I could see that the sensation was imperfect. I attempted to rise from my chair, but fell back. I immediately looked at my watch, and found that I had been insensible between seven and eight minutes.

For him rest was now impossible until that one step more was taken which would prove that what the world had so long waited for had been discovered—something that could subdue pain. In his own words, recorded by the late Mrs. Harriette Woods Baker:

I had become much excited, and had determined that I would not leave the office until I had seen something more of the power of this new agent [he wrote]. Twilight came on, but in my present state I felt it to be impossible to go home to my family. As the evening wore away my anxiety increased. The hour had long passed when it was usual for patients to call. I had just resolved to inhale the ether again, and have a tooth extracted under its influence, when a feeble ring was heard at the door. Making a motion to one of my assistants, who started to answer the bell, I hastened myself to the door, where I found a man with his face bound up, who seemed to be suffering extremely.

"Doctor," said he, "I have a dreadful tooth, but it is so sore I cannot summon courage to have it pulled. Can't you mesmerize me?"

I need not say that my heart bounded at this question, and that I found it difficult to control

my feelings, but putting a great constraint on myself, I expressed my sympathy for the man and invited him to walk into the office. There were no instruments in sight to terrify him, and the ether was close at hand, every arrangement having been previously made in the hope that a similar case might occur. I examined the tooth, and in the most encouraging manner told the poor sufferer that I had something better than mesmerism by means of which I could take out his tooth without giving him pain. He gladly consented, and, saturating my handkerchief with ether, I gave it to him to inhale. He became unconscious almost immediately. It was dark. Dr. Hayden held the lamp. My assistants were trembling with excitement, apprehending the usual prolonged scream from the patient, while I extracted a firmly rooted bicuspid tooth. I was so much agitated that I came near throwing the instrument out of the window. But now came a terrible reaction. The wrenching of the tooth had failed to rouse him in the slightest degree. Instead of the quick start of relief with which a patient usually leaves the operating-chair the moment the instruments are withdrawn, he remained still and motionless as if already in the embrace of death.

The terrible thought flashed through my mind that he might be dead, that in my zeal to test my new theory I might have gone too far and sacrificed a human life. With the rapidity of lightning my mind ran through the whole process of my investigations up to the present hour. I trembled under the sense of my responsibility to my Maker and to my fellow-men. The question, Can I restore him to consciousness? startled me into action. I seized a glass of water, and dashed it in the man's face. The result proved most happy. He recovered in a minute, and knew nothing of what had occurred. Seeing us all stand around him he appeared bewildered. I instantly, in as calm a tone as I could command, asked:

"Are you ready to have your tooth extracted?"

"Yes," he answered in a hesitating tone.

"It is all over," I said, pointing to a decayed tooth on the floor.

"No!" he shouted, leaping from the chair.

For the next two weeks Dr. Morton hardly allowed himself time to sleep. He devoted much attention to endeavoring to ascertain the best methods of administering the ether. By the varying results obtained in the experiments which followed one another in rapid succession at his office, it was made apparent to him that in this respect much remained to be learned.

Then arose the question, How was he to make his wonderful discovery known to the world? Had he gone abroad and proclaimed from the house-tops that he had found out how to conquer pain, he would have been laughed at as a demented enthusiast, or denounced as an impudent and dangerous quack, of whom the good city of Boston should rid herself as speedily as possible. After consultation with friends he decided that to gain recognition for his dis-

covery, he must give a demonstration of its efficacy under conditions that would preclude any suspicion of deception, and in the presence of witnesses who would command the confidence of the medical profession of the world.

No more fitting place was there in all Boston for such a work than the Massachusetts General Hospital. Dr. Morton obtained permission from Dr. John C. Warren, the senior

made that it would render the person treated with it temporarily incapable of feeling pain had attracted a large number of medical men to the theater. It was inevitable that nearly all of those present should be skeptical as to the result. As the minutes slipped by without any sign of Dr. Morton, the incredulous gave vent to their suspicions concerning him and his discovery.

"As Dr. Morton has not yet arrived," said

ETHERTON COTTAGE AT WELLESLEY, MASS., HOME OF DR. MORTON, WHERE THE EARLY EXPERIMENTS AND DISCOVERY OF ANESTHESIA WERE MADE.

surgeon, to make a trial of his pain-annihilator at the hospital. On Wednesday, October 14, 1846, he received a note from Dr. Warren, requesting him to be present at the hospital at ten o'clock the next Friday morning, to administer his preparation to a patient who was then to be operated on. On that morning he arose at four o'clock, hurried off to the house of an instrument-maker, and, awaking him, induced him to undertake forthwith the construction of an inhaler, the design for which had been prepared only on the previous evening. As the hour appointed for the test drew near, and it was still uncompleted, Dr. Morton snatched it from the maker's hands, and hurried off to the hospital.

Meanwhile, within, all necessary preparations for the operation had been made. The patient selected for the trial was Gilbert Abbott, who was suffering from a congenital but superficial vascular tumor just below the jaw on the left side of the neck. The announcement that the operation was to furnish a test of some preparation for which the astounding claim had been

Dr. Warren, after waiting fifteen minutes, "I presume that he is otherwise engaged."

The response was a derisive laugh, clearly implying the belief that Dr. Morton was staying away simply because he was afraid to submit his discovery to a critical test.

Dr. Warren grasped the knife. At that critical moment Dr. Morton entered. No outburst of applause, no smiles of encouragement, greeted him. Doubt and suspicion were depicted on the faces of those who looked down upon him from the tiers of seats that encircled the room. No actor about to assume a new rôle ever received a more chilling reception.

"Well, sir," exclaimed Dr. Warren, abruptly, "your patient is ready."

Thus aroused from the bewilderment into which the novelty of his position had thrown him, he spoke a few words of encouragement to the young man about to be operated on, adjusted the inhaler, and began to administer the ether. As the subtle vapor gradually took possession of the citadel of consciousness, the patient dropped off into a deep slumber.

My dear Sir,

Few persons have
or had better reason than myself
to assert the claim of Dr. Morton
to the introduction of artificial
anesthesia into surgical practice.

* * *

This priceless gift to humanity
went forth from the operating theater
of the Massachusetts General Hospital
and the man to whom the world
owes it is Dr. William Thomas Green Morton.

Yours very truly
O. W. Holmes

FACSIMILE OF PARTS OF A LETTER WRITTEN BY DR. OLIVER WENDELL HOLMES.¹

Dr. Warren seized the bunch of veins, and made the first incision with his knife.

Instead of awakening with a cry of pain, the

¹ This letter was written in reply to an inquiry addressed by the writer of the present article to Dr. Oliver Wendell Holmes, who was a member of the medical staff of the Massachusetts General Hospital at the time of the discovery. Following is the full text:

"BOSTON, April 2, 1893.

"MY DEAR SIR: Few persons have or had better reason than myself to assert the claim of Dr. Morton to the introduction of artificial anesthesia into surgical practice. The discovery was formally introduced to the scientific world in a paper read before the American Academy of Arts and Sciences by Dr. Henry J. Bigelow, one of the first, if not the first, of American surgeons.

On the evening before the reading of the paper containing the announcement of the discovery, Dr. Bigelow called at my office to read the paper to me. He prefaced it with a few words which could never be forgotten.

He told me that a great discovery had been made, and its genuineness demonstrated at the Massachusetts General Hospital, of which he was one of the surgeons. This was the production of insensibility to pain during surgical operations by the inhalation of a certain vapor (the same afterward shown to be that of sulphuric ether).

patient continued to slumber peacefully, apparently as profoundly unconscious as before.

Then the spectators underwent a transfor-

In a very short time, he said, this discovery would be all over Europe. He had taken a great interest in the alleged discovery, had been present at the first capital operation performed under its influence, and was from the first the adviser and supporter of Dr. W. T. G. Morton, who had induced the surgeons of the hospital to make trial of the means by which he proposed to work this new miracle.

The discovery went all over the world like a conflagration. The only question was whether Morton got advice from Dr. Charles T. Jackson, the chemist, which entitled that gentleman to a share, greater or less, in the merit of the discovery. Later it was questioned whether he did not owe his first hint to Dr. Horace Wells of Hartford, which need not be disputed.

Both these gentlemen deserve honorable mention in connection with the discovery, but I have never a moment hesitated in awarding the essential credit of the great achievement to Dr. Morton.

This priceless gift to humanity went forth from the operating theater of the Massachusetts General Hospital, and the man to whom the world owes it is Dr. William Thomas Green Morton. Yours very truly,
"O. W. HOLMES."

mation. All signs of incredulity and indifference vanished. Not a whisper was uttered. As the operation progressed, men began to realize that they were witnessing something the like of which had never been seen before.

When the operation was over, and while the patient still lay like a log on the table, Dr. Warren, addressing the spectators, said, with solemn emphasis, "Gentlemen, this is no humbug."

But notwithstanding that Dr. Morton had thus demonstrated that a patient could be rendered completely insensible to suffering while undergoing an operation, yet for three weeks the employment of the ether at the hospital was discontinued, and surgery and agony still went hand in hand. In fact, instead of being hailed as a public benefactor, Dr. Morton found himself, for a short period immediately following the public announcement of his discovery, the target for indignant scorn and contempt. He was pilloried in the public prints by medical men and laymen as a charlatan.

Dr. Morton made application at the hospital on November 6, for permission to test the efficacy of his discovery on a patient who the next day was to undergo an amputation of the leg. Then he was told that the surgeons at the hospital deemed it their duty to decline to use the preparation until informed what it was. Dr. Morton professed his entire willingness to inform the surgeons, confidentially, what the preparation was. But for some reason this did not satisfy the exacting code of medical ethics. Through the pleas of Dr. Henry J. Bigelow, Dr. Morton was finally allowed to administer ether when Alice Mohan, a delicate girl of twenty, who had been in the hospital more than a year suffering from a disease of the knee joint, underwent an amputation of the leg, as the only alternative offered for preserving her life. Instead of filling the chamber with her agonizing shrieks, she slept the sleep of oblivion through it all; and when she revived, refused to believe that the leg had actually been removed.

After that Dr. Morton frequently administered the ether at the hospital, and always with complete success. In 1848 the trustees showed their appreciation of his services, and his free gift of the discovery to the hospital, by presenting him with a silver box containing one thou-

sand dollars, the inscription concluding with these words, "He has become poor in a cause which made the world his debtor."

Dr. Morton shared none of the joys which his discovery brought to thousands of his fellow-creatures, but reaped only a harvest of misery and misfortune, blighted hopes, ruined health, and bankruptcy. He was granted a patent for his discovery. When the use of it was freely offered the army and navy, both departments declined to have anything to do with it, but nevertheless at their convenience employed it in their hospital service. For nearly two-score years he sought redress in vain. But there is no space here to tell that sad story, nor to enter into discussion of the claims of Dr. Jackson and Dr. Wells, both of whom maintained that they were entitled to the honor and credit of making the discovery.

The ether controversy was a bitter one; but the obscuring smoke of the battle has long since rolled away, and one fact stands out as clear as the noonday sun—namely, that it is to Dr. Morton that the world is indebted for its knowledge of the complete anesthetic properties of sulphuric ether. It was he who did the work; he who made the experiments; he who dared to assume the risk of public failure and disaster and possible loss of life.¹

Dr. Morton died suddenly of apoplexy on July 15, 1868. His widow is still living. Her maiden name was Elizabeth Whitman, and she was a daughter of Edward Whitman of Farmington, Connecticut. Her most vivid recollections of her husband's great discovery are associated with that memorable October 16, 1846, when for the first time he administered ether at the Massachusetts General Hospital.

"In those few hours," she said to the writer, "I learned to realize what is meant by the agony of suspense. I had heard it often predicted that he would kill somebody by his experiments. My mind recoiled from such a thought with horror, and yet was forced to dwell upon it. I knew not what minute a messenger might arrive with the information that my husband had been arrested for manslaughter. When he returned, there was that in his face which told me, before he opened his lips, that he had triumphed."

E. L. Snell.

¹ Dr. Morton received a valuable indorsement of his rights as a discoverer from Dr. Simpson. The professor had just published a pamphlet upon chloroform, the application of which he had discovered, and which he proposed as a substitute for ether in certain cases. Upon a fly-leaf of a copy of this pamphlet which he sent to Dr. Morton was written the following note:

MY DEAR SIR: I have much pleasure in offering, for your kind acceptance, the accompanying pamphlet. Since it was published we have had various other operations performed here, equally successful. I have a note from

Dr. Liston, telling me also of its perfect success in London. Its rapidity and depth are amazing.

In the Monthly Journal of Medical Science for September, I have a long article on etherization, vindicating your claims over those of Jackson.

Of course the great thought is that of producing insensibility—and for that the world is, I think, indebted to you.

I read a paper lately to our society, showing that it was recommended by Pliny, etc., in old times.

With very great esteem for you, allow me to subscribe myself,

Yours, very faithfully,

J. Y. SIMPSON.

T. Cole sc. Met. 1594

PORTRAIT OF MASSY'S SECOND WIFE, IN THE UFFIZI.

OLD DUTCH MASTERS.

QUINTEN MASSYS (1460?–1530).

IN glancing at the history of Flemish art, a distinction must be borne in mind between its two dominant schools—that of Bruges, of which the brothers Van Eyck (1366–1440) were the first great representatives, and which was further adorned by the famous names of Van der Weyden and Memling; and that of Antwerp, which Quinten Massys founded at about the beginning of the sixteenth century, and of which Rubens and Van Dyck are the final glory. There is this difference between them: the school of Bruges, which was the earlier of the two, was original and indigenous to the soil, born on the spot, and continued to assert its independence to the last; while the one which succeeded it became, after the time of Massys, subject to the spirit of the Italian Renaissance, and adopted the Italian fashion, which ill accorded with the homely realism of its native environment. Thus Flemish art from the time of Massys to that of Rubens is a combination of two manners, a mongrel style which strikes the beholder who is conversant with Italian art as rather odd and incongruous.

But Quinten Massys is a genuine Fleming, as independent and personal as Rubens himself, though recalling the old school of the Van Eycks; he is indeed generally regarded as the connecting-link between these two extremes in that he unites the best traditions of the former with a softer and broader treatment, and a grandeur (though by no means voluptuousness) which seems prophetic of the latter. This is especially evident in his celebrated work of "The Entombment," an altarpiece for the chapel of the Joiners' Company in the Cathedral of Antwerp. Sir Joshua Reynolds says of this work, "There are heads in this picture not exceeded by Raphael, and indeed not unlike his [early] manner of painting portraits, hard and minutely finished." The work is now in the Public Gallery at Antwerp. Besides works of this order, Massys also painted works of a secular nature, such as those where merchants or money-changers are seen weighing their gold or counting their gains. A fine example of this kind is "The Banker and his

Wife" in the Louvre. Here may be found the same delicacy of pencil, the same avoidance of heavy shadows, as in his other works, and therein a test of the genuineness of similar productions often ascribed to him. A few portraits by his hand exist, which are full of individuality; such are those of himself and his wife to be seen in the room of portraits at the Uffizi Gallery in Florence, and of which I have chosen that of his wife as an illustration. The two portraits are upon one panel; that of his wife is wonderfully well preserved, as, being the inner panel, and boxed in the frame, it is shown only upon application to the custodian. It is delightfully fresh, and charming to look at. Truly a picture of "the lassie that's so neat and clean," and pure and sweet withal.

Quinten Massys, whose name appears in the various forms of Matsys, Metsys, and Messys, was born at Antwerp about 1460. He is said to have been the son of a locksmith, and to have worked at his father's trade—he is popularly known as "the blacksmith of Antwerp." Doubt has, however, been cast upon this, as likewise upon the romantic story telling how he wooed and won his bride. The father of his lady-love had declared that she should marry a painter, and Massys accordingly left the anvil, and devoted himself to the study of painting. Such was the power of his love that he rapidly became a master in his new art, and so wedded the object of his passion. There appears, however, some foundation in fact for crediting this pretty romance, since in the Latin inscription in the Cathedral of Antwerp in honor of Massys occurs the line,

Connubialis amor de Mulcibre fecit Apellem, and the master himself wrote on his own portrait the words, "Pictorem me fecit Amor." In 1497 Massys joined the Painters' Guild, soon rose to fame, and attained station, wealth, and landed property in his native town. He was the friend of the famous engraver Lucas van Leyden, and was visited by another even more renowned, Albert Dürer. He married twice, and died at Antwerp in 1530, leaving a large family. Two of his sons were painters. The portrait in the Uffizi is that of his second wife.

T. Cole.

LOVE IN IDLENESS.

A FORTNIGHT AT BAR HARBOR.

BY F. MARION CRAWFORD,

Author of "Mr. Isaacs," "Saracinesca," "Paul Patoff," "Katharine Lauderdale," etc.

v.

LOUIS LAWRENCE had not been at Bar Harbor a week before he became fully aware—if indeed there had previously been any doubt on the subject in his mind—that he was very much in love with

Fanny Trehearne. It became clear to him that, although he had believed himself to be in love once or twice before then, he had been mistaken, and that he had never known until the present time exactly what love meant. He was not even sure that he was pleased with the passion, or, at least, with the form in which it attacked him. Sensitive as he was, it "took him hard," as the saying is, and he felt that it had the better of him at every turn, and disposed of him in spite of himself at every hour of the day.

When he was alone he wondered why he had been asked to the house, and whether Mr. and Mrs. Trehearne, who were abroad, knew anything about it. He was a modest man, and was inclined to underestimate himself, so that it could never have occurred to him that Fanny Trehearne might have been strongly attracted by him during their acquaintance in town, and might have insisted that he should be asked to come and pass a fortnight. Moreover, Fanny lost no opportunity of impressing upon him that he was a great favorite with the three Miss Miners, and she managed to convey the impression that he had been asked chiefly to please them, though she never said so.

Meanwhile, however, it was evident that the three sisters were absorbed in Mr. Brinsley, and that when the latter was present they took very little notice of Lawrence. He laughed at the thought that the three old maids should all be equally in love with the showy Canadian, and he told himself that the thing was ridiculous; that they were merely enthusiastic women,— "gushing" women, he called them in his thoughts,— who were flattered by the diplo-

matic and unfailing civilities of a man who was evidently in pursuit of Fanny Trehearne.

For by this time he was convinced that Brinsley had made up his mind to marry Fanny if he could; and he hated him all the more for it, even to formulating wicked prayers for the suitor's immediate destruction. The worst of it was that the man might succeed. A girl who will and can ride anything, who beats everybody at tennis, and who is as good as most men in a sail-boat, may naturally be supposed to admire a man who does those things, and many others, in a style bordering upon perfection. This same man, too, though not exactly clever in an intellectual way, possessed at least the gifts of fluency and tact, combined with great coolness under all circumstances, so far as Lawrence had observed him. It was hardly fair to assert that he was dishonest because he flattered the three Miss Miners, and occupied himself largely in trying to anticipate their smallest wishes. He did it so well as to make even Fanny Trehearne believe that he liked them for their own sakes, and that his intentions were disinterested and not directed wholly to herself. Of course she knew that Brinsley wished to marry her; but she was used to that. Two, at least, of several men who had already informed her that their happiness depended upon winning her were even now at Bar Harbor, presumably repeating that or a similar statement to more or less willing ears. As for Lawrence, he could not fairly blame Brinsley for his behavior; he confessed in secret that he flattered the three Miss Miners himself, with small regard for unprejudiced truth. Besides, they were very kind to him. But he found it hard to speak fairly of Brinsley when alone with Fanny Trehearne.

"I don't like the man," he said, on inadequate provocation, for the twentieth time.

"I know you don't," answered Fanny, calmly, "but that's no reason for letting go of the tiller. Mind the boom! she's going about—no—it's of no use to put the helm up now. We've no way on—let her go! No—I don't mean that—oh, do give it to me!"

And thereupon Fanny, who was sitting forward of him, on the weather side, stretched her long arm across him, pushing him back into his corner, and put the helm hard down with her left hand, while she hauled in the sheet as much as she could with her right, bending her head low to avoid the boom as it came swinging over.

Lawrence could not help looking down at her, and he forgot all about the boom, being far too little familiar with boating to avoid it instinctively, when he felt the boat going about. It came slowly, for there was little wind, and the cat-boat, having no way on to speak of, was in no hurry to right herself and go over on the other tack; but just as the shadow of the sail warned him that something was coming, he looked up, and at the same instant received the blow full on his forehead, just above his eyes. He wore a soft, knitted woolen cap, which did not even afford the protection of a visor.

Fanny turned her head at once, for the blow had been audible, and she saw what had happened. Lawrence had raised his hand to his forehead instinctively.

"Are you hurt?" asked Fanny, quickly, keeping her eyes upon him, and still holding the helm hard over so as to give the boat way.

Lawrence did not answer at once. He was half stunned, and still covered his forehead with his hand. The young girl looked at him intently, and there was an expression in her eyes which he, at least, had never seen there — a sudden, scared light which had nothing to do with fear.

"Are you hurt?" she asked again, gently.

His delicate face grew suddenly pale, as the blood, which at first had rushed up under the shock of the blow, subsided as suddenly. Fanny turned her eyes from him, and looked ahead and under the sail to leeward. She let out a little more sheet, so that the boat could run very free; for the craft, like most cat-boats, had a weather helm when the sheet was well aft, and Fanny wanted her hands. Moreover, Lawrence was now on the lee side with her, and the boat would have heeled too far over with the wind abeam. As soon as the sail drew properly, Fanny sat up beside Lawrence, steering across him with the left hand. With her right she could reach the water, and she scooped up what she could in her hollow palm, wetting her sleeve to the shoulder as she did so, for the boat was gaining speed. She dashed the drops in his face.

"Are you hurt?" she asked a third time, drawing away his hand, and laying her own wet one upon his forehead.

"Oh, no," he answered faintly; "I'm not hurt at all."

She could tell by his voice that he was not speaking the truth, and a moment later, as he

leaned against the side of the boat, his head fell back, and his lips parted in a dead faint.

There was no scorn in the young girl's face for a man who could faint so easily, as it seemed; but the scared look came into her eyes again, and without hesitation, still steering with her left hand, she passed her right arm around his neck, and supported him. The breeze was almost in her face now, for she was looking astern, and she knew by the way it fanned her whether she was keeping the boat fairly before it.

Lawrence did not revive immediately, and it was fortunate that there was so little wind, or Fanny might have got into trouble. She looked at him a moment longer, and hesitated, for the position was a difficult one, as will be admitted. But she was equal to it, and knew what to do. Letting his head fall back as it would, she withdrew her arm, let go the helm, and hauled in the sheet as the boat's head came up. As the boom came over toward Lawrence's head, she caught it and lifted it over him, hauled in the slack and made the sheet fast, springing forward instantly to let go the halyards. The gaff came rattling down, and she gathered in the bellying sail hastily, and took a turn round everything with the end of the throat-halyard, which chanced to be long enough — the gaskets were out of her reach in the bottom of the boat.

There was little or no sea on, as the tide was near the turning, and the cat-boat was rocking softly to the little waves when Fanny came aft again. Lawrence's head was hanging back, his lips were parted, and his eyes were half open, showing the whites in a rather ghastly way. With strong arms the young girl half lifted him, and let him gently down upon the cushions in the stern-sheets. Then she leaned over the side, and wetted her handkerchief, and laid it upon his bruised forehead. The cold water and the change of position brought him to himself.

He opened his eyes, and looked up into her face as she bent over him. Then, all at once, he seemed to realize what had happened, and, with an exclamation, he tried to sit up. But she would not let him.

"Lie still a minute longer!" she said authoritatively. "You'll be all right in a little while."

"But it is n't anything, I assure you," he protested, looking about him in a dazed way. "Please let me sit up. I won't make a fool of myself again — it's only my heart, you know. It stops sometimes — it was n't the knock."

"Your heart?" repeated Fanny, with greater anxiety than Lawrence might have expected.

"You have n't got heart disease, have you?"

"Oh, no; not so bad as that. It's all right now. It will begin to beat very hard presently — there — I can feel it — and then it will go

on regularly again. It is n't anything. I fancy I smoke too much — or it's coffee — or something. Please don't look as though you thought it were anything serious, Miss Trehearne. I assure you, it's nothing. Lots of people have it."

"It is serious. Anything that has to do with the heart is serious."

Lawrence smiled faintly.

"Is that a joke?" he asked. "If it is, please let me sit up."

"No; that is n't a reason," answered Fanny, laughing a little, though her eyes were still grave. "You must lie still a little longer. You might faint again, you know. It must be dangerous to have one's heart behaving so strangely."

"Oh, I don't believe so."

"You don't believe so? You mean that it's possible, but that you hope it won't stop. Is that it?"

"Oh — well — perhaps. But I don't think there's any real danger. Besides, if it did, it's easy, you know."

"What's easy?"

"It's an easy death — over at once, in a flash. No lingering, and last words, and all that." He laughed.

Fanny Trehearne's sun-burned cheeks grew pale under their tan, and her cool gray eyes turned slowly away from his face, and rested on the blue water.

"Please don't talk about such things!" she said in a tone that seemed hard to Lawrence.

"Are you afraid of death?" he asked, still smiling.

"I?" She turned upon him indignantly. "No; I don't believe that I'm much afraid of anything — for myself."

"You turned pale," observed the young man, raising himself on his elbow as he lay on the cushions, and looking at her. Her color came more quickly than it had gone.

"Did I?" she asked indifferently enough. "It's probably the sun. It's hot, lying here and drifting."

"No; it was n't the sun," said Lawrence, with conviction. "You were thinking that somebody you are fond of might die suddenly. We were talking about death."

"What difference does it make whom I was thinking of?" She spoke impatiently now, still watching the water.

"It makes all the difference there is, that's all," answered Lawrence. "Won't you tell me?"

"No; certainly not! Why should I? Look here — if you are well enough to talk, you're well enough to help me to get the sail up again."

"Of course I am — but —" Lawrence showed no inclination to move.

"But what? You're too lazy, I suppose." Fanny laughed. "Let me see your forehead — take your cap off," she added with a change of tone.

Lawrence thrust the cap back, which did not help matters much, as his hair grew low, and partly hid the bruise. The skin was not broken, but it was almost purple, and a large swelling had already appeared.

"It's too bad!" exclaimed Fanny, looking at it as he bent down his head, and softly touching it with her ungloved hand. "Tell me — do you feel very weak and dizzy still? I was only laughing when I spoke of your helping me with the sail."

"Oh, no," answered Lawrence, cheerfully. "It aches a little, of course, but it will soon go off."

"And your heart?" asked Fanny, anxiously. "Is it all right now? You don't think you'll faint again, do you?"

"Not a bit."

"I'm not sure. You are very pale."

"I'm always pale, you know. It's my nature. It does n't mean anything. Some people are naturally pale."

"But you're not. You're dark, or brown, and not red, but you're not usually pale. I wish I had some whisky, or something, to give you."

She looked round the boat rather helplessly as though expecting to discover a remedy for his weakness.

"Please don't make so much of it," said Lawrence in a tone which showed that he was almost annoyed by her persistence. "I assure you that I won't have such bad taste as to die on your hands before we get to land."

Fanny rose to her feet, and turned away from him with an impatient exclamation.

"Just keep the helm amidships while I get the sail up," she said, without looking at him, and stepping upon the seat which ran along the side, she was on the little deck in a moment, with both halyards in her hands.

Lawrence sprang forward to help her, forgetting what she had just told him to do.

"Do as I told you!" she exclaimed quickly and impatiently. "Do you know what the tiller is? Well, keep it right in the middle till I tell you to do something else."

"Don't be fierce about it," laughed Lawrence, obeying her.

But when she was not looking he pressed one hand to his forehead with all his might, as though to drive out the pain, which increased with every minute.

Meanwhile, Fanny laid her weight to the halyards, and the sail went flapping up, throat and peak. The girl was very strong, and had been taught to handle a cat-boat when she was

a mere child, so that there was nothing extraordinary in her accomplishing unaided a little feat which would have puzzled many a smart young gentleman who fancies himself half a sailor.

VI.

IT chanced that on that evening Roger Brinsley was to dine with the Miss Miners. He was often asked, and he accepted as often as he could. As a matter of fact, he was not so much sought after elsewhere as he was willing to let the four ladies believe, for there were people in Bar Harbor who shared Lawrence's distrust of him, while admitting that, so far as they could tell, it was quite unfounded. There was nothing against him. The men said that he played a good deal at the club, and remarked that he was a good type of the professional gambler, but no one ever said that he won too much. On the contrary, it was believed that he had lost altogether rather heavily during the six weeks since he had first appeared. He paid cheerfully, however, and was thought to be rich. Nevertheless, the men whose opinion was worth having did not like him. They wondered why the Miss Miners had him so often at the house, and whether there were not some danger that Fanny Trehearne might take a fancy to him.

It was very late when Fanny and Lawrence got home, for the cat-boat had been carried far up Frenchman's Bay during the time after the little accident, and it had been necessary to beat to windward for two hours against the rising tide in order to fetch the channel between Bar Island and Sheep Porcupine. The consequence was that the pair had scarcely time to dress for dinner after they reached the house.

Lawrence felt ill and tired, and was conscious that the swelling on his forehead was not beautiful to see. He was still dazed, and by no means himself, when he looked into the glass and knotted his tie. But though he might well have given an excuse, and stayed in his room instead of going down to dinner, he refused to consider the possibility of such a thing even for a moment. He felt something just then which more than compensated him for his bruises, and his wretched sensation of weakness.

The conversation, after the boat had got under way again, had languished, and had been so constantly interrupted by the often repeated operation of going about that Lawrence had not succeeded in bringing it back to the point at which Fanny had broken it off when she had gone forward to hoist the sail. But he had more than half guessed what might have followed, and the reasonable belief that he might

be right had changed the face of his world. He believed that Fanny had turned pale at the idea that his life was in danger.

One smiles at the simplicity of the thought, in black and white, by itself, just itself, and nothing more. Yet it was a great matter to Louis Lawrence, and as he looked at his bruised face in the glass, he felt that he was too happy to shut himself up in his room for the evening, out of sight of the cool gray eyes he loved.

He had assuredly not meant to frighten Fanny when he had spoken, and he had been very far from inventing an imaginary ailment with which to excite her sympathy. The whole thing had come up unexpectedly as the result of the accident. Hence its value.

As often happens, the two people in the house who had been most hurried in dressing were the first down, and as Lawrence entered the library he heard Fanny's footstep behind him. He bowed as they came forward together to the empty fireplace. She looked at him critically before she spoke.

"You're badly knocked about. How do you feel?" There was a man-like directness in her way of asking questions, which was softened by the beauty of her voice.

"I feel—as I never felt before," answered Lawrence, conscious that his eyes grew dark as they met hers. "You told me something to-day—though you did not say it."

Fanny did not avoid his gaze.

"Did I?" she asked very gravely.

"Yes. Plainly."

"I'm very sorry," she answered, with a little sigh, and turning from him at last.

"Are you taking it back?" Louis's voice trembled as he asked the question.

"Hush!"

Just then the voices of the three Miss Miners were heard in the hall, and at the same instant the distant tinkle of the front-door bell announced the arrival of Roger Brinsley.

The conversation turned upon Lawrence's accident, from the first, as was natural, considering his appearance. He dwelt laughingly on his utter helplessness in a boat, while Fanny was inclined to consider the whole affair as rather serious. For some reason or other Brinsley was displeased at it, and ventured to say a disagreeable thing. He had lost at cards in the afternoon, and was in bad humor. He spoke to Fanny with affected apprehension.

"You really ought to take somebody with you who knows enough to lend a hand at a pinch, Miss Trehearne," he said. "Suppose that you got into a squall, and had to take a reef; you'd be in a bad way, you know."

"If I could n't manage a cat-boat alone, I'd walk," answered Fanny, with contempt.

"Yes; no doubt. But if a squall really came

up, what would you do? Mr. Lawrence confesses that he could n't help you."

"Are you chaffing, Mr. Brinsley?" asked Fanny, severely. "Or do you think I really should n't know what to do?"

"I doubt whether you would."

"Oh — I'd let go the halyards, and lash the helm amidships, and take my reef with the sail down — 'hoist 'em up, and off again,' after that, as the fishermen say."

"I think you could stand an examination," said Brinsley.

"I dare say. Could you? If you were going about off a lee shore in a storm, and missed stays, could you clubhaul your ship, Mr. Brinsley?"

The three Miss Miners stared at the two in surprise and wonder, not understanding a word of what they were saying. It was apparent to Lawrence, however, that Fanny was bent on putting Brinsley in the position of confessing his ignorance at last; but where the young girl had learned even the language of seamanship, which she used with such apparent precision, was more than Lawrence could guess. Brinsley did not answer at once, and Fanny pressed him.

"Do you even know what clubhauling means?" she asked mercilessly.

"Well — no — really, I think the term must be obsolete."

"Not at sea," retorted Fanny.

This was crushing, and Brinsley, who was really a very good hand at ordinary sailing, grew angry.

"Of course you've had some experience in cat-boats," Fanny continued. "That is n't serious sailing, you know. It's about equivalent, in horsemanship, to riding a donkey — a degree less dignified than walking, and a little less trouble."

"I won't say anything about myself, Miss Trehearne," said Brinsley, "but you might treat the cat-boat a little less roughly. I did n't know you'd ever sailed anything else."

Here the Miss Miners interposed, one after another, protesting that it was not fair to use up the opportunities of conversation in such nautical jargon.

"I only wished to prove to Mr. Brinsley that I'm to be trusted at sea," Fanny answered.

"My dear child," said Miss Cordelia, "Mr. Brinsley knows that, and he must be a good judge, having been in the navy."

"Oh, I did n't know you'd been in the navy, Mr. Brinsley," said the pitiless young girl, fixing her eyes on his with an expression which he, perhaps, understood, though no one else noticed it. "The English navy, of course?"

"The English navy," repeated Mr. Brinsley, sharply.

"Oh, well, that accounts for your not knowing how to clubhaul a ship. Your own people are always saying that your service is going to the dogs."

Even Lawrence was surprised, and Brinsley looked angrily across the table at his tormentor, but found nothing to say on the spur of the moment.

"However," Fanny continued, with some condescension, "I'm rather glad to know you're a navy man. I'll get you to come out with me some day and verify some of the bearings on our local chart. I believe there are one or two mistakes. We'll take the sextant and my chronometer with us, and the tables, and take the sun — each of us, you know, and work it out separately, and see how near we get. That will be great fun. You must all come and see Mr. Brinsley and me take the sun," she added, looking round at the others. "Let's go to-morrow. We'll take our luncheon with us, and picnic on board. Can you come to-morrow, Mr. Brinsley? We must start at eleven, so as to get far enough out to have a horizon by noon. I hope you're not engaged. Are you?"

"I'm sorry to say I am," answered the unfortunate man. "I'm going to ride with some people just at that hour."

"How unlucky!" exclaimed Fanny, who had expected the refusal. "I'll take Mr. Lawrence, anyhow, and give him a lesson in navigation."

"I've had one to-day," said Lawrence, affecting to laugh, for it was his instinct to try to turn off any conversation from a disagreeable subject.

"You'll be all the better for another to-morrow," answered Fanny.

As she spoke to the artist, her tone changed so perceptibly that even the Miss Miners noticed it. Brinsley took the first opportunity of talking to Miss Cordelia, of whose admiration he was sure, and the rest of the dinner passed off in peace, Brinsley avoiding a renewal of hostilities with something almost like fear, for he felt that the extraordinary young girl who knew so much about navigation was watching for another opportunity of humiliating him, and would not be merciful in using it.

The change in her manner to him had been very sudden, as though she had on that particular day made up her mind about something concerning him. Hitherto she had treated him almost cordially, certainly with every appearance of liking him. He had even of late begun to fancy that her color heightened when he entered the room — a phenomenon which, if real, was attributable rather to another cause,

and connected with Lawrence's presence in the house.

After dinner the whole party went out upon the veranda, a favorite maneuver of Miss Cordelia's, whereby the society of Mr. Brinsley was not wasted upon smoke and men's talk in the dining-room. This evening, however, instead of sitting down at once in her usual place, Cordelia slipped her arm through Fanny's, and led her off to the other side, and down the steps into the garden.

"The moonlight is so lovely," said Miss Cordelia, "and I want to talk to you. Let us walk a little—do you mind?"

The two went along the path in silence, in and out among the trees. The moon was full. From the sea came up the sound of the tide, washing the smooth rocks at high water. The breeze had died away at sunset, and the deep sky was cloudless. Here and there the greater stars twinkled softly, but the little ones were all lost in the moonlight, like diamonds in a pure fountain. Everything was asleep except the watchful, wakeful sea. The two women stood still, and looked across the lawn. At last Miss Miner spoke.

"Why were you so unkind to Mr. Brinsley to-night?" she asked in a low voice.

Fanny glanced at her before she answered. The eldest Miss Miner's face had once been almost beautiful. In the moonlight, the delicate, clearly chiseled features were lovely still, but a little ghostly, and the young girl saw that the fixed smile had disappeared for once, leaving a look of pain in its place.

"I did n't mean to be unkind," Fanny began. "That is," she added quickly, correcting herself, "I'm not quite sure of what I meant. I think I did mean to hurt him. He's so strong, and he's always showing that he despises Mr. Lawrence because he is n't an athlete. As though a man must be a prize-fighter to be nice!"

"Well—but—Mr. Lawrence does n't mind. You see how he takes it all. Why should you fight battles for him?"

"Perhaps I should n't. But—why should you take up the cudgels for Mr. Brinsley? He's quite able to take care of himself, if he will only tell the truth."

"If!" exclaimed Miss Cordelia, in ready resentment. "He's the most truthful man alive."

"Oh! And he told you he had been in the English navy."

"What has that to do with it? Of course he has, if he says so."

"He's unwise to say so, because he has n't," answered Fanny, in her usual direct way.

"How in the world can you say that a man like Mr. Brinsley—an honorable man, I'm

sure—is telling a deliberate falsehood? I'm surprised at you, Fanny—indeed I am! It is not like you."

"Did you ever know me to tell you anything that was n't exactly true?" asked the young girl, looking down into her elderly cousin's sweet, sad face, for she was much the taller.

"No—of course not—but—"

"Well, Cousin Cordelia, I tell you that your Mr. Brinsley has never been in the English navy. I don't say that I think so. I say that I know it. Will you believe me or him?"

"Oh, Fanny!" Miss Cordelia raised her eyes with a frightened glance.

"Not that it matters," added Fanny, looking away across the moonlit lawn again. "Who cares? Only it's one of those lies that go against a man," she continued after a short pause. "A man may pretend that he has shot ten million grizzly bears in his back yard, or hooked a salmon that weighed a hundred-weight—people will laugh, and say that he's a story-teller. It's all right, you know, and nobody minds. But when a man says he's been in the army or the navy, and has n't, people call him a liar, and cut him. I don't know why it's so, I'm sure, but it is—and we all know it."

"Yes," answered Cordelia, almost tremulously; "but you have n't proved that Mr. Brinsley is n't telling the truth—"

"Oh, yes, I have! There never was a deep-sea sailor yet who had never heard of clubhauling a ship to save her. I know about those things. I always make navy officers talk to me about them whenever I get a chance. Besides, I can prove it to you. Ask the first captain of a fishing-schooner you meet down at the landing what it means. But don't tell me I don't know; it's too absurd."

Miss Cordelia looked down. Her hand still rested on Fanny's arm, and it trembled now so that the young girl felt it.

"What does it mean, then?" asked Cordelia, faintly.

"Oh, it's a long operation to tell about. It's when you've got a lee shore in a gale, and you want to go about and can't, because you miss stays every time, and you let go an anchor, and the ship swings to it, and just as she begins to get way on, you slip your chain, and she pays off on the other tack. Of course you lose your anchor."

"Oh—you lose the anchor? To save the ship? I see."

"Exactly."

"You lose the anchor to save the ship," repeated Cordelia, softly, as though she were trying to remember the words for future use. "Shall we go back?" she suggested rather abruptly.

"I wish you'd answer me one question first," said Fanny.

"Yes. What is it?"

"Why are you so awfully anxious to stand up for Mr. Brinsley? You're not in love with him, are you?"

Cordelia started very perceptibly, and turned her face away. Then, all at once, she laughed a little hysterically.

"In love? At my age?"

And she laughed again, and laughed, strange to say, till she cried, clinging all the time to the young girl's strong arm. Fanny did not ask any more questions as they walked slowly back to the house.

VII.

"COME with me into the village, and help me to do errands," said Fanny on the following morning, just as Lawrence was feeling for his pipe in his pocket after breakfast. "You can smoke till we get there. It would n't hurt you to smoke less, anyway."

They went down through the garden, fresh and dewy still from the short, cool night, toward the sea. The path to the village lies along a low sea-wall, just high enough to keep the tide from the lawns. But the tide was beginning to run out at that hour, and was singing and rocking itself away from the shore, leaving the big loose stones and the chocolate-colored rocks all wet and shining in the morning sun. The breeze was springing up in the offing, and would reach the land before long, kissing each island as it passed softly by, and gently breaking with dark blue the smoothly undulating water.

The sun was almost behind the pair as they walked along the sands, and shone full upon the harbor as it came into view, lighting up the deep green of the islands between which passes the channel, and bringing up the warm brown of the soil through thick, weaving spruces. The graceful yachts caught the sunshine, too, their hulls gleaming darkly, or dazzlingly white, their slender masts penciled in light against the trees, and standing out like threaded needles when they showed against the pale, clear sky. In the bright northern air the artist would have complained that there was no atmosphere, no "depth" nor "distance," but only the distinct farness of the objects a long way off—nothing at all like "atmospheric perspective."

"Is n't it a glorious day?" exclaimed Fanny, looking seaward at a white-sailed fishing-schooner, which scarcely moved in the morning air.

"It's a little bit too swept and garnished," answered Lawrence—"that is, for a picture, you know. It's better to feel than to look at, if you understand what I mean. It feels so

northern, that when you look at it, it seems bare and unfinished without a little snow."

"But you like it, don't you?" asked the young girl, in prompt protest.

"Of course I do. What a question! I thought I'd been showing how much I liked it, ever since I got here."

"I'm not sure that you show what you like and don't like," said Fanny, in a tone of reflection. "Perhaps it's better not to."

"You don't, at all events. At least—are n't you rather an inscrutable person? Of course I don't know," he added rather foolishly, pulling his woolen cap over his eyes, and glancing at her sideways.

"Inscrutable! What a big word! 'The inscrutable ways of Providence'—that's what they always say, don't they? Still, if you mean that I don't 'tell,' you're quite right. I don't, when I can keep my countenance. Do you? It's always far better not to tell. Besides, if you commit yourself to an opinion, you're committing yourself to jail."

"What a way of putting it! But it's really true. I should so much like to ask you a question about one of your opinions."

"Why don't you?" asked Fanny, turning her eyes to his.

"Oh—lots of reasons; I'm afraid, in the first place; and then I'm not sure you have one, and then—"

"Say it all—I hate people who hesitate!"

"Well—no. There's a great deal more to say than I want to say. Let's talk about the landscape."

"No. I want to know what the question is which you wished you might ask," she insisted.

"It's about Mr. Brinsley," said Lawrence, plunging.

"Well, what about him?" Fanny's tone changed perceptibly, and her expression grew cold and forbidding.

"Nothing particular,—unless it's impertinent,—so I won't ask it."

"You won't?" asked Fanny, slackening her pace, and looking hard at him. "Not if I ask you to?"

"No," answered Lawrence. "I'd oblige you by asking a different question, but not that one. You would n't know the difference."

"That's ingenuous, at all events." She looked away again and laughed.

"I never fight when I can help it, and you looked dangerous just now. You always are, in one way or another."

"What do you mean?"

"Only when you don't happen to be frightening me out of my wits, you are charming me into a perfect idiot."

"Something between an express train and the Lorelei," laughed Fanny.

But the quick, girlish blood had sprung to her sunny cheeks and lingered a moment, as though it loved the light. They were now in the village — in the broad street where the shops are. At that hour there were many people moving about on foot, and in every sort of vehicle short of broughams and landaus. There was the smart couple in a high buckboard, just out for a morning drive; there was the elderly farmer with his buggy or his hooded cart, his wife seated beside him, with her queer, sad winter-blighted face, and her decent, but dusty black frock; there was the young farmer "sport," driving his favorite trotting horse in a sulky. And of pedestrians there was no end. A smart party, bent on a day's excursion by sea, came down the broad walk, brilliant in perfectly new blue and white serge, with bits of splendid orange and red here and there, fresh faces, light hearts, great appetites, and the most trifling of cares — the care for trifles themselves. Fanny nodded and smiled, and was smiled at, while Lawrence attempted to lift his soft woolen cap from his head with some sort of grace — a thing impossible, as men who wear soft woolen caps well know. But the air seemed lighter and branner for so much youth laughing in it.

Fanny dived into one shop after another, Lawrence following her rather awkwardly, as a man always does under the circumstances, until he is old enough to find out that there is a time for watching as well as a time for talking, and that more may be learned of a woman's character from the way she treats shopkeepers than is generally supposed. Fanny showed surprising alternations of firmness and condescension, for she had the gift of managing people and of getting what she wanted, which is a rare gift, and one not to be despised. She asked very kindly after the fishmonger's baby, but she did not hesitate to tell the grocer the hardest of truths about the butter.

"I always do my own marketing," she said to Lawrence, in answer to his look of surprise. "It amuses me, and I get much better things. My poor dear cousins don't understand marketing a bit — though they ought to. That's the reason why they never get on, somehow. I believe marketing is the best school in the world for learning what's worth having and what is n't. Don't you?"

"I never had a chance to learn," laughed Lawrence. "I wish you'd teach me how to get on, as you call it."

"Oh, it's very easy. You only need know exactly what you want, and then try to get it as hard as you can. Most people don't know, and don't try."

"For that matter, I know perfectly well what I want."

"Then why don't you try to get it?" asked

Fanny, pausing at the door of another shop as though interested in his answer.

"I'm not sure that it's in the market," answered the young man, his eyes in hers.

"Have you inquired?" Fanny's mouth twitched with the coming smile.

"No — not exactly. I'm trying to find out by inspection."

"If you don't think it's likely to be too dear, you'd better ask — whatever it is."

"Money could n't buy it. Besides, I've got none," added Lawrence.

"You might get it on credit," said Fanny. "But I think it's very doubtful."

Thereupon she entered the shop, and Lawrence followed her, meditating deeply upon his chances, and asking himself whether he should run the great risk at once, or wait and watch Brinsley. To tell the truth, he thought his own chances very small; for he underestimated all his advantages by looking at them in the light of his present poverty, not seeing that in so doing he might be underestimating Fanny Trehearne as well. A somewhat excessive caution, which sometimes goes with timidity, though not at all of the sort which produces cowardice, is often the result of an education which has not brought a man closely into competition with other men. No one in common sense, save the Miss Miners and Lawrence himself, could have imagined that Brinsley had a chance against him. For anything that people knew, Brinsley might turn out to be an adventurer of the worst kind, whereas Lawrence was of good birth, a man of whom many knew who he was, and whence he came, and that he had as good a right to ask for Fanny's hand as any man. He was poor just now, but no one believed that his rich uncle, a childless widower of fifty-five, would marry again, and Lawrence was sure to have money in the end, though he might wait thirty years for it.

As for Brinsley, Fanny Trehearne either could not or would not pretend that she liked him, even in the most moderate degree of distant liking, after she had satisfied herself that he was not a truthful person in those matters in which truth decides the right of a man to be considered honorable. Being, on the whole, more careful than most people about the accuracy of what she said, she was less inclined to make allowances for others than a great many of her contemporaries. Besides, Brinsley had not only told a lie, which was mean in itself, but he had allowed himself to be found out, which Fanny considered contemptible.

Up to this time she had seemed to think him very pleasant company, and not a bad addition to the society of the place.

"He's so good-looking!" she had often said to the approving Miss Miners. "And he

has good manners, and knows how to come into a room, and how to sit down and get up — and do lots of things," she added vaguely.

In this opinion her three old-maid cousins fully concurred, and they were quite ready to say as much in his favor as Fanny could have heard without laughing. They were therefore greatly distressed when she changed her mind.

"He 's handsome," Fanny now admitted, "but he 's a little too showy. I 've seen men like him at races, but they were not the men who were introduced to me. I don't think they knew anybody I knew — that sort of man, don't you know? And his English accent is n't quite English, and I don't like his little flat whiskers, and his hands irritate me. Besides, he said he had been in the navy, and now he admits that he never was. That 's enough."

"My dear Fanny," Cordelia answered, on such occasions, "there was a misunderstanding about that, you know. He was in the navy, since he was an officer of marines, but of course he was n't expected to know —"

"The marines!" exclaimed Fanny, contemptuously. "It 's only a way of getting out of it, I 'm sure."

Thereupon the three Miss Miners told her that she was very unjust and prejudiced, as they retired together to praise Mr. Brinsley, ~~one~~ of hearing of their young cousin's tart comment. Miss Cordelia had made it all right by giving the man an opportunity of justifying himself after he had privately explained to her that the marines were an integral part of the navy, but that they were not called upon to know anything about navigation — a fact which must account for his ignorance.

He had very firm friends, to say the least of it, in the three spinsters, who might have been said to worship the ground on which he walked, and who thought it a sin and a shame that Fanny should treat him as she did. As for young Lawrence, he looked on, with his observant artist's eyes, and never mentioned Brinsley, except to Fanny herself. For he was not at all lacking in tact, however deficient he might be in manly accomplishments.

"Do you know?" Fanny began, one day when they were walking in the woods, "I don't half mind your being such a bad hand at things. It 's funny. I thought I should at first, but I don't."

"I 'm awfully glad," answered Lawrence, not finding anything else to say to express his gratitude.

"Oh, you may well be," laughed Fanny. "I don't forgive everybody for being a duffer. And that 's what you are, you know. You don't mind my saying so?"

"Oh, no; not at all." The tone in which he spoke did not express much conviction, however.

"I believe you do," said Fanny, thoughtfully.

They were following a narrow path which led upward along the bank of a brook under overarching trees. Here and there the bank had fallen away, and the woodmen had laid down "slabs" of the rippings first taken off by the saw-mill in squaring timber. It was damp underfoot, for it had lately rained, and the wet, chocolate-colored dead leaves of the previous year filled the chinks between the bits of wood, and sometimes lay all over them, a slippery mass. It was still and hot and damp all through the thick growth on the midsummer's afternoon. The whispered mystery of countless living things filled the quiet air with a vibration more felt than heard, which overcame the silence, but did not break the stillness.

The path was very narrow, and Fanny had to walk before her companion. Their voices seemed to echo back to them from very near, as they talked, for among the trees the rich undergrowth grew man-high. On their right, below them, the brook laughed softly to itself, as a faun might laugh, drowsily, half asleep in a hollow of the deep woods.

And then, through the warm-breathing secret places, where all that was living was growing fiercely in the sudden summer, stole the heart-thrilling fragrance of all that lived, than which nothing more surely stirs young blood in the glory of the year.

For some minutes the pair walked on in silence. The young man watched the strong, lithe figure of the girl as she moved swiftly and sure-footed before him. Suddenly she stopped, without turning round, and seemed to be listening. A low ray of sunlight ran quivering through the trees and played with a crisp ringlet of her hair, too full of life and strength to be smoothed to dull order with the rest.

"What is it?" asked Lawrence in a low voice, watching her.

"I thought I heard some one in the woods," she answered quickly, and then listened again.

Not a sound broke the dreamlike stillness.

"I 'm sure I heard something," said Fanny. Then she laughed a little. "Besides," she added, "it 's very likely. It 's awfully hot. Here 's a good place to sit down."

It was not a particularly good place, being damp and sloping, and Lawrence planted his heels firmly among the wet, dead leaves to keep himself from slipping down into the path as he sat beside her.

"There 's always something going on in the woods," she said softly and dreamily. "The trees talk to each other all day long, and the squirrels sit and crack nuts while they listen to the conversation. I like the woods. Somehow

one never feels alone when one gets where things grow — does one?"

"I don't mind being alone when I can't be — I mean —" Lawrence did not finish his sentence, but bent down, and picked up a twig from the ground. "Is n't it funny!" he exclaimed, twisting it in his hands. "All the bark's loose and turns round."

"Of course; it's an old twig, and it's wet. When don't you mind being alone? You were saying something — 'when you could n't be with' — something or somebody."

"Oh — you know. What's the use of my saying it?" Lawrence kept his eyes on the twig.

"I don't know, and if I want you to say anything, that's the use," answered Fanny, whose prose style, so to say, was direct if it was anything.

"Yes — but you see — I did n't mean anything in particular." He broke the twig in two, and tossed it over the path into the brook below.

Fanny changed her position a little, leaning forward, and clasping her gloved hands round her knees.

"You're very nice, you know," she said meditatively. "I like you."

"Because I don't answer your questions?" asked Lawrence, looking at her face, which was half turned from him.

"Yes; that's one of the reasons."

"It's a very funny one. I don't see much reason in it, I confess."

"Don't you? Don't you know that a woman sometimes likes a man for what he does not say?"

"I never thought of it in that way. I dare say you're right. You ought to know much better than I do. Especially if you really like me, as you say you do."

"Oh — I'm honest. I never said I'd been in the navy!" Fanny laughed. "Besides, if I did n't like you, why should I say so? Just to say something civil? The way Mr. Brinsley does?"

"Brinsley's a horror! Don't talk about him — especially here."

"I don't mean to. I hate him. But if we were going to talk about him, this would be a good place — one's sure that he's not just round the corner of the veranda making one of my three cousins miserable."

"How do you mean?"

"Well — they all love him. Can't you see it? I don't mean figuratively. Not a bit. They are in love with him, poor dears!"

"Nonsense! not really?" Lawrence laughed incredulously.

"Yes — really. It's a rather dismal sort of love — they've kept their hearts in pickle for

such an age, you know — old pickles are n't good, either. I've no patience with old maids who fall in love and make fools of themselves."

"Perhaps they can't help it," suggested the young man. "Nobody can help falling in love, you know."

"No," answered Fanny, rather doubtfully. "Perhaps not. I don't know. It depends."

"People don't generally try to keep themselves from falling in love," remarked Lawrence, with the air of a philosopher. "It's more apt to be the other way. They are generally trying to make some one else fall in love with them. That's the hard thing."

"Is it?" Fanny smiled. "Perhaps it is," she added, after a pause. "I'd like to tell you something —"

She hesitated and stopped. Lawrence looked at her, but did not speak, expecting her to go on. The silence continued for some time. Once or twice Fanny turned, and met his eyes, and her lips moved as though she were just going to say something. She seemed to be in doubt.

"I don't believe in friendship, and I don't believe in promises — and I don't believe much in anything," she said at last, in magnificent generalization; "but I'd like to tell you, all the same. Do you mind?"

"I won't repeat it if you do," said Lawrence, simply.

"No — I don't believe you will. You see I have n't any friends, so I never tell things — at least, not much. I don't believe much in telling, anyway. Do you?"

"Not if you mean to keep a secret."

"Oh — well — this is n't exactly a secret — only I don't want any one to know it. Yes, I know. You laugh because I'm going to tell you. But you're different, somehow —"

"Am I?"

"Oh, yes; you don't count!"

Lawrence's face fell a little at this last remark, and there was silence again for a few moments.

"I'm not sure that I'll tell you, after all," said Fanny, at last.

The quiet lids were half closed over the gray eyes, and she seemed to be thinking out something. Lawrence was unconsciously wondering why he did not think the white lashes ugly, especially when she had just told him that he did not "count."

"Are you sure you won't tell?" asked the young girl, after another long pause.

"If you don't want me to, of course I won't," answered Lawrence, mechanically.

"It's a sort of confession," said Fanny. "That's the reason why I don't like to tell you. It's cowardly to be afraid of confessing that one's been an idiot, so I am going to do it at once and get it over."

"It's a startling confession," laughed Lawrence, softly. "I don't believe it. Is that all?"

"If you laugh at me, I won't tell you anything more. Then you'll be sorry."

"Shall I?"

"Yes."

"All right. I'm serious now," said Lawrence.

"Don't you want to smoke?" asked Fanny, suddenly. "I wish you would. I should be less — less nervous, you know."

"What a curious idea! But I'll smoke if you like."

He proceeded to fill and light a big briar-root pipe.

"I like the smell of a pipe," said Fanny, watching the operation. "I'm so tired of the everlasting cigarette."

"I'm ready," Lawrence said, puffing slowly into the still, hot air.

"Are you sure you won't laugh at me? Well, I'll tell you. I liked Mr. Brinsley awfully — at first."

Lawrence looked at her quickly, and took his pipe from his mouth.

"Not really?" he exclaimed, only half-interrogatively, but with a change of color. "But then — well — I don't suppose you mean anything particular by that," he added, to comfort himself. "You don't mean that you —" he stopped.

Fanny nodded slowly, and the blush that rose in her face reddened her sunny complexion.

"Yes; that's what I mean. I cared for him, you know — that sort of thing."

"It has n't taken you long to get over it, at all events," answered Lawrence, gravely, and wondering inwardly why she made the extraordinary confession, seeing that it hurt him and could do her no good.

"No — it has n't taken long, has it? That's what frightens me. If I were n't frightened I should n't talk to you about it."

"I don't understand — why are you frightened? Especially since you've got over it. I don't see —"

"I thought you might," said Fanny, enigmatically.

A long silence followed, this time. Lawrence

(To be concluded in the next number.)

crossed his hands on his knees as Fanny was doing, holding his pipe, which was going out. They both sat staring at the opposite bank of the brook.

The vital loveliness of the still woods was all around them, whispering in their young ears, breathing into their young nostrils the breath of nature's life, caressing them with bountiful warmth. They sat side by side, very near, staring at the opposite bank, and for a long time no words passed their lips. At last the young girl spoke in a low and almost monotonous tone.

"He has an influence over people who come near him," she said. "Besides, that kind of man appeals to me. It's natural, is n't it? I'm so fond of all sorts of things out-of-doors that I can't help admiring a man who can do everything so well. And he's a splendid creature. You've never seen him ride. You don't know — it's wonderful! I wish you could see him on that thoroughbred Teddy Van De Water has brought up this summer. Teddy's a good rider, but he can't do anything with the mare. You ought to see Brinsley — Mr. Brinsley — you'd understand better."

"But I understand perfectly, as it is," said Lawrence, rather gloomily.

"Do you? I wonder whether you really do. Do you think there's any — any excuse for me?"

The words were spoken in a faltering shamefaced way very unlike Fanny's usual manner.

"As though you needed any excuse for taking a fancy to any one who pleases you!" answered Lawrence, rather coldly. "Are n't you perfectly free to like anybody who turns up?"

During the pause that followed he slowly relighted his pipe, which had quite gone out by this time.

"I was afraid you would n't understand," said Fanny, in a disappointed tone.

"But I do —"

"No; not what I mean. I hate explaining things, but I shall have to."

Louis Lawrence wondered vaguely what there could be to explain, and, if there were anything, why she should be so anxious to explain to him in particular.

F. Marion Crawford.

THE DAY'S SHROUD.

FROM sunrise to the set of sun
The Winds went to and fro,
Singing the while they deftly spun
A garment white like snow.

And, lo! at dusk unto the west
They bore the robe of cloud,
And for the grave the dead Day dressed
Within this snowy shroud.

Then, slowly vanishing from sight,
I heard them softly sing;
And saw above the grave at night
The stars all blossoming.

Frank Dempster Sherman.

THE RIGHT AND EXPEDIENCY OF WOMAN SUFFRAGE.

THE liberty of a people consists in being governed by laws which they have made for themselves, under whatever form it be of government; the liberty of a private man, in being master of his own time and actions, as far as may consist with the laws of God and his country. — *Cowley*.

COWLEY'S definition of liberty is the definition of a thoughtful, wise, and benevolent monarchist. We should hardly be content nowadays with a liberty which in the last resort is dependent upon another's will, or on a decision in which we have no part. American women are part of the American people. But they certainly are not governed "by laws they have made for themselves, under whatever form it be of government." For myself, I prefer, in discussing this question, rather to speak of self-government than of liberty. Liberty is worse than useless except it be as an opportunity for self-government. The Creator of the universe has placed mankind in this world that it may attain to that height of moral being which comes from resistance to temptation and from self-control or self-government. The sublimest thing in the universe, except its Creator, is a human will governing itself by a law higher than its own desire. The sublimest manifestation of that self-control is the self-government of a free State in which each of its citizens has his or her equal share.

I am not one of those who are impatient with the slow movement of the cause of woman suffrage. Its advocates seek to change a relation which has existed from the foundation of the earth. It is but a century since the experiment of a government in which all grown men could be admitted to an equal share was well under way, and even in that every sixth man was a slave. Many persons now living remember the time when it was not considered safe or decent that a married woman should control her own property, or that any woman should speak in public, or attend a public banquet, or practise medicine, or engage in many other honest and praiseworthy occupations. The changes of the last fifty years have demolished one by one most of the prejudices and most of the arguments which woman suffrage has now to encounter.

So, instead of discouragement, I am filled with astonishment and joy at its great hope. In two States in the West women vote for all officers, and are eligible to all offices. There is no doubt that several others will soon follow their example. In others they vote in muni-

cipal elections. In England the leaders of the Conservative party announce their readiness to give women the franchise for members of Parliament, and in municipalities, on the same terms as men. So the cautious, hesitating States of the East are not unlikely to find themselves beset behind and before.

I lament that Lucy Stone should not have lived to see the full triumph of the cause to which she devoted herself. We hear often of gentlemen of the old school. Lucy Stone was a lady of the old school. Her gracious smile would have been a most precious ornament in any household, however exalted or however humble. Her appearance by the sick-bed would have been a healing power like that of the best physician. Men and women would have intrusted their children to her, and the children would have gone to her without a misgiving. If she had been a queen, her personal qualities would have prolonged the life of a monarchy. She was an embodied argument for woman suffrage. The universal testimony to her loftiness, sweetness, uprightness, and wisdom is but a new challenge to those who are to undertake to tell us, if they can, why Lucy Stone should not have been permitted to vote.

Nor am I one of those who think that the right to vote is denied to women by men because of a tyrant's desire to keep to themselves the rule of the State. There are some exceptions; but I think it is chiefly an honest desire for the good of the State, and an honest desire for the welfare of women, that we have to deal with. We convert men to our cause almost as fast as we convert women. What we have to deal with is a misunderstanding of the true nature of men and women, and a misunderstanding of the true nature of government. It is the same misunderstanding and prejudice that the advocates of freedom have encountered from the beginning of time.

The chief single argument of the opponents of woman suffrage is that women do not want it. They say that whenever a majority of women in any State desire the right to vote, they ought to have it, and will have it. Just consider what this argument implies. The greatest single political question which can arise under a free government certainly is the question whether one half of its people shall be excluded from

a share in the government of the State. No person who sees destruction or peril to the State in admitting women to the suffrage, and certainly no person who sees degradation of women in its exercise, will deny this. Yet our opponents concede that the greatest political question which can come up should properly be left to their decision. It would seem that it would be difficult to make an admission more destructive to their contention than this. But I do not think this glib utterance bears serious examination. What single step toward the emancipation of women has been taken in obedience to their desire? I think it is quite doubtful whether the women of Turkey would be allowed to go abroad with unveiled faces if the question were left now to their decision, and the other sex disapproved. The admission of married women to control their own property, which has come to pass within a generation, is due to the law-making sex, and I think there was quite as much hesitation and opposition to it on the part of women as on the part of men. Miss Alice Stone Blackwell said in my hearing the other day that the various successive changes that have taken place in regard to the person and property and educational and professional liberties of women during the last fifty years were made before a majority of the women asked for them, and even in spite of the disapproval of a majority of women. She added that when a merchant in a town in Maine for the first time employed a woman in his store, the men in the place boycotted the store, and the women upheld the men; that when Dr. Elizabeth Blackwell studied medicine, the women refused to speak to her, and that their contemptuous and irritating attitude was more painful than any masculine objection; that in India the masses of Hindu women are so much opposed to the idea of education that when a progressive Hindu proposed to educate his daughter, the other women of that family threatened to commit suicide.

But nobody that I know of proposes to compel reluctant women to vote. The proposition we have to deal with is to allow such women to vote as may desire to, and upon the same terms and conditions as are prescribed for men. You may have any provision to secure intelligence, to secure education, to secure a property qualification, require residence in a State, or the payment of taxes as a contribution to its maintenance. All these things the governing power in the State must settle. What we say is, as we say about negro suffrage or Indian suffrage, that where these conditions exist the question of sex, as the question of race, is totally immaterial. I agree with Miss Blackwell in thinking that most of the women who now object to the responsibility of government would

have objected to the responsibility of property, and would have thought the change of custom which has thrown open to them so many vocations dangerous to their womanhood.

All the evils of misgovernment affect women, and, in many cases, affect women far more than they affect men, while women are ordinarily free from the temptation which would lead to their continuance. Women are a little more than one half of the population, but they endure far more than one half of the suffering and evil caused by bad legislation or bad administration. The mother commonly knows best if the child is growing up in a bad school, and is most distressed by the knowledge. If the husband comes home besotted from a den of vice, his faculties benumbed to an unconsciousness of his own degradation, the purer and gentler the wife the more intense is her suffering. If the home suffers, she suffers most whose place is always at home. If the husband is out of employ, or his wages are cut down to a point which will barely keep his household from starvation, the worst of it is for her. If she has an interest in these matters, if her wish or her welfare is to be considered, pray, should not her vote be counted?

There cannot be found, either in our constitutions, or in the discussions of this subject by great philosophers, any definition of the right to vote which does not include women.

When it is said in the Declaration of Independence that "we hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness," no man will claim, I suppose, however restricted or however extended a meaning may be given to the language, that the general proposition is not as applicable and as true in the case of women as in the case of men. The mechanism of our constitutions, State and National, is imperfect, and has needed repair and change from time to time. It has not been in all cases consistent with the general principle upon which its framers propose, in their bills of rights or preambles, to construct it. But there never has been any serious fault found with their statements of fundamental principles. So far, at any rate, nobody has been hardy enough to propose to strike out these statements of fundamental principles from any constitution, State or National. The Constitution of Massachusetts repeats in substance the opening sentences of the Declaration of Independence, which are taken from the Bill of Rights of Virginia. It goes on to declare that the various powers of instituting, constructing, and administering government belong to the people, and that the several magistrates and officers

of government are their substitutes and agents; and that no men, or association of men, have any title to particular and exclusive privileges distinct from those of the community other than what arise from the consideration of services rendered to the people, and that the idea of a man born a magistrate, law-giver, or judge is absurd and unnatural. It further declares that the people alone have an incontestable, unalienable, and indefeasible right to institute government, and to reform, alter, or totally change the same when their protection, safety, prosperity, and happiness require it; that all the inhabitants of the Commonwealth having such qualifications as they shall establish by their frame of government have an equal right to elect officers, and to be elected for public employment; that no tax ought to be laid without the consent of the people or their representatives; that no subject ought to be arrested, imprisoned, or deprived of his property, or of his life or liberty, but by the judgment of his peers.

The Massachusetts Constitution of 1780 seems to me as perfect a system of government for its purposes as was ever devised by man for mankind. I am almost tempted to say there was never a good amendment to it. At any rate, there never was nor will be a good amendment made to it except to carry into practical effect the logic of its fundamental principles. But if there were to be anywhere a conflict between the principle and the mechanism, there, as everywhere, the principle must abide, and the mechanism must be changed. This constitution, like every constitution of that day, was framed by men for men. But the inexorable logic of its principles demands of us a constitution framed, adopted, administered by the whole, men and women alike, for the whole people. If it had been attempted to deny to a woman any right declared in the constitution, except the right to vote and the right to be tried by a jury of her peers, the answer would have been that the constitutional terms, "the people," "every subject," "every citizen," of course and beyond question include women as well as men. What I have said in regard to the constitution of my own State applies equally to the constitution of every free State. It applies equally to all constitutions where the government is partly free, and partly the government of a privileged class. With monarchies, with a rare exception in those to which the Salic law is applicable, a woman may succeed to the highest function in government, even that of the throne itself. So if you look to the statement of fundamental and universal principles contained in any existing constitution, you find that those principles involve an affirmation of equal title to woman to share in the govern-

ment, and her rightful title to that share is established unless you can bring her within the excepted or disqualified class which arises out of personal unfitness for the function, of which the other examples are idiots, lunatics, criminals, children, and foreigners.

Take next the definitions of the right of suffrage given by writers on such questions.

I have never seen anywhere any well considered statement of the conditions upon which the right to vote ought to depend except these :

- (1) A stake in the country;
- (2) Attachment to the country;
- (3) Capacity to judge of the character of candidates;
- (4) Capacity to judge of the public interest;
- (5) Contribution to the cost of the government;
- (6) Capacity to serve it in public offices;
- (7) Capacity to bear arms in its defense;
- (8) An intelligent interest in public affairs;
- (9) Sufficient education.

I am but repeating a familiar argument. I am repeating what I have said many times, and what others have many times said better. Does any land-owner, any director of business enterprises, any man who bears a great family name, or has inherited a great title to public gratitude for the services of a famous ancestor, possess a stake in the country like that a mother has in her children?

Whatever the boy may get of instruction, or stimulus, or example, from his father, he best learns the lesson of patriotism, as he best learns the lesson of religion, at his mother's knee. The love of country is the highest and purest emotion of which human nature is capable. Whatever dreamers or moralists may affirm, whenever the love of humanity at large overcomes this passion in the human bosom, it is diluted, weakened, and spoiled, and the man becomes worthless to his own country and to mankind. There has been but one example to the contrary in all history, and that example is divine, not human. This loftiest and purest of human passions surely is as lofty and pure in the breast of woman as in the breast of man.

Does any man claim that in whatever other respect he may excel woman, that in the capacity of affection she is not his superior? Man values the objects of his affection for the comfort and dignity and benefit that comes to him from them. Woman values herself only for the comfort which she can be to the objects of her affection.

The intuitive and instinctive judgment of personal character especially distinguishes women. One of the acutest, most philosophical,

and most conservative observers of modern times, in a great political speech, declared what everybody agreed to, and which will be always accepted as the literal truth, except when uttered from a woman-suffrage platform. Rufus Choate, in his great speech to the Whigs at Salem, in 1848, says:

I do not suppose I enter on any delicate or debatable region of social philosophy, sure I am that I concede away nothing which I ought to assert for our sex, when I say that the collective womanhood of a people like our own seizes with matchless facility and certainty on the moral and personal peculiarities, and character, of marked and conspicuous men, and that we may very wisely address ourselves to her to learn if a competitor for the highest honors has revealed that truly noble nature that entitles him to a place in the hearts of a Nation. We talk and think of measures; of creeds in politics; of availability; of strength to carry the vote of Pennsylvania, or the vote of Mississippi. Through all this, her eye seeks the moral, prudential, social, and mental character of the man himself—and she finds it!

Whatever contribution to the public maintenance of the State is to be required of men who vote should of course be required of women, whether in the way of paying taxes on property or polls, imposts, excise, or the maintenance of whatever other burden.

I do not think that the capacity to bear arms, which is sometimes suggested as essential to the right to vote, has anything to do with it. It is said that it is not just that any class of persons should have a voice in deciding whether the nation shall go to war that is not itself exposed to the perils of war. But we apply no such principle to the large number of persons who are above the military age, the persons who are physically unfitted to bear arms, or the persons whom we exempt because of their profession, as clergymen, or because of their being assigned to other public duties, as legislators. Certainly the woman who cannot go to war does not so much deserve to be disfranchised as the man who can go and won't go. Besides, in modern times women have to bear a large share both of the risk and the burden of carrying on war. That new occupation,—I am sometimes tempted to say the most valuable and useful of all professions which in our time has been added to the list of highest human employments,—that of the trained nurse, belongs to women. Since Florence Nightingale visited the Crimea, and since Clara Barton's services in the war for the Union, the strength and efficiency of armies has been due almost as much to the corps of nurses as to the commissariat itself. Besides, that man must hold human nature cheap who thinks the suffering of war does

not fall as heavily upon the mother, the wife, the sister, or the daughter of the soldier as upon the soldier himself. The husband will be quite as likely to be willing to go to war in an unjust cause as his wife to send him. The wife and mother, who have always in our own history shown themselves willing to give the life of husband or son for the life of the country, have made the sacrifice with a keener pang and heavier burden of sorrow than fell upon the youth or the man whom they gave.

Whatever educational test, also, we impose upon the voter, should be imposed equally upon both sexes. So, in considering whether women could comply with the conditions upon which the right to vote should depend in a well-ordered State, it is immaterial what opinion we may form as to the fitness of an educational test.

Next, the capacity to serve the State in public offices. I am quite willing to agree that no class of persons who are permitted to vote should be excluded, as a class, from holding office. But it must be remembered that eligibility to office, or exclusion from office by the constitution of the State, is quite a different thing from the right of the individual belonging to that class to be elected. There is a vast number of persons whose occupation in life does not fit them to be judges of our highest courts, or even to be inferior magistrates. They are never, or almost never, appointed to such places. But they are not disqualified by the constitution. I do not think any bartender has ever been appointed to the cabinet; but the law does not exclude the bartenders from appointment to these places. Eligibility to office is one thing. It is treated in our constitutions, with some few exceptions, as a matter of common right. Being elected, or appointed, to office is a question of individual and personal quality, and depends upon the judgment of the appointing power, whether the people or the executive, as to the capacity and character of the person under consideration. But I shall, I think, show in a moment that the public functions for which intelligent women are fitted are quite as numerous and quite as important as those for which men are fitted, and I think this will be admitted, upon consideration, by our opponents.

The discussion upon this point, as of the two other conditions upon which the right to vote ought to depend, namely, the capacity to judge of what is for the public benefit, and an intelligent interest in public affairs, requires us perhaps to look somewhat more deeply into the subject. The reluctance on the part of wise and honest men and women to admit women to the privilege, and to impose upon them the duty, of a share in the government comes from

a conception of the nature of the government, and a conception of the nature of women, not perhaps very clear, and not commonly avowed, even to themselves, by the persons who are controlled by it. But doubtless many intelligent people feel that the nature of woman and the government of States have something in them which are repugnant to each other; that women will debase government and that government will debase women. You hear the phrases, "Shall our mothers and wives and daughters leave their place in the household and plunge into politics?" "Shall they be contaminated by the vile company of the ward room?" "Shall they scuffle and quarrel at polling-places?" "Shall they learn the devices by which elections are manipulated and the will of the majority is defrauded?" "Shall woman turn her thought from plans for making home happy to the abstruser problems of finance or currency, for which she has little aptitude?" "Shall she forsake the cradle or the sick chamber for the jury-room or the House of Representatives?" Such people cannot conceive that a modest and pure woman shall do or help to do these things without changing her nature, or of these things being done under the direction of feminine intellect without being badly done.

Now I am disposed to concede to these reasoners, or to the people who make these suggestions, whether they depend wholly on reason or not, pretty much all that they ask. I am willing to concede that there are large domains of legislation and administration, of intelligent direction of the conduct of the State, for which the great mass of women are, and are likely to be, so little fitted that, even if there are some conspicuous exceptions, it would be better to exclude them as a whole from this domain than to admit them as a whole.

But is not this true of all our most intelligent citizens? How few in proportion to the whole number ever reason intelligently on questions of finance, or currency, or protection, or ever know the facts in regard to questions of foreign policy? Men take their opinions about these things from their political leaders, or follow their political party. One man is interested in finance, one in education, one in protection, one in the Chinese question, one in the question of State rights or honest elections, and each takes his opinion on most subjects upon trust or authority. There is still a large proportion of our voters in large sections of the country who cannot read or write. A much larger number who claim these accomplishments never use the power to read or write as a means of receiving or conveying information. Many workmen, and a good many men of wealth and leisure, read some news-

paper of a Sunday, from which they get very little, in the way either of counsel or of fact, that is trustworthy on many very great political questions; and that is all. They attend a political meeting two or three times a year, and vote with their party. They love their country, and would give their lives, if they were needed, to preserve the Union, or to preserve the honor of the flag. Somehow and somehow an intelligent and wise government, which deals pretty well with most public questions, is the result, whatever party is in power. Even those persons whose spirit is a public spirit, and who give much labor and thought to the common weal, deal with some one matter alone, and leave other things to other men.

Now I maintain that the management of schools—whether it depend on legislation or administration; the management of colleges; the organization and management of prisons for women, of hospitals, of poor houses, of asylums for the deaf and dumb and the blind, of places for the care of feeble and idiotic children; the management and improvement of the hospital service in time of war; the collection and management of libraries, museums, galleries of art; the providing for lectures on many literary and scientific subjects in lyceums and other like institutions; the regulation—so far as it can be done by law—of the medical profession, and of the composition and sale of drugs; the management of our factory system, and the employment of children; and a great many other kindred matters which I might mention, taken together, ought to make up, and do make up, a large part of the function of the State. To these we may add what has not been in this country for some generations a part of the duty of the State, but still is a political function of the same kind, the government of parishes and churches. Now for all these things women are as competent and as well qualified as men. I do not see why a woman like Clara Leonard or Clara Barton, who knows all about the management of hospitals and the care of the sick and wounded, is not performing a public function as truly and as well as a West Point graduate like General Hancock, who can lead an army, but who thinks the tariff is a local question. If women keep themselves to these things, and keep off the ground which the opponents of woman's suffrage seem to dread to have them occupy, they still are helping largely in the work of the State. I do not see how it is to degrade them to have their votes counted, or why their votes, when they are counted, are any more likely to work an injury to the State than the vote of a man who knows nothing except the management of a ship or the management of an engine.

If ninety-five per cent. of the school-teach-

ers of Massachusetts are women, why should not their votes be counted in the choice of the governor who appoints the Board of Education? If women have charge of the stitching-rooms in our shoe-factories, why should not their votes be counted when the laws which determine for what hours and for what part of the year children may be employed in those factories, or even when the laws on which some of us think the rate of wages in these factories depend are to be framed?

The vote of the father has not yet quite accomplished the rescue of the children of our manufacturing States from overwork in crowded and heated factories. It might be well to have the voice of the mother also.

About thirty years ago, when I was beginning to think seriously on this question of woman suffrage, Mrs. John Ware of Lancaster, Massachusetts, one of the wisest and most accomplished persons in this country of either sex; addressed to the legislature of Massachusetts a remonstrance, which she headed, against the suffrage of women. A few weeks after, she came into my office to enlist me in a movement for the establishment in Massachusetts of a separate prison for women. She knew all about it; she had studied the subject at home and abroad. She gave an interesting account of the experience of Ireland and Germany and Belgium. She said there were many girls of sixteen or eighteen years of age, who were committed for some first offense, who could be saved and become good mothers and wives if they could be put in the charge of a humane and kind woman, and kept from prison association with vile and abandoned criminals. She said if they were associated with hardened criminals, and brutal turnkeys were put over them, their cruel and vulgar speech and behavior made the poor children sullen and morose, and crushed all hope in their bosoms. The plan was afterward carried out, largely through the influence of Mrs. Ware and Clara Barton. Mrs. Ware wanted to know whom I could think of among the people of influence in Massachusetts to whom she had better address herself to get the public interested in the matter. I said to her, "Why, Mrs. Ware, what do the brutal turnkeys think of this thing? Are they in favor of it?" She said, "Well, I suppose not; but what has their voice to do with it?" I said: "Their opinion, not yours, of course, ought to prevail. This is a matter of government. When you are advocating this thing you are a woman in politics. I think you are quite right, and the doing of these things not only elevates politics, but it is politics in the true sense. The only difference between you and me is that when you have understood the subject, and have made the people of Massachu-

setts understand it, and they come to decide the question, I think you should help decide the question yourself, and not leave it to the brutal turnkeys."

Clara Leonard is another of the women who are the pride and ornament of the Commonwealth of Massachusetts. She is a great authority on the management of our hospitals. The governor of Massachusetts, some years ago, thinking to advance his political ambitions and to commend himself to the enemies of his State in the South, made a foul charge against the management of the almshouse at Tewksbury. Clara Leonard wrote a letter,—just a few lines,—saying that she had looked into the complaint, and there was nothing in it. The governor's charge fell, and nobody troubled himself any longer about the matter. Mrs. Leonard, a few years afterward, addressed to the Senate of the United States a remonstrance against granting suffrage to women.

The mistake of these good ladies was not in their desire that woman should not be debased, or her nature changed, and that she should not be called to the coarse and vulgar and vicious employments of base politics, but in not seeing that the thing they themselves were doing all their lives was public and not private, was a part, and a great part, of the management of the State, and that nobody wanted to change them one iota. All we want is that Clara Leonard shall give her vote on the questions she understands and has studied, and that Clara Barton shall give her vote on the questions she understands and has studied. We will run the risk that when they vote on the questions they have not studied, they will, each of them, vote as wisely as the majority of their masculine fellow-citizens vote on the questions they do not understand or have not studied. When Clara Leonard was one of the Massachusetts Board of Lunacy and Charity, when Clara Barton was the superintendent of the prison for women at Sherburne, when Mrs. Hale acted as one of the trustees of the great hospital for the insane at Worcester, these women were holding office, were engaged in politics. Will you, pray, tell us, if they were fitted to do that, why their votes on these matters should not be counted? If Alice Freeman Palmer and Kate Gannett Wells are upon the Board of Education, they are helping govern the State, they are engaged in politics, they are contributing as large, important, direct, and practical a share in government as any of their masculine companions in these offices. I know something of the men who are associated with them, and these women, each of them, would carry to all political questions which their votes would affect quite as wise, safe, and intelligent an understanding for their

solution as any of their masculine associates in these public functions.

I have never been able to see that women who can give high counsel are not capable of lofty action. Why should not the heroism of the Spartan mother, which inspired the individual son, contribute directly its share to that splendid heroism which we call Sparta? Why, if we agree that woman may teach, inspire, control, conduct, all the most important institutions of the State, if the State is to be kept largely in the pathway of honor and glory by the stimulus which she furnishes, why is it that when the question whether the State shall act wisely, or shall go on in the pathway of honor and glory, shall be taken, her voice shall not have its direct influence, and her vote be counted in determining the result? How often in the crisis of great historic occasions the warning or the encouraging voice of the woman has been heard, sometimes to be obeyed and sometimes to be disregarded! When Pilate ascended the judgment seat, his wife warned him to have "nothing to do with that just man." When Lord Croke gave his judgment for Hampden in the case of the ship-money, it is said he had first written an opinion for the crown, and changed it in obedience to the remonstrance of his wife. Lord Nugent says:

This noble lady cast the shield of her feminine virtue before the honor of her husband, to guard it from the assaults equally of interest and fear; and with that moral bravery which is so often found the purest and brightest in her sex, she exhorted him to do his duty at any risk to himself, to her, or to their children, and she prevailed.

When D'Aguesseau was summoned to Versailles by Louis XIV., who demanded of him an unjust judgment against his conscience, he was about departing from his house trembling and prepared to submit. His wife laid her hand upon his shoulder, and said to him, "When you appear before the king, forget your wife, forget your children, forget everything but your duty and your God." It was this counsel that saved that matchless judicial reputation among the treasures of mankind.

To my mind the one most touching story in human history is that which Burnet tells of the parting of Lady Rachel Russell from her husband when he was about to die.

Lady Russell returned alone in the evening. At eleven o'clock she left him; he kissed her four or five times, and she kept her sorrow so within herself that she gave him no disturbance by their parting. As soon as she was gone he said to me, "Now the bitterness of death is past," for he loved her and esteemed her beyond expression, for she well deserved it in all respects.

He ran out into a long discourse concerning her, — how great a blessing she had been to him, — and said what a misery it would have been to him if she had not had that magnanimity of spirit, joined to her tenderness, as never to have desired him to do a base thing for the saving of his life.

These examples have been given to mankind by monarchies. Cannot a republic match them? When it does match them, when the forces of faith and wisdom and patriotism and self-sacrifice are measured against their antagonists to determine whether the conduct of the republic shall be wise and brave and honest, shall not the influence and votes of such women be counted?

The counsel of Lady Croke, or Lady Russell, or Mme. d'Aguesseau, the monarch himself might well heed. Each would have graced the throne. If one of them had been upon the throne, what shame and calamity would have been spared England or France! Would not the same counsel be worth listening to by the people? Should not the woman who was fit to wield alone the scepter of a powerful kingdom be held fit at least to share the self-government of a republic?

There are a great many things women are not expected to do. There are a great many things that no doctor of divinity or college professor, or very old man or very young man, is expected to do. If the process of voting or attending political meetings will degrade women, it will degrade clergymen. If it will soil the purity of delicate and refined ladies, it will soil the purity of delicate and refined gentlemen. Meanness, coarseness, selfishness, violence, and fraud are not of the essence of government. If the fastidious refined scholar or man of wealth will not leave his palace in Fifth Avenue to go to the polling-places in the city of New York, the government of that city will perhaps be abandoned to the base and criminal classes. But give his wife and daughter the right to go, and he will go with them, and he will see to it that the process of voting is conducted under conditions and with surroundings which will make it decent and clean, and fit for the participation of every refined person of either sex.

Shall women leave the cradle, or the parlor, or the kitchen, to plunge into politics? No. Shall our farmers leave the farm, or our scholars the study, or our workmen the factory, or our sailors the ship, to plunge into politics? No.

Women can contribute their share to, and exercise their right in, the government of the State with no more sacrifice of the other duties of life than is made by their husbands or brothers. There are some public duties which require the devotion of a large part of the working-

hours of life, and in some cases the entire life of the citizen to whom they are assigned. As many of these duties can be performed by women as by men, and the public duties which can be performed by women as well as by men are as important to the well-being of the State. There are many duties for which most women are unfitted. There are some few for which all women are unfitted. There are many public duties for which most men are unfitted, and there are some which—as I hope it may come in the course of time to be seen—are unfit for any human being, man or woman, to perform, and which in the better time that we look for will cease to be considered duties at all.

The same arguments with which we have to deal have been used against every extension of suffrage. Good and wise men dreaded to admit the large mass of ignorant and poor, men easily excited by passion, to the great and sacred work of ruling the State. But history and experience have shown us that on the whole that State is best ruled where the largest number of citizens have a share in its government. The evils of universal suffrage, whatever they are, can easily be shown to be less than the evils of oligarchy, or of a government by any privileged classes.

There are plenty of disturbing causes to swerve the governing power in the State from the simple course of wisdom and rectitude. But I believe that the larger the number of persons who share in the government the more likely the simple natural law is to prevail and the disturbing forces to disappear. Personal ambition may control the government given to one man. Give the government to twenty men, and you have twenty interests to control the disturbing cause. Each of the twenty will be likely to have some prejudice and some interests which conflict with those of the others. The larger the number, the less likely the disturbing causes to operate and the more likely to control one another. Add 100 per cent. to the voting population of this country, and you decrease the proportionate power of the disturbing forces operating to overcome the simple law and the interests of the nation which should direct and control its government. You make it harder to buy up votes in numbers enough to corrupt the community. The passion on one side is neutralized by the passion on the other. The rogues have less influence, because rogues do not agree. One has one motive of selfishness, another has a different one. The appeals to class prejudice, attempts to excite contempt and derision or ignorance or jealousy and envy toward wealth and education, abound, unhappily, to-day. But I believe they are less than they were in the time of Washington and Jefferson. The questions asked to-day on our politi-

cal platforms, as to the matter which is up for discussion, are: Is it right? Is it just? Is it humane? Is it for the highest welfare of the State? No speaker touches a public audience better than he who appeals to the best, purest, and highest motives in our nature.

Some of our friends who admit that the argument is on the side of the champions of woman suffrage point to a few indiscreet or ungainly persons who appear on the platform at woman-suffrage meetings, and ask if we are willing to enlist ourselves under such leaders, or work in company with such companions. Doubtless this appeal frightens some sensitive women and some fastidious men. But it is an old story. Many a man remained a Tory in Revolutionary time because he did not like to have his sleeve rubbed against the sleeve of Sam Adams, or to be taunted with the leadership of Tom Paine. Many a good man in the North kept out of the antislavery movement who believed thoroughly in its principles, because he could not bear to clasp hands with Henry Wilson, or to be confounded with the followers of Garrison, or to appear among the grotesque figures that were visible on the Free-Soil platform. But we are getting past this in the movement for woman suffrage. If anybody's taste is shocked by an occasional exhibition of a queer character at a woman-suffrage meeting, or if his ear is pained by the shrill or strident voice of some feminine orator, we will invite him to a comparison—even if it were a question of mere taste—of the conspicuous opponents of woman suffrage with its conspicuous advocates. When they have matched, or over-matched, Lucy Stone or Lucretia Mott in everything that constitutes a sweet and gracious womanhood, we will ask them to find among the opponents of woman suffrage four masculine figures whom they will like to select as leaders or companions rather than Abraham Lincoln, Salmon P. Chase, John G. Whittier, and Ralph Waldo Emerson.

I go for all sharing the privileges of the government who assist in bearing its burdens, by no means excluding women. — ABRAHAM LINCOLN.

I think there will be no end to the good that will come by Woman's Suffrage on the elected, on elections, on government, and on woman herself. — CHIEF JUSTICE CHASE.

For over forty years I have not hesitated to declare my conviction that justice and fair dealing, and the democratic principles of our government, demand equal rights and privileges of citizenship, irrespective of sex. I have not been able to see any good reason for denying the ballot to woman. — JOHN G. WHITTIER.

If the wants, the passions, the vices, are allowed a full vote through the hands of a half-brutal, intemperate population, I think it but fair that the

virtues, the aspirations, should be allowed a full vote, as an offset, through the purest part of the people.—RALPH WALDO EMERSON.

George F. Hoar.

THE WRONGS AND PERILS OF WOMAN SUFFRAGE.

HE pending proposal to extend the suffrage to women imposes upon men the duty of deciding whether to retain power where it was lodged by the founders of existing governments, or to make women eligible to vote and hold office upon the same terms as men.

DISFRANCHISED CLASSES.

WITH inconsiderable exceptions, the common sense of the human race, as expressed in civil government, has confined its prerogatives to men. When necessary to preserve an unbroken line in hereditary monarchies, women have been invested with sovereignty. In some communities, where property qualifications exist, they possess a limited right to vote, and to hold minor executive offices.

To portray an idiot, a criminal in prison garb, an Indian in barbaric finery, a lunatic staring in frenzy, and a woman whose features indicate intelligence and refinement, and to entitle the representation, "American Woman and her Political Peers," may beguile the unwary, but others will ask, Does the picture include all disfranchised classes? and, Is their exclusion from the suffrage for similar reasons?

It does not include all. To complete the picture, might be added a portrait of Alexander Hamilton, who, at the appearance of trouble between Great Britain and the Colonies, when he was still a school-boy barely eighteen years of age, wrote a series of papers in defense of the rights of the Colonies which were at first taken for the production of John Jay; and who, when only twenty,—and consequently not allowed to vote,—was aide-de-camp to Washington.

There would also be needed a portrait of one of the distinguished foreigners who, after a study of the Constitution of this country, have adopted it as their own, and yet, after arriving, are disfranchised for a term of years.

Foreigners are disfranchised for a period of time assumed to be long enough for men of average ability to comprehend the institutions and interests, and to identify themselves therewith sufficiently to "have a stake in the country"; criminals are not allowed to vote because, being foes to society and to the government, they have forfeited all claim to personal and

political liberty; insane persons and idiots are debarred, being incompetent to understand; Indians, on account of their tribal claims to an independent sovereignty, and other causes peculiar to themselves; Chinamen, because forbidden naturalization. Young men under twenty-one years of age are not permitted to vote because it is assumed that the average male has not the knowledge and stability of character wisely to exercise the franchise until he has had twenty-one years of life in the land of his birth.

Woman is not refused admission to the suffrage on any of these grounds. The picture is not true to life, and the ideas which it is designed to suggest confuse rather than elucidate the question whether women should be eligible to vote, and hold office, upon the same terms as men.

Whether the suffrage shall be conferred upon any class of men or women cannot be decided exclusively upon the question of natural rights. These do, indeed, require the protection of all in the enjoyment of life, liberty, and the pursuit of happiness, so long as the same are exercised in a manner compatible with the rights of others. The arrival of a second man upon a desert island would necessitate a whole series of compromises which, if not accepted, would result in the abject submission of the weaker, his flight, or war to the death.

In this country it is agreed that the majority of voters shall rule. What fundamental principle gives to two millions the absolute right to rule over two millions less one? As at the age of seventeen some are better qualified for the suffrage than many at forty, what absolute natural right decrees that none shall exercise the franchise until twenty-one years old? These, and many other provisions, are compromises to which the people submit for the sake of the results. Should a citizen change his residence from one State to another, he must remain there a specified time before he can vote; nor could he, one day after legally changing his residence, return and cast a ballot where he had lived all his life. If born in Canada, though brought over the line when an infant, he could never become President. Also, every citizen must vote at such times and places as the law prescribes. Nor can one unavoidably detained from his legal residence, even in the service of

the country, as in the army and navy, or in the Federal Congress, demand a subsequent opportunity, or be permitted to deposit a sealed ballot in advance of the time, forward the same, or vote by proxy.

FOUNDATIONS OF SOCIETY.

AN advocate of woman suffrage declares that its opponents "must show that it is incompatible either with the best conception of the State, or with the nature of womanhood." While the burden of proof should rest upon those who would change the universal practice, I hold, and will present the grounds for the belief, that to impose direct responsibility in this particular upon women is incompatible with the nature of womanhood, and with the best conception of the State.

There is a feminine, as well as a masculine, soul; a spiritual sex, as well as a corporeal.

Frederic Harrison, in contrasting men and women, justly says, "Not one man in ten can compare with the average woman in tact, subtlety of observation, in refinement of mental habit, in rapidity, agility, and sympathetic touch; in sudden movement, in perseverance, in passive endurance, in dealing with the minutest surroundings of comfort, grace, and convenience." He predicates of man, as distinguished from woman, "a greater capacity for prolonged attention, intense abstraction, wide range, extraordinary complication, immense endurance, intensity, variety, and majesty of will."

From the same difference arise the virtues and vices, respectively, of the sexes, modified by different degrees of physical strength.

If there be no such feminine nature as distinguished from the masculine; if the abstraction of the mental and spiritual elements peculiar to woman, and their being replaced by those characteristic of man, would make no radical and harmful difference in the constitution of society, there is no reason for exempting women from the responsibilities of government.

On closely considering the State, it appears that the fundamental fact is not most frequently the subject of discussion. The political economist occasionally refers to it, the statesman and legislator deal with a few of its phases, it is seen more frequently in the courts, and asserts itself in various details in a thousand forms, but it is seldom comprehended as a whole. That fact is that the individuals who form the State are constantly changing, are proceeding, in fact, across the earth, finally disappearing, rather than permanently domiciled upon it. Nevertheless, the State endures because there are constantly fresh arrivals through the fami-

lies into which society is divided. The State directly takes no cognizance of these immature beings, who, though human, are without strength or understanding. Their parents are their rulers, responsible for their support, and exercising the prerogatives of government, issuing mandates, requiring submission; permitted to chastise, imprison, and to direct their actions in numberless ways. It depends upon the parents to train them in such a manner as to qualify them for the duties of citizenship, according to the statutes and laws of the land. Only when parents are incapable or unwilling to discharge their responsibilities does the State take cognizance of the situation. In proportion as this State within a State is maintained in its integrity is the nation strong, happy, and prosperous. It is the fountain of private, and the source of public, morality.

Whatever may be said of a few minds of a peculiar structure, lifelong partnerships for better or worse could not be maintained by two natures of the same kind, debating all questions in the same plane, with no natural predominating tendency. The coherence and permanence of the family depend upon the difference in the mental and emotional constitution of men and women. The family is a union of two manifestations of a common human nature, masculine and feminine of soul as well as body; molding, governing, and guiding the children, each after its own manner, and diffusing through society the blended influence of wife, mother, daughter, sister, and husband, father, son, and brother.

The bearing of these principles upon the relations of wives and mothers to the suffrage is that to govern in the State would unfit woman for her position in the family.

It is mere sophism to say that the simple dropping of a piece of paper into a ballot-box could not produce such a result. Unless women are to be treated like children, and furnished with the ballot by men, it is not the mere dropping of a piece of paper, for it implies the whole mode of thinking, feeling, and acting, of which a vote is the concentrated expression. "The vote is the expression of government; voting is governing." To vote intelligently is to think and act in the imperative mood; and to be qualified as voters, girls must be trained to think, feel, and act in the spirit of boys.

To avoid the force of this, it would be necessary to show that women will not be affected in this way, or that, should they be, no harm will result. John Stuart Mill admits that it will produce this effect, and asserts that women are held "in subjection" in the family, and should be emancipated. Wendell Phillips said, "No one can foresee the effect; therefore the only way

is to plunge in." Others affirm that "under all possible circumstances feminine instincts will preserve woman." "Plunging in" without a high probability that the effect will be good is never wise, except when destruction impends over the existing situation.

To assume that either men or women will remain unchanged in their intellectual, moral, and emotional susceptibilities, whatever their situation, is contrary to the facts of evolution, environment, and culture. In countless individual cases, and even in nations, woman has shown a capacity to rise or fall, a susceptibility to moral and intellectual modifications not surpassed, if equaled, by men.

Not only would the governing spirit become a part of her character, greatly obstructing the discharge of the duties of home, but it would make her position there an insupportable restraint. Man is naturally self-reliant; woman may, in an emergency, develop self-reliance and complete independence; but is naturally disposed either to coalesce in the determining tendency of her husband, or to control it by persuasion. Imbued with the governing spirit, she will become as restive in her position as would he if similarly placed. This is avowed by many advocates of woman suffrage, and held up as a result to be desired. The more consistent go fearlessly to the end, and define marriage as a civil contract to be terminated at the will of either party, and society as a collection of independent units instead of an assemblage of families.

That there are exceptions to the ideal family, here assumed as the nucleus of society, is true. Some women rule their husbands; a larger number through the misfortune, weakness, or wickedness of the husband are obliged to support the family, and there are many single women and widows. These exceptions to the general law often have much to bear; but not so much as to justify the overthrow of the whole structure with a view to rebuild upon exceptions. Every female child must be presumed eligible to wifehood and motherhood; therefore the whole sex should be left to the exercise of that kind of influence for which their nature and relation to the family qualify them, and which is required in the interest of society.

An argument drawn from exceptions may be very plausibly affirmed. Suppose a movement to enact a law requiring the training of all children in public institutions. In its support it might be maintained that there are numerous orphans, that many children have lost one parent, and that many parents are cruel, intemperate, incompetent, or unfaithful; that relatively few feel, and conscientiously and intelligently discharge, their responsibilities. These propositions are indisputable: how then shall the

scheme to require all children to be educated by the State be shown to be untenable? Only by affirming that the general law of nature is that parents must be responsible for their offspring. To remove the children of those willing and able to train them, because of these exceptions, would be cruel and unjust; and such a wholesale destruction of home life is not necessary, because the general rule is that parents, with all their imperfections, do train their children in a manner better adapted to promote the public weal than is any institutional training. Individual exceptions must be cared for by private philanthropy, or by special statutes which are compatible with the effectual working of the general law.

The same method of reasoning vindicates the conclusion that the general law necessary for the preservation of the family should not be overthrown in order that unmarried women and widows might be introduced into political life.

Nor would a specific statute admitting single women to the suffrage, and excluding married women therefrom, be expedient or right; for then another evil of stupendous proportions would result, namely: the putting of a premium upon the unmarried or childless condition, since such women would have much more time and strength for the political arena than wives and mothers, and could gain many more personal, pecuniary, and political advantages.

NOTABLE REVERSALS OF OPINION.

It was a deep and serious consideration of these things which led some of the greatest of men to reverse their opinions after having been strongly in favor of woman suffrage, or inclined to espouse it.

Horace Bushnell, when assured that the principles of progress which he had adopted required him to support woman suffrage, reopened the question. After protracted thought he was forced to the conclusion that it would be "a reform against nature."

John Bright, the patriot, the tried and valued friend of every movement for the general benefit of woman, accustomed to equality of women in Friends' meetings, was one of those who on May 20, 1867, voted in favor of Mr. Mill's amendment to strike out of a reform bill the word *man*, and insert the word *person*. Nine years afterward, namely, in March, 1876, he spoke against the enfranchisement of women. When charged with having changed his opinions, he said that he gave Mr. Mill the benefit of the doubt, and sympathized with him in a courageous stand, and in a letter published in "The Woman Question in Europe," by Theodore Stanton, he wrote:

I cannot give you all the reasons for the view I take, but I act from the belief that to introduce women into the strife of political life would be a great evil to them, and that to our own sex no possible good could arise. When women are not safe under the charge or care of fathers, husbands, brothers, and sons, it is the fault of our non-civilization, and not of our laws. As civilization founded on Christian principles advances, women will gain all that is right for them to have, though they are not seen contending in the strife of political parties.

To this he adds personal testimony :

In my experience I have observed evil results to many women who have entered hotly into political conflict and discussion. I would save them from it. I am, respectfully yours,

JOHN BRIGHT.

Goldwin Smith is also one of those who voted with Mr. Mill. He was led to change his opinion by considerations similar to those adduced by Mr. Bright, and adds that another important reason was that he found "that those women whom he had always regarded as the best representatives of their sex among his acquaintances were by no means in favor of the change."

Herbert Spencer, in "Justice," renounces his former position, and maintains that there are fundamental reasons for keeping the spheres of the sexes distinct. He had formerly argued the matter "from the point of view of a general principle of individual rights," but he finds that this cannot be sustained, as he "discovers mental and emotional differences between the sexes, which disqualify women for the burdens of government and the exercise of its functions."

Mr. Gladstone, who had sometimes spoken as though he thought the change might have more to be said in its favor than against it, was appealed to two years ago in the most desperate crisis of his life by those women in England who demand the suffrage offering their support if he would avow himself in favor of the principle. He sat down to investigate it in the light of the bill then proposed in parliament, "Extending Parliamentary Suffrage to Women," but confined to unmarried women, and after pointing out the impropriety of that proposal says :

I speak of the change as being a fundamental change in the whole social function of woman, because I am bound in considering this bill to take into view not only what it enacts, but what it involves. . . . It proposes to place the individual

woman on the same footing in regard to Parliamentary elections as the individual man. She is to vote, she is to propose or nominate, she is to be designated by the law as competent to use and to direct, with advantage not only to the community but to herself, all those public agencies which belong to our system of parliamentary representation. She—not the individual woman marked by special tastes, possessed of special gifts, but the woman as such—is by these changes to be plenarily launched into the whirlpool of public life, such as it is in the nineteenth century, and such as it is to be in the twentieth century. . . . A permanent and vast difference of type has been impressed upon woman and man respectively by the Maker of both. Their differences of social office rest mainly upon causes not flexible and elastic like most mental qualities, but physical and in their nature unchangeable. I, for one, am not prepared to say which of the two classes has the higher, and which the other, province, but I recognize the subtle and profound character of the difference between them. . . . I am not without fear lest, beginning with the state, we should eventually have been found to have intruded into what is yet more fundamental and sacred, the precinct of the family, and should dislocate or injuriously modify the relations of domestic life. . . . As this is not a party question, or a class question, so neither is it a sex question. I have no fear lest the woman should encroach upon the power of the man; the fear I have is lest we should invite her unwittingly to trespass upon the delicacy, the purity, the refinement, the elevation of her own nature, which are the present sources of its power.

I admit that in the universities, in the professions, in the secondary circles of public action, we have already gone so far as to give a shadow of plausibility to the present proposals to go farther; but it is a shadow only, for we have done nothing that plunges the woman as such into the turmoil of masculine life.

Upon Bishop John H. Vincent, the founder of Chautauqua, the consideration of this subject has naturally been forced, and to it he has given years of reflection, closely following the influence of modern general and higher education upon society, and in particular upon the home. In former years he was an advocate of woman suffrage; but though enthusiastically devoted to the spread of knowledge, and having distributed diplomas to thousands of women who have pursued the extended course of reading of the Chautauqua Literary and Scientific Circle, he has been compelled to reverse his attitude. In response to a request for a concise statement of the grounds which led to the change of his views, I received the letter which appears as a foot-note.¹

¹ When about thirty years of age I accepted for a time the doctrine of woman suffrage, and publicly defended it. Years of wide and careful observation have convinced me that the demand for woman suffrage in America is without foundation in equity, and, if successful, must prove harmful to American society. I

find some worthy women defending it, but the majority of our best women, especially our most intelligent, domestic, and godly mothers, neither ask for nor desire it. The instinct of motherhood is against it. The basal conviction of our best manhood is against it. The movement is at root a protest against the representa-

AFFIRMATIVE ARGUMENTS WEIGHED.

THE previous considerations, if well founded, will be sufficient to deter every thoughtful citizen who believes the family to be the foundation and safeguard of all that is valuable in civilization from attempting an experiment so dangerous; yet an examination of the popular phrases relied upon to prepare the way for the plunge seems necessary.

It is alleged that "it is obviously fair and right that those who obey the laws should have a voice in making them; that all who pay the taxes should have a voice in levying them; and that men cannot represent women until women shall have legally consented to it, and this they have never done."

But if it is better to exempt them from the responsibilities of government, that the influence which they are naturally qualified to exert, and which is essential to the well-being of society, may not be diminished, it would not be "fair and right" to give women the same kind of voice in making laws that men have. Woman's influence in forming the characters and principles of the law-makers insures care for her.

"No taxation without representation" as an abstract principle is just, but it does not follow that the representation must be identical. The authors of the Declaration of Independence, the framers of the Massachusetts Bill of Rights, did not perceive any incongruity between declaring that "all men are born free and equal," that there should be "no taxation without representation," that "governments derive their just powers from the consent of the governed," and at the same time relieving women from the responsibility and burdens of government. Taxation is not levied upon the property of men and women respectively upon different principles, but upon property as such by whomsoever held.

The property rights of woman are better protected now than they could be if she were actively engaged in politics. Not long since,

tive relations and functions by virtue of which each sex depends upon and is exalted by the other. This theory and policy, tending to the subversion of the natural and divine order, must make man less a man, and woman less a woman. A distinguished woman advocate of this suffrage movement says, "We need the ballot to protect us against men." When one sex is compelled thus to protect itself against the other the foundations of society are already crumbling. Woman now makes man what he is. She controls him as babe, boy, manly son, brother, lover, husband, father. Her influence is enormous. If she use it wisely, she needs no additional power. If she abuse her opportunity, she deserves no additional responsibility. Her womanly weight, now without measure, will be limited to the value of a single ballot, and her control over from two to five additional votes forfeited.

a lady of rare intelligence, arguing in favor of the suffrage, stated that it was proposed to pave a street in which she lived, contrary to the judgment and wishes of the property-holders, most of whom were widows and single women. She attributed the scheme to "recklessness on the part of men, most of whom paid no taxes. Had she and her friends been able to vote, such a thing would not have been attempted." When asked concerning the outcome, the response was that she and a few other interested women "went to the leaders of both parties, and easily persuaded them to defeat the proposition." She did not appear to perceive that if she had been a voter her influence would have been confined to members of her own party.

Should it be said that this principle, if admitted, would justify slavery, it may be fairly replied that the motive of slavery was self-aggrandizement by individuals, its method the violent restraint of personal liberty. But the motive which relieves woman from government is the belief that the exercise of the suffrage by her will work an injury to herself and to the family, and thereby to the State.

The proposition that men cannot represent women until they have legally consented to it is specious, but not sound. Who has ever been asked whether he consents to the government that exists here? That government was established before the present inhabitants were born. Under it the supreme power inheres in adult male citizens. The consent of the governed is and must be taken for granted, except as changes are made by constitutional methods, until a revolution arises. Then all questions sink out of sight save this, "Shall the government stand?" and that question must be decided by the arbitrament of war.

It is affirmed that "capacity indicates sphere; woman has a capacity to vote intelligently, therefore she should be empowered to do so," and that "the dignity and authority of the ballot would increase her influence as it does that of man." There are various acts for which

The curse of America to-day is in the dominated partizan vote—the vote of ignorance and superstition. Shall we help matters by doubling this dangerous mass? Free from the direct complications and passions of the political arena, the best women may exert a conservative and moral influence over men as voters. Force her down into the same bad atmosphere, and both man and woman must inevitably suffer incalculable loss. We know what woman can be in the "commune," in "riots," and on the "rostrum."

Woman can, through the votes of men, have every right to which she is entitled. All she has man has gladly given her. It is his glory to represent her. To rob him of this right is to weaken both. He and she are just now in danger through his mistaken courtesy.

JOHN H. VINCENT.

TOPEKA, Kansas, April 18, 1894.

woman has the ability that she should not be asked or compelled by the law to perform. If it be said, Why not leave the question to her judgment and instincts? it is because the qualifications of voters must be prescribed by law. If the population of the globe consisted exclusively of men or women, to confer the ballot upon any who had been without it would increase their dignity and authority. But since it is composed of both, and woman's influence is not derived from authority, or her true dignity symbolized by the ballot, the clenched fist, or the drawn sword, it would add nothing to her power.

The claim is made that "woman suffrage has worked beneficially wherever tried." It was tried in New Jersey. On July 2, 1776, the provincial assembly conferred the suffrage upon women; in 1797 seventy-five women voted, and in the Presidential election of 1800 a large number availed themselves of the privilege. At first the law was construed to admit single women only, but afterward it was made to include females eighteen years old, married or single, without distinction of race. In the spring of 1807 a special election was held in Essex County to decide on the location of the courthouse and jail. Newark and vicinity struggled to retain the county buildings, Elizabethtown to remove them. The contest waxed warm, and, according to a paper on "The Origin, Practice, and Prohibition of Female Suffrage in New Jersey," read by the Hon. William A. Whitehead, Corresponding Secretary of the New Jersey Historical Society,

It was soon found, though only women of full age, possessing the required property qualification, were permitted by judges of election to vote, that every married woman in the country was not only of "full age," but also "worth fifty pounds proclamation money clear estate," and as such entitled to vote if they chose. And not only once, but as often as, by change of dress or complicity of the inspectors, they might be able to repeat the process.

In Acquackanonk township, thought to contain about three hundred voters, over eighteen hundred votes were polled, all but seven in the interest of Newark.

One woman voted three times. Her name was Mary Johnson, and she cast her first vote under that name. Afterward, as a somewhat stouter-looking woman, she voted as Mary Still, and later in the day as a corpulent person whose name was Mary Yet. The legislature set aside the election as fraudulent, and the whole State was so disgusted that an act was passed restricting the suffrage to white male citizens twenty-one years of age.

It was tried in Utah. Introduced by the Mormons, who designed by it to maintain their

ascendancy over the Gentiles, the women supported not only polygamy wherever they had an opportunity, but anything else suggested by the Mormon hierarchy. On March 22, 1882, the Federal Congress passed an act deciding that no polygamist, or any woman cohabiting with such, could take part in any election. This left the wives of monogamists, and unmarried women, in possession of their vote; but the Edmunds-Tucker bill, designed to destroy polygamy, by a Federal law, February 9, 1887, withdrew the suffrage from all women in Utah.

"It has been tried in the great State of Wyoming, where it has worked so beneficially that the legislature has unanimously adopted a resolution of commendation."

The entire population of the State of Wyoming, according to the census of 1890, is only 60,705, of which 39,343 are males and 21,362 females. The largest city is Cheyenne, with a population of 11,690, and the next, Laramie, which has 6388. Besides these there was only one town with a population of more than 3000, and only one with more than two and less than three, and only four with more than 1000 and less than two. Of the population of the State, 16,291 are between five and twenty years of age, and there are only 27,044 males of voting age in the State; and this sparse population is scattered over an area twice that of the State of New York. According to Judge Cary of Wyoming the women consist of less than twenty per cent. of the voting population. "Usually about half of them go to the polls."

The complacency with which the legislature unanimously praises itself and its constituents has often been paralleled, but in the absence of details can hardly be regarded as the best testimony of which the case admits. None of the questions comprehended in the government of dense populations and vast cities is brought to the test. Citizens so generally isolated are practically a law to themselves. Pauperism would not be likely to exist under such conditions; vice in many sections could be practised without attracting attention; crowds at elections, in the absence of people enough to make a crowd, would be difficult to assemble. Unless the State has been grossly slandered, various troubles have occurred within a few years approximating the gravity of civil war. There is no unusual restraint upon the sale of liquor, and little attention is paid to enforcing such laws as women might be supposed to be specially interested to maintain. Without intending to reflect in a wholesale way upon the officers elected in that State, such inquiries as I have made, with some observation, show that, as a whole, they do not merit any unusual eulogium. But the population is too small, and

the conditions are too peculiar, to make the experiment of any value; nor is the legislative testimony of importance when it is considered that any class, male or female, the commendation of whose influence might be under consideration, contains a sufficient number who would execute vengeance at the polls upon those who would venture to take a negative position.

"Women are better than men, and therefore would make better laws, and would reform politics."

To show that women are better than men it is customary to present statistics of the number of the sexes respectively in prisons and in churches. Undoubtedly more than two thirds of the imprisoned criminals of the country are men, and probably more than two thirds of the communicants of the churches are women. But that this indicates that women are naturally better than men it is easier to assert than to prove. The majority of women are shielded and protected, while most men lead adventurous lives, away from home. Men have excessive physical energy, which frequently involves them in fierce conflicts. When they commit crimes they are more likely, under the present régime, to be convicted; for juries dislike to convict women, especially of crimes punished by long terms of imprisonment or death. Men's crimes are generally of violence, the result of excess, or distortion of those natural characteristics which in normal degree and legitimate use give them the power of defense and aggression. Women's abstention from crimes of violence is due to those characteristics which fit them for the persuasive influence which in their normal condition they exert.¹

The same differences affect their attendance at church. The majority of church-going women spend their lives during the week at home, so that to attend religious meetings is a pleasant variety. Most men spend their lives away from home in laborious exercises, for which they find little relief in attending church, except when sustained by high religious motives. That under ordinary circumstances the instincts of women would be in favor of good laws, there is no doubt; but how far their temperaments would affect the character of special enactments, and how far their personal prejudices and prepossessions would affect their political action, are practical questions of moment.

"Women will always vote against war, and thus put an end to it in the world. They will not send their husbands, brothers, fathers, and friends to the slaughter."

Does history support this statement? Where-

ever there has been a war, women have been as much interested as men. They have even encouraged their husbands, fathers, brothers, and lovers to enlist, and would have despised them if they had not. In the last war in this country, the women on both sides were more intense and irreconcilable than the men.

It is alleged that "the demand for the suffrage is the inevitable consequence of the higher education."

This follows only when the normal dissimilarity in the constitution of the sexes—"a difference but not a scale of inferiority or superiority"—is ignored or underestimated. The proper characterization of such culture is the lower education.

IV.

INSURMOUNTABLE OBJECTIONS.

THE practical objections to woman suffrage can be most clearly stated in detail.

Universal suffrage exists in the United States, with the exception of the classes hereinbefore specified. It is an unreasonable expectation that this policy will be changed. If women are to be admitted to the suffrage, all of sound mind, of legal age, not disfranchised by the effect of crime or other special causes applying equally to men, will be entitled to vote. This will add the more than three millions of negro women, all naturalized women of foreign birth, all domestic servants—in a word, all women without respect to intelligence, character, or race, except the Chinese and Indians. In the whole country it will nearly double the vote, and in several States much more than double it. Similar considerations apply to jury duty, which is a concomitant of the ballot.

That the nation has gone so far in a dangerous path does not make it necessary to proceed farther.

The physiological and pathological reasons for the abstention of women from political work and excitement are not diminished but increased by the complexity of modern civilization. Exceptional cases of voluntary endurance of physical and mental strain, exhibited by the triumph of certain women in the contests of scholastic life, or in bearing unusual burdens in business, should not divert attention from the usual facts of personal or domestic life, or from the fact that a large proportion of the best women in youth, middle life, and age will be unable to respond to demands upon them at set times, in storm or calm, for the different forms of service involved in voting and holding of-

¹With these general views of men and women in respect to crime, etc., Frances E. Willard seems to agree; for in an article entitled "The Woman's Cause is Man's Cause," in the "Arena" for May, 1892, she

says: "We do not claim that this is because woman is inherently better than man (although his voice has ten thousand times declared it); we are inclined to think it is her more favorable environment."

fice, or in securing the qualifications for the one or the other.

Here and there a physician may evoke smiles and compliments from advocates of the suffrage for women by declaring that he knows of no anatomical or physiological impediment to the assumption by women of the duties of political life. But the medical faculty as a whole have no sympathy with his sycophancy, and the common sense of the race, and the observation and experience of most women, concur with them rather than with those who would render legal and necessary the participation of the whole sex in the agitations and exposures of campaigns and elections.

Woman suffrage cannot achieve what its advocates expect. They think that it will reform public morals, close the saloons and other places of evil resort, and realize absolute prudence, honesty, and economy in management.

Laws that do not carry the votes of a majority of the men of a community cannot be executed. Law-abiding citizens require no force to induce obedience; but those disposed to break the law can be compelled to keep it only by force. There is a natural instinct in man which leads him to submit to persuasion by women, and to resist force applied by them. It cannot be eradicated by philosophy, refinement, or religion, and in every generation reappears with undiminished vigor. If women were admitted to political life, the tendency would be for both parties to pass all kinds of laws to please women, which would be dead letters unless they carried the judgment of a majority of the male citizens. In the absence of this, to enforce them would involve a change in the character of the government in the direction of despotism.

Religious feuds would affect political life much more than under present circumstances. It is of immense importance to the welfare of this country that the separation of Church and State be complete. The feelings of women upon the subject of religion are so intense that the franchise, in a large majority of instances, would be exercised under the power of religious prejudice. John Bright, in one of his most important speeches on this subject, exclaimed, "Of one thing there is no doubt: the influence of priest, parson, and minister will be greatly increased if this measure is passed."

Chivalry, with its refining influence over men, must pass away when women become politicians. It is not a favorable portent that of late it has become customary for the advocates of woman suffrage to disparage that chivalrous feeling which causes normal men, wherever modern civilization exists, to treat women with deference, and to be ready to extend them needful aid. At present one of the chief refining ele-

ments of society is the respect felt for women as such by men. Even those who voluntarily form evil associations still esteem the ideal woman. The passing or decline of this sentiment is equally unfavorable to both; for it will accustom men to resist the influence of women.

That it will be undiminished when the fierce conflicts of party politics are involved is an unwarranted hope. All special courtesy to women grows out of the recognition of a kind of influence peculiar to them, and a dependence on their part which must be swept away when they contend on the same plane with men in the political arena. There are many indications that it lessens in proportion as women come forward to compete with men in public life and in business. In the latter case it is an incidental result of a necessity; but it will be the natural consequence of a condition when women appear in politics.

In England, when women first appeared upon the hustings, they were received with the old chivalry, but in recent elections, the contest being fierce, all respect has disappeared. Noted women were treated most disrespectfully in the very heart of London, and people of all parties agree that England has never seen so much participation of women, or such rude treatment of them, as in the last election. In Wales Mrs. Cornwallis West tried to quell a disturbance among the electors who refused to hear Colonel West speak. She obtained a momentary hearing, but the disorder revived, and she exclaimed with much heat, "I am an Irish woman, but it was not until I came to Wales that I found men capable of refusing to hear a woman who was pleading a cause." She was silenced by yells and hisses, and was finally compelled to retire from the platform.

The introduction of women into political life will increase its bitterness. That politics create violent feuds is too evident to be questioned. At present they are modified by the undisturbed relations between the wives, mothers, daughters, and sisters of the combatants. When the struggle has been decided at the polls, these social relations serve to bring about a calm, and the resumption of personal harmony. This was admirably stated by Horace Bushnell:

Hitherto it has been an advantage to be going into our suffrages with a full half, and that (when left to its normal environment and habits) the better half morally, as a corps of reserve left behind, so that we may fall back on this quiet element, or base, several times a day, and always at night, to recompense our courage, and settle again our mental and moral equilibrium. Now it is proposed that we have no reserve any longer, that we go into our conflicts taking our women with us, all to be kept heating in the same fire for weeks or months together, without interspersings of rest,

or quieting times of composure. We are to be as much more excited of course, as we can be, and the women are of course to be as much more excited than we as they are more excitable. Let no man imagine that our women are going into these encounters to be just as quiet or as little nerved as now, when they sit in the rear, unexcited, letting us come back to them often to recover our reason. They are to be no more mitigators now, but instigators rather, sweltering in the same fierce heats and commotions, only more fiercely stirred than we.

It is the very distinctive qualities culminating in an exquisite sensibility, the source of woman's charm in private and family and social life, which, exposed to the attrition and agitations of party conflicts, will most fan the flame.

In this country these liabilities have been illustrated where women have come into anything analogous to political life. The feud that existed for years between two wings of the Woman Suffrage Association in the United States is ancient but still instructive history.

The Woman's Christian Temperance Union, organized for the promotion of an end in which all were agreed, managed by leaders to whom all are accustomed to defer, would not be expected to have any serious difficulty. But when a feud arose which ostensibly began because of a divergence of opinion with respect to the relation which the Union should sustain to political parties, it speedily became intense, and a distinguished woman, the leader of the minority, more than intimates concerning the national president, that,

in all her great work she has been but seeking a background for her personal exploits, and a theater for the exercise of her wonderful powers and accomplishments.

To this, by order of the executive committee, a reply was prepared by a sub-committee of four women of national recognition, which, after making various charges, culminates in a passage unsurpassed in sting of innuendo:

Whatever values — has won as chairman of the Women's Republican National League, as one of the famous "spell-binders," and wife of a Republican official, she has lost the faith of her old comrades in her sincerity, the chaplet of their admiring love, and the crown of leadership in the grandest body of women known in the world.

The closest approximation to political life on a national scale ever made in this country was the National Board of Lady Managers of the World's Fair. These were women of high character and social influence, most of them accustomed to various forms of public life, selected because of their standing in the States whence they came. A large proportion of them at all times spoke and acted in such a manner

as to command universal respect, and their work as a whole secured the approbation of the country.

But the Board had honors to confer, awards to make, and patronage to distribute. Discord arose between the secretary and the president, the former being a lawyer and a noted advocate of woman suffrage. This controversy lasted for months, threatening to embroil the country. Jealousy of the president's failure to introduce some of her colleagues to the Duchess de Veragua caused a stormy scene. Later, another charged a woman in higher office with instructing the presidents of the various meetings to exclude her from participation in the speaking. Owing to various bitter quarrels among the members, and factional opposition, the president intimated her intention to resign. It must be remembered that the president was a woman of tact and rare ability as a presiding officer. On one day, after a long altercation, accompanied by many personal contradictions, the Board stopped business, and the members left the hall in confusion without adjourning. A sectional war broke out, when a lady exclaimed with reference to the nomination of jurors: "New York has eight representatives and North Dakota none. I want to know the reason why. There is something crooked going on here, and I am going to find it out."

Subsequently several women commissioners appealed to the National Commission against alleged injustice. And later, in open debate, one delegate charged another with being "an arrogant, malicious, injurious, and vindictive woman," which caused intense general excitement accompanied by ejaculations and tears. For several days the disturbance was renewed; but peace was finally made, and the account of the controversy was expunged from the records. Such was the effect of these scenes that some of the members of the Board reversed their opinion on the desirableness of woman's entering political life.

Further illustrations appeared during the recent canvass in the State of New York for petitions to strike out the word male from the Constitution, when a counter-movement was begun by women. The protestants were characterized by educated ladies in public assemblies as "traitors to their sex," "copperheads," "betrayers of the cause of woman," and such was the intensity of the feeling that these terms and phrases evoked general applause. The women who presumed to resist the innovation were characterized by one of their sisters, in a contribution to an important periodical, as "parasites who have mentally retrograded."

It will place a new and terrible strain upon the family relation. The ratio of marriages relatively to the number of the population is

diminishing; the number of divorces has been increasing alarmingly for the past thirty years. They are most numerous in sections of the country where there has been a persistent and almost fierce demand for the ballot.

The introduction of political disputes and party work into family life will develop and increase incompatibility, a prolific cause of separations, infidelity to the marriage contract, and divorce. To this it has been responded: "There has always been more contention over religion than over politics, yet often the wife is a member of one church, and the husband of another or of none; and yet the family is not disrupted, and it is evident from the seeming concord of the household that the two have agreed to disagree." That the family can bear existing strains does not prove that it could endure all that it has and a greater than any of them. Even the worst of men generally wish their wives, unless they become fanatics, to be religious, or do not seriously object to it. But there is a radical difference between political excitement and any other. A political difference means that the most intense feelings shall be excited and kept at fever heat for several weeks or months, liable to culminate in a direct act of opposition, the wife going to the polls against her husband, and he against her, exchanging glances of sympathy with life-long political opponents, perhaps coöperating in active opposition. The wife may be working and voting against her husband's most intimate business or personal friends, and endeavoring to secure the passage of laws especially obnoxious to him. In cases of disagreement, where there are children, each parent would endeavor to surpass the other in capturing recruits at the family altar, the table, and the fireside. At the end of the conflict the defeated would be left without the sympathy of the other; and not only without the sympathy, but in many cases with the taunt and sneer.

These possibilities should not be considered merely or chiefly with respect to established families, united "by the reciprocal ties of friendly intercourse," through many years down to the time of the introduction of woman suffrage. The strain will be most felt whenever and wherever the tie is weakest, whether the cause be the inexperience and impulsiveness of early married life, or the accumulated incompatibilities which test the self-control of many. To resort to the assumption that "women will generally vote as their husbands do" is to renounce most of the considerations advanced in favor of the movement.

To invest her with the responsibility of voting will diminish the real power of woman in speech. At present she may say what she will; men hear, and, without subjecting her words

to too close a scrutiny, are influenced by her spirit. Require her to vote, identify her with a party, and in some instances she will grow timid; where she refuses to restrain herself, she will become an impediment to party success, and will be ignored. When women oppose women, their party conflicts will deprive them of that power by which they now leaven public sentiment.

In an argument in favor of giving the suffrage to woman, a senator of Massachusetts brought forward as an example of intellectual and moral fitness for the franchise Mrs. Clara Leonard, whom he justly characterized as the highest living authority on private and public charities. Mrs. Leonard has recently thus expressed her estimate of the value of the ballot to woman:

It is the opinion of many of us that woman's power is greater without the ballot, or possibility of office-holding for gain, when, standing outside of politics, she discusses great questions on their merits. Much has been achieved by women for the anti-slavery cause, temperance, the improvement of public and private charities, the reformation of criminals, and by intelligent discussion and influence upon men. Our legislators have been ready to listen to women and carry out their plans when well formed.

It may reasonably be expected to deteriorate the moral tone of most of the women who become political leaders, and affect unfavorably all who take an active part in politics; and it will introduce dangerous forms of corruption. The principal causes of political immorality are the desire for power, for "spoils" in money and office, bribery, craft, party and personal prejudice. Is it reasonable to believe that women who become political leaders, and intensely excited in political campaigns, will escape the influence of these demoralizing elements? Certainly it will not be maintained that women are destitute of ambition, that they are above the influence of prejudice or prepossession, that personal favoritism can never warp their judgment, that money, or what it procures, has no charm for them. While some—in the aggregate, many—would resist every temptation, preserve their womanliness, and illustrate in high places all the virtues, is certain. But to subject the entire sex to such influences would inevitably lower its moral tone.

When women vote generally,—and if they are not to vote generally the agitation is useless,—all classes will need to be instructed and led to the polls. There must be women leaders for different classes, as there are among men. Women who aspire to be leaders, or are made such by their constituents, will be compelled to associate for political purposes with other wo-

men similarly related to the party. At present the morals of society are largely preserved by the fact that a woman of doubtful character is not admitted to the society of women of unspotted reputation. It is easy to maintain such an attitude now; it would be impossible in a general participation of women in politics. Also that leading political women will be brought into confidential relations with men occupying similar relations in the same party is a consequence of the proposed revolution which would not long be delayed. Its effect upon domestic peace, and public and private morality, could not be salutary.

A RATIONAL FORECAST.

SHOULD the suffrage be extended to women the grant can never be recalled. Experiments in legislating upon economic questions, even if unwise, need not be permanently harmful, for they may be repealed; but in dealing with the suffrage, or with moral questions, new laws, if bad, are exceedingly dangerous. They will develop a class lowered in tone, or deriving personal, pecuniary, or political advantages from the new environment, who will vehemently declare that the effect of the innovation is beneficial, and resist all efforts to return to the former state.

Should the duty of governing in the State be imposed upon women, all the members of society will suffer; children, by diminished care from their mothers; husbands, from the in-

crease of the contentions, and the decline of the attractions of home; young men and maidens, from the diminution or destruction of the idealism which invests the family with such charms as to make the hope of a home of one's own, where in the contrasts of the sexes life may be ever a delight, an impulse to economy and virtue—but the greatest sufferer will be woman. Often those who recollect her genuine freedom of speech, "the might of her gentleness," the almost resistless potency of her look and touch and voice, will long for the former proud dependence of woman on manliness, reciprocated by man's reverence for womanliness; while "the new generation, to whom such sweet recollections will be unknown, will blindly rave against their fate or despondently sink under it, as women have never done (from similar causes) under the old régime." Meanwhile the office-holding, intriguing, campaigning, lobbying, mannish woman will celebrate the day of emancipation,—which, alas, will be the day of degradation,—when, grasping at sovereignty, she lost her empire.

The true woman needs no governing authority conferred upon her by law. In the present situation the highest evidence of respect that man can exhibit toward woman, and the noblest service he can perform for her, are to vote *NAY* to the proposition that would take from her the diadem of pearls, the talisman of faith, hope, and love, by which all other requests are won from men, and substitute for it the iron crown of authority.

J. M. Buckley.

[In accordance with the conditions of this debate, the foregoing articles were written independently, and have not been changed since they were sent to the authors in order to enable them to prepare the postscripts which follow—which are also written independently of each other.—EDITOR C. M.]

POSTSCRIPT BY SENATOR HOAR.

I HAVE read Dr. Buckley's paper entitled "The Wrongs and Perils of Woman Suffrage." It does not seem to me to make it necessary that I should restate my own argument. The reading of the paper has given me great pleasure. It is, in my judgment, the strongest argument ever made on that side. All patriotic persons, whatever their present opinion, must desire that this great step should not be taken without seriously weighing everything that can be said against it. Dr. Buckley has discussed powerfully and clearly what seem to me the true points of the controversy:

"Will it be a bad thing for woman that woman should help govern the State?"

"Will it be a bad thing for the State that woman should help govern it?"

I do not suppose Dr. Buckley himself ascribes much importance to the portion of his paper headed "Disfranchised Classes." He says that the common sense of the human race, with inconsiderable exceptions, has confined the prerogatives of civil government to man. But in general the common sense of the human race has confined the prerogatives of government to a very few men—to monarchs, noblemen, aristocracies, oligarchies. We are at present addressing an audience who are agreed that what is largely the common sense of the human race is entirely mistaken in its opinion, as expressed in existing civil governments, or the civil governments of the past. So we surely need not occupy time or space in debating whether we should exclude women from a share in the gov-

ernment of the republic in which manhood suffrage is the law, because the common sense of the human race has agreed that nearly all mankind, whether masculine or feminine, should be excluded from a share in the government. Our question is, whether women should help in self-government, not whether, if it be true that most of mankind are born to obey, and a few are born to rule, it is better that the ruler should be of one sex or the other.

Dr. Buckley denies that voting is a birth-right. This denial he extends to all persons; not merely to idiots, lunatics, persons under the age of discretion, and foreigners not attached to the government, or not familiar with its principles. His readers will easily see that this claim is essential to his argument. So, we are fairly entitled to insist that all persons who think a share in the government to be a birth-right shall, if no reasons but Dr. Buckley's stand in the way, come to our conclusion. It can hardly be worth while to take much space in making an argument to persons who accept the American Constitution, State and National, as founded on sound principle, or in debating over again what our grandfathers settled.

I do not, also, care to take much more time than I have already taken in dealing with the authority of Mrs. Leonard and other ladies who, while active in affairs of government, disapprove conferring the ballot on women. I have endeavored to show already that Mrs. Leonard's practice is against her theory, and that she is mistaken only as she misunderstands what is proposed. Dr. Buckley quotes a sentence from her to the effect that woman's power is greater when, standing outside of politics, she discusses great questions on their merits. I do not think she is standing outside of politics when she discusses great political questions on their merits. I do not think she is standing outside of politics when she manages a government hospital or a normal school. I do not see how, when it is proposed to the people that some important change shall be made in these political instrumentalities, that after saying "yes" in a report, or a magazine, or a letter in a newspaper, and giving her powerful and cogent reasons, she or anybody is to be harmed if, when the vote is counted, her vote shall not be excluded. Mrs. Leonard votes when she is a member of the Massachusetts State Board of Lunacy and Charity. Mrs. Hale votes when she is a member of the Board of Trustees of the great hospital for the insane at Worcester. Other ladies vote in the Board of Education. They exercise their power by direct vote when they manage these great political instrumentalities. Will it harm either of these ladies any more to do the same thing in the town or ward where they live under the quiet security of the Australian ballot?

So we come to what I am glad to see Dr. Buckley considers the chief question, which he has dealt with so admirably and powerfully.

"Do we propose anything likely to injure womanhood, or anything likely to injure the Republic?"

I am afraid I shall do Dr. Buckley's argument injustice if I attempt to sum it up in a few lines. But of course that is all I can do here.

The argument is, if I understand it, that if women take a share in governing the State they are so far to control other wills by an authority which is submitted to because the persons submitting are subjected, governed, constrained, and obey because they are subjugated and not because they are persuaded. Women now, Dr. Buckley says in substance, exercise their control in the family as wives, mothers, or daughters, by reason of an influence which the person who submits to it is perfectly free to disregard. But the ruler of a State governs by reason of a power which the person controlled by it is not at liberty to disregard or disobey. Now he says that for women to substitute the habit of government by authority for the habit of influence by persuasion will destroy the sweet nature of womanhood itself. Dr. Buckley says a great deal more than this, which I have not time to deal with. But I select only the point which has made the most impression upon me.

It seems to me we shall find the answer to this proposition by inquiring whether the function of voting bears such a proportion to the other influences that form and affect the character, that it will tinge and color the whole character and life, or whether it will take its own color and tinge from the general character of the person who exercises it. If Lucy Stone had voted, would her character have become arrogant, quarrelsome, dishonest, ambitious, intriguing, because there is danger that political activity will create a temptation to indulge in these vices, or would the function of voting, as discharged by Lucy Stone, have been characterized by sincerity, patriotism, calmness, wisdom, sweetness, and unselfishness? Now I affirm that in mankind, in general, the function of voting takes its hue and tincture from the general character of the person who exercises it, and that the general character of the person who exercises it is not changed by the temptations which attend the struggle for political power. Voting and politics, to most men, are but a small and insignificant portion of life. They do not change opinions, or control the character of the citizen; but they take their character from the character that he brings to them. The German who has lived under the iron rule of the Cæ-

sars, the Irishman who has lived as a peasant under the heel of the Englishman, the Englishman who has lived under the hooped republicanism by which the Englishman governs himself, and with that arrogant disregard for human right with which the Englishman deals with other nations — each, when he comes here, brings to his American citizenship the quality which he gained at home, and does not change it when he takes his share in our republicanism. It may be added, also, that the function of motherhood is a function of absolute authority, perhaps the most absolute that one human being exercises over another.

Dr. Buckley narrates the story of the old New Jersey election frolic. He gives also some amusing narrations of some more recent, and rather undignified scuffles in which ladies have engaged. But these can be matched a thousand times by like scenes in deliberative bodies

controlled by men. I am afraid even ecclesiastical assemblies are not free from them. I suppose Dr. Buckley does not seriously contend, because of the example he has cited, that the great Woman's Temperance Union should disband, or that woman should not manage it any longer.

No person desires to change the essential character of American womanhood. It is a character whose beauty, dignity, grace, sweetness, and power come from causes with which the giving or denying to women of a share in the government of the State has nothing to do. It will not, in my judgment, be affected in the slightest degree for the worse if her vote shall be counted. On the other hand, when she shall be admitted to complete citizenship, these qualities of American womanhood will become more and more the qualities of American citizenship itself.

George F. Hoar.

POSTSCRIPT BY DR. BUCKLEY.

THE courteous admission of Senator Hoar that opponents of woman suffrage among men are not influenced by "the tyrant's desire to keep the rule of the State to themselves," but "chiefly an honest desire for the good of the State, and an honest desire for the welfare of woman," deserves recognition. Not less noteworthy is his acknowledgment of the changes already made in the laws concerning a married woman's relation to property and other subjects, by the "law-making sex." He might have added that where women are concerned law-makers are more than willing to rectify every real injustice and grant any reasonable request.

Woman suffrage, in his opinion, is "the change of a relation which has existed from the foundation of the earth"; yet upon this, the greatest political and social revolution, he generalizes without critically estimating the question of the value and elements of the influence of the sexes respectively under the existing order of things.

The typical man and the typical woman are contrasted by the senator in this passage: "Man values the objects of his affection for the comfort and dignity and benefit that comes to him from them. Woman values herself only for the comfort which she can be to the objects of her affection." Were this description of woman true to nature, no other argument against woman suffrage would be needed, for it would imply absolute incapacity for impartial legislation; but the characterization gives an unequal view of both sexes.

That the majority of the women of the country

Vol. XLVIII.—79.

do not desire the suffrage is by no means "the chief reason" for withholding it. But the fact that it is so contrary to their instincts, intuitions, and sense of need that they do not wish it is a weighty reason for not imposing it upon them. The reference to Turkish ladies is not relevant, since they are deprived of the information accessible to American women.

The framers of the constitution of Massachusetts were not ignorant of the logical results of their principles. But they knew that every principle has its limits, and, when forced beyond them, mutilates or smothers some other truth. The Essex Convention, meeting at Ipswich in 1778 to consider the proposed new constitution and form of government, was particular to say that women were left unfranchised "not from a deficiency in their mental powers, but from the natural tenderness and delicacy of their minds, their retired mode of life, and various domestic duties. These concurring prevent that promiscuous intercourse with the world which is necessary to qualify them for electors."

Rufus Choate's tribute to the discrimination of character "by the collective womanhood of a people like our own" is just. But should she be compelled to "talk and think of measures, of creeds in politics, of availability, of strength to carry the vote," what reason is there to believe that her vision will not be dimmed or distorted by the medium through which she looks?

It is a suggestive phenomenon that General Butler was the particular admiration of a large number of women, conspicuous aspirants to

political life, who often commended him from the platform and in the press.

The senator concedes that there are large domains of legislation and administration from which "it would be better to exclude women as a whole than to admit them as a whole, because the great mass will be so little fitted for them," but affirms that this is true of the great majority of men. This, however, is an argument drawn from a vast evil which should be overcome, not increased by the addition of an immense number of voters whom he grants are destined to remain in the same condition.

To say that the same arguments which the advocates of woman suffrage have to meet have been used against every extension of suffrage merely acts as an opiate to thought, unless it be clearly proved that they do not now apply. Every important change, good or bad, has been opposed. The proposed extension is radically unlike any that has preceded it.

My eminent colleague in this comparison of views asks his opponents to "find four masculine figures whom they will like to select as leaders or companions rather than" those he names. Emerson and Whittier were idealists, neither qualified for leadership in politics or statesmanship, though a multitude rejoiced to come within the influence of their inspiration and elevating impulses. The deliverance of Mr. Lincoln was made at the very outset of his career, and so far as is known, though paying many a beautiful tribute to woman, he never referred to the subject again.¹ His later experience led to a profound conviction that the temperament of women was such as to make it more difficult to compose public feuds among them than

among men. When the possibility of carrying out his conciliatory methods of reconstruction was under consideration, he remarked to the President of the Sanitary Commission that he expected more trouble from the women than from the men, and closed the conversation with these words, "Bellows, you take care of the women, and I will take care of the men."

It is not necessary to journey outside the senator's own paper to find two women worthy to be compared with Mrs. Lucy Stone Blackwell and Mrs. Howe. These are Mrs. John Ware, whom he declares to be "one of the wisest and most accomplished persons in this country of either sex," and Clara Leonard, "another of the women who are the pride and ornament of the Commonwealth of Massachusetts." Both these ladies strongly and conscientiously disapprove of woman suffrage.

To these I add the name of "the most useful and distinguished woman that America has produced," whose influence is felt throughout the world upon every sphere of philanthropy, and is preserved in the laws of every civilized nation, Dorothea L. Dix. She saw the rise of the American woman-suffrage movement, studied it in its advocates, arguments, sentiments, and tendencies, and rejected it. The "divine discontent" which its leaders were and are endeavoring to kindle in the hearts of women she deemed merely one of the ever-changing forms of human unrest. Her biographer states that she believed in "woman's keeping herself apart from anything savoring of ordinary political action. She must be the incarnation of a purely disinterested idea, appealing to universal humanity, irrespective of party or sect."

which is reprinted in Lincoln's Complete Works, Vol. I, p. 7). [This is the passage quoted by Senator Hoar.]

So far as I know, the topic is nowhere else mentioned in his writings, speeches, or letters, nor did I ever hear him refer to it in conversation either directly or indirectly."

J. M. Buckley.

CONVERSATION IN FRANCE.

MUCH has been written, here in THE CENTURY MAGAZINE and elsewhere, about the French salons; but often it seems to be taken for granted that these exist no more. In fact, there are still several of them, which certainly have not all the importance they had before the advent of newspapers and free political discussion, but in which artists and men of letters still love to meet in companionship with intelligent people of the world. Conver-

sation is, and will long continue to be, one of the greatest pleasures of the Gallic race, in which, as every one knows, the social spirit exists from the lowest to the highest rank. Wealth has never been necessary in order to have a salon. Mme. du Deffand lived very simply in the convent of St. Joseph; Mlle. de Lespinasse was so poor that her friends had to support her; and each of these two women had a real court in the 18th century. She who became later almost a queen, Mme. de Maintenon, then Mme. Scarron, gave celebrated dinners; yet it was during one of them that an

anxious servant came to her to whisper, "One more story, Madame, as there is no roast to-day." The old Maréchale de Beauvau, living after the Revolution in a small lodging of the Faubourg St. Honoré, saw quite the same number of interesting people mount her muddy staircase as when she was mistress of a splendid mansion. Good dinners and a grand household have nothing to do with the success of a salon. Yet they are not an obstacle to its success when the best elements exist; one proof of this is the salon of Princess Mathilde, assiduously frequented for so many years by writers and painters. She herself paints, working not in an amateurish and princess-like way, but busy in her studio from morning to dusk. When night comes, her guests are to be found in the two large drawing-rooms of her house in the Rue de Berri, which are filled with old pictures, and precious works of art, and in the greenhouse, which is nothing else than a square yard covered with glass and transformed into a winter-garden. People sit and talk under the tropical foliage of the palm-trees, while the princess, showing still, notwithstanding her years, a classical profile, snowy shoulders, a very graceful movement, and the finest hands in Paris, receives the few survivors of the last empire, with other men of more or less fame who have been faithful to her under all governments. There are some of the younger artists also: Besnard, Doucet, poets like José-Maria de Heredia, novelists like Paul Bourget, critics like Louis Ganderax. Groups of congenial persons settle themselves freely in the corners. The private talk is interrupted now and then by a little music, and tea is served in an informal way by the lady of honor, Baronne de Galbois. The princess has wit, and, moreover, she has eloquence of a fiery, passionate, splendid sort, above all when she is roused to discussion. Her brother, Prince Napoleon, had the same imperial way of speaking. Notwithstanding the atmosphere of liberty and ease which her highness wishes to create, every one has present to his mind the fact that she is a princess, and she herself from time to time shows that she is aware of it. When Taine wrote a hard and severe portrait of her uncle, the great Napoleon, she simply put him out of her house by sending him a formal card, with the letters "P. P. C." Taine mourned the end of their long intimacy.

"But what would you have done in my place?" he inquired sadly of Renan, another friend of the house.

"My dear Taine," answered the author of the "Life of Jesus," "I have, for the sake of what I think truth, quarreled with a much greater lady than all the princesses on earth: I have quarreled with the Church."

We have said that Princess Mathilde is eloquent, and eloquence is supposed to be the enemy of conversation, which never flourished in the days of great oratorical art—during the Revolution, for example. This is probably true in a general way, the chief qualities of conversation being in *apropos* good humor, piquancy, and cheerfulness; but after all, Mme. de Staël was eloquent, and none the less understood conversation. She has written the most delightful things about it—for instance:

The sort of enjoyment that lively conversation makes us feel does not precisely consist in the subject of the conversation; neither are the ideas or the knowledge that may be developed in it the principal interest. It is a certain manner of acting upon each other, the exchange of a quick pleasure, a way of speaking as soon as one thinks, of rushing instantly out of one's self, of winning applause without effort, of manifesting one's wit in all shades, by accent, gesture, look—in short, of producing a sort of electricity which causes sparks to fly, relieves some of the excess of sprightliness which is in them, and awakens others from apathy.

Such is conversation as we see it practised at Paris in the much renowned salon of Mme. Aubernon de Nerville, who is heiress to the best traditions of the eighteenth century. Her day is Saturday—the day of Mlle. de Scudéry in the time of the "Précieuses," which name has been more than once given, very unjustly, to Mme. Aubernon de Nerville and to her mother, who was one of the most accomplished women of Parisian society. "Les précieuses radicales" they were called, both of them being republicans. Every Saturday a dinner is given in the fine house of the Rue d'Astorg, usually a dinner of eight, never more than ten, persons, all of them carefully chosen, with one great talker only. Mme. Aubernon believes that two *premiers rôles* will never do. Either they clash unpleasantly, or, what is more probable, they annihilate the effect of each other. Then, to throw and catch the ball, some academician, chosen from among the more agreeable; a younger poet or novelist; a professor in the Sorbonne; one or two women only, cultivated and open-minded, not too youthful, not too handsome, not too self-conscious, and caring as little as possible to monopolize attention; perhaps as many brilliant men of fashion, capable of listening—of listening even to serious conversation if it happens to be serious, and practising that intelligent silence which is a good "accompaniment to the music of speech." Observe that silence has its value; there may be wit in the manner of responding by a glance, or a smile, to some striking word, and the sympathy thus expressed is the best excitement for a talker. The hostess

excels in this sort of encouragement, having kept the pretty dimpling smile of her youth and the most sparkling black eyes. She has also the knack of making original and unexpected witticisms which turn the current into another channel when she feels that a subject has been dwelt upon long enough, or is becoming dangerous. She never cuts the conversation, a thing which must not be done, she says, even with golden scissors; but she passes rocks and breakers like an experienced seaman, or changes the course when the wind seems to be lacking in the sail. In the choice and treatment of subjects she has plenty of freedom, always kept, of course, within the limits of good breeding; some slanderers accuse her of preparing in her mind the program of each dinner's talk, so that she has the advantage over her guests of being ready, while they are taken unawares, upon such or such a topic. It may be true for the starting, in behalf of what will follow; but very soon she is carried away by her natural and genuine wish to make others shine, and by her perfect unconsciousness.

The prominent star among the more or less brilliant surrounding clusters was very often, while he lived, Ernest Renan. He would speak, with the exquisite grace which pervades all his writings, of the historical and archæological researches which he made in Syria as in the Holy Land. Although by the natural current of his mind he was always brought to religious questions, never did a word of his offend any Christian feeling. The very peculiar combination of belief and unbelief which appears in his books, and makes him, as has been said, a beacon with changing lights (*un phare à feux changeants*), rendered him sympathetic in conversation to every kind of interlocutor. His large tolerance, his broad manner of looking at things on all sides at once, his slightly ironical and perhaps disdainful though courteous acceptance of other people's opinions, made any passing intercourse with him perfectly delightful. When I remember his fine smile and the bright twinkle of his eyes, I cannot help having a grudge against Bonnat's portrait. It is admirable painting, of course, but it does not give an idea of the charm, the very real charm, of a face so heavy in lines, yet so completely refined by the power of expression. M. Renan was at his best at Mme. Aubernon's house; even the most wonderful talkers fall to nothing if they are not given opportunities, and the good nature of that exceedingly amiable man allowed him to yield without protest to any current into which he was pushed. The very first time I saw him—long ago—he was involved in a feminine discussion of shopping and the Bon Marché. Such accidents could never happen at the house of

Mme. Aubernon; she carries the flag of conversation with a firm grasp, and never lets it droop.

Alexandre Dumas has been for many years the idol of this salon. Second only to his father, he certainly deserves to be considered as the greatest spendthrift in conversation, lavishing the gold of genius as if it were brass. This is by no means always the case; on the contrary, some writers are great misers, and keep every valuable thing that comes to their minds for the market—that is to say, for their printed work. Dumas's bon mots are like a continual exhibition of fireworks. Another prodigal of wit is Henri Becque, the writer of some sharp comedies, who has also been one of Mme. Aubernon's favorite guests. Foremost among them all we must still name Jules Simon, Ferdinand Brunetière, and Victor Cherbuliez. Jules Simon's perfect moderation in speech, and his comprehension of social problems, have sometimes allowed the talk to wander toward politics, although this is generally a forbidden subject, the passions which are excited by the public events and discussions of the day being banished from a circle where thought is supposed to soar above all earthly things. Brunetière, the strong and deeply original critic, is also the best lecturer in France. Cherbuliez, who is also known under the name of Valbert, has made his novels the vehicle of much deep thought and information, while he has given to his miscellaneous papers on politics, esthetics, or philosophy, all the charm of romance. His humor, enriched by the intimate knowledge of many foreign countries and languages, has a wonderful cosmopolitan flavor.

It would be a mistake to believe that when Mme. Aubernon invites only one great man at a time, she means to let him take the talk all to himself among admiring listeners. This would never do in France, where long dissertations and anecdotes are quite contrary to the national spirit, which is one of continual take and give, the well-edged weapons clashing together. *Glissez, n'appuyez pas*, is the first rule of conversation. One of the most exquisite talkers of the Aubernon salon, Professor Deschanel, once wrote, "Ten minutes of Parisian conversation are more full of ideas, images, feelings of every sort, than three days of provincial talk." This is true. Provincial talk has always some stiffness and heaviness in it, and it admits of a great many stories good or bad, old or new. The anecdotic manner is, on the contrary, very little used in Paris, where ideas seem far more interesting than people or facts. Some lazy minds think that conversation at Mme. Aubernon's dinners must be work rather than pleasure, and that she behaves among her guests like the leader of a symphony, bringing each

instrument to action or to silence. It is perfectly true that she permits no private chats between neighbors, which would be a trespass against the good traditions of the eighteenth century; she finds it impolite and vulgar, injurious to the general effect, and when by some rare chance it happens, she rings a tiny bell in the most decided way. She was punished once for this tyranny. While some one was speaking,—I think it was Bardoux, the biographer of Chateaubriand's lovely friends, Mme. de Beaumont and Mme. de Custine,—another guest whispered to the lady seated next to him; the tinkling of the bell stopped his untimely words. When M. Bardoux had ended, Mme. Aubernon bade the guilty one speak in his turn.

"What had you to say?" she inquired.

"Oh, little, very little," he answered in a rather distressed way.

"I am sure it was something valuable; we cannot afford to lose it. Pray speak out!"

With hypocritical modesty the other demurred. At last, with eyes lowered upon his plate, he answered, "I was just saying I would willingly have taken a little more salad."

There was a laugh, and some confusion for the autocrat. In truth, Mme. Aubernon deserves to be called by Dr. Holmes—who, if he chose, would have the seat at her right hand,—the autocrat of the dinner-table.

After dinner, as soon as coffee is brought into the drawing-room, the players in her orchestra are released; they may go to smoke a cigar in the *fumoir*, and either vanish afterward in the mysterious way which is called *à l'anglaise* in France, and *à la française* by other nations, or come back to meet the pretty and well-dressed women, and the men of leisure, who call during the evening on their way to a ball or to the last acts of the opera. Stage performances of the rarest quality have been given at Mme. Aubernon's. Chosen fragments of Alexandre Dumas' comedies were played there by artists and amateurs together, the latter—among whom was the mistress of the house—showing sometimes as much talent as the former. Once she was inspired to try the effect of Sardou's "*Divorçons*," with the last act cut off, and with actors of the Théâtre Français as interpreters. It became thus a delightful comedy instead of a farce. The translation of Ibsen's "*A Doll's House*" was first given in her salon. But the best representations are always the Saturday dinners, and some of her friends say that she ought to invite people to sit about; she thinks with reason, however, that this attitude of *cure-dents*, so to speak, would only make the listeners feel doubly famished. Nor are the Saturday dinners the only ones she gives; there is a Wednesday dinner for younger and less

well-trained guests—dinners of anarchists, as she calls them, before they get to be tamed and broken to harness.

It has been said that Pailleron thought of this autocratic salon when he wrote "*Le monde où l'on s'ennuie*," and that Mme. Aubernon was portrayed in his comedy. She went to see it, applauded warmly, and told the author, who was among her guests: "People make a mistake; they think you have wished to paint us, while you know as well as I do myself that we are "*le monde où l'on s'amuse*."

But the truth is that she cares only for highly intellectual amusements, and that, without being a lion-hunter, she has a great respect for established fame. Many among the Forty Immortals come to her assiduously, and, notwithstanding her democratic feelings, Mme. Aubernon clings to the old institutions, to classical forms. Each election to the Academy is to her a subject of the deepest interest. She is decidedly a conservative in art; the excesses of realism were always hateful to her, and she cannot forgive the so-called *jeunes* their trespasses against the integrity of the French language. The sort of mysticism which has lately become fashionable does not appeal to her, since she has the truly national taste for what is clear, sound, and definite, scorning shadows and mists and metaphysics, and wishing to know where she is going, and to feel the solid ground under her feet. As to her religion, it is sufficiently expressed by the words, "I keep myself equally ready for eternity and for nothingness."

An eternity without lively talk and literary interests would of course seem dreary to this leader of a salon. She could not even understand the witchery of nature, or taste the delightful rest of country life, without some sort of social condiment. When she leaves Paris it is to go a short distance to a place that seems to have been specially made for her, in the neighborhood of those enchanting woods of Marly to which Louis XIV. so often resorted, and of that lovely Louveciennes which his successor cherished. "*Cœur Volant*" is the name of this delightful dwelling-place. The house is built in the unpretending style of the eighteenth century, so favorable to close intimacy. Every piece of furniture belongs to the same time. There, on summer Sundays, the friends who meet on Saturdays through the winter at the Rue d'Astorg come to luncheon or to dinner for an afternoon or evening of conversation; sometimes under the shade of the stately old trees,—suggesting a refined Decameron of modern times,—sometimes, according to the hour and weather, in the drawing-room, the walls of which, if they could speak in their turn, would certainly have much interesting matter to repeat. This also is very helpful; a salon needs

to have been warmed by many conversations, to imprison, as one might say, contagious atoms of thought and wit.

A new, splendid, glaring mansion, without any association with the past, would never answer the purpose. Mme. Récamier knew what she did when she retired behind the walls of L'Abbaye-aux-Bois, where a chosen set came to worship the god whose priestess she chose to be.

This central figure of worship is certainly an excellent means of success, as one may see from the examples of Chateaubriand in Mme. Récamier's salon, and of Alfred de Vigny in that of Mme. Ancelot. Yet the "chosen set" is before anything indispensable. A woman vain enough to suppose that her *habitués* come to her specially for herself will never create anything like a salon. She ought to know that the pleasure of meeting together stands foremost in the mind of each of her guests, and she must leave them to that pleasure with a wholesome fear of breaking the spell. She is not free to open her door to the more pleasant outsiders without making sure that they will not be troublesome to her set; she is not allowed to be hospitable, as she perhaps would like to be; she must stand firm against letters of introduction and suing for invitations: otherwise the salon very promptly becomes an inn, and there is an end of it. Anger, resentment, and jealousy of course follow each of her refusals; she may make many enemies; some bitter attacks may be made in the newspapers: but all this she will have to endure; no difficult work is achieved without a good deal of self-sacrifice and suffering.

The women of the great French salons enjoyed the enjoyment of others without any selfish wish to attract attention, or to shine for their own sakes, even when they did shine. Such is Mme. Aubernon. Her salon, notwithstanding the disappearance by death of some of its most noteworthy people, stands unique in its way. Two others which have very close links with it aspire only to a more subdued and quiet sort of fame, which is not, however, of inferior quality.

Some families seem to be happily gifted. Mme. Aubernon is a near cousin of the two sisters-in-law, Mesdames Baignères, whose Thursdays on the one side, and Sunday afternoons on the other, are frequented by much the same people; but there are more poets than at Mme. Aubernon's, whose preferences are for prose—more painters, more artists of the pen, as well as of the brush. Symbolists like M. de Regnier, impressionists like M. Jacques Blanche, are seen there among the flower of diplomacy and the best of traveling foreigners. In those two very elegant houses a vivid interest is shown in English literature.

A salon which has made me often think what may have been the surroundings of the accomplished and highly cultivated Rahel Levin of Berlin is that of Mme. Arman de Caillairet, a salon where science, philosophy, and literature are blended. There one may meet Anatole France, and G. Laffitte, the present chief of positivism, the heir and representative of the theories of Auguste Comte.

To all these various salons comes a man who, by his intense knowledge of the eighteenth century, seems really indispensable. M. Victor du Bled, the particular friend of all witty French women of all centuries, has tried something new and interesting at the Vicomtesse de Tauzé's Saturday afternoons; he has given short and brilliant private lectures about old French society; one of them, before two princesses of the house of Orleans, on that feminine incarnation of virtue in an unvirtuous time, the Duchesse de Choiseul. This innovation was full of fitness, Mme. de Tauzé, the biographer of Berryer, being a Choiseul herself, and the frame, so to speak, of the picture, a wonderful art-gallery full of carefully selected bric-à-brac, adding to its charm. That more or less fortunate fashion of lectures brought in and through conversation is carried to the highest degree in the palace-like mansion of a worthy English lady much given to what is called spiritualism, the Duchess of Pomar, formerly Lady Caithness.

But we are wandering very far from genuine French conversation. This we should find, and of the best kind, seasoned with tact and taste, within the chosen circle—notabilities of birth, wealth, and talent—which seeks in her modest retreat Mme. Caro, widow of the philosopher. She is herself the author of some very good novels. Her "*Péché de Madeleine*" was, when it appeared anonymously, a rival to the child in the story of Solomon, having been claimed by two persons, and awarded finally to the true owner, to the great annoyance of the pretender.

An interesting and valuable exchange of ideas is to be found at the fireside of the learned and humorous essayist whom the world at large believes to be a man, under her Russian pseudonym of "*Arvède Barine*." But her duties as a wife and mother are not neglected for those of a writer. Here we are on Protestant ground, and also at Mme. C. Coignet's, the historian of the French renaissance and reformation, who gathers about her a knot of thinkers belonging to every creed or to no creed at all, provided they be high-minded, and ready for good work; on the ladies' side, the widow of Michelet, the widow of the great liberal preacher, Pressensé, and some other strong-minded, interesting women, who have devoted themselves to pedagogy, or to some philan-

thropic work. Among the men was seen more than once last winter a very remarkable political writer of the "Temps," who is also professor of dogmatics in the Protestant faculty of the Paris University, and has given some admirable lectures in the Sorbonne upon Christian literature. The first one, on "The Intimate Life of Dogmas," was perhaps still more admired by the Catholics than by the Calvinists and Methodists, who found him too liberal, though he is thoroughly Protestant. But like many large-minded men of the period, he seems to wish to throw a bridge from one religion to another, in bringing all Christians to adore in spirit and in truth. His "St. Francis of Assisi" was the event of the season. An irreverent wit said of it, "St. Francis is becoming so fashionable that he will soon be worn upon bonnets."

It would need a separate paper to show at length the powerful sympathy and encouragement which were received in the home of the late Baronne Blaze de Bury by that special group of reformers who represent the neo-Christian movement in France. "Le Devoir Present" and "Jeunesse" have been translated, and many an American has become interested in the ethical league of the "Compagnons de la Vie Nouvelle." Among these one woman only has taken a prominent place—a woman, however, of powerful intellect and inexhaustible enthusiasm, who also is a most clever writer on subjects which would seem to need the masculine mind; but Mme. de Bury had a man's brain. The long illness which has just ended fatally stopped her pen about one year ago. She contributed at least as often to the English reviews or magazines as to those of France. Born in Scotland, she had passed many years in Germany before marrying one of the best Frenchmen of his time, and though she always remained an Englishwoman at heart, she seemed to belong to three countries. Half-foreign salons have more than once succeeded in Paris, as in the case of Mme. Mohl. Mme. de Bury had known well, and admired deeply, Madame Swetchine. Such men as Montalembert, Villemain, and Père Gratry had been the friends of her husband and herself—an association which often made her severe and fastidious in judging the talents of the hour. The afternoon receptions in the old house at the Rue Oudinot, formerly the house of Chateaubriand, were of the most varied sort. One could see at once the Viscount de Vogüé, the late Mr. Lawrence Oliphant, Mr. Hamilton Aidé, people of the Faubourg St. Germain, members of the republican government, representatives of the London "Times," and distinguished Americans who chanced to pass. The hearty welcome of the hostess it is not easy to forget.

We might well give the name of salon—

and even call it a very brilliant one—to the cozy library of Alphonse Daudet, where every Thursday night men like Edmond de Goncourt, Pierre Loti, Paul Hervieu, Raffaelli the painter, and now and then Henry James, come informally to be received by him and his charming wife, who allows his friends the freedom of smoking-jacket and cigar. We could easily add to our list one or two attractive Bohemian resorts; we could describe a certain Monday enjoyed by many a hunter of new forms in prose and verse—Mallarmé and Léon Rosny, for example, with several others, who, however hostile to bourgeois taste, prefer the atmosphere of a friendly home to that of a *brasserie*. But we should be carried too far, since there is almost no house in the world belonging to artistic and literary people where conversation, as an art, does not naturally flourish. For a like reason I have purposely omitted to mention in this sketch of salons, great and small, and their annexes, some of the most conspicuous, which are those that the editor of an important paper or magazine is always able to create with the help of a clever and charming wife. It will be easy to imagine what elements of success a staff like that of the "Revue des Deux Mondes" may bring to conversation at a dinner, or an entertainment of any kind. The salon of Mme. Adam has already been written about more than once. Mme. Eugénie Yung, the widow of the able founder of the "Revue Bleue," has kept near her a group of her husband's collaborators and friends, such as Jules Lemaitre, Challemeil-Lacour, Larroumet, and Édouard Grenier, who speaks as well as he writes about the romantic period whose most glorious representatives have been his friends. As a poet he grew up under the influence of Lamartine, and among the clever and charming women who were his friends were Bettina von Arnim, Daniel Stern (Comtesse d'Agoult), and George Sand.

In the stately building of the Institut, an incomparable court surrounds Mme. Camille Doucet, the wife of the perpetual secretary of the French Academy. The trouble of choosing is spared to her; a more difficult judge than any *maitresse de maison* can be—the Academy itself—decides. Every Tuesday some of the Forty, who are like a large and very friendly family, come to her, and no reception of a new member takes place without tea following in her hospitable and stately drawing-room, where candidates enter with a low bow, and which is a most pleasant center for the whole illustrious company. Three salons of the Faubourg St. Germain have been closed, one after another, by death: that of the Comtesse d'Haussonville, Mme. de Staël's worthy granddaughter; that of the Comtesse de Chambrun,

and that of the Marquise de Blocqueville. The latter was an invalid during many years, and never went out — which is one of the best ways to succeed, if you wish to have a salon, out-of-door life being incompatible with such an ambition. Salons belong to the time when people stayed much at home, shut their doors to visitors, and wrote dozens of pretty notes every morning, instead of sending telegrams in the modern fashion of Paris, which threatens to be the death of letter-writing, an exquisite sequel to conversation. The same people daily kept those late hours that the "herculean weakness" of an aged Mme. du Deffand could bear, but which would kill any young woman of the present century; they had midnight supper, the meal which has always most suggested wit; they never traveled. By the way, Mme. de Chambrun, who traveled a good deal, managed to have a sort of double salon, one at Nice, the other in her Parisian home, the splendid historical Hotel de Condé. She herself was the author of some poetry. Mme. d'Haussonville wrote two books, one of them relating to the youth of Lord Byron, and the other to Ireland and Robert Emmet. Mme. de Blocqueville has left some refined essays, and a volume of thoughts and maxims. This mode of writing has been familiar to more than one brilliant woman-talker, and many jewels may be found among the "Pensées" of Mme. Barratin, who believes in the power of excellent dinners to stimulate conversation, and is, moreover, able to appreciate the wit of foreign guests, as she knows three or four languages excellently well. The Comtesse de Beausacq (Comtesse Diane) has chosen from among her own sayings the material for a pretty little volume, "Maximes de la Vie," for which the great man of her salon, Sully Prudhomme, has written a preface.

Have I said that it was to be noticed that the women who succeed best in creating a salon are those who have no husbands? The great salons of the seventeenth and eighteenth centuries were, without exception, presided over by widows or single ladies. When it was otherwise, the husband had to efface himself, as did insignificant M. Geoffrin, whom the philosophers at his wife's table never noticed until some one happened to ask why that silent little gray-haired man, generally sitting at the end of the table, came no more. It was then rumored that it had been M. Geoffrin, and that he was dead.

Fortunately for some women, it is possible to have excellent conversation within reach without resorting to widowhood. Mme. de Girardin, the first wife of the clever newspaper writer and editor, the author herself of the weekly masterpieces called "Lettres du Vi-

comte de Launay," not to speak of her well-known poetry, comedies, and dramas — Mme. de Girardin shone like a star some forty years ago in the neighborhood of her very brilliant husband. She has given in a humorous way very good receipts for conversation: "First of all, the quality of the talkers; secondly, the harmony of their minds; and thirdly, a propitious arrangement of the furniture." "An amusing conversation," she says, "cannot start if the chairs are arranged symmetrically. The disposition of a drawing-room must be like that of an English garden — apparent disorder, which is not the effect of chance, but, on the contrary, of consummate art, the result of fortunate combinations. In a symmetrically furnished drawing-room, it is only at the end of the evening, when the furniture has against its will yielded to the necessities of society, that enjoyment begins. You just begin to amuse yourself when it becomes necessary to take leave.

"And remember," she adds, "that good talkers hate idleness, the most witty men hardly know what to say when they ceremoniously hold their hats in their hands; they must have some valuable thing to finger, and help them keep countenance — dainty scissors or pen-knife, a golden chain, a jeweled smelling-bottle. The more you scatter trifles and baubles in your salon, the less nonsense there will be in conversation. But before anything," she recommends, "let yourself go; do not think of yourself; forget the talent you may have."

And Deschanel, to whom we already have referred, the professor in the Collège du France, the delightful lecturer, adds some more precious and deeper advice: "Banish the words *I* and *me* as much as you can; be courteous in contradiction, ready to understand a joke, although unwilling yourself to use that weapon too frequently; employ no *banalité*, no commonplace; be merry; remember that gaiety is the soul of conversation, that mockery often shows the lack of real wit. Talk can never be good unless men and women are brought together, all of them comfortably seated in a congenial atmosphere. Try to be neither above nor below the persons you talk with, and avoid, like the plague itself, that sort of people who by their very presence, as they enter, take off the wit of others, and spoil the already settled affinities. Let conversation be clear, prompt, and lively, with sound good sense at the bottom."

Perhaps, however, good advice is not quite enough to prepare good talkers. There must be a sort of initiation which no one can get outside that refinement which is the result of elegance and leisure. Less and less, very probably, shall we see anything like the magic of conversation as it existed in some high-born women

of the past, as it exists in the Comtesse de Beaulaincourt, who still lives, and lives most intensely too. She was reared in the midst of it, in the salon of her mother, the Marquise de Castellane, where she knew in her youth Merimée and Alfred de Musset, playing comedies and proverbs with the one, and keeping up a correspondence with the other, of which delightful letters fortunately remain. She remembers to the smallest details the days which one cannot believe her old enough to have seen; but the most distinguished figures of that time passed before her eyes while impressions were quickest and strongest. Her first great dinner, when she was a newly married beauty of seventeen, was given in her honor by Talleyrand, and while she can speak as no one else can of everything relating to the old monarchy, her personal friendship with the Empress Eugénie made her no less familiar with the last court. Imbert de St. Amand, the *avocat* of interesting women in the last two centuries, often comes to breathe near her the atmosphere of the *ancien régime*; so, also, does Mlle. Herpin, who signs herself "Lucien Perey" in her works of curious research, which are most valuable books. Mme. de Beaulaincourt is keenly interested in history, and she can speak of political subjects, French or foreign, with any statesman. To hear her rouse the eloquence of such a man as Émile Olivier is great good fortune to the listener.

Strange to say, the name of this remarkable woman is not known in America for any social or intellectual reason, but simply as that of a maker of artificial flowers. Among the women's work exhibited last year in Chicago were some of these unique flowers made for the great exposition, which many a visitor made the mistake of thinking natural. While engaged in making these she was busy with an entirely different piece of work—preparing the memoirs of her father, the late Marquis de Castellane, *maréchal de France*.

I remember that when Merimée was passing the winter at Cannes he used to send Mme. Beaulaincourt baskets containing anemones, which she returned to him full of the same flowers so exactly copied that one needed to go very close and to touch them to know them from the models.

Mme. de Beaulaincourt displays her diploma from one of our universal exhibitions in a conspicuous place in her drawing-room, feeling more proud of it than of many greater distinctions. French tradesmen know how well she has deserved it, for she has brought excellent additions to their art through her good taste, her knowledge of botany, and the ingenious researches for which they themselves lacked time and money. More than once she

has taught working-girls, calling them in to help her in some emergency,—such as a sale for the poor,—when they have not only learned the refinement of flower-making, but have discovered that constant, laborious work may be chosen as a pleasure by a great lady who could afford to be idle.

Every day, during part of the afternoon and almost every evening, unless she is taken away by music, Mme. de Beaulaincourt sits at a large plain deal table, which is covered with masses of natural flowers and the materials for their counterfeit presentments, at which she works diligently. She dyes, folds, and curls the small parts of what will presently be a rose, talking meantime to the guests who come and go as no one else will talk when she is gone, because no one else will have, like her, the spirit of the past. Her active fingers have always seemed to help her active brain, for she never talks so well as when most busily at work. She does not strive to imitate the *grandes dames d'autrefois*. She is by nature one of them—the last of them; and it is surprising enough that such vivid interest in the present can exist side by side with such a wealth of ancient traditions.

Democratic life, from its general conditions of haste and effort, is not favorable to conversation. This has often been said and proved; yet we have seen that the great accomplishment still exists in republican France, and, for my part, I have never heard better talk than in republican America. But the American gift for conversation seems, with several glorious exceptions, to be most given to women, which is certainly not the case elsewhere. The reason for this must be in the excitements and engrossments of business, which fill the time of most men, and to some extent in the influence of ladies' clubs. The regular meetings where charitable, literary, or social subjects are discussed seem to be in every respect a very good and wise institution. They develop self-possession, ease, fluency, and clearness of expression. They accustom the speakers to contradict courteously, and to discuss without too much warmth. Even if such a club does not carry its members to the threshold of political life—a life which many of us think undesirable—it will help them a great deal to excel in general conversation, always provided that they do not lose the taste for men's society, keep fast to simplicity, and avoid all over-pretension and pedantic forms of speech. It is very necessary to find the right word, but the technical one is often *de trop*, and an apparent ignorance is very becoming to both sexes, I must say, in purely social intercourse, especially to women. Never will the pedants know how nearly a far-fetched scientific expression produces the effect of the

snakes and toads which fall from the lips of the beautiful princess in the old French fairy-tale.

After all, no one can be taught the art of conversation; it must be a natural gift, or, rather, the individual expression of many gifts, both natural and acquired. "Use what language you will," says Emerson, "you never can say anything but what you are." And to

sum up, I can do nothing better than transcribe that great man's praise of what he considers best in life: "What a train of means to secure a little conversation! This palace of brick and stone, these servants, this kitchen, these stables, horses, and equipage, this bank-stock, and file of mortgages; trade to all the world, country-house and cottage by the water-side, all for a little conversation, high, clear, and spiritual!"

Th. Benton.

TOPICS OF THE TIME.

Intelligent Citizenship.

IT is encouraging to note that in various parts of the country, and especially in the large cities, increasing attention is being paid to questions relating to additional safeguards about the ballot-box. Many earnest reformers are beginning to suspect that perhaps we have been somewhat too liberal in extending the suffrage to foreign-born citizens, and also somewhat too eager to make the exercise of the suffrage easy to those least qualified to exercise it intelligently. As a consequence, our naturalization laws are undergoing careful scrutiny, and our ballot laws and election regulations are being examined for the purpose of discovering whether it is desirable to make them more stringent.

These subjects are at present receiving thoughtful consideration in the New York Constitutional Convention, and it is not improbable that the outcome will be amendments making important changes in the fundamental law of the State. Discussion of ballot-reform legislation in this State has turned always upon the meaning of the words in the present Constitution — "all elections by the citizens shall be by ballot, except for such town offices as may by law be directed to be otherwise chosen." The opponents of the most desirable form of the Australian ballot system, as it has been embodied in our American laws, held at one time that the words "by ballot" meant a written or printed ballot, and hence a ballot which a voter may prepare for himself and take with him to the polls. For these reasons they opposed the official ballot as unconstitutional, since its exclusive use prevented the voter from preparing his ballot outside the polling-place. Being driven from this position as untenable, they took up another one, to the effect that any law which did not allow the voter to write or paste upon the ballot the name of any candidate, not printed thereon, for whom he desired to vote, was unconstitutional. Under this contention the "blanket paster" provision was incorporated in the present New York law, and repeated efforts to dislodge it have proved vain.

It is made very plain by the debates and resolutions of the Constitutional Convention of 1776-77, which framed the New York Constitution, that the words, "by ballot" were used to distinguish secret methods of voting, which were just then coming into use, from the open or *viva voce* method, which had previously prevailed. Previous to the Revolutionary War the word "ballot" was used to signify various forms of vo-

ting other than that of holding up the hand, or *viva voce*, but in no case was it used to signify a written or printed vote. Thus, in Pennsylvania, voting with black and white beans was voting by ballot; in New Jersey balls were used under the same name, and in New England Indian corn and beans were so used. Whenever written ballots were used, they were spoken of as "papers," or "votes," and sometimes as "written votes." The framers of the New York Constitution had this custom in mind when they used the words "by ballot," and without reasonable doubt they had no other intention than to designate a form of voting which should be secret as distinguished from open voting.

The contention that not only was a printed or written ballot called for by the words "by ballot," but that the words carried with them also a right for the voter to write or paste upon that ballot any name he chose, and, if necessary, to have help in so doing, is based entirely upon legislation which has been enacted during the last fifty years or more. Because the laws have recognized the right of the voter to write his own ballot entirely, or to write or paste names upon it, the claim has been made that the Constitution gives him this right. As a matter of fact it does nothing of the kind; but years of legislative assumption that it does have given as much force to the contention as if it were based on the Constitution itself.

In fact the ballot laws of nearly all our States recognize the same right when they provide a blank space at the bottom of all groups of candidates' names in which the voter may write any name he chooses. The only reform ballot law that we know of which has not such a provision is that of Colorado, which in its original form had nothing of the kind, though it may have been amended recently.

The question has been raised in more than one State whether or not it is wise to have this provision allowing a voter to write in the name of a candidate which does not appear on the official ballot. If this provision were not incorporated there would be no need of supplying aid to the illiterate voter in all States having laws which arrange the names of candidates in party groups with symbols at the top. It is the necessity of providing aid for illiterates, in order that they may exercise their right of voting for a candidate other than those regularly nominated, which opens the door to all the worst frauds and most pernicious corruption at the polls. If the laws were to say that no one should be permitted to vote for anybody except those whose

names were printed on the official ballot, all this trouble about illiterates would vanish, and with it most of the loopholes for fraud. Of course an educational qualification, like that of Massachusetts, makes such prohibition unnecessary.

It is claimed by those who advocate this prohibition that the privilege of writing in names on the ballots is of no practical use whatever; that it merely enables a voter to throw away his vote in order to gratify a whim; that with all the privileges that are given under the reform laws, in the way of nominations by petition, etc., every candidate who has any following, or any chance of election, has abundant opportunity to get his name on the official ballots; and that it is unreasonable, and not in the interest of honest and fair elections, to ask for anything more. On the other hand, it is said that it might happen, in case the objectionable character of the regular candidates for a given office was not discovered till a few days before election, that the privilege of writing in, or of pasting on, a name would be the only way by which the honest voters could defeat the bad candidates, and elect a good one of their own. Whether it would be desirable, in order to obtain the greater and more general good, to run the risk of exceptional evil like this, is a question which we do not presume to answer.

We believe that the New York Constitutional Convention will consider carefully the question of so altering the language of the Constitution that there will be no doubt as to the forms of voting allowed. We believe it will also give thoughtful attention to our naturalization laws. These at present permit any foreign-born citizen to vote who has been a resident of the United States for five years, and who has been naturalized ten days before election. While these laws are much more stringent than similar laws in many other States, they are more lax than many others in one respect, namely, the time which must elapse between naturalization and election. In sixteen States aliens are permitted to vote on the mere declaration of an intention to become citizens, the time of required residence in the State varying from three months to a year and a half. In New York and many other States they cannot vote till they have become citizens, which makes a five years' residence in the country obligatory, and the time of State residence varies from three months to a year. To let a man vote before he becomes a citizen, and especially after a few months' residence, is to invite evils like those which fell upon Louisiana with the Mafia crimes and the riots that followed them. The source of evil in the New York law is the ten-day limit before election. It is because of this that each year great squads of new citizens are naturalized on the eve of election in ways which always cause public scandal. If the limit were to be placed a full year before election, the corrupt bosses would not interest themselves in naturalization to anything like the same extent that they do under the present law. It is a very easy matter for them to keep track of a new voter for ten days, but they would not undertake to do so for a year. The consequence would be that naturalization would be largely a spontaneous act on the part of aliens, and would cease to be a farce and a scandal as at present. Other States than New York have a short limit, and in those we are glad to learn that movements are on foot to extend the time to six months or a year before election. It is worse

than folly to allow our electorate to be swollen and debased by unfit voters, when we have so completely in our hands the means of controlling the foreign supply.

Legal Tender Money in History.

WHAT is the meaning of the term "legal tender," as applied to money? "The Century Dictionary" defines it as "currency which can lawfully be used in paying a debt." A briefer and common definition is "compulsory circulation," and this is the term applied to such money habitually in most South American countries, *curso forzado*. Edward Atkinson, in a recent very interesting pamphlet, cites legal tender among some examples of words of which the meaning has been perverted to the vitiation of public thought, and says legal tender should be defined as "an act by which bad money may be forced into use so as to drive good money out of circulation." He has made a search through history for legal-tender acts, and concludes from his discoveries "that no decree and no statute of legal tender ever originated anywhere except for the purpose of forcing a debased coin into circulation, or for the purpose of collecting a forced loan by making paper substitutes for coin a legal tender for debts."

This conclusion must be confirmed by everybody else making like research. The first case of legal tender on record, Mr. Atkinson thinks, was in Greece, in the sixth century before Christ, when Solon debased the coinage so that one hundred new drachmæ were worth no more than seventy-three of the old ones. Another case occurred in Rome, when the senate reduced the weight of the copper money of the republic during the second Punic war. Philip le Bel, of Spain, about 1506, debased the pound sterling, and enforced the circulation of the depreciated money based upon it by decree of legal tender. Professor James B. Thayer of the Harvard Law School is cited by Mr. Atkinson as authority for the statement that the first appearance of legal tender in English history was in the time of Edward III. (1312-1377), who debased the coin, and by a decree of the crown made it a penal offense to refuse the debased money.

A little more than three hundred years later, in 1689, James II. of England made a similar experiment. He was then reigning in Dublin, whither he had returned after abdicating and fleeing to France, and was seeking to regain his throne with the aid of an Irish Parliament. He was confronted with an empty treasury, and conceived the notion, according to Macaulay, that "he could extricate himself from his financial difficulties by the simple process of calling a farthing a shilling." He reasoned that since the right of coining money belonged to the royal prerogative, the right of debasing the coinage must also belong to it. Macaulay gives an entertaining account of the outcome of his experiment, from which we quote a few passages:

Pots, pans, knockers of doors, pieces of ordnance, which had long been past use, were carried to the mint. In a short time, lumps of base metal, nominally worth near a shilling sterling, intrinsically worth about a sixteenth part of that sum, were in circulation. *A royal edict declared these pieces to be legal tender in all cases whatsoever.* A mortgage for a thousand pounds was cleared off by a bag of counters made out of old kettles. . . . Any man who belonged to the cast now dominant might walk into a shop, lay on the counter a bit of brass worth three pence,

and carry off goods to the value of half a guinea. Legal redress was out of the question. . . . Of all the plagues of that time none made a deeper or more lasting impression on the minds of the Protestants of Dublin than the plague of the brass money.

During our Revolutionary War the Continental currency was made a legal tender, and one of the most formidable obstacles with which the patriot cause had to contend was the debased money which was thus given a forced circulation. Readers of *THE CENTURY'S* Cheap-Money series remember the disastrous results which followed the efforts of the State government of Rhode Island, between 1785 and 1787, to enforce its decrees making the money of the Rhode Island Paper Bank a legal tender. Business of all kinds was paralyzed, money ceased almost entirely to circulate, the State's credit was ruined, and its prosperity dealt a blow from which it did not recover for many years. France, as was shown in the same series, went through the same experience twice—once with John Law's money, between 1718 and 1720, and again with its assignats and mandats, between 1789 and 1796. So also did Alabama with its State Bank in 1823-42; Michigan with its "wildcat" banks in 1837-39; Mississippi with its Planters' Bank in 1833-1840; and the Argentine Republic with its Hypothecary Banks in 1884-90. All these diversified forms of debased money were made legal tenders, and their circulation was forced by all the powers of the governments which had issued them.

No one can examine historical evidence upon this point and not be convinced that every act of legal tender has been passed to force into circulation a form of money which would not otherwise circulate at all. Sometimes this has been the assumed necessity of a great war like that of the Revolution, and later, of

the Rebellion, but oftener it has been the outcome of ignorance or something worse.

Good money needs no act of legal tender to make it circulate. Mr. Atkinson makes an unanswerable argument on this point by citing the fact that the great international commerce of the world has been carried on from its beginning to the present time without international act of legal tender. There has been no trouble experienced in finding a satisfactory form of money for this trade. The traders of the world have selected gold as the medium of exchange, because it best answers the purpose, and no act of international legal tender, if such a thing were possible, would have the slightest effect upon them. They would still go on using gold.

Why, then, should we go on making silver, or any other form of money, a legal tender? Why not accept the proposal made by Mr. Wells and other economists years ago, and put in the form of a bill in the House of Representatives by Congressman Harter of Ohio, to *open the mints to the free coinage of both gold and silver, with no legal-tender quality imposed upon either?* The people of the country could then decide with which form of money they would prefer to transact their business, in the same way in which the international traders of the world decide now. Is not this the best and fairest way out of our financial complications? What objections have the bimetallicists to such a plan? Will they consent, after a ratio between gold and silver shall have been agreed upon, to leave both metals to stand upon their own merits as money, without the aid of any legal-tender enactment? That would surely be doing as much for silver as for gold, and it would soon be demonstrated which metal the people preferred to use as money.

OPEN LETTERS.

The Senate and the Constitution—A Reply.

THE purpose with which Mr. Warner's article entitled "An Attack on the Senate," in *THE CENTURY* for July, was written has my full sympathy. I understand he seeks to maintain that representation in the Senate, as now obtained, is an essential part of our scheme of government, and cannot be modified without prejudice to that whole scheme. The suggestion that a different method of selecting senators in the States, viz., by popular vote, would be preferable to selection by the legislatures, has attracted some attention, though it seems to me that the argument of Senator Hoar in April, 1893, vindicating the present plan, is virtually unanswerable.

A proposition to abolish the Senate altogether would hardly meet with favor in any one of the States; certainly it could not be carried so long as the Constitution remains unaltered in this provision: "no State, without its consent, shall be deprived of its equal suffrage in the Senate."

I think, however, while agreeing with the purpose of the article, that there are statements in it which ought not to pass unquestioned.

On page 375, readers are told that the Constitution was framed and adopted "without the slightest refer-

ence to the *doctrinaire* propositions of the Declaration of Independence." This seems to be contrary to the current opinions upon the subject, and lays a foundation for most unfortunate inferences. Gouverneur Morris, in the convention which framed the Constitution, stated, "On the Declaration of Independence a government was to be formed." If he referred to the Articles of Confederation, then, it is also true that the Constitution was formed upon the same foundation: its object was the securing of a more perfect union. Chief Justice Taney, in the Dred Scott case, seems to have had very strongly in his mind the idea that the *doctrinaire* propositions of the Declaration of Independence had a great deal to do with the Constitution. His opinion concedes it in its effort to exclude the negro from the application of those propositions. The judges who concurred in that opinion must have entertained precisely the same notion, or they would not have so approved the elaborate discussion by which Taney C. J. sought to establish the exception.

President Lincoln also entertained the idea that these *doctrinaire* propositions had not been abandoned in the formation of the Constitution, for in his speech at Independence Hall, February 22, 1861, he announced it as his object to save the country upon the basis of the

Declaration of Independence. He repeated this in his first inaugural :

The Union is much older than the Constitution. It was formed, in fact, by the articles of association in 1774. It was matured and continued by the Declaration of Independence in 1776. It was further matured, and the faith of all the then thirteen States expressly plighted and engaged that it should be perpetual, by the Articles of Confederation in 1778. And, finally, in 1787, one of the declared objects for ordaining and establishing the Constitution was, "to form a more perfect Union."

Again at Gettysburg he said :

Fourscore and seven years ago [1776] our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

It is undoubtedly true that the idea prevailed in the convention that the States were to a very large extent the guardians of the rights asserted in the Declaration. This was believed by the delegates, and among them by the authors of "The Federalist." And so it was contended in that remarkable collection of papers that the Constitution as it stood furnished adequate protection of those rights so far as the general government was concerned. (See Nos. 54 and 55.)

"The Constitution does not give to Congress the power to interfere with the great body of the rights of the citizen." (Miller on the Constitution, p. 294.) This being true, the members of the convention were not the sort of men to spend time during the sessions in repeating the Declaration of Independence.

When the Constitution came before the people in their conventions, it was felt that further safeguards were desirable, so the first batch of amendments was proposed and adopted. These had the direct assent in the conventions in the States of many men who were members of the Constitutional Convention, and practically were agreed upon by all; so that the document as it stands furnishes ample protection for those so-called "*doctrinaire* propositions," and ample evidence that the gathering at Philadelphia had these propositions in mind. The Constitution, with the first eleven amendments, must be taken as representing the mature views of the statesmen of that time.

It is hardly to be supposed that the men who fought the battles of the Revolution, conducted its diplomacy, participated in the acts of Congress, under the old confederation,—many of them were members of the Constitutional Convention,—would turn their backs upon the propositions which the foundation paper announced. Fancy Roger Sherman and Benjamin Franklin, members of the committee which drafted the Declaration, cutting themselves loose, in the convention which established their government, from the principles announced in the instrument with which they had so much to do! Imagine Robert Morris, James Wilson, George Clymer, George Ross, and George Read engaged in that business—imagine, if one can, the officers of the Revolutionary Army who were in the Convention, with George Washington at their head, in that kind of performance! The truth is, that the Constitution is a grant of power, and the Declaration of Independence is a sovereign rule for the interpretation of the grant.

It is an interesting fact that the great act of freedom, the Ordinance of 1787, was adopted at the very time the Constitutional Convention was engaged in its great

work, and was confirmed by an early Congress under the Constitution.

A careful consideration of the Constitution, providing as it does for *habeas corpus*, forbidding bills of attainder, *ex post facto* laws, titles of nobility, and making it obligatory upon the nation to guarantee to every State a republican form of government, and the first eleven amendments, indicate a very general belief in the *doctrinaire* propositions of the Declaration of Independence. In short, taking all these things together, they do conserve the rights which the Declaration set forth. But so careful were the statesmen of that period upon this point that they provided in the IXth Amendment, "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

The doubt suggested by Mr. Warner as to the early existence of the definite national idea is unfortunate. The proclamation of Elias Boudinot, President of Congress in 1783, is an interesting illustration of its prevalence, but far less important than the fact that for years the confederacy had representatives abroad engaged in negotiating treaties with various nations,—only nations can, in the sense of international law, make treaties,—and several had been actually signed before this date. The idea runs through the diplomatic correspondence of the Revolution. It is strikingly presented in a letter written by Benjamin Franklin to Hartley, May 24, 1782. Franklin observes, "We Americans consider ourselves a distinct and independent power or State." It is imbedded in the Declaration in emphatic terms. That paper by the authority of the good *people of these colonies* "declares that these *United colonies* are, and of right ought to be, free and independent States."

On page 377 is the assertion that "the States ratified the Constitution." The doctrine announced by Mr. Warner seems to be, (1) That the Constitution was ratified by the States; (2) That it had its origin in the States.

This seems to be clearly erroneous, and full of mischief. The question came up in legal form in the case of *McCulloch v. The State of Maryland* (4 Wheat. 316) in 1819. The cause was elaborately and exhaustively argued by the greatest lawyers of that time. Walter Jones, of great professional repute, one of the counsel for the State of Maryland, "insisted that the Constitution was formed and adopted, not by the people of the United States at large, but by the people of the respective States. To suppose that the mere proposition of this fundamental law threw the American people into one aggregate mass, would be to assume what the instrument itself does not profess to establish. It is, therefore, a compact between the States, and all the powers which are not expressly relinquished to it are reserved to the States." William Pinkney of Maryland closed the discussion on the part of the United States; he said "that the State sovereignties are not the authors of the Constitution of the United States. They are preceding in point of time, to the national sovereignty, but they are postponed to it in point of supremacy, by the will of the people. . . . But the State powers are no more original than those belonging to the Union. There is no original power but in the people, who are the fountain and source of all political power."

Chief Justice Marshall gave the opinion of the court, in which it was declared:

From these conventions the Constitution derives its whole authority. The government proceeds directly from the people. . . . The assent of the States, in their sovereign capacity, is implied in calling a convention, and thus submitting that instrument to the people. But the people were at perfect liberty to accept or reject it; and their act was final. It required not the affirmation, and could not be negated, by the State governments. The Constitution, when thus adopted, was a complete obligation, and bound the State sovereignties.

This opinion was concurred in by Washington of Virginia, Johnson of South Carolina, Livingston of New York, Duval of Maryland, and Story of Massachusetts — certainly a respectable tribunal.

Years afterward, Chief Justice Chase, speaking for the Supreme Court in 1868 (*Lane Co. v. Oregon*, 7 Wall. 71), declared that the people established a national government. So one may well suppose that point, at least judicially, set at rest.

It was supposed to have been settled also by the debate in 1830–33, in the nullification days, and especially by the great speeches of Webster, and the remarkable proclamation of President Jackson, drawn by the master hand of Edward Livingston.

The question was by some thought to be an open one from 1861 to 1865, during the War of the Rebellion, but it is generally agreed to have been finally closed by the surrender at Appomattox. I cannot but think it unfortunate that this undoubted heresy should be repeated at this late day by so important a writer as Mr. Warner, in so important a periodical as *THE CENTURY*.

On the same page is the proposition that "The form of government can be changed, but it can be changed, except by revolution, only by the action of the States in the manner that they prescribed in the Constitution." I cannot think that this statement announces constitutional law.

It is clear that the States did not form the Constitution, and if this be so, then clearly they did not, in the language of the article, "prescribe" in it the manner in which it was to be changed; on the contrary, the people prescribed the manner in which it may be changed. It is not, under that document, to be changed by the States at all. The manner of accomplishing the change is fixed by article V:

1. Two thirds of both houses may propose amendments.
2. Congress may call a convention on the application of two thirds of the States.

When amendments are proposed under either of the two methods they may be ratified in one of the two ways:

1. By the legislatures of three fourths of the States.
2. By conventions in three fourths of the States.

Congress, however, is to determine which of the two methods shall prevail.

Obviously, the statement I have quoted fails to set forth the plan provided by the Constitution for the introduction or perfection of changes in that instrument.

I pass now to a notice of only two of the specifications indicating, according to Mr. Warner, a tendency to disregard limitations in the powers of Congress, and even a disposition to overrun State lines.

The first relates to a proposition for legislation by Congress in respect of conditions such as were pre-

sented by the riot in New Orleans when several Italians were killed. The theory of the article is, that the proposed legislation merely had reference to the opinion of other nations concerning the United States. I do not so understand it. I understand that the claim was asserted on the part of the Italian government that it is the duty of one nation to protect the citizens of other nations who may be temporarily within its borders — an obligation of unquestioned sanctity, and, in this instance, reinforced by treaty stipulations. When demand was made, the Italian government was met by a statement of the relations subsisting between the national and State governments, which it was thought precluded the nation from any attempt to procure the punishment of those who composed the mob. Eminent statesmen felt that a condition was presented which called for legislation in that regard, and bills were introduced into Congress for that purpose. It will not be disputed that the General government ought to have some power to protect itself in respect of violations, within State lines, of international obligations.

A kindred situation was presented in the famous case of *McLeod*, who was arrested by the New York authorities on the charge of perpetrating a murder on board the steamer *Caroline* in the Niagara River. Undoubtedly, as between nations, the British government, having avowed its responsibility for the acts of the armed body who cut out the *Caroline* and sent her over the falls, *McLeod*, who was an armed soldier acting under the authority of Great Britain, could not be held personally responsible for his act. It was found that, under the law as it then existed, his discharge could not be procured, the State of New York refusing to recognize the right of the General government to demand his discharge as an international obligation. Fortunately, *McLeod* was acquitted, but immediately an act was passed in Congress giving the right to the writ of *habeas corpus* in such cases. That has always been held, and is now considered a wise piece of legislation. A charming situation would have been exhibited if *McLeod* had been executed after the avowal of his act by the British government. If war had then resulted, it would not have presented a case of what other nations thought of us, but of what another nation did to us.

Again, the article contains this surprising statement:

A lack of delicacy in the Supreme Court in reaching into State conflicts, and too great readiness to take out a kink which it were much better for the State's honor that it should take out itself, at any inconvenience.

Such an attack as this ought not to be made on a great tribunal without some reference to facts sustaining it. I insist that it cannot be supported by any fair treatment of the history of the court. In my judgment it is not only unwise, but unjust. I think an examination of its decisions will show that the court has a remarkably clear and creditable history on this point. The Supreme Court has no power by its own action to reach into State conflicts. It cannot institute any proceedings; it can do nothing but take cognizance of causes which are properly brought before it by regular process sued out by litigating parties. It is well known that the Supreme Court is reluctant to pass upon questions regarding State laws. It avoids them whenever it can do so, and perform its duty. For instance, when a cause is brought before it on a writ of error from a State

court, the first question considered is whether a determination of a Federal question was necessarily involved in the decision; and if the court find that a Federal question might have disposed of the case, and also that a question of mere State law might have disposed of the case, the court will not take jurisdiction, presuming that the case was disposed of upon a question of State, not Federal law. The books are full of cases of this sort.

Again, suppose a question comes before the Supreme Court involving the constitutionality of a State law. The court will not decide, as I understand it, the State law unconstitutional unless the cause is argued before a full bench. For instance, if upon an argument of such a question before eight of the nine judges five of them be against the State statute and

three in its favor, the court will order a reargument, and not rehear the case until there is a full bench. And this situation, as I believe, is one of the reasons why such a considerable number of cases were postponed during the term which has just ended, while the seat of the late Justice Blatchford was vacant. Take also the attempts which have been made within a few years to enforce a State liability in the Supreme Court, the liability arising out of the various railroad transactions in the Southern States where State indorsements had been given. The court has carefully avoided these questions in every case where avoidance was possible, and uniformly regarded constitutional limitations.

There are many other things in the article which might well be made the subject of criticism, but there is space in these columns for no more.

Cephas Brainerd.

IN LIGHTER VEIN.

Brother Rolly's Drawback.

IT was Saturday afternoon at the Station. A number of men sat out in the front porch of Bundy's store, which was also the post-office. The two benches on each side of the door were filled with men, and several were balanced on the porch railing. Brother Rolly McKittrick occupied a goodly portion of one of the benches, his long legs, incased in brown jeans trousers and calfskin boots, comfortably crossed. He presented a pleasing aspect, with his white hair and beard, ruddy skin, benevolent and inquiring eyes, and sturdy figure, somewhat bent at the shoulders.

"Well, gentlemen," he was saying in a mellow voice, "my experience in religion has certainly been funny. Mighty strange, I should call it. I know I'm saved, and that my sins is forgive,—I got the assurance of justification,—but I don't seem to git no further. I've got the peace of religion, but not the joy, so to speak—saved, but not sanctified. Here I been seekin' sanctification for two year, and ain't got any more 'n I had at first. W'y, pretty near everybody in the Station's been sanctified in that time but me. I've kep' up a sight of prayin', and walkin' in the narrow path, and got all the preachers and saved a-prayin' for me, but look like it ain't no use. There 's bound to be a drawback somewheres, I say. I ast Brother Cheatham about it last quarterly meetin', and he says: 'It's faith you 'relackin', Brother Rolly. Keep a-prayin' for more faith.' But seem like I got the faith a plenty. Now I ain't got no doubt that the Lord *could* sanctify me if he was a mind to. I 'm always lookin' for the blessin'—always gettin', but never got. So I think there must be somethin' else in the way. I wish somebody 'd tell me what it is! Now, I ain't a drinkin' man, and goodness knows I never played no cards, and never swore but once, and that when I was a little fellow six year old ridin' a stick horse, and he shied at a stump, and I cussed him. That sounded so bad I never swore no more. I was brought up in the way I ought to go, and although I've been a tol'able sinner, I ain't never been to say ornery. Now, I say the Lord's dealin's with me is strange, for here I've been seekin' the blessin' for two year, and seen worse sinners sanctified in two days. It's a funny thing. There 's a drawback somewheres, Brother Jones."

During this time Brother Rolly had been turning over tenderly in his fingers a new plug of "Kentucky Orphan," with a shining silver band around it, and he now proceeded, with keen relish and much delicacy of touch, to slice off an end of it with his barlow knife. The slice, being satisfactorily square and straight-cut, was conveyed on the point of his knife to his mouth.

"I should say with Brother Cheatham that it was faith you was lackin', Brother Rolly," replied Brother Gilly Jones. "The grace is free to them that 's got the faith to lay hold of it." Brother Jones was perched on the porch railing, and spat vigorously over to the other side of the porch to emphasize his remark. He was a thin, wiry little man, with pale red hair and chin-whiskers, much-wrinkled skin, and watery blue eyes.

A young boy, who, standing outside of the charmed circle, leaned inward over the railing, here ventured to say with some hesitation: "I heard Preacher Hockersmith say down to Lebanon at camp-meetin' last week that no man that chawed tobacco could hope to git the blessin'." He said it was 'filthiness of the flesh.'" He gasped rather than spoke the last words, for all eyes were turned upon him in stern surprise and disapproval, and all the moving lower jaws suddenly dropped rigid. There was silence for the space of a minute. Then Brother Jones recovered himself.

"Well, I know I got the *evidence* of the Spirit in me, and I've chawed since I was five year old. You must have heard wrong, Charlie. Sholy Brother Hockersmith never said that!"

"Yes, he did," replied the boy, not without a visible tremor.

"Where's his reference? Where 's his Bible for it?" demanded Brother Jones. "Got to show me Bible on any line before I 'll believe it."

"Well, he said somewheres in Corinthians it said, 'Havin' therefore these promises, dearly beloved, let us cleanse ourselves from all filthiness of the flesh and spirit.' He say if chawin' tobacco was n't filthiness of the flesh, he 'd like to know *what* it was. He say a *hog* would n't chaw tobacco. He say he had a special call to preach on that line."

"Well, he need n't be noratin' it around none in these parts!" exclaimed Brother Jones, in a high and scornful voice. "W'y, what 's tobacco made for, I say?"

Jest to set on a stump and look at? Jest to plant and plow and worm? No, gentlemen; things has their uses. I ast you all, gentlemen, if it wa' n't made for to chew?" He extended his right arm in an inclusive gesture. "I reckon Brother Hockersmith ain't the *only* man that has leadin's. I reckon there 's others that 's got some po'ion of the Spirit!"

Brother Rolly moved uneasily, and slowly pushed his broad straw hat off of his forehead. "What else did he say on that line, Charlie?" he asked, after a few minutes' reflection.

"He said there was jest lots of folks that was plumb ready for the blessin', all but that, and look like they found tobacco harder to give up than all the rest, and kep' rackin' around with their mouth full of tobacco, lookin' for the blessin', and wonderin' why they did n't git it."

"That may be the very thing your soul 's hangin' back on, Brother Rolly," said Brother Melton, a tall, fine-looking young man, with clear, direct eyes, who was leaning against one of the posts. "Everybody has their drawbacks. Sometimes it 's one thing, sometimes another. The devil 's sure to nose around, and find out the partic'lar spot where he can git his holt on a man. With me it was my gold collar-button. The devil mighty near got me on that! I 'd heard a sight of preachin' on the gold line, but look like I could n't see the harm in that there little old collar-button that my father 'd wore before me. I kep' a-strivin' for the blessin', and prayin' fit to kill. I taken off my necktie, for of co'se I knowed that was superfloo-ous adornment. But then it seem like I had more need than ever of that collar-button. Well, gentlemen, it got so, when I 'd be up at the mourners' bench or prayin' anywheres, that collar-button it 'd burn right into my neck, and after while it never quit burnin' at all. I was jest in misery, and done give up hopes of gettin' the blessin'. Kep' resistin' for all I was worth, till one day when I was dressin' I got the strength to snatch it off, and throw it out of the window. Well, sir, I had n't no more 'n done it before I got the blessin' all thoo my soul, and commenced to shout. Rulaney she come a-runnin' from the kitchen, and she said she never seen nobody have a more glorious experience than me that mornin', less 'n it was the time she throwed her new spring hat into the fire."

"It was swearin' with me," mournfully remarked Brother Gideon Blevins, his lantern jaws snapping to after each sentence. "I was born a-cussin'. My pa he cussed before me. I could n't be out-cussed. Somehow got religion. Commenced seekin' the blessin'. Look like I 'd never git it. Was always helt back. Then I 'd git mad, and turn in and cuss the devil for all I was worth. One day I was wormin' tobacco, and set down on a log to meditate. I commenced to think about the devil holdin' me back, and how he helt Adam and Eve back in the first place, and Jonah, and them, and first thing I knowed I was cussin' him like a blue streak. Pretty soon I heard a rustlin' in the bushes behind that log, and every cuss-word I 'd say, somethin' would say over again. Well, I knowed the devil and me was in pretty close quarters then, so I turned in to cuss him black and blue. Well, sir, the more I talked, the more he talked, till after awhile he was sayin' about ten words to me one, and I could n't hear what I was

sayin'. I set and listened awhile, and then I up, and made a bee-line for the house. I seen I was whipped, and that he could beat me at it so bad I was n't nowheres. So I quit."

"Boiled shirts was my drawback," timidly said young Brother Tice Deacon, a mild-eyed young man with a dawning mustache. "I used to send my shirt up to town every week to be boilt and laundered. But I had a leadin' on the fine linen line, and finally give it up, and got the blessin'."

Here Mr. Bundy, the storekeeper, who stood bracing his elbows against the door-posts, put in a scornful remark. "By gosh! You folks 'll swallow a camel next! Seems to me if a man lives righteous as he knows how, and don't shoot nobody, and pays his just debts, he 's goin' to come out at the big end of the horn. I 'd bet my money on him every time a durn sight quicker 'n on some of them that 's got such a terrible sight of religion and sanctification, and don't pay their honest debts!" He gazed in a non-committal way at the western sky. There was a dead silence. Some of the gentlemen, noticeably Brother Jones, squirmed uncomfortably.

The conversation had received too much of a damper to thrive after this, and the men sauntered off one by one to the hitching-bar after their horses. Brother Rolly mounted his fat bay mare in silent meditation, and set off at a brisk canter for home. Keziah gradually slackened her speed as they went down the one long street of the Station, until, reaching the end of it, and not receiving the expected discouragement from Brother Rolly, she relapsed into a slow walk, leisurely switching her tail from time to time. Meanwhile Brother Rolly sat, rapt and unseeing, on her back. Not for him did the evening sky flame with gold and red and purple; not for him the heavy yellow light slant through the trees in great bars, glorifying the dusty road and grass and weeds. Brother Rolly was looking inward. They went slowly on, through the green woods, between broad fields where the stately tobacco plant spread its soft, ample leaves, or tall corn rustled lazily. Once Brother Rolly slipped his hand into his trousers pocket, and drawing therefrom the plug of "Kentucky Orphan," gazed at it long and earnestly, and with a deep groan slipped it back again. Keziah walked on, through more woods, past the three-mile covered bridge, and presently stopped short before Brother Rolly's own big gate. Brother Rolly slowly raised his eyes, and gazed around him, his usually placid brow contracted in a frown, a stern gleam in his eye. Once more he brought forth the "Kentucky Orphan," and, raising his arm, prepared to throw it far out into the field. But, in so doing, a whiff of its odor reached him. It was too much. He jerked his extended arm back, and inhaled the fragrance. The plug brushed against his mustache. His teeth spasmodically closed upon it. He drew a long, sighing breath; the frown melted away; he closed his eyes.

Suddenly his whole frame stiffened; his eyes flew open; he grasped the "Kentucky Orphan," and flung it far out into the corn-field, with a loud shout as of victory.

The next day it was told in the Station that Brother Rolly had found the blessing.

No. 5.

SCHOOL EXCURSIONS IN GERMANY.

WITH PICTURES BY WERNER ZEHME.

WHILE the body of the present article will be devoted to the description of a seven days' excursion undertaken during the summer of 1893 by the school of practice of the University of Jena, I shall devote a few words at the opening to the consideration of school excursions in general, in order that their purpose may be clearly understood.

The principal purpose of instructive excursions, as conducted by the schools of Germany, is to lead the child, by guided observation, to acquire a broad knowledge of his environment. Indeed, the study of the home surroundings of the child is recognized in the German schools as a special branch of knowledge, and it is included in the curriculum for the first three school-years under the name of *Heimathskunde* (home-ology).

While in some of the German schools instruction in this branch is still limited to class-room work, in others — perhaps the majority — the teachers are in the habit of taking their pupils upon instructive walks for the purpose of introducing them, in a natural manner, into almost every branch of knowledge. Cannot everywhere material be found for teaching, from nature, botany, zoölogy, geology, and the elements of geography? Are not the works of man represented by the streets and buildings, the shops and factories? Does not the government of every town contain the elements of general government? And may not the local historical associations serve to introduce the child into the study of universal history?

The most progressive German teachers are

accustomed to take their pupils upon an excursion whenever occasion calls for one, whether the interval be a month, a week, or even a day. And, depending upon the aim of the particular outing, they walk with their pupils over the hills, or along the banks of streams, or visit instructive buildings, such as museums, castles, and factories. As a rule, sufficient material is collected on a single outing to serve as a basis for a number of lessons in home-ology in the class-room.

That instruction of this nature is not a new departure is proved by the fact that a work on *Heimathskunde*, founded on walks that had been taken by the author of the book with his pupils, was published as early as 1844.

When the child has passed his third school-year, the ideas acquired during the study of the home surroundings are constantly called into play, and by their means life is frequently given to words and symbols which otherwise would convey little meaning to the pupil.

But in some schools of Germany objective teaching has reached a still higher stage of development. In these schools the idea of the *Heimathskunde* is extended so as to include, after the third year, the study of the broader home — the fatherland. On many occasions even Switzerland and Italy have been visited by German schoolmasters, accompanied by large classes of children. Where the broader aim is found, the children, after entering upon their fourth school-year, are taken annually on an excursion the duration of which is from one to two weeks. Long outings are usually termed

"school journeys." Extremely novel as the idea of the extended tour may appear, it is nevertheless true that journeys were undertaken by the eminent pedagogues Basedow and Salzmann, a hundred years ago. Since the initiative was given by these educators, pedagogical journeys have been constantly growing in favor. At the present time they are regularly conducted by a rather large number of German schools, both public and private. During the course of time not only has the number of followers increased, but the journeys themselves have become more scientific in their management. Generally speaking, the work now undertaken on a tour is more organically connected with the curriculum than was the case in former years, and the material to be studied is more definitely selected with reference to the interests and mental capacity of the pupils. It is necessary to add, however, that even at the present time the journeys conducted by some schools are much more scientific in their aim than those undertaken by others.

Among the most scientific journeys are those conducted by the school of practice of the Pedagogical Seminary at Jena. This institution is unique in so far as it is a model school connected with a university. It is directed by the university professor of pedagogy, at present Professor W. Rein, and it exists for the purpose of affording to students of pedagogy an opportunity to apply in practice, under the direction of regular class-teachers, the educational theories as taught in the university. The school contains only three classes, and each class is limited to about fifteen members. There is probably no city in the world that offers to the student of pedagogy so many advantages as Jena. While every one may not agree with all the phases of the work as there carried on, it cannot be denied that those who study pedagogy at Jena become imbued with the idea that education is a science, and that he who teaches without a proper pedagogical training is guilty of quackery.

In the school of practice the pedagogical journey is regarded as an invaluable element in the development of the child, intellectually, morally, and physically. The instruction here undertaken during a journey is not only regulated in accordance with the curriculum, but the ideas acquired on the tours actually constitute central points around which either directly or incidentally the instruction during the entire year revolves. Thus, while on the one hand the class-room instruction is directed largely either toward the assimilation of ideas acquired on preceding journeys or to preparing pupils for future excursions, on the other hand each outing serves the double purpose: first, of broadening and impressing more forcibly ideas acquired in the class-room, and,

secondly, of introducing the pupils in an interesting and impressive manner into the work of the following year. Further, as an abundance of opportunity is offered on a journey to converse freely with the scholars, and to observe their actions while associating with their companions, the excursions are supposed to enable the teachers to acquire a more thorough insight into the individuality of each particular child, and consequently to obtain important clues serviceable in the development of his character.

The territory to be covered on the excursions is determined by the historical interest, because the instruction throughout is conducted on the principle of unification, history being the common center. The remaining interests, geographical, botanical, industrial, and so on, are however, duly regarded. As the school's historical course has been thoroughly planned, the ground to be covered on the five journeys to which each child is entitled has been rather definitely fixed.

The journey of the summer of 1893, upon the consideration of which I shall now enter, was undertaken for the purpose of preparing the pupils for the study of the history of the Reformation. It involved, first, a visit to Bavaria, in order that the pupils might become somewhat acquainted with the appearance and customs of a Catholic country, and, secondly, a tour through the Thuringian Forest, and particularly through the districts where Luther spent much of his time while translating the Bible into the German language. While this tour was intended primarily for the pupils in their seventh school-year, the tourists were met at the end of the third day by the members of the fourth-year class. I shall, however, for want of space, limit my remarks to the studies undertaken with the older children. The party, including teachers, students, and the pupils of both classes, numbered thirty-eight. The ages of the children ranged between ten and twelve years.

The last school-day before the start was devoted entirely to the final preparations. On that day the boys made their appearance with their knapsacks packed, ready for the tour. The things to be taken had been definitely prescribed, and they were now inspected by the teachers. The foot-wear was examined with particular care, as imperfections in this direction would be liable to incapacitate the pupils for the long tramps. Besides the necessary clothing, each pupil was required to be provided with a piece of soap and a towel, and every third child with a clothes-brush, a blacking-brush, needles, thread, and buttons. The school supplied for the benefit of the party the following articles: a medicine-chest, a field-glass, a compass, a magnifying-glass, a barometer, and a tape-measure. When the knapsacks had been

inspected, the boys were drilled in packing, regard being had for both speed and order.

Next, the class was divided into sections or committees of three, for the performance of special duties. These committees were: first, an advance-guard, whose duty consisted in lead-

search for points of interest which the party would not be likely to come upon naturally. In order that the pupils may become trained in the performance of these various duties, each section serves in the same capacity only one day at a time. During the excursion each section

ing the way, and thus determining the rapidity of the gait; secondly, a rear-guard, whose members were obliged to search through rooms and cars, in order that nothing might be forgotten on leaving hotels and trains, and, further, to coax or push along children inclined to fall behind during the march; thirdly, the purchasing committee, who attended to the purchasing of the lunches required by the party during the day; and lastly, the committee of inquiry, to ask the way when necessity required, and to

is placed in charge of a teacher or a student, who is required to observe that the duties are properly performed by the children. The hotel arrangements are made by the principal of the school a week or two in advance.

The session concluded with a final recitation concerning the special points of interest to be observed. During this recitation a map of the route was drawn on the board, and copied by the pupils in their note-books. Each child was provided with a memorandum-book containing

notes taken during the preparatory lessons, each alternate page being left blank for entries to be made on the way.

When the children had been dismissed, the teachers and students who had decided to take part in the journey met for their final conference. During the journey, however, conferences were held every evening after the children had retired. At these meetings the work of the day was criticized, and special traits of character that had been observed among the children were discussed. While the excursion was conducted under the general supervision of one of the regular class-teachers, the direct instruction was, as a rule, left in the hands of the students, each student who had volunteered to take part in the instruction being placed in charge of the excursion for a whole day. Again, a number of students were appointed each to make a report of the proceedings of a single day. The final preparations were made on Saturday, July 29, the time of starting having been set for the following Monday morning at six o'clock.

Monday morning was ushered in by a tremendous downpour of rain, which showed no sign of abating as six o'clock approached. I fully expected that the inclemency of the weather would result in a change of program. On arriving at the school-house, however, I found everything in readiness, and was informed by the teachers that the plans of the excursionists were never changed by reason of unfavorable weather. A few minutes after six, the members of the party threw their knapsacks over their shoulders, fell into line, three abreast, started a national air, and while singing left the building. On the march to the station no one appeared to think of the rain. Lichtenfels, Bavaria, being our destination, we were booked for a six hours' ride.

Both the valley of the Saale and the valley of the Loquitz, through which we passed on our way across the Thuringian Forest to Bavaria, are naturally very picturesque, and the numerous castles on the surrounding peaks serve to increase the beauty of the scenery. Among the points in the valley of the Saale in which the pupils were particularly interested were: first, Orlamünde, a village that played a not important part during the period of the Reformation; and secondly, the castle of the Prince of Schwarzburg-Rudolstadt, a very fine structure plainly to be seen from the train. Not far from this castle is situated the village of Kailhau, where, in 1817, Friedrich Froebel established the famous institute which is still in existence. The valley of the Loquitz proved of interest not only on account of its scenery, but also by reason of its numerous slate-quarries. In some of the villages that we passed, the houses were built entirely of slate. Near the southern end

of this valley, a few minutes before entering Bavaria, the train passed through a tunnel into the valley of the Main. At one o'clock we arrived at Lichtenfels. By this time the rain had ceased. Indeed, with the exception of the first few hours, we were fortunate enough to enjoy excellent weather during the entire excursion.

After lunching hastily at Lichtenfels, we started on our way to the first of the points of interest on our program—Die Vierzehnheiligen, a magnificent Catholic church, and one of Bavaria's celebrated places of pilgrimage. It occupies a commanding situation on one of the plateaus surrounding Lichtenfels, and is within an hour's walk of that city. When we had reached the top of the plateau we halted for the purpose of giving the pupils the benefit of the view. From the spot where we rested an excellent view of the city could be obtained. In all directions the country was peculiar in so far as it abounded in plateaus, and the teachers did not fail to take advantage of the opportunity for giving a lesson on the plateau. The boys were led to observe the landscape before them systematically, and they recited upon the results of their observations. They compared the plateaus now before them with those they had seen on previous occasions, and thus incidents of former journeys and excursions were recalled. Some peculiar stones that had been found during the walk were shown to the class and discussed. Halts made for the purpose of incidental instruction are usually cut short, in order that the time to be spent on essential points may not be given to matters less closely connected with the particular aim of the journey. Interesting specimens found on excursions are presented to the school in the name of the finder.

When the Vierzehnheiligen was reached, the boys were fascinated with the grandeur of the structure. A systematic study of the church was now undertaken. First, the front of the building was observed and described by the pupils, and a sketch of the portals made by them; next, a walk around the building was taken, in order that the pupils might receive a general idea of its size; finally, the church was entered and the interior examined. After an hour had been devoted to the observation of the church, the class assembled to recite upon what they had learned. That the boys possessed almost incredibly fine powers of observation, as well as excellent memories, was apparent to all who attended the recitation.

Next in order was a visit to the hermit who for many years has occupied a small house on the Staffelsstein, a mountain not far from the Vierzehnheiligen. During the ascent several stops were made for the purpose of studying certain phases of plant-life. We were more

IN LUTHER'S ROOM.

ENGRAVED BY N. DAVIDSON.

than repaid for our walk by the magnificent view that greeted us from the Staffelstein. Here the pupils received a valuable lesson in geography. Below us lay the valley of the Main, and the river itself could be followed with the eye for miles. The mountains in which this river rises (the Fichtelgebirge) were plainly to be seen in the distance. Other mountain ranges were also in view, and the numerous castles in the field lent additional charm to the scenery. The observations were as usual followed by a recitation. Recitations following upon such observations serve a double purpose: first, they act in the nature of a drill, the points becoming more thoroughly impressed by means of the repetition; and secondly, they enable the teachers to learn whether the pupils have received the correct impressions. It is foreign to the methods of this school to take for granted that children know everything that they ought to know.

The visit to the Staffelstein virtually ended the first day. Another hour's walk brought us to the railway station, where we boarded the train for Coburg, our resting-place for the night. The

particulars in regard to the distances walked, the food, the hotel accommodations, and the spirit manifested during the journey, will be discussed after the consideration of the intellectual features.

The morning of the second day was devoted principally to the study of the Feste (Fortress) Coburg. It was here that Luther spent his time during the session of the Augsburg Reichstag, from April 16 to October 6, 1530. The fortress, moreover, is a splendid specimen of a Roman castle, and it is peculiar in so far as the main structure is surrounded by two massive stone walls.

Before ascending to the fortress, some observations were made in the city of Coburg itself. On the market-place we found a number of buildings of both legendary and historical interest. The walks through the principal streets enabled the pupils to receive a general impression of the appearance of the city. The castle, which is situated on a hill commanding an extensive view, was reached by means of a road leading through the court-yard of the residence of the Duke of Coburg, and across the beautiful park surrounding the palace.

On arriving at the outer wall of the fortress, we halted for the purpose of examining its structure. The large door guarding the entrance to the first court-yard is a work of art. Its artistic merits were discussed, and a sketch of the door was made. The tour of the castle was next undertaken. While Luther's room and the Reformation room were to us the most important, there were many other things in which the boys were interested. It was in the apartment known as Luther's room that the reformer lived during the session of the Reichstag at Augsburg. In this room a bronze bust of Luther, a collection of his writings, and numerous other relics, are kept.

In the Reformation room the large painting representing the Reichstag in session was carefully examined, and the events of that session recalled. A general talk on the Reformation followed. Before leaving, the children sang in chorus Luther's hymn, "Ein' feste Burg," which is said to have been composed in that apartment. During the recitation that followed the visit to the castle, the pupils spoke so well that one who did not know how their information had been received would have been liable to believe that the matter had been studied *verbatim* from

AN ACCIDENT ON THE JOURNEY.

A LESSON IN GEOGRAPHY ON THE INSELSBERG.

ENGRAVED BY A. E. ANDERSON.

a text-book. The recitation over, we wended our way to the railway station to board the noon train for Suhl, a city in the heart of the Thuringian Forest. On reaching the station, we found a large number of people assembled, and we learned that the excitement was due to the fact that the King of Roumania was expected in Coburg. He was indeed traveling on the train for which our party was waiting. The children's desire to have a good look at the king was gratified, for within a few feet of where we were standing he held conversation with the Duke of Edinburgh—the man destined, within a month, to become the Duke of Coburg.

Two hours after leaving Coburg our train arrived at Suhl, the place that had been selected by the teachers for beginning the ascent to the Adlersberg, one of the highest peaks in the Thuringian Forest. After the visit to the Feste Coburg, several days elapsed before further points of interest relating to the history of the Reformation were reached. In the mean time the attention was directed principally to geography, botany, and the industries. The Adlersberg was placed on our program because the extensive view from the summit affords

an opportunity for a good lesson in geography. Besides, the view from this mountain is one of the most picturesque to be obtained in the forest. Unfortunately, the lesson in geography that had been prepared for this occasion was destined to be a failure, the peak, during the party's visit, being wrapped in clouds.

The second night was spent in Schmiedefeld, an industrial village of some importance, situated at the foot of the Adlersberg. A considerable amount of porcelain and glassware is here manufactured. It had been our intention to visit both the porcelain and the glass factories, but we were doomed to disappointment, in so far as the latter was not in operation at the time.

The tour through the porcelain works, however, proved to be one of the most interesting features of the journey.

Owing to the kindness of our guide, the children received a good idea of the numerous processes involved in the manufacture of this ware. We began with the room where the raw material passes through its first process, and ended with the apartment where the finished articles are placed on exhibition. It was interesting to notice how well the guide played the

part of the teacher, and how, on this occasion, the pupils recited to him. On school excursions the teachers frequently resign their positions, for a time, in favor of persons better acquainted with the matters brought to the notice of the pupils. After completing the round of the room in which the raw material is molded and glazed, the large ovens in which the articles are hardened were shown to the boys, and explained to them. In another room we saw a number of men engaged in painting on porcelain, and the method of fixing the colors was also demonstrated. Next, we were taken into the packing-room, and, lastly, into the salesroom.

The remainder of the day was devoted to a visit to the highest point in the Thuringian Forest — namely, the observatory on the Schneekopf. Its elevation is 3250 feet. A tramp of two and a half hours from Schmiedefeld brought us to our destination. On this occasion the atmosphere was perfectly clear. The view was very extensive and proved of much value geographically, as the children received a bird's-eye view, not only of the entire forest, but also of a considerable amount of territory beyond. Here, indeed, the pupils were enabled to determine from nature the relative positions of several of the mountain ranges about which they had received instruction in the class-room.

For conveying to children the meaning of a map, a view of this nature is ideal. With the aid of a field-glass a large number of castles and ruins could plainly be seen. The recitation that followed again showed that the pupils were able to observe accurately, to grasp situations quickly, and to memorize with remarkable facility. Before descending from the mountain, a number of observations were made upon plants, and the geological conditions were studied. From the Schneekopf, an hour's walk brought us to the village of Gehlberg, where we were booked to pass the night. At this place we were joined by the twelve pupils of the fourth grade, accompanied by their teacher and a number of students.

As the next point on our program was situated in an entirely different part of the forest, some thirty miles from Gehlberg, the fourth day of the journey was virtually devoid of pedagogical features. It was devoted simply to traveling on foot to Finsterbergen, a village twenty miles nearer our destination. Although, taken all in all, that day was a very wearisome one, it was not entirely devoid of interest. Between Gehlberg and the next railway station (Oberhof) there is a tunnel two miles in length, and in order that the children might experience the sensation of riding through a long tunnel, the first few miles were made by train. Again, the pupils were delighted with their march through Oberhof, which is one of

the most beautifully situated summer resorts in Thuringia.

It might naturally be supposed that the children, on arriving at their destination, were ready to succumb. When Finsterbergen was reached, some of them were, indeed, very tired; but a few minutes' rest, followed by a good wash, served to refresh them so thoroughly that even before supper they were amusing themselves by running and jumping about the grounds. In the evening their feet were examined by the teachers, and sore spots were covered with carbolized vaseline and bandaged.

The last three days of the journey were fully as interesting and instructive as the first three days had been. While the distances traveled on foot on the fifth and sixth days were long, there was so much variation both in the character of the scenery and in the subjects of instruction that the drudgery of the tramp was reduced to a minimum.

The special points included in the program for the fifth day were two: first, a visit to the Inselsberg, a mountain commanding a very picturesque and extensive view; and secondly, a walk over a part of the historical Rennstieg.

The distance from Finsterbergen to the Inselsberg can be covered at a brisk walk in three and a half hours. Among the interesting places passed on the way were, Friedrichroda, the most frequented summer resort in the forest; and Reinhardsbrunn, a romantic spot where one of the residences of the Duke of Meiningen is situated. When we reached the Inselsberg, the view was especially good, and the pupils received another important lesson in geography.

On leaving the Inselsberg on the opposite side, we came upon the Rennstieg, a historical road one hundred and ten miles in length, extending through the forest almost from end to end. Of all the places visited on the journey, none offered richer opportunities than the Rennstieg for instruction both in history and in geography. Geographically the road is of interest, first, because it forms a watershed between two important river-basins, the Elbe and the Main, and, secondly, because it forms a boundary line between north and south Germany, separating directly the country of the Thuringians from the land of the Franks. There is, consequently, on the two sides of the Rennstieg a marked difference both in the dialect and in the customs of the people. As an illustration of a watershed no better example can be found than the Rennstieg in the vicinity of the Inselsberg, running as it does on a narrow strip of land highly elevated above the valley on each side. It is needless to state that the teachers made excellent use of the instructive material afforded by the road. When at clearings

RECITING POEMS IN LUTHER'S VALLEY

ENGRAVED BY W. MILLER.

glimpses were received now of north Germany and now of south Germany, appropriate poems were recited by the pupils and national airs were sung. The fact that the Rennstieg forms a boundary line between north and south Germany is as interesting to historians as it is to geographers. It is over this road that St. Boniface is supposed to have found his way into Thuringia.

Just before leaving the Rennstieg, we came upon a triangular stone known as "Der Drei Herrstein" (The Stone of Three Masters), so called because it indicates the point of meeting of three dominions—namely, the kingdom of Prussia, and the duchies of Meiningen and Coburg. An hour's walk from Der Drei Herrstein,

through the garden-like valley of the Steinbach, brought us to the village of Steinbach, a small manufacturing place, where we passed the night.

The next day, again, was interesting and instructive throughout. It was begun with a visit to a factory in Steinbach where clasps, locks, and similar articles are made. Among the most interesting of the processes here followed by the tourists was the manufacture of the metallic framework for pocket-books and purses. As an object lesson, it proved as valuable as the one received on the tour through the porcelain works at Schmiedefeld. Some rather extensive cutlery works also were visited.

After the round of the factories had been made, we started on our way to a neighboring

rock, upon which St. Boniface is said to have preached. This rock forms a prominence in the park surrounding Schloss-Altenstein, another of the palaces of the Duke of Meiningen. As we had been informed at Steinbach that the duke was at the time stopping at this residence, we doubted whether permission to enter would be granted to us. We were, however, not long in suspense. On the road leading to the park the duke, who was at the time on his morning walk, came upon the party, and entered into conversation with the teachers. On learning their mission, he cordially invited them to visit the grounds. He led the tourists across the magnificent park to the balcony of his palace, from which a fine view may be obtained. After looking over the children's note-books, and offering cigarettes to the teachers, he summoned a soldier to guide the party over the grounds. When the rock which we sought was reached, some incidents relating to the work of St. Boniface were discussed. The Duke of Meiningen is one of the regents, as well as a supporter, of the University of Jena.

Soon after leaving Schloss-Altenstein, we reached a stretch of land known as Luther's Valley. It was here that the reformer, while fleeing from Worms, was captured, and, against his will, taken to the Wartburg for protection. Upon the spot where he was made prisoner a monument has been erected. At the monument the pupils received another lesson on the Reformation, Luther's conviction by the Reichstag at Worms and his friendly capture being discussed. The inscriptions on the monument were explained by the teachers, and copied by the boys in their note-books. Next, Luther's hymn was sung, and a few poems suited to the occasion were recited. Lastly, the excursionists quenched their thirst at Luther's spring, which flows within a few feet of the monument.

From Luther's Valley it was but an hour's walk to Ruhla, an important manufacturing town and a favorite summer resort. Ruhla was visited principally for the purpose of witnessing the manufacture of meerschaum pipes, the meerschaum industry being conducted here on a very large scale. On our arrival, however, we learned to our disappointment that, on account of a festival then in progress, all the factories were closed. As a substitute, we were obliged to accept a parade of the villagers, and the music of the local band. These incidents were, however, thoroughly enjoyed by the children, who soon met with another pleasant surprise in the form of a visit from their principal, who had come to finish the journey with them. After a rather prolonged stay at Ruhla, we started on our two-hours' walk, through one of the most beautiful districts in the forest, to Eisenach, the last place on our program.

The morning of the last day was devoted to the study of the gem of Thuringia, the Wartburg, which is said to be the most perfect relic of a Roman castle in existence. It is situated on a hill near the city of Eisenach, and the view from its terraces is picturesque beyond description. As the Wartburg forms the most prominent figure in the history of Thuringia, and the castle was Luther's home during the time of the Reformation, the teachers regarded this visit as the most instructive period of the journey. On this occasion the principal of the school took charge of the classes.

During the tramp through the woods from the hotel to the fortress, many places of historical interest were passed, and the more important points were discussed. A few appropriate songs and verses given by the pupils served more fully to impress upon them the grandeur of the situation. When the castle was reached the final preparatory recitation took place. Before entering the structure some time was spent in observing its exterior from the various court-yards, and a view from the terraces was taken. After we had entered the building we were first ushered into the gallery containing the series of fresco paintings representing important incidents in the life of St. Elizabeth, who spent much of her time on the Wartburg. When the guide here began in a mechanical manner to explain the meaning of the pictures, Mr. Scholz, the principal, requested him to allow the boys to do the talking, as they had all seen copies of the paintings. The man gave his consent very reluctantly, stating that he was obliged to complete the round of the buildings in half an hour; but when the pupils began to talk, he was so thoroughly surprised at the knowledge they displayed, that he no longer thought of his haste. Indeed, in passing from room to room, he now requested the teachers to take their time, and he did not speak unless his services were required to elucidate points not clearly understood by the members of our party.

While there were things innumerable in which the boys became interested, the center of attraction was the room that had been occupied by Luther during the period of his captivity—from May, 1521, to March, 1522. It was in this room that the translation of the Bible was begun. Among the relics here to be found are portraits of Luther and his parents, two of the reformer's letters in manuscript, a book-case containing a number of Bibles, and the famous ink-spot. In Luther's room the boys reviewed in outline what they had learned during the journey concerning the history of the Reformation. Incidents relating to the early life of Luther, with which they had become familiar on a previous excursion, were also re-

THE RETURN.

ENGRAVED BY CHARLES STATE.

called. Before leaving, Luther's hymn was once more sung.

The visit to the Wartburg over, the work that had been planned for the journey was concluded. The remainder of the closing day was spent in strolling about the city of Eisenach. Here the attention of the pupils was called to a number of interesting things, among which were the building in which Luther resided as a boy while in the charge of Widow Cotta, and the house in which John Sebastian Bach was born. As the children were tired and thinking of home, the day dragged on rather heavily. At six o'clock in the evening we boarded the train for Jena. The return trip was uneventful. When, at ten o'clock, the lights of Jena came into view the boys were happy, and they gave vent to their feelings in a song of greeting.

As the journeys undertaken by this school are always closed with a parade through the city of Jena from the railway station to the school-house, we were not surprised to find, on our arrival, a large number of people in waiting. As a festival was in progress on that evening, the usual number of musicians could not be obtained. Nevertheless, the two drummer-boys who had volunteered their services played with so much energy that they succeeded in preventing the procession from becoming chaotic. Many of those who had come to meet us were supplied with Chinese lanterns, and the streets through which we passed were further illuminated by means of strontium lights, which had been prepared by friends of the pupils.

When the school-house was reached the procession halted. The principal of the school now

spoke a few words, intended mainly for the purpose of explaining to the parents the significance of a school journey. An outline of the work that had been done during the week was also given. In answer, one of the men who had listened to the address spoke in behalf of the parents, thanking the teachers for their pains, and expressing complete confidence in the methods of the school. It was eleven o'clock when the company dispersed.

WHEN the attention is directed to the features of the journey other than those purely intellectual, the story to be told is by no means a glowing one. The distances to be covered on foot were long, the sleeping accommodations poor, and the meals plain and uniform. But as the German mode of living differs so widely from our own, things that might be regarded as hardships by American boys would not necessarily be so regarded by boys brought up in Germany, amid poor home surroundings. Besides, it is one of the particular purposes of a German school-journey to harden the boys.

From the start until the end of the third day the boys fared well enough; the walks were not very long, and the hotel accommodations were passable. On the first night mattresses were placed at the disposal of the tourists, and on the second night even beds were secured. On the evening of the third day, however, the difficulties were destined to begin. Owing to an act of negligence, no positive arrangements had been made for that night. On our arrival at the only available inn at Gehlberg, the proprietor stated that he was not prepared, at a moment's notice, to accommodate a party of thirty-eight (we were to be joined before dinner by the members of the younger class). The host, on seeing our plight, finally concluded to accommodate us. He proposed to allow the party to occupy during the night a large meeting-room, promising to spread shavings on the floor, and to supply an adequate number of blankets.

As the children were tired and hungry, and the prospects before them were poor, their humor was naturally not of the best. And when the teachers, instead of endeavoring to raise their spirits, voluntarily added trouble to the unavoidable ones, the boys became very much depressed. In the first place, on this evening, when the dinner was much more meager than usual, the pupils were punished for a slight offense, committed on the previous day, by being deprived of their regular allowance of beer. Again, when, after the meal, two boys became engaged in a harmless war of words, a teacher settled the question by striking one of them.

When the time for retiring arrived, matters were found to be even worse than had been expected. The proprietor of the inn—who was

the only mean man we met on the journey—had furnished no more than five blankets for the accommodation of over thirty persons, and besides, the supply of shavings was far too scanty. As we were at an elevation of twenty-two hundred feet, and the temperature was exceptionally low even for that region, some of the children suffered severely from the cold. It was, indeed, the lot of more than one to be obliged to rest on the bare floor, and without even a part of a blanket for a cover. One of the boys in the party weighed only forty-eight pounds, and another not more than fifty. That, on rising the next morning, the excursionists were not in excellent condition, it is not difficult to imagine; yet this was the day that had been set for the long walk to Finsterbergen, to which I have already referred. On the night following this walk the children rested on straw, but the proprietor of the hotel was kind enough to make them comfortable by means of a liberal supply of sheets and blankets.

While the fifth day's tour was interesting, it was nevertheless a difficult one, as the distance walked was nearly twenty miles, and the boys had finally begun to tire. The little fellow that weighed only forty-eight pounds carried a knapsack weighing nine and a half, while some of the knapsacks weighed no more than five pounds.

By far the most disagreeable experiences during the journey, however, were those that befell the party in the place where the fifth night was spent. The village itself bore a look so uninviting that even on entering we were thoroughly disgusted. The odor that pervaded it was awful. But this was not all. While on our way to the inn where we had arranged to stop, we were informed that the proprietor had died suddenly, that he had been buried on that day, and that, in consequence, we should be obliged to stay at the only other available house. Even under the most favorable circumstances it would have been bad enough to spend a night in such a place; but now matters were very much worse. The house to which we were conducted by our informant was kept by a butcher who had absolutely no regard for sanitary laws. As to the room which had been placed at our disposal for the night, although it was large enough for the purpose, it was so badly ventilated and so poorly lighted that it was scarcely habitable for human beings. The straw that had been strewn upon the floor for the accommodation of the guests bore the appearance of having been used in the stalls for a considerable period. It was fortunate that all escaped on the following morning no worse for the experiences of that memorable night. On the sixth day, again, a walk of nearly twenty miles was taken; but the night was spent in a good hotel, and, on that occasion, the straw was clean.

While the food during the journey was plain, it was better than most of the boys were accustomed to receive, for nearly all the children attending this school are from the poorest of homes. The breakfast, which was usually taken at seven, consisted of a cup of coffee and a roll. At dinner—the evening meal—the boys were generally served with a roast, one or two vegetables, bread, and half a pint of beer. Breakfast and dinner were taken at the hotels where the nights were passed. During the day three luncheons of bread and sausage were made. The luncheons at ten and at five were hastily partaken of on the road or in the woods. The midday meal, however, was usually spread on a table, either in a restaurant or a beer garden, and each child at this time received, in addition to his sandwiches, half a pint of beer. As a rule, a long time was spent over this meal. It was the period set aside for resting after the morning's exertions. Socially, it was the most enjoyable part of the day, and the only time when the family life may be said to have been led by the school.

The expense, although fully as high as on other occasions of a similar nature, was almost incredibly small. All things included, the cost, *per capita*, did not exceed sixty cents a day. The highest amount paid in any one inn for dinner, lodging, and breakfast was thirty-two cents—eighteen cents for dinner, nine cents for lodging, and five cents for breakfast. Fifteen cents covered the cost of the three lunches. The remainder was spent on railway-fares, and on entrance-fees to castles and observatories. To school excursionists railway-tickets are sold at a reduction of sixty-six per cent. from the regular rates, and still greater reductions are made on entrance-fees to instructive places. Thus, in Germany, school excursions are in every way encouraged. The funds required for the journey are in part provided by the university, and in part given in the form of donations by the students of pedagogy, and other friends of the school. The pupils are not obliged to contribute, but a few of them usually pay a small sum.

The spirit manifested during the journey was in full accord with the physical features. Indeed, lack of sympathy on the part of the teachers was a characteristic phase of the tour.

As for the boys, although they endured the physical hardships with scarcely a murmur, their behavior in other directions showed a complete lack of manliness. Nor did the feeling of good-fellowship exist. In many of them the tears were always near the surface, and they were shed in profusion on the slightest provocation. If a boy happened to take the smallest liberty with one of his companions, the affair was seldom passed over good-naturedly,

the usual result being either a crying spell, or a flow of abusive words. One of the pupils wept long and bitterly simply because some one had called him a shoemaker. Worst of all, petty spats arising among the pupils were seldom settled by themselves. Sooner or later the tale of woe was carried to one of the teachers, and the latter not infrequently brought affairs to a close by boxing the ears of one of the boys, it mattered little which. No attempt was made by the teachers to cure the children of their babyishness, and tattling was always encouraged. Once a boy's mental equilibrium was disturbed, he became sullen, and remained aloof from the others for hours. As ill-humor on the part of a few pupils naturally reacted on the other members of the party, the prevailing feeling during the journey was one of gloom. Again, in the evening, when the boys were tired, nothing was done to afford them pleasure. And when, after retiring, children were found who failed promptly to fall asleep, their restlessness, which was most likely due to exhaustion, was put down by the teachers as unruliness, and they received as an anodyne a box on the ears.

Although the spirit and the physical features of the described journey may not meet with our approval, it is clear that its suggestive value, from the standpoint of intellectual development, is in no way affected by the former. In themselves the German methods are not antagonistic to sympathy. Is not, for example, the kindergarten—the institution which above all fosters helpfulness, love, and sympathy—a creation of Germany? And are not our progressive schools abounding in sympathy, while their system of instruction is founded on theories evolved by German educators? In a word, as it has been shown in so many directions that when German educational theories are planted in American soil, the fruit begins to approach the ideal, is it not reasonable to suppose that the same would be true in regard to the school excursions?

The material for instruction offered by our country, with the exception of the historical, is in every way equal to that offered by Germany. Nor is our country by any means lacking in historical associations interesting to Americans. In regard to the latter, I take the liberty to quote the following from Mr. Lyman P. Powell's highly suggestive article, "The Renaissance of the Historical Pilgrimage," which appeared in the "Review of Reviews" for October, 1893:

Our land is a great historical laboratory in which our historic wealth has been too long neglected. In each of the thirteen original States, pilgrimages could easily be planned for a study of its colonization. A week in New England will furnish a new insight into the colonization of that

section. The Swedish, Dutch, and English settlements of the Middle Atlantic States could be visited in little time. Doubtless the early Southern colonies could easily be picked out, including a visit to the site of Sir Walter Raleigh's fort on Roanoke Island. . . . There is scarcely a spot, east or west, which is not within easy access of some historic survival which has in it a lesson for the child and for the adult. The whole Southwest is rich with vestiges of those Spanish institutions of

exert an excellent influence on the esthetic feelings and the sympathies of the child, it is but natural to suppose that amid surroundings in themselves inspiring the influence exerted on the character of the child would be doubly favorable. Finally, by careful attention to the physical needs of the pupils, a school journey could not fail to exert a favorable influence on their health. As money is more plentiful

which Professors Bernard Moses and Frank W. Blackmar have recently written. The school-children of St. Louis and New Orleans will find in those cities abundant traces of the French occupation of Louisiana. The dweller upon the Great Lakes will find Detroit of as great historic as commercial interest.

Again, as the spirit manifested by our progressive teachers in the class-room is such as to

here than it is in Germany, an American school journey might be made in comfort; suitable accommodations for the night might be secured, and the food made commensurate with our mode of living. Moreover, by means of wagons, the physical exercise might be regulated according to the strength of the pupils. The experiment is certainly worth trying.

J. M. Rice.

It is interesting to note that, on the suggestion of the author of this article, the experiment was made last June by the public-school authorities of Anderson, Indiana. The excursion, which was seven days in duration, proved successful. The party, including teachers, pupils, and members of the school-board, numbered seventy-two.—EDITOR.

PLAYGROUNDS FOR CITY SCHOOLS.

BUSINESS led me over on the West Side and into Wooster street the other day. It was the noon hour. Below Bleeker street, in front of Grammar School No. 10, a knot of boys obstructed the sidewalk, intent on some game that was new to me. I stopped to watch them. While I looked, some one in the crowd shouted to go into the yard and finish it, and they all went. I wanted to see the end of the game, so I went too.

The "yard" was a gloomy little well between the school and a big factory building. I was going to say it was called yard by courtesy, but courtesy could never have been stretched so far. Nobody but a boy born in a tenement would have thought of it as a yard. A stairway ran up at the farther end, and to the right was an open door, through which the boys disappeared. I followed them in. If it was twilight in the yard, in there it was midnight. A gas-lamp burned on the opposite side of the room. It seemed to me a long way off, though it was only a few steps. Its rays merely served to show how dense the darkness was. Doors were slamming; they let in smells, but no light. One of the romping boys ran against me, but though I caught and held him, it was some time before my eyes, accustomed to the sunlight in the street, could make him out. By degrees I saw. I was in a room about half the width and, I judged, nearly the length of the building, full of dust and drafts, in which a score of boys were running around. Presently they were all bunched at the rear, where there was some kind of a recess, and a teacher, coming in from the yard, went swiftly over to see what they were doing. The impulse was upon me to do as he did. The place seemed suggestive of nothing so much as of deeds of darkness. Coming back, he told me that some of the class-rooms up-stairs were as dark as this playground. Even on a day as bright with summer sunshine as this one, they had to burn gas in them. Then a bell rang, and all went up-stairs.

I knew well enough that he spoke the truth, for I remembered a report made by Dr. Moreau Morris of the Health Department, two years before, on this Wooster street school among others, and of course it was not to be expected that it would have had any other effect so soon than to make some of the school

officers angry. Schools are not built or reformed in a day—at least not in New York. There was, years ago, a conscientious board of trustees that had doubts as to their school, and resolved to have it investigated by the Board of Health. The inspector reported that it was bad, and told how it should be made good, and supposed that he had heard the last of it. But the next year there was another resolution asking for an inspection. It was made, and disclosed that nothing had been done. The same faults were pointed out, and the same remedies suggested. It was not until this performance had been gone through four or five times—for all I know it is going on yet—that it dawned upon the inspector that he was never to hear the last of it. So I was prepared to find the Wooster school unchanged. I have been at the pains since of looking up Dr. Morris's report, and these are some of the things it said: that the class-rooms were dark; that in some the little light that came in fell on the right side of the children, which was most injurious to their sight; that the closets were foul; that the air in the class-rooms was so "vitiating, foul, and unhealthy" that "the teachers are compelled to suspend the studies for a time during each session to open all the windows and doors for the admission of fresh air, exercising the children by calisthenics during the time the windows are open, whatever may be the outside temperature at any season of the year."

The doctor said nothing about the "playground," for the reason, probably, that there was little to say that would not be a virtual condemnation of every other school playground in the city, and just then he had his hands full with the class-rooms in which the children spent five hours of the day, breathing sometimes little less than rank poison. Such as it is, this Wooster street playground is typical of the New York public school in all essential things. Perhaps it is darker than most of them, but none of them is well lighted. There is always need of the lamp. Herds of rats forage about the old buildings. In all but the newest schools rows of closets open upon the playground. In the cellar-like gloom of this cheery apartment the boys and girls dodge countless iron posts and pillars in their play. In the most recently built schools these have been abolished, and a stone floor has been substituted for the dusty boards, but there is no trick of construction that

IN THE WOOSTER STREET SCHOOL — THE BOYS' PLAYGROUND.

can bring sunlight and cheer into them. I never enter one without experiencing a real shock at the thought that such things can be. I know of a mother in this city, the wife of a missionary, who, having spent half a lifetime sharing her husband's labors among the heathen, returned to New York and civilization overjoyed at the thought of having an opportunity to give her boys proper schooling; but horrified at what she saw at the public school to which she took them, she marched them off at once to the nearest private school that was not like a dungeon, as she said; and there they stayed.

Perhaps it is unjust to criticize the Board of Education on this account. It must be admitted that it is no easy task to keep step, even a long way behind as we do, with the demands of our growing population upon the schools, and the idea that they had any duties in the matter of the children's play that were not covered by the "system" as it has been handed down to them probably never entered the commissioners' heads. If it had, it is highly improbable that any proposition to spend money for such an object in a city that pays thirty millions a year for the running of its municipal machinery would have provoked anything but ridicule in those who hold its purse-strings. It is not to be assumed that they would comprehend that children have other rights than to be stuffed with "knowledge" that is sometimes of more than doubtful quality. The proof of it is in the very recent condemnation by the Health Department of at least one school-building as dangerous to life, and the arraignment by one of the school commissioners of a dozen others as unfit for use. The old Greeks, with whom we are fond of comparing ourselves in seasons of civic gloriation, rather to our own advantage, knew better than that. They gave the boy the first chance, and the man they made of him would have passed muster, intellectually and physically, even with a New York school-board.

In the matter of healthy play the school-boy in New York does not have a chance. Any village boy is better off than he. He has playgrounds, so called, but it is idle to say that he plays there. He could not if he would. With boys, to play is to run. To run one must have room. How much room is there on one floor for the children to run in, who, sitting down, pack three rooms? They must either go on the street, or they are let loose in the play-room on sufferance. The limit is reached as soon as they begin to let themselves out. Up-stairs there are pupils who study during recess, and teachers with nerves. The result was described to me by an employee in one East Side school up-town, one of the best in the city, where more than three thou-

sand children go. "There is generally one of the teachers looking after them to see that they don't over-do it. They have to make noise kind of easy-like, you know. Anyhow, they can't all be here. Most of them stay up-stairs studying at recess. It has to be that way." And down in the Allen street school, No. 42,—which is one of the worst, if not the worst, in the city,—where the playground is, if anything, darker and more repulsive than the one in Wooster street, the janitress explained the prevailing quiet in so great a crowd by the statement that "these children are of a kind that have to be kept down." As if they were not kept down enough out of school, poor wretches! They were the children of the poorest refugee Jews.

I know of at least one school in this city where there never was any other playground than the street outside. After forty years of this sort of thing, I am told that an indoor one is at last to be provided this year, the crowd of children having been reduced enough by the building of another school-house in the neighborhood to allow space for it. In another, where nine hundred of the poorest children go, all little ones, the only playground is a narrow hallway with rows of vile-smelling closets strung along it. To offset these, there is to my knowledge one real public-school playground in New York, not counting the two-acre lot at the West Farms school, or the accidental playground afforded the boys of Grammar School 94, at 68th street and Amsterdam Avenue last winter, by some building lots that are now being fenced in. It is characteristic that this one real playground as such is also an accident, or at least it was never acquired for that purpose. It is in the heart of a tenement block adjoining the First street school, on the site of an old graveyard, which was acquired with infinite trouble to protect the school's light. No less than two special laws had to be passed to gain possession of it. The veteran principal builded better than he knew when he persevered through many obstacles. His school is to-day one of the brightest in the city. It is noted for the spirit his boys put into their singing and into all their work. Nor is it all the reflection of the spirit of the master. The playground, I am persuaded, is responsible for its share of it. "Money would not compensate us for the loss of it," said Mr. Litchfield, the master, to me one day recently. Exclusion from the playground he has found to be a most effective punishment, if any is needed, which is not often. The demand for this, the only playground in the neighborhood, is so great that he has been compelled to allow its use after school-hours in the afternoon. It is not big enough for all at once, but for as many as it can hold it is an ideal spot, with enough shelter

THE HALL THEIR PLAYGROUND—ESSEX MARKET SCHOOL.

when it rains, and sunlight in plenty when it is dry. Some of the boys come an hour earlier in the morning to get a chance for a good romp.

It may have been a mere coincidence that the rough gang of boys which used to disgrace that block on Second Avenue, and occasionally did much mischief, has not been heard from since the old graveyard became a playground. It is a fact, anyhow, and my experience with Poverty Gap makes me feel quite certain that there is a connection between the two things. Over there it used to be next to impossible to go through the block without being pelted with mud by

the ragamuffins, who very early developed into toughs of a peculiarly vicious stamp. They half killed two policemen, and, out of sheer malice, beat to death the one boy in the block with a good reputation. The neighborhood was as desolate as it was desperate; but when the wicked old tenements were torn down, and a public playground was opened on the site of them, with swings and sand-heaps and wheelbarrows and shovels, the whole neighborhood changed as if by magic. There were no more outrages. I don't believe I heard once from Poverty Gap that year through the police. Even a man with spectacles might go undisturbed

through the block. The boys had found other use for the mud. As an ingredient of pies it was a great persuader to peace, whereas in the gutter it had been a standing challenge to combat with society at large. All the wickedness that remained in Poverty Gap spent itself in the name it gave to the playground, "Holy Terror Park." But it was harmless. Unfortunately, the Park is gone. The building of the Wayfarers' Lodge wiped it out in part. There is room yet, however, and a rare chance for some public-spirited citizen to do his day and his generation (all but the police-reporter) a good turn.

If the transformation of Poverty Gap was magic, it was of a kind school-boards and city authorities ought to learn with all speed. But, after all, it is very simple. Boys in and out of school need to play, and in their own way. Their own way is not "kind of easy-like." They have to yell to be healthy. Unless they have the chance, they are likely to turn out either wicked or dull. Dr. Morris in his report on the schools commented upon the fact that where the ventilation was bad the children were always dull toward the end of the session. There are not a dozen schools among the hundred and thirty-odd in the city where the ventilation is as it should be. There are many in which it is exceedingly bad. The children are required to give close attention to their studies during five hours of every school-day. Unless that day is broken up by intermissions in the open air at healthy play, it is simply impossible for them to do it. They have not the chance. The street is the only playground that is open to them. But the street is an educator with its own plan, and the plan is not a safe one. Poverty Gap gave us a lesson on that point, and we have had more of the kind.

Real playgrounds must be provided for the children of New York, but from where are they to come? I do not know of a single school in the city to-day that is near to a park or other breathing-spot, where the boys and girls may romp to their hearts' content. Indeed, they seem to have been placed with a purpose of avoiding such neighbors. No relief is to be expected from the Board of Education. It has lost some good chances of providing it, and interfered to spoil some promising plans laid by more far-sighted ward trustees. A case in point was the new school, No. 7, in Chrystie street, on the corner of Hester street. It is a building with a magnificent sweep of nearly two hundred feet front, and is in the most densely crowded neighborhood, not only in New York, but in all the world. The census shows the packing of the Tenth Ward to be at the rate of 353,000 to the square mile, and it is growing all the time. The children that attend the school come,

to a large extent, from the poorest and most desolate homes. There is no green spot within easy reach of it. To procure a playground for the children by the purchase of property was beyond the means of the trustees. They determined to make one on the roof of their big building, and laid their plans for a brick floor up there, and a parapet high enough to keep the boldest boy from climbing over. It was a beautiful idea, but it never became more than that. The Board of Education decided that the building would cost too much, and cut off all the "frills." The playground on the roof was the first of these. Now the school has a tin roof, which represents a lost opportunity of rare proportions. The city saved perhaps \$40,000. What it lost cannot easily be computed in money. That roof-garden would have been cheap at almost any cost.

The new school in the Mulberry Bend has an attic gymnasium that was secured by a trick. As an educational influence it will rival the park under its windows, when that becomes a reality. Adjoining Grammar School No. 1, at Ludlow and Delancey streets, there was an open lot with a single tree in it upon which I cast longing eyes for years as a member of a committee interested in locating a playground in that neighborhood; but we were told at the Comptroller's office that it was for the school-children to play in. It was to be laid out for their use. Since then it has been built upon, and there is an end of that plan. I have heard of three or four instances in which ground had been procured with this professed aim, but it has not in any case been utilized. The longest step the Board of Education took in the direction of reforming the physical condition of the schools was when, some years ago, it committed itself to the policy of building thenceforward only on corners;¹ but that, salutary as its effects were, specially in the matter of light, was a step away from the needed playground, for of course corner property costs more money, and leaves less to spend for "frills." And then the improved looks of the thing made it easier to forget what was still lacking. Grammar School No. 77, on First Avenue between 85th and 86th streets, represents the development of that idea to its best advantage, though it was built before the idea was laid down as a rule of conduct. It occupies two corners, covering the whole end of the block, and is in all other respects an excellent school; but its indoor playgrounds are ridiculously inadequate to the accommodation of its three thousand and more

¹ At least so I understood it; but I see that in this year's report Superintendent Jasper recommends that preference be given to such sites, as if it were not a settled principle, as I thought. At all events, it has been the practice.

THE STREET THEIR ALTERNATIVE.

pupils. It is the one I spoke of in which the children had to "play kind of easy-like." Of course the effect is to thrust the children upon the street, which is hostile to the educational idea that the school-board represents.

Some other way must be found, then, of providing the needed playgrounds, if they are ever to come. It happens that there is a perfectly simple and easy way. It is no Utopian backyard reform, but a plain business-measure, for the operation of which the machinery is already provided by law. The need of breathing-spots for old and young in the crowded tenement districts appealed to the legislature seven years ago with sufficient force to procure the pas-

sage of what became known as the Small Parks Law. Under it the Board of Street Opening and Improvement is empowered to condemn lands anywhere below 155th street, and to take the necessary steps to locate and lay out "such and so many" public parks as it may "from time to time determine." Here was an unequaled opportunity, deliberately extended to meet a recognized emergency. How was it used? In seven years the city authorities have located, but not laid out, one park of a single block, which was urgently needed. I refer to the one which is coming, when all the red tape is unwound, in the Mulberry Bend. It has taken the commissioners seven years to award

a million and a half, in round numbers, to the holders of property in the block. It took the politicians less than seven weeks to get the half million they assessed for benefit upon adjacent property wiped out, and to saddle the whole thing on the city. That is the way of a good many reform efforts in New York. Still, one might condone even that, if the park were there, or even in sight. But the Bend is there instead, in all its pristine nastiness. All the change wrought so far has been on paper.

I say that is the only visible, or rather invisible, result wrought so far under this most beneficent law. To be sure, an addition was made to the East River Park, up-town, under it, at a cost of half a million, and the old Hudson street graveyard has been condemned at a like figure. But there was no crying demand for either, and as to the Corlear's Hook Park, that was authorized by a special act, and was never urgent except as a political measure. None of the sites that were urged by the health officers have been taken or even considered. As a means of "relieving the congestion of the tenement districts," the Small Parks Law has been a bad failure. The net results of seven years of its operation are an appropriation of two millions and a half, already paid out, or soon to be, and a promise of a park in the Mulberry Street Bend. Clearly, if this generation, or the next, is to derive the intended benefit from it, we must go about it in another way.

Here is the one I propose, for which the law furnishes all the needed machinery: Let enough land be condemned around every public school in the city that is not already isolated, to make a very small park that shall at once be a playground for the children, and a breathing-spot for the over-worked mothers with their babies, as well as a place where the fathers may smoke their evening pipes. And let these parks be laid out at once. There need be no long quarrel about the value of

property to be so seized. It generally goes way up when the city manifests a desire for it; but, as is well known, schools depress rather than boom real estate, so that, without taking advantage of this fact, the fair selling value ought to be ascertained without long palaver. Then this plan would result in locating at once a hundred little "lungs" or more where the greatest crowds are, and where, therefore, they are needed most, and so would end that discussion. The question that arises in everybody's mind at once, quite naturally, is, What would it cost?

Without stopping to consider whether such a system of school-parks would not be cheap at any cost, let us look at the facts a moment. There are in this city from the Battery to West Farms 131 public schools. Of these about eighty-three are in the middle of blocks, squeezed in between other buildings that rob them of light and air, and four more are situated in that way, but run through to the next street. I say "about," because while that is the number at the time of writing this, yet some of them are to be abandoned,—none too soon,—as for instance the Vandewater street and the

WHERE THEY BURN GAS BY DAYLIGHT--IN THE ESSEX MARKET SCHOOL.

Roosevelt street school, and are counted here only because they still exist. The rest of the schools are on corners, or isolated for the present at least. Leaving these last, which are all in the annexed district, out of consideration at this time, I find that such parks as I have in mind could be provided at the remaining 116 schools for about thirteen millions of dollars. Keeping in mind what we have or have not got for two millions and a half in seven years, does this seem an exorbitant sum? There is no reason why the carrying out of such a plan should take anything like the time that has been wasted in the Bend. It could be done as easily in seven months as in seven years, in season to give all the work needed by the unemployed next winter without surrendering to their claim that the city should make work for them. The expense of setting each of the 87 school-houses that stand in the middle of their blocks in such a park as I mean, I estimate at ten millions and a half, an average of about one hundred and twenty-five thousand dollars for each.

But what kind of park can be got for \$125,000? By looking at the ground-plan of Grammar School No. 20, in Chrystie street, the reader

will at once comprehend both the emergency and the scheme of relief. The school is seen to be set in a solid block of tenements, which, as the pressure of the population grows, will grow taller, trenching more upon its light and air until they must be removed. Already the teachers have to burn gas on the two lower floors on the brightest days, and in spite of the use of reflectors to catch what light struggles down between the tenements, the lower rooms resemble dungeons more than places for children to learn their lessons in. The class-rooms are so crowded that in two the children had to get up and move before I could enter. Their legs blocked the door. Their "playground" is dark, with closets opening upon it. The school is in the heart of the crowded Tenth Ward. My scheme includes the removal of one tenement on each side of it in Chrystie street, and the six on Forsyth street behind it. I have been at some pains to ascertain the value of the property to be so condemned, and believe that it could be bought for \$240,000, if not for less. In fact, one of the houses is for sale at a lower figure than I had put upon it. So in the case of No. 7, at Chrystie and Hester streets, only a few blocks away.

There I would pay for the "frills" rejected by the Board of Education by condemning all the property back of the school on Forsyth street at a cost of \$220,000. If this were deemed too liberal an allowance because of the proximity of the other school park in Chrystie street, a hundred feet square or so behind the school, from the corner to No. 51 Forsyth street, might be acquired at a cost of \$130,000. But this is of all places the neighborhood where parks are needed, and I would not skimp here, particularly as there are other localities where a simple playground will suffice. These help to reduce the average of cost, which in some of the East Side schools is much exceeded.

To this class belongs Primary School No. 15, in Stone street, for instance, which has a small attendance, and could get along nicely with a playground, Jeannette Park being in the immediate vicinity. The adjoining lot is in the market for \$60,000. So, in the case of Primary School 34, in Pearl street, near Beekman street, where the population is small, \$75,000 would cover the purchase of enough ground for the children to play in, and to secure light and air for the class-rooms, if the school is to remain there. In the case of Grammar School No. 4, in Rivington street, I would tear down all the houses that back up on it from Ridge and Pitt streets, and so make at once a breathing-spot capable of being made beautiful as well as useful. The city has already, I believe, acquired the property west of the school, but not for a playground. I am informed that a new wing of the school is to be built there at once. If this could not be prevented, the Pitt street property ought at least to be acquired at a cost of not much more than \$100,000, though it is held at a higher figure. And so on. My figures are not random guesses. I have carefully examined the property on the insurance maps and personally, and while they would probably be disputed by those in interest, I am confident that they would not be greatly exceeded in the awards.

If the Wooster school is not to be definitely abandoned, it would be necessary to demolish the factories on both sides to improve its light, as well as to give the children a playground, and I have counted it in my footing at \$175,000; but I do not think it would be worth spending any such amount upon it. Neither would the expenditure of \$125,000 to secure relief for No. 42, in Allen street, be justified by the results. These schools should long since have been condemned, and other sites found. I have included them in my estimate for that event. For the

Vandewater street and the Roosevelt street school I have allowed \$100,000 to be laid out in a breathing-space about the new building in Oliver street. The site is now under discussion, and there is here a fine opportunity to test my plan in a district that is as much in need of a green spot as any in the city.

So far I have spoken only of the schools downtown. Some of those up-town are quite as bad as the worst. In the case of those that are not, as for instance Grammar School No. 77, at First Avenue and 85th street, and where Central Park is within reasonable reach of the grown-up people, I would add a playground of generous size by clearing at least two full lots adjoining the school. This is merely for economy's sake, since that is going to be where the fight will come in. If I had my way, I would surround every school in the city, up-town or down-town, with a park that would make it always the most attractive spot in all the neighborhood.

To my mind that is one of the chief advantages to be derived from the school park. Instead of being repelled, children would be attracted to a school that was identified with their playground. Truancy would cease. I

PLAN OF RIVINGTON STREET SCHOOL AND NEIGHBORHOOD.

would adopt the plan that has proved successful in London, of lending the schools to the boys for club-rooms in the evening hours,—under some system of effective but not intrusive surveillance, and not the kind that would aim at "keeping them down,"—those evening hours when the manufacture of the tough goes on most actively in the street. The gangs would soon find their occupation gone when the schools became boys' clubs. Why is it so hard for our city authorities to learn a lesson which any man's unofficial common sense grasps at once? However, the club is not necessarily a part of the school park. It is one of the "frills" to be con-

sidered afterward. The first consideration would be to make the park attractive as well as useful. I would have a few trees in it for shade, a shelter at one end or along the side for rainy days, and some simple gymnastic apparatus for the children. For the rest, there should be a combination of asphalt and grass, with the asphalt predominating, and never a sign of "keep off the grass," if the lawns had to be sodded every year anew. My school-park should be a people's park in which the children might play at recess, and where the mothers might take their babies during school hours. It should be always open, and there should be plenty of seats in it.

A school set in such a park could be made architecturally attractive. Perhaps it would be difficult to accomplish that with some of the structures which now stand, but in time that would follow, once the principle was laid down. Light in plenty there would be, and foul air would no longer make the children dull over their books. Dr. Morris reported that in all the schools he visited "the children and the teachers suffered from colds caused by the dangerous drafts" from the windows that had to be opened lest they smother. Mechanical ventilation might yet be needed, but there would be no Allen street or Wooster street stench, at all events, to wreck our children's health. The question of quick exit in the event of danger would be solved by the school-park, and the awful risk of fire by having a school-house in among tinder-box factories would be avoided. Very few public-school buildings in the city have any pretensions to being fireproof. Any one can see for himself, by examining the insurance maps, how many of them, especially of the crowded ones down-town, are surrounded by buildings rated specially hazardous on account of their character.

The plan of the school-park, as I have here put it forth, did not originate with me. It was first suggested by Dr. Roger S. Tracy when the location of small parks was broached some years ago. There was a chance to try it when the Mulberry Bend Park was taken in hand, for there was a public school in that very block. But that chance, like so many others, was lost. When I called attention to it at the time they were looking for a new site for the school,—since built on the opposite corner, and not included in the estimate above, because of the prospective proximity of the park, and because they have actually a gymnasium up in the attic,—and pointed out that the law allowed the Park Commissioners to erect in the small parks, "for public purposes, for the comfort, health, and instruction of the people," such buildings as they saw fit, I was told by a city official, a high-salaried lawyer, that that could not be made to

include schools, and that the Park Department was not the Board of Education anyhow. There would be "a conflict of authority." Doubtless. This is one of the most efficient means of hindering and hampering reform of any kind. But it ought to be possible to overcome that obstacle in this case. The real argument, so far as there is any, against the school-park plan is on the question of expense. Dr. Cyrus Edson, Health Commissioner, answered that when, in 1892, he, as sanitary superintendent, forwarded Dr. Morris's report to the board with this comment: "The only objection that can be made to the recommendations is that their compliance would entail the expenditure of a large amount of money. This objection should not weigh for a moment against the health of the school-children. Pure air is absolutely essential to their well-being. The air of our school-buildings should be made pure, regardless of cost." In Paris, and in other cities abroad, there are playgrounds for real play at every public school-house. I presume that real estate is high enough in the French capital, if not as high as in cramped New York; yet it does not appear that the city's credit has suffered by its liberality, if the statement is correct which recently came by cable to the effect that a new municipal loan had been taken eighty-five times over in one day by her own people. Local conditions differ; the school-park plan seems to me to meet for New York a double demand quite as well as anything I have heard of abroad. And when it comes to the actual pay-desk, I believe that the revenues of the sinking fund for a single year would almost pay the ten millions and a half, if not the thirteen.

I was told once by an ex-superintendent of school-buildings in a great city that he had no end of trouble trying to make his school-board understand the relation between the number of their scholars and the cubic air-space of the class-rooms. They paid no attention to him until one day he brought a copy of the Talmud to the chief among them, who was a Jew, and showed him that it was all down in the Mosaic law ages and ages ago. That settled it. After that he had his way. We in New York can get up a fine frenzy at short notice over the question of keeping the Bible in our public schools. By all means let it stay, and hoist the flag on the school, too, if it is worthy of it, but until our schools have been made places for which no Christian needs to blush, as he must for many that are crowded every day in this city, this zeal for the Bible is sheer mockery and humbug. It were better to put the Talmud on the principal's desk, and upon the desk of every School Commissioner as well, until they have learned its lesson.

Jacob A. Riis.

"THE PRICE OF PEACE."

IN writing about the lobby, in his "American Commonwealth," Mr. James Bryce says: "All legislative bodies which control important pecuniary interests are as sure to have a lobby as an army to have its camp-followers.

Where the body is, there will the vultures be gathered together. Great and wealthy States, like New York and Pennsylvania, support the largest and most active lobbies." This was written several years ago, and was, like all the same author's comments upon American affairs, singularly penetrating and accurate. The lobby evil was then substantially the same in all the older and wealthier States, and the problem of coping with it by means of laws for its regulation was a subject of current discussion. But within recent years there have been developments which have resulted virtually in the discontinuance of the lobby in the richest State, and in the establishment in its place of the political boss as the disposer and regulator of all legislation. Since Mr. Bryce wrote also one State, Massachusetts, has passed a law for the regulation and restraint of the lobby, and I will consider briefly the results achieved by that law before passing to the consideration of the modern substitute for the lobby.

The Massachusetts statute went into effect at the legislative session of 1891. It requires the sergeant-at-arms of the legislature to keep two dockets, one for the names of all persons employed as counsel before committees, and the other for the names of all agents employed in connection with any legislation affecting the pecuniary interests of any individual, association, or private or public corporation. Upon these dockets the names of each counsel and agent must be registered within one week of the date of his employment, with the length of time it is to continue, the special subject or subjects of legislation to which his employment relates, and the name and business address of his employer. Whenever additional subjects of legislation are assigned to an agent or counsel, they must be entered on the books in such a manner that the entries opposite the name of each employer will show all the subjects of legislation in relation to which any counsel or agent is employed by him, and that the entries opposite the name of each agent or counsel will show all the subjects of legislation with reference to which he is employed. No person whose name is not

registered is allowed to appear as counsel before any committee, or to act in any manner as agent in respect to any legislation, and no person, or corporation, or association, is permitted to employ as counsel or agent any person who is not registered. Each register or docket is closed at the end of the session, and new ones must be opened at the ensuing session. Within thirty days after adjournment, every person, corporation, or association, whose name appears on the docket as having employed any counsel or agent, must render to the secretary of the Commonwealth a full, complete, and detailed statement, sworn to before a justice of the peace, of all expenses paid or incurred in connection with promoting or opposing in any manner, directly or indirectly, the passage of legislation. Violation of any provision of the act is punishable by a fine of not less than \$100 or more than \$1000 for each offense; and any person seeking to act as counsel or agent contrary to its provisions is liable to the same penalties, and in addition will be disqualified from acting in such capacity for a period of three years from the date of conviction.

The law demonstrated its usefulness in one respect immediately upon going into operation. At the first session of a legislature acting under its provisions, many professional lobbyists, including all those of the most notorious character, declined to put their names upon the dockets and departed forever from the State-house. Some of them took up their occupation in the hotel lobbies, and other places frequented by members of the legislature, but they plied their trade under such disadvantages that most of them abandoned it permanently not long afterward. The regular counsel of the railway companies and other corporations appeared as usual, and put their names on the dockets. At the close of the session of 1891, the secretary of the Commonwealth sent to the attorney-general the names of 67 employers of counsel and agents who had failed to make sworn statements in accordance with the law. These were classified as follows: making no returns, 8; making returns more than thirty days after adjournment, 28; making imperfect returns, 31. The attorney-general submitted the cases to the grand jury, but no indictments were returned. Since 1891 the attorney-general has sent notice to persons whose names have been given to him as those of employers failing to comply with the law, and they have all thereupon made the required returns. I

have obtained from the records of the attorney-general's office the following figures of registrations and returns for the four years in which the law has been in operation, those for 1894 being incomplete as to returns, which at this writing are not due:

	1891.	1892.	1893.	1894.
Legislative council.....	163 men.	183 men.	157 men.	142 men.
Legislative agents {	223 cases.	276 cases.	262 cases.	231 cases.
49 men.	39 men.	30 men.	17 men.	
66 cases.	57 cases.	63 cases.	28 cases.	
Cases referred to the attorney-general.....	67	36	23	—
Prosecutions.....	0	0	0	—

As to the general working of this law, it is the verdict of all observers that it has made the air of the State-house steadily clearer each year, the number of lobbyists growing smaller at each succeeding session, as the official figures show. Of the seventeen agents registered this year, only seven were professionals—that is, men who have been about the State-house as lobbyists for several years. All these had a miserable year of it, or, as the sergeant-at-arms put it, "were living on apples and cheese." It has been shown that persons and corporations in search of legislation do not like to make public record of the fact, as they are obliged to do if they employ a counsel or an agent. They do not like to have it known, in the first place, that they are hiring men to help them to procure legislation, and they wish to avoid, in the second place, the importunities of agents who rush in for employment as soon as they see a possibility of obtaining it. Publicity, which is a wonderful reform agency wherever it is applied, works, first, to cut down the number of lobbyists by driving away the more pernicious of them, because they dare not register, and, second, to send the more reputable into other occupations by diminishing the number of employers and making the business unprofitable. One bad effect of the law, which was developed during its first three years, seems to have run its course, for it has not been apparent during the present year. Foreseeing that they could not ply their trade thenceforth in the lobby, certain professional corruptionists got themselves elected to the legislature, and plied it on the inside. They would go to the registered employers of counsel and agents, and offer for cash to pass certain measures, threatening to defeat them if their offers were not accepted. There was reason to suspect that something of this kind was done during the first three years of the law, but this year none of the persons suspected reappeared in either house, and that evil appears to have worked its own cure.

Ohio is the only other State which has shown any indication of even a desire to adopt the

Massachusetts method, a bill embodying its principles having been introduced in the Ohio legislature at its last session. So far as I can discover, there are no other State laws bearing upon the subject except the old ones of California and Georgia, the former of which declares lobbying to be a felony, and the latter declares it to be a crime.

Let us now consider the case of New York, in which State, as I have said, the lobby has been superseded by a political boss who dispenses and regulates all legislation. It has been a part of my professional duty for many years to keep close watch upon legislation at Albany, and to examine every bill that was introduced in either house of the legislature. I began to notice four years ago that certain forms of "strikes"—that is, bills against corporations, designed to reduce their profits or otherwise injure them, which had been familiar for many years—were not so plentiful as formerly. This was in the session of 1891. In the session of 1892 a still further diminution was perceptible. In 1893 there was a total void. Not a "strike" of any size or consequence was to be found among the bills from the opening to the close of the session. In 1894 a few of the familiar ones reappeared again, but they were of comparatively slight importance, and were able to make no progress. When the "strikes" began to fall off in 1891, loud complaints were heard from the lobby, and when the supply failed entirely in 1893, the lobbyists disappeared from the capital, and, what was no less significant, members who for years had been notorious legislative jobbers began to complain audibly that there was no longer "anything in the business," since the bosses took all the profits.

The legislature of 1892 was the first one for many years which had in both houses a majority of the same political faith as the governor. This harmonious arrangement had been accomplished by proceedings which afterward became familiar to the whole State because of Judge Maynard's connection with them. It was during this session that my curiosity prompted me to set on foot inquiries as to the reasons for the falling off in anti-corporation legislation. There were rumors in circulation that a new system had been put in operation, and that instead of "sending up the stuff to Albany,"—to quote Mr. Tilden's phrase in description of the lobby method,—a way had been opened for the direct application of the "stuff" in New York city. I asked one attorney of a powerful corporation, who had spent much time at Albany every winter for many years, if he had any information on the point which he could give me. His answer was that he could only say that for the first time since his

connection with the corporation he had not been asked to go to Albany to oppose any measure either in committee or elsewhere. I asked another attorney, whose knowledge of the ways of corporations was intimate and large, what he thought about the matter, and his reply was that if the truth could be got at, he suspected it would be found that every corporation liable to attack at Albany had "bought peace" for itself in New York city.

It should be borne in mind, in order to follow step by step the development of the new system which is now thoroughly established in New York, that no assurance could be given, during the campaign of 1891, in which the legislature and governor of 1892 were elected, that one party would control the entire State government. Whatever system there was in that year for controlling legislation from New York city was put in operation, consequently, after election. When the campaign of 1892 came around, the outlook was much more certain. The Democratic party had the governorship; it had such sway in New York city that it was certain of rolling up a great majority there; its majority in the State Senate was to hold over for another year, and it had an excellent prospect for getting a majority in the lower house, or Assembly. Herein lay the conditions for constructing the new system, which was the simple one of "buying peace" by means of a contribution to a campaign fund. The "word was passed" that every contributor to the Tammany campaign fund would be "taken care of," not merely in the city, but at Albany. For years a request for a contribution to this fund had been recognized as carrying with it a pledge of immunity from various local annoyances, in case it were complied with. Consequently, in 1892 and 1893, when contributions were asked on a more generous scale, and were asked also in the light of recent experience in the new way of disposing of Albany legislation, they were granted with full understanding on both sides as to the ends in view. That these contributions were very large in some instances was admitted freely in private conversation, and the existence of the new system was as well known as that of the old had been. In the campaign of 1893 the system was in full operation, and there was scarcely a corporation in the city of New York, the great center of the corporate wealth of the land, that did not at least have an opportunity to fall beneath its sway.

More or less open allusion to the existence of the system had been made from time to time in the newspapers, but the first public exposure of its operation in specific cases, with names and amounts, was made by Mr. Wheeler H. Peckham in March of the present year. In a speech before a Good Government Club, Mr.

Peckham described the new system in its true light as the successor of the old lobby, declaring that one man, the boss, "says whether a bill shall pass or not," and that to this boss "many pay large amounts 'for peace,' as they put it." He then went on to say that he had heard of one corporation, which he named, that "pays \$50,000 a year for peace," and he knew of another that pays a similar amount for the same purpose. If a man of less character had made these statements, they might have attracted little attention; but Mr. Peckham had, only a few weeks earlier, been nominated by President Cleveland for Justice of the Supreme Court of the United States, and the press of all political parties had agreed in declaring him eminently fitted, by ability and character, for that exalted position. That such a man should make statements like these was a serious matter, and there was a natural expectation that denial or explanation would follow from the corporation named. But, from that day to the present, not a word either of denial or of explanation has been heard. Silence, under such conditions, must be taken as confession.

I was led by this incident to make exhaustive inquiry as to the number of corporate and other interests which, from the nature of their business, would be likely to be called upon to "pay for peace," with a view to obtaining some idea of the gross income of this new system. I made a careful analysis of all the corporations existing under New York laws, and examined the business of those and of all other financial institutions subject in any way to legislative regulation. When the resulting list was completed, I submitted it in turn to eminent legal advisers of the various classes of corporations and institutions embraced in it, for the purpose of eliminating all whose claims to a right to be included were in any way doubtful. I left in none which did not belong to some class in which there were individual members that had, to my certain knowledge, paid something "for peace." As finally revised and sifted, this list contained 2126 names, with an aggregate nominal capital of \$1,890,000,000. These can be subdivided as follows:

With capital less than 1 million	1864
With capital ranging from 1 to 5 millions	192
With capital ranging from 5 to 25 millions	55
With capital ranging from 25 to 100 millions	15

Total, 2126

I have not included in this list the foreign steamship companies, though these are all, through Tammany control of the quarantine regulations of the port, as sensitive to the demands of "peace" as any other elements of the organized wealth of the community. A partial

list of the larger groups of susceptible corporations is the following :

Insurance companies.....	170
State banks.....	32
Savings banks.....	25
Street railway companies.....	26
Ferry companies.....	21
Foreign steamship companies.....	37
Domestic " ".....	24

Whether all the members of these lists are contributors to the "peace" fund, it is impossible to say, but it is the opinion of the authorities to whom I have submitted them that the great majority of them are. It being an undoubted fact that individual members of each group or class do contribute, it is a logical and reasonable inference that other members do the same; but of course it is mere inference. There are undoubtedly exceptions, for some upon whom the demand is made refuse to accede to it. That the demand itself is made wherever there is a reasonable prospect of success can scarcely be questioned. A system of local government which levies tribute upon all forms of industry in the community, from the wealthiest corporation down to the Italian fruit-vender with his cart in the gutter, is not likely to let anything within its reach escape its clutches without an effort to grasp it. That its demands are systematic and well-nigh universal is the common belief, as was revealed in a remark which the head of a great business-house made recently, when he was asked why he did not form a corporation. "We would," he replied, "were we not afraid that Tammany would strike us the minute we did so." But the strongest testimony of all ever given on this point was that volunteered by the Senate Investigating Committee by Mr. Henry O. Havemeyer, President of the American Sugar Refining Company, known as the Sugar Trust. He said that the trust had made a campaign contribution to local political organizations, and the corporations composing the trust had done it before the trust was formed, and in explanation added: "We have large interests in this State: we need police protection and fire protection; we need everything that the city furnishes and gives, and we have to support these things. Every individual and corporation and firm—trust, or whatever you call it—does these things, and we do them."

As to the objects of the contributions, I have several incidents, of unquestionable authenticity, which leave no doubt upon that point. Toward the close of the campaign of 1893, the president of a powerful and wealthy corporation called a meeting of its directors to consider a special matter. There was some delay in getting them all together, and the meeting was not held till the Friday preceding election

day. When the directors had assembled, the president stated to them that the corporation had been asked to contribute \$15,000 to the Democratic campaign fund. He advocated the granting of the demand, saying that the amount was the same that they had paid the year before, that they had got all they had bargained for, that he considered the payment a good business investment for the company, and that as careful custodians of the interests intrusted to them they could not afford to refuse. The directors voted the payment. It was stipulated by the "peace" negotiators that the money should be divided into three equal parts, one check for \$5000 to go to a State machine leader, another for the same amount to a local boss, and the third to a campaign-committee fund. The checks were drawn, and were to be called for by one of the beneficiaries on Monday following. They were locked in the company's safe. On Saturday the cashier or other employee in charge of the safe was called away, expecting to return on Monday. He was delayed, the safe could not be opened, and when the checks were called for, the person calling was told that they had been ordered and drawn, but could not be reached for the reasons given; he was told, however, that it was all right, and if he would call on Wednesday, the day after election, he could obtain them. On Tuesday the election was held, and the result showed that the Democrats had lost control of the legislature. When the checks were called for on Wednesday, they were withheld on the ground that the Democratic bosses "had no goods to deliver" in return for the money.

Another instance, no less authentic, is equally illuminating. A meeting of the board of directors had been called a few days before election to consider the question of a contribution of an amount similar to the one in the foregoing case. It was voted to pay it. One of the directors said that in his opinion there was considerable doubt as to the outcome of the election; and he suggested, therefore, that it might be expedient to have the check which had been drawn "mis-laid quite accidentally" till after election. If the Democrats carried the election, he explained, it could be sent to them with a note stating that it had been mislaid, and no harm would be done. If they failed to carry the election, the check could be destroyed. It was destroyed.

Whatever else these instances show, they reveal a perfect understanding on the part of the contributors as to the real object of their contributions. They are not giving to the campaign fund because they believe in the principles of the party receiving the money, but because they are buying "peace." One prominent head of a great corporation, the "assessment" on which by Tammany in one campaign was

\$100,000, and the regular contribution of which is fully half that amount, says in conversation that he and his corporation are well satisfied with the present system: "We get what we pay for, and think it well worth the money."

While it is probably true that in some instances the "peace" money is paid to protect a corporation in the maintenance of privileges that are hostile to the public interests, in the great majority of cases it is paid to secure immunity from all kinds of blackmailing attacks. Of course, it is itself blackmail, but it is a fixed sum as against an indefinite outlay for defense against innumerable and incessant attacks. All those who refuse to pay it find out sooner or later that it is much cheaper to yield. Not only is the legislative power in the hands of the men who ask the tribute, but the local administrative and police powers as well. A corporation carrying on its work in New York city, and subject to local regulations, will soon find that unless it makes a "peace" contribution, its business is practically at a standstill. I have in mind one instance, the full details of which are in my possession, but would occupy too much space to be set forth here, in which a corporation which had refused to buy "peace" was compelled to fight in the courts, all the way up to the Court of Appeals, for a permit to which it was justly entitled from the local authorities, to carry forward operations under its franchise. It got its rights in the end, but only after more than a year of delay, during which time the development of its business had been virtually stopped, entailing upon it in business injury and legal expenses a loss of not less than \$100,000. A "peace" offering of \$10,000 or \$15,000 would have prevented unquestionably all this annoyance and expense.

Concerning the gross earning-capacity of this system, not even an approximate estimate can be made. I have not been able to discover anything like a regular scale of prices. The corporation which Mr. Peckham says pays \$50,000 a year has a nominal capital of only \$3,500,000. Its liability to harmful legislation is peculiarly great, and in this quality of its business lies its paying ability. That many other corporations pay equally large amounts, I am convinced by information which I have obtained. Among the 15 that have capital ranging from \$25,000,000 to \$100,000,000, there are several which have special reasons for paying heavily for "peace." The same thing is true of the 55 which have from \$5,000,000 to \$25,000,000, and of the 192 which have from \$1,000,000 to \$5,000,000. Contributions which range from \$50,000 a year down through \$15,000 and \$10,000 to a few hundreds pile up a great total very rapidly. I have been given all kinds of guesses as to the grand to-

tal obtainable in a year like that of 1893, when both branches of the legislature, the governor, the quarantine office, and the entire city government were all in control of the same machine. The most conservative authorities have placed it in the millions, ranging from \$2,000,000 to \$4,000,000. This includes not merely "peace" revenue from reputable business enterprises, but that obtained from the liquor-traffic, and from the vice and crime of a great city, the rates of which are being revealed to the public by the Senate Investigating Committee as this article goes to press. As those in charge of these funds at the same time control legislation and all sorts of influence and opportunity, is it a matter of wonder that they rapidly amass great fortunes and expend their money like millionaires with ostentatious profusion?

That other bosses should cast covetous eyes upon so lucrative a system is inevitable, since all bosses are at bottom of the same character, all of them being in politics for corrupt and corrupting purposes. The first essential for the establishment of the system is a machine with a boss at its head whose power is absolute. Tammany Hall, being the most perfect machine of the kind ever known, is able to operate the system more scientifically than any of its rivals or imitators; but when Tammany lost control of the legislature at Albany last winter, there were not lacking signs that a Republican boss, with a machine at his command, seemed disposed to see how the system would work when applied to his party. He could not work it so successfully because he could not command such absolute obedience; but in at least one instance there was reason to suspect that the principle of "paying for peace" had been established by one of the \$50,000 contributors to the Tammany fund. That the Republican politicians of a certain sort had caught a glimpse of the treasures within their reach was shown by their refusal to allow the Corrupt Practices Act to be so amended that every campaign committee would be compelled to make sworn publication, after election, of all moneys received or expended during the campaign. Of course, if it had been made a law, the exact amount which every corporation should contribute would have to be made public, and this would destroy the system. In this fact we find the explanation of the hostility of both parties to such amendment of the law.

It would be a mistake to infer that when the outlook concerning an election is doubtful, no contributions "for peace" are made. In such campaigns they are made in smaller sums to both sides. "We always give to the funds of Tammany Hall, the County Democracy, and the Republicans," said the head of a great corporation who was asked for a contribution a

few years ago. He was making himself "solid" with all sides, in the way in which Jay Gould declared that he was wont to do in the old Erie campaigns: "In Republican counties I was a Republican, in Democratic counties I was a Democrat, in doubtful counties I too was doubtful, but in all counties I was an Erie man."

I HAVE made inquiries of high authorities in other States containing large cities to ascertain if the "peace" method has gained any foothold there. Of course a large city is one essential to its establishment, and the existence of a machine with an autocratic boss is another. I find that Maryland and Pennsylvania are the only States except New York in which anything of the kind has been established. Maryland appears, in fact, to be entitled to the honor of inventing the system, for it came into being in that State early in the seventies. The political bosses established soon after 1870 what has since been known as the "Grandmother's Fund." Into this were poured all the "assessments" upon office-holders, all the voluntary contributions, and all the "peace" money which was levied upon corporations. At one time the "peace" tariff was a uniform one of 15 per cent. upon all bills "with money in them" which came before the legislature. Subsequently, the New York method of proportioning the levy to the liability of the corporation to injury, and to its ability to pay, was adopted, and single contributions sometimes rose as high as \$30,000. At least two treasurers of the fund have become very rich men while holding the position.

In Pennsylvania the system has been put in operation only to a limited extent, and at somewhat widely separated intervals. In Massachusetts and Illinois it is entirely unknown. But it will spread to other States in time, unless steps are taken to prevent it. If the principle once becomes general that any corporation within the regulating control of a legislature can obtain the treatment it desires by a contribution to a campaign fund, every State will succumb to it, for there is untold "money in it for politics." Campaign committees exist in all States, with or without bosses, and they will not be slow to discover this method of swelling their funds. Party committees, like bosses, can control the action of members of the legislatures. If they have the funds in their hands, they can expend them in the elections for legislative candidates, on the understanding that after election these candidates shall take no action which the contributors will dislike. When an advocate of a measure in the public interest, who had tried in vain to find some member of the majority at Albany who would introduce his bill

a few years ago, asked in great perplexity why they all refused to touch it, the leader of the majority in one house said: "Why, the corporation whose profits your bill would reduce paid \$50,000 into our campaign fund last year. Any of our members who should even introduce that bill to the legislature would never be permitted by the machine to get a nomination again." That would be the effect of the system everywhere. The lobby would be abolished, corporations would cease to have dealings with individual members, as has been their custom heretofore in nearly all our legislatures, and legislation with money in it would all be contracted for with the campaign committees before the members were elected.

The remedies for this condition of affairs are not far to seek. I have mentioned one in the requirement of sworn publication, after election, of all receipts and expenditures by campaign committees as well as by candidates. That is in force now in Massachusetts, Missouri, California, Colorado, and Kansas. No corporation would venture to contribute such a sum as \$50,000 if the fact were to be published, for the size of the contribution would of itself be proof of the bargain, expressed or implied, which was behind it. Another remedy, and the only one which can work a radical and lasting cure, lies in the awakened moral sense of the people who buy the peace. There has never been a time when these by combining and exposing their blackmailers could not have destroyed the system and driven its operators from politics forever. They not only keep silent about the levies that are made upon them, but many of them refrain from active participation in public affairs lest they may give offense to their oppressors. It is notorious that a reform movement can seldom hope to command the open sympathy and support of great corporations or great property owners. Not only do these by their "peace" offerings sustain corrupt and ignorant and debasing rule, but they also abstain from all assistance to those who are seeking to free republican institutions from the shame and burden of that rule. Such a condition of things cannot long endure. It is defended now on the plea that the interests of thousands of investors are at stake, and it is held to be cheaper to buy peace than to enjoy it as a right by securing honest government through active and vigilant performance of the duties of citizenship. Sooner or later it will be seen that there is something of far greater moment than private or corporate interests involved in this question, and that under popular government peace at the price of liberty, and at the sacrifice of patriotism, is bought too dearly to be worth the having.

Joseph B. Bishop.

JAKE STANWOOD'S GAL.

BY ANNA FULLER,

Author of "Pratt Portraits," "A Literary Courtship," etc.

WITH PICTURES BY LOUIS LOEB.

JACOB STANWOOD was not the only college-bred man, stranded more or less like a disabled hull, upon the prairie sea of Colorado. Within the radius of a hundred miles — no great distance as prairie miles are reckoned, — there were known to be some half dozen of the fraternity, putting their superior equipment to the test, opposing trained minds and muscles to the stubborn resistance of ungenial Nature. The varying result of the struggle in different cases would seem to indicate that it is moral fiber which Nature respects and submits to, rather than any acquired advantages.

In Jacob Stanwood's case there was no such test applied, for there was absolutely no struggle. He would have found it much easier to send a bullet through his brain than to put that organ to any violent exertion. Up to this time, the alternative had not been presented to him, but he sometimes fancied that he saw it coming. At such times he would philosophize over himself and fate, until he had exhausted those two great subjects, and then, in a quiet and gentlemanly way, he would drown speculation in the traditional dram. He never drank anything but "Old Rye," and he flattered himself that he did so only when he pleased. If he somewhat misapprehended his relation with Old Rye, it was perhaps no wonder; for in his occasional encounters with this gentlemanly intoxicant, his only witnesses and commentators were his collie dogs, and they never ventured upon an opinion in the matter.

When he was in a good mood Stanwood would sit in his doorway of a summer evening, with the collies at his feet, and commune with nature as amicably as if she had been his best friend. Between his cabin door and "the range" stretched twenty miles of arid prairie; but when the sun was in the west, the wide expanse took on all the mystic hues that the Orientals love and seek to imitate, and he gazed across it to the towering peaks with a sense of ownership which no paternal acres, no velvet lawns, no stately trees, could have awakened in him. A row of telegraph-poles, which had doubtless once been trees, straggled along the line of the railroad, a few miles to the north, and his own

windmill indicated the presence of water underground. But as far as the eye could reach not a living tree could be seen, not a glimmer of a lake or rivulet; only the palpitating plain and the soaring peaks, and at his feet the cluster of faithful friends, gazing into his face, from time to time, with rapt devotion.

On these meditative evenings Stanwood found a leisurely companionship in reminiscences of better days; reminiscences more varied and brilliant than most men have for solace. But it was part of his philosophy never to dwell on painful contrasts. Even into the memory of his wife, whom he had adored and lost, he allowed no poignant element to enter. He thought of her strong and gay and happy. He never permitted the recollection of her illness and death, nor of his own grief, to intrude itself. Indeed he had succeeded in reality, as well as in retrospect, in evading his grief. There had been a little daughter of six, who had formed part of the painful association which his temperament rebelled against. Foregoing, in her favor, the life-interest in her mother's estate to which he was entitled, he had placed the child under the guardianship of an uncle whom he equally disliked and trusted, and, having thus disposed of his last responsibility, he had gone forth into what proved to be the very diverting world of Europe. The havoc which some ten years' sojourn wrought in his very considerable fortune would force one to the conclusion that he had amused himself with gambling; but whether in stocks, or at faro tables, or in some more subtle wise, was known only to himself.

He had returned to his own country by way of Japan and San Francisco, and then he had set his face to the East, with an idea that he must repair his shattered fortunes. When once the Rocky Mountains were crossed, however, and no longer stood as a bulwark between him and unpleasant realities, he suddenly concluded to go no farther. It struck him that he was hardly prepared for the hand-to-hand struggle with fortune which he had supposed himself destined to; it would be more in his line to take up a claim and live there as master, though it were only master of a desert.

The little daughter, with whom he kept up

a desultory correspondence, had expressed her regret in a letter written in the stiff, carefully worded style of "sweet sixteen," and he had never guessed the passion of disappointment which the prim little letter concealed.

This had happened five years ago. He had taken up his claim successfully, but there success ended. After four years or more of rather futile "ranching," he sold most of his stock to his men, who promptly departed with it, and proceeded to locate a claim a few miles distant. The incident amused him as illustrating the dignity of labor, and kindred philosophical theories which the present age seems invented to establish.

One horse, a couple of cows, and his six collie dogs of assorted ages and sizes he still retained, and with their assistance he was rapidly making away with the few hundreds accruing from the sale of his stock and farming implements. He had placed the money in the bank at Cameron City, a small railroad-station in a hollow five miles north of him, and it was when his eyes fell upon the rapidly diminishing monthly balance that he thought he saw coming that unpleasant alternative of which mention has been made.

He found no little entertainment, after the departure of his men, in converting their late sleeping-apartment into what he was pleased to call a "museum." To this end nothing further was necessary than that two old sole-leather trunks should render up their contents, consisting of half-forgotten souvenirs of travel. The change was magical. Unmounted photographs appeared upon the wall, an ivory Faust and Gretchen from Nuremberg stood, self-centered and unobservant, upon the chimney-shelf among trophies from Turkey, and Japan, and Spain, and Norway. A gorgeous *kimono* served as curtain at the south window, a Persian altar-cloth at the west; and through the west window, Pike's Peak gazed with stolid indifference upon all that splendor, while the generous Colorado sunshine poured itself in at the south in unstinted measure, just as lavishly as if its one mission had been to illuminate the already gorgeous display.

And then, when all was done, Stanwood found to his surprise that he still liked best to sit at his cabin-door, and watch the play of light on peak and prairie.

Late one afternoon, as he sat in the doorway, at peace with himself, and in agreeable harmony with the world as he beheld it, his eye was caught by an indistinguishable object moving across the plain from the direction of Cameron City. He regarded it as he might have regarded the progress of a coyote or prairie-dog, till it stopped at his own gate, half a mile to the northward. A vague feeling of dissatis-

faction came over him at the sight, but he did not disturb himself, nor make any remarks to the dogs on the subject. They, however, soon pricked up their ears, and sprang to their feet, excited and pleased. They were hospitable souls, and welcomed the diversion of a visitor. As the wagon drew nearer, Stanwood observed that there was a woman sitting beside the driver; whereupon he repaired to his own room to give himself a hasty polish. The dogs began to bark in a friendly manner, and, under cover of their noise, the wagon came up and stopped before the door. Suddenly a rap resounded, and in acknowledgment of this unusual ceremony, the master of the house went so far as to pull on his best coat before stepping out into the main room. There in the doorway, cutting off the view of Pike's Peak, stood a tall, well-dressed young woman, patting one of the dogs, while the others leaped, barking, about her.

Somewhat mystified by this apparition, Stanwood approached, and said; "Good-evening, madam."

"Good evening," came the reply, in a rather agitated voice. "I 'm Elizabeth."

"The deuce you are!"

Struck, not by the unfatherly, but by the ungentlemanly, nature of his response, Stanwood promptly gathered himself together to meet the situation.

"Pray come in and take a seat," he said; and then, falling into the prairie speech, "Where are you stopping?"

The tall young lady, who had entered, but who had not taken the proffered seat, looked at him a moment, and then came toward him with a swift, impulsive movement, and said: "Why, papa, I don't believe you know me! I 'm Elizabeth!"

"Yes, yes, oh, yes! I understand. But I thought perhaps you were paying a visit somewhere — some school friend, you know, or — or — yes — some school friend."

The girl was looking at him half-bewildered, half solicitous. It was not the reception she had anticipated at the end of her two-thousand-mile journey. But then, this was not the man she had expected to see — this gaunt, ill-clad figure, with the worn, hollow-eyed face, and the gray hair. Why, her father was only fifty years old, yet the lines she saw were lines of age and suffering. Suddenly all her feeling of perplexity and chagrin and wounded pride was merged in a profound tenderness. She drew nearer, extending both her hands; placed them gently upon his shoulders, and said: "Will you please to give me a kiss?"

Stanwood, much abashed, bent his head toward the blooming young face, and imprinted a perfunctory kiss upon the waiting lips. This unaccustomed exercise completed his discom-

figure. For the first time in his life he felt himself unequal to a social emergency.

A curious sensation went over Elizabeth. Somehow she felt as if she had been kissed by a total stranger. She drew back and picked up her small belongings. For a moment Stanwood thought she was going.

"Don't you get your mail out here any more?" she asked.

"Not very regularly," he replied, guiltily aware of possessing two or three illegible letters from his daughter which he had not yet had the enterprise to decipher.

"Then you did not expect me?"

"Well, no, I can't say I did. But"—with a praiseworthy if not altogether successful effort—"I am very glad to see you, my dear."

The first half of this speech was so much more convincing than the last, that the girl felt an unpleasant stricture about her throat, and knew herself to be on the verge of tears.

"I could go back," she said, with a pathetic little air of dignity. "Perhaps you would not have any place to put me if I should stay."

"Oh, yes; I can put you in the museum"—and he looked at her with the first glimmer of appreciation, feeling that she would be a creditable addition to his collection of curiosities.

Elizabeth met his look with one of quick comprehension, and then she broke into a laugh which saved the day. It was a pleasant laugh in itself, and furthermore, if she had not laughed just at that juncture she would surely have disgraced herself forever by a burst of tears.

Cy Willows, meanwhile, believing that "the gal and her pa" would rather not be observed at their first meeting, had discreetly busied himself with the two neat trunks which his passenger had brought.

"Hullo, Jake!" he remarked, as the ranchman appeared at the door; "this is a great day for you, ain't it?"

The two men took hold of one of the trunks together, and carried it into the museum. When the door opened, Willows almost dropped his end from sheer amazement. He stood in the middle of the room, staring from Venus to altar-cloth, from altar-cloth to censer.

"Gosh!" he remarked at last. "Your gal's struck it rich!"

The "gal" took it more quietly. To her the master of this fine apartment was not Jake Stanwood, the needy ranchman, but Jacob Stanwood, Esq., gentleman and scholar, to the manner-born. She stepped to the window, and looked out across the shimmering plain to the rugged peaks and the warm blue slopes of "the range," and a sigh of admiration escaped her.

"Oh, papa!" she cried, "how beautiful it is!"

"And I'll be durned if 't wa'n't the moun-

tings the gal was looking at all the time!" Cy Willows declared, when reporting the astonishing situation at the ranch.

Stanwood himself was somewhat impressed by the girl's attitude. The museum had come to seem to his long unaccustomed mind a very splendid apartment indeed. When, a few minutes later, Elizabeth joined him in the rudely furnished living-room of the cabin, he felt something very like chagrin at her first observation.

"Oh, papa!" she cried, "I'm so glad the rest of it is a real ranch house! I've always wanted to see just how a real ranchman lives!"

He thought ruefully that she would soon learn, to her cost, how a very poverty-stricken ranchman lived. His examination of the larder had not been encouraging.

"I am afraid we shall have rather poor pickings for supper, my dear," he said, apologetically. He called her "my dear" from the first; it seemed more non-committal and impersonal than the use of her name. He had not called a young lady by her first name for fifteen years.

"I have my dinner in the middle of the day," he went on, "and I seem to have run short of provisions this evening."

"I suppose you have a man-cook," she remarked, quite ignoring his apology.

"Yes," he replied, grimly. "I have the honor to fill that office, myself."

"Why, is n't there anybody else about the place?"

"No. I'm 'out of help' just now, as old Madam Gallup used to say. I don't suppose you remember old Madam Gallup."

"Oh, yes, I do! Mama used to have her to dinner every Sunday. She looked like a duchess, but when she died people said she died of starvation. That was the year after you went away," she added, thoughtfully.

It seemed very odd to hear this tall young woman say "mama," and to realize that it was that other Elizabeth that she was laying claim to. Why, the girl seemed almost as much of a woman as her mother. Fifteen years! A long time to be sure. He ought to have known better than to have slipped into reminiscences at the very outset. Uncomfortable things, always—uncomfortable things!

He would not let her help him get the supper, and, with a subtle perception of the irritation which he was at such pains to conceal, she forbore to press the point, and went, instead, and sat in the doorway, looking dreamily across the prairie.

Stanwood noted her choice of a seat, with a curious mixture of jealousy and satisfaction. He should be obliged either to give up his seat, or to share it for a while; but then it was grati-

fying to know that the girl had a heart for that view.

And the girl sat there wondering vaguely why she was not homesick. Everything had been different from her anticipations. No one to meet her at Springtown; no letter, no message at the hotel. She had had some difficulty in learning how to reach Cameron City, and when, at last, she had found herself in the forlorn little prairie train, steaming eastward across the strange yellow expanse, unbroken by the smallest landmark, she had been assailed by strange doubts and questionings. At Cameron City, again, no longed-for, familiar face had appeared among the loungers at the station, and the situation and her part in it seemed most uncomfortable. When, however, she had made known her identity, and word was passed that this was "Jake Stanwood's gal," there were prompt offers of help, and she had soon secured the services of Cy Willows and his "team."

As she sat in the doorway, watching the glowing light, the sun dropped behind the Peak. She remembered how Cy had said he "had n't never heard Jake Stanwood speak of havin' a gal of his own." The shadow of the great mountain had fallen upon the plain, and a chill, half imaginary, half real, possessed itself of her. Was she homesick after all? She stood up and stepped out upon the prairie, which had never yielded an inch of space before the cabin door. Off to the southward was a field of half-grown alfalfa that had taken on a weird, uncanny green in the first sunless light. She looked across to the remote prairie, and there, on the far horizon, the sunlight still shone, a golden circlet. No. She was not homesick; anything but that! She had been homesick almost ever since she could remember, but now she was in her father's house and everything must be well.

When Stanwood came to look for her he found her surrounded by the assiduous collies, examining with much interest the tall, ungainly windmill, with its broad wooden flaps.

On the whole, their first evening together was a pleasant one. Stanwood listened with amused appreciation to the account of her journey. She would be a credit to his name, he thought, out there in the old familiar world which he should never see again.

He had relinquished to her the seat on the door-step, and himself sat on a saw-horse outside the door, where the lamp-light struck his face. Her head and figure presented themselves to him as a silhouette, and somehow that suited him better than to see her features distinctly; it seemed to keep their relation back where it had always been, a sort of impersonal outline.

Elizabeth, for her part, thought that, for all

his shabby clothes and thin, sunburnt face, her father was more manifestly a gentleman than any man she had ever seen.

She learned several things in the course of that conversation. She found that when she touched upon her reasons for coming to him, — her feeling that they were only two and that they ought to be together, — his eyes wandered and he looked bored; when she spoke of her mother he seemed uncomfortable.

Was she like her mother? No, he said, she was not in the least like her mother; he did not see that she took after anybody in particular. Then, as if to escape the subject, was her Uncle Nicholas as rabid a teetotaler as ever?

He liked best to hear about her school-days and of the gay doings of the past year, her first year of "society."

"And you don't like society?" he asked at last, with a quizzical glance at her pretty profile. She had turned her eyes from the contemplation of his face, and seemed to be conjuring up interesting visions out of the darkness.

"Yes, I do!" she said with decision.

"You won't get much society out here," he remarked, and his spirits rose again. Of course she would be bored to death without it.

"I like some things better than society," she replied.

"For instance?"

She turned her face full upon him, and boldly said, "You."

"The deuce you do!" he cried, and was instantly aware that it was the second time that he had forgotten himself.

A little crinkle appeared in the silhouette of a cheek, and she said, "I do like to hear you say 'the deuce.' I don't believe Uncle Nicholas ever said 'the deuce' in his life."

"Nick was always a bore," Stanwood rejoined, more pleased with the implied disparagement of his pet aversion than with the very out-spoken compliment to himself.

"I think Uncle Nicholas has done his duty by me," Elizabeth remarked demurely, "but I am glad he has got through. I came of age last Monday, the day I started for Colorado."

"When did you decide to come?"

"About five years ago. I always meant to start on the 7th of June of this year."

"You make your plans a long way ahead. What is the next step on the program?"

"I have n't the least idea."

"For such a very decided young lady, is n't that rather odd?"

"There are some things one can't decide all by one's self."

"Such as?"

"The next step."

"Perhaps you will find it easier after a week or two of ranching."

"You don't think I am going to like ranching?"

"Hardly."

"Don't you like it?"

"Oh, I 'm an old man, with my life behind me."

The lamplight on his face was stronger than he was aware; Elizabeth saw a good deal in it which he was not in the habit of displaying to his fellow-creatures. She stooped, and patted one of the collies, and told him she thought she really ought to go to bed; upon which Stanwood rose with alacrity, and conducted her to the museum, which had been turned into a very habitable sleeping-room.

Having closed the door upon his latest "curiosity," Stanwood proceeded to perform a solemn rite in the light of the stars. He took his demijohn of Old Rye, and, followed by the six collies, he carried it out a few rods back of the cabin, where he gravely emptied its contents upon the sandy soil. At the first remonstrating gulp of the demijohn, which seemed to be doing its best to arrest the flow, a strong penetrating aroma assailed his nostrils, but he never flinched. Great as his confidence was in his own supremacy in his peculiarly intimate relations with Old Rye, he did not wish to "take any chances" with himself.

The dogs stood round in an admiring circle, and sniffed perplexedly at the strange libation which was clearly not intended for their kind. Did they realize that it was poured before the altar of parental devotion? They stood there wagging their tails with great vigor, and never taking their eyes off their master's countenance. Perhaps they appreciated the odd, half-deprecating, half-satirical expression of the face they knew so well. It would have been a pity if somebody had not done so. It is to be feared, however, that the remark with which Stanwood finally turned away from the odoriferous pool, and walked toward the house, was beyond the comprehension of the canine intellect. To himself, at least, the remorseful pang was very real with which he said, half aloud, "Pity to waste good liquor like that! Some poor wretch might have enjoyed it."

The morning following his visitor's arrival, the two drove together in the rattling old ranch wagon to Cameron City. Elizabeth was enchanted with the ingenious introduction of odd bits of rope into the harness, by means of which the whole was kept from falling apart. She thought the gait of the lazy old nag the most diverting exhibition possible, and as for the erratic jolts and groans of the wagon, it struck her that this was a new form of exercise, the pleasurable excitement and unexpectedness of which surpassed all former experiences. At Cameron City she made purchase of a saddle-

horse, a very well-made bronco with dramatic possibilities in his eye.

"I don't know where you will get a side-saddle," Stanwood had demurred when the purchase was first proposed.

"A side-saddle? I have it in my trunk."

"You don't say so! I should think it would jam your bonnets."

"Oh, I packed it with my ranch outfit."

So they had jogged and rattled over to Cameron City, where Elizabeth made the acquisition, not only of a saddle-horse, but of two or three most interesting new acquaintances.

"I do like the people so much, papa," she declared as they drove out of town, having left the new horse to be shod.

"You don't mind their calling you 'Jake Stanwood's gal'?"

"No, indeed! I think it's perfectly lovely!"

"It cannot but be gratifying to me," Stanwood remarked, in the half-satirical tone he found easiest in conversation with this near relative—"in fact, I may say it *is* gratifying to me, to find that the impression is mutually favorable. Halstead, the ruffianly looking sheep-raiser who called you 'Madam,' confided to me that you were the first woman he had ever met who knew the difference between a horse and a cow; and Simmons, the light-haired man who looks like a deacon, but who is probably the worst thief in four counties, told me I ought to be proud of 'that gal'!"

"Oh, papa, what gorgeous compliments! Don't you want a swap?"

"A what?"

"A swap. That's what we call it when we pay back one compliment with another."

He turned and looked at her with an amused approval which was almost paternal.

"It is most refreshing," he said, "to have the vocabulary of the effete West enlivened with these breezy expressions from the growing East."

"But, papa, you must really like slang, now really! Uncle Nicholas could never tolerate it."

"There you strike a chord! I desire you to speak nothing but slang if Nick objects."

Agreeable badinage had always been a favorite pastime with Jacob Stanwood. If Elizabeth had but guessed it, a taste of it was worth more to him than all the filial devotion she held in reserve.

"And now for the swap," she said. "You are not modest, I hope?"

"Heaven forbid!"

"Well, then! Miss Hunniman—you remember Miss Hunniman?—she used to make mama's dresses, and now she makes mine. She told me only a year ago that whenever she read about Sir Galahad or the Chevalier Bayard or

Richard the Lion-hearted, she always thought of you; which was very inconvenient, because it made her mix them up, and she never could remember which of them went to the Crusades and which of them did not."

Anything in the nature of a reminiscence was sure to jar upon Stanwood. He preferred to consider the charming young person beside him as an agreeable episode; he half resented any reminder of the permanence of their relation. Therefore, in response to this little confidence, which caused the quaint figure of Miss Hunniman to present itself with a hundred small, thronging associations of the past, he only remarked drily:

"I suppose you know that if you stay out here any length of time you will spoil your complexion."

Elizabeth was impressionable enough to feel the full significance of such hints and side-thrusts as were cautiously administered to her. She was quite aware that she and her father were totally at odds on the main point at issue, that he had as yet no intention of sharing his solitude with her for any length of time. As the days went by she perceived something else. She was not long in discovering that he was extremely poor, and she became aware in some indefinable wise that he held existence very cheap. Had her penetration been guided by a form of experience which she happily lacked, she might have suspected still another factor in the situation which had an unacknowledged influence upon Stanwood's attitude.

Meanwhile their relation continued to be a friendly one. They were, in fact, peculiarly congenial, and they could not well live together without discovering it.

They rode together, they cooked together, they set up a target, and had famous shooting-matches. Elizabeth learned to milk the cows and make butter, to saddle her bronco and mount him from the ground. They taught the puppies tricks, they tamed a family of prairie-dogs, they had a plan for painting the wind-mill. By the end of a week Stanwood was in such good humor that he made a marked concession.

One of the glowing, glimmering sunsets was beautifying the prairie as warmly as the sky. Stanwood came from the shed where he had been feeding the horses, and found his visitor seated in the doorway. For a few moments he stood observing her critically. She made an attractive picture there in the warm sunset light. Before he could check himself he found himself wishing that her mother could see her. Ah! If her mother were here, too, it would be almost worth while to begin life over again.

Unaware of his scrutiny, the girl sat gazing at the view he loved. As he watched her

tranquil, happy face he felt reconciled and softened. Her hands lay palm downward on her lap. They were shapely hands, large and generous, a good deal tanned and freckled now. There was something about them which he had not noticed before; and almost involuntarily he said:

"Do you know, Elizabeth, your *thumbs* are like your mother's!"

Elizabeth felt that it was a concession, but she had learned wisdom. She did not turn her eyes from the range, and she only said quietly, "I am glad of that, papa."

Emboldened by the knowledge of her own discretion, she ventured, later in the evening, to broach a subject fraught with risks. Having armed herself with a piece of embroidery, and placed the lamp between herself and the object of her diplomacy, she remarked in a casual manner:

"I suppose, papa, that Uncle Nicholas has told you how rich we are."

"Nick wrote me with his usual consciousness of virtue that his investments for you had turned out well."

"Our income is twice what it was ten years ago."

"I congratulate you, my dear. I only regret the moral effect upon Nick."

"And I congratulate *you*, papa. Of course it's really yours as long as you live."

"I think you have been misinformed, my dear. It was your mother's property, and is now yours."

"Oh, no, papa! You have a life-interest in it. I am surprised that you did not know that."

"And I am surprised that you should be, or pretend to be, ignorant that the property stands in your name. I have no more concern in it than — Miss Hunniman."

"But, papa!"

"We won't discuss the matter, if you please, my dear. We can gain nothing by discussion."

"I don't want to discuss it, papa," taking a critical survey of her embroidery; "but if you won't go snacks, I won't. Uncle Nicholas told me never to say 'go snacks,'" she added, with a side-glance around the edge of the lamp-shade.

His face relaxed so far that she ventured to add: "Uncle Nicholas would be furious if we were to go snacks."

Stanwood smiled appreciatively.

"Nothing could be more painful to me than to miss an opportunity of making Nick furious," he said; "but I have not lived fifty years without having learned to immolate myself and my dearest ambitions upon the appropriate altars."

After which eloquent summing-up, he turned the conversation into another channel.

It was not long after this that Stanwood found himself experiencing a peculiar depression of

spirits, which he positively refused to trace to its true source. He told himself that he wanted his freedom; he was getting tired of Elizabeth; he must send her home. It was nonsense for her to stay any longer, spoiling her complexion and his temper; it was really out of the question to have this thing go on any longer. Having come to this conclusion, it annoyed him very much to find himself enjoying her society. His depression of spirits was intermittent.

One morning, when he found her sitting on the saw-horse, with the new bronco taking his breakfast from a bag she held in her lap, the sun shining full in her clear young face, health and happiness in every line of her figure, a positive thrill of fatherly pride and affection seized him. But the reaction was immediate.

He turned on his heel, disgusted at this refutation of his theories. He was wretched and uncomfortable as he had never been before, and if it was not this intruding presence that made him so, what was it? Of course he was getting tired of her; what could be more natural? For fifteen years he had not known the pressure of a bond. Of course it was irksome to him! He really must get rid of it.

His moodiness did not escape Elizabeth, nor did she fail to note the recent accentuating of those lines in his face, which at first struck her painfully, but which she had gradually become accustomed to. In her own mind she concluded that her father had lived too long at this high altitude, and that she must persuade him to leave it.

"Papa," she said, as they stood for a moment in the doorway after supper, "don't you think it would be good fun to go abroad this autumn?"

His drooping spirit revived; she was getting tired of ranching.

"A capital plan, my dear. Just what you need," he replied, with more animation than he had shown since morning.

"Let's start pretty soon," she went on persuasively, deceived by his ready acquiescence.

"Us? My dear, what are you thinking of? I'm tired to death of Europe! Nothing would induce me to go."

"Oh, well. Then I don't care anything about it," she said. "We'll stay where we are, of course. I am as happy and contented as I could be anywhere."

Stanwood turned upon her with a sudden, fierce irritation.

"This is nonsense!" he cried. "You are not to bury yourself alive out here! I won't permit it! The sooner you go, *the better for both of us!*"

His voice was harsh and strained; it was the tone of it more than the words themselves that cut her to the heart. He did not want her; it

had all been a miserable failure. She controlled herself with a strong effort. Her voice did not tremble; there was only the pathos of repression in it as she answered: "Very well, papa; perhaps I have had my share."

Stanwood thought, and rebelled against the thought, that he had never seen a finer thing than her manner of replying. For himself, he felt as if he had come to the dregs of life and should like to fling the cup away.

They occupied themselves that evening a good deal with the colliers, and they parted early; and then it was that Stanwood was brought face to face with himself.

For half an hour or more he made a pretense of reading the papers, and looking at the pictures in a stray magazine, thus keeping himself at arm's-length, as it were. But after awhile even that restraint became unendurable. He went to the back door of the house and opened it. The colliers appeared in a delighted group to rush into the house. He suffered them to do so, and then, stepping out, he closed the door upon them and stood outside. There was a strong north wind, and, for a moment, its breath refreshed him like a dash of cold water. Only for a moment, however. The sense of oppression returned upon him, and he felt powerless to shake it off. With the uncertain, wavering step of a sleep-walker, he moved across to the spot where he had poured his libation three weeks ago. He stood there, strangely fascinated, glancing once or twice furtively over his shoulder. Then, hardly knowing what he did, he got down on his knees and put his face to the ground. Was it the taste or the smell that he craved? He could not have told. He only knew that he knelt there and pressed his face to the earth, and that a sickening sense of disappointment came over him at finding all trace of it gone.

He got up from his knees, very shaky and weak, and then it was that he looked himself in the face and knew what the ignominious craving meant. He slunk into the house, cowed and shamed. The sight of the dogs, huddled about the door inside, gave him a guilty start, and he drove them angrily out. Then he got himself to bed in the dark. He lay there wondering foolishly what Jacob Stanwood would say if he knew what had happened; till, suddenly, he became aware that his mind was wandering, upon which he laughed harshly. Elizabeth heard the laugh, and a vague fear seized upon her. She rose and listened at her door, but the noise was not repeated. Perhaps it was a coyote outside; they sometimes made strange noises.

She went to the window and drew back the Persian altar-cloth. The wind came from the other side of the house; she had been too pre-

occupied to notice it before. It shook the house rudely, and then went howling and roaring across the plains. It was strange to hear it and to feel its force, and yet to see no evidence of it: not a tree to wave its branches, not a cloud to scurry through the sky; only the vast level prairie and the immovable hills, and up above them a sky, liquid and serene, with steady stars shining in its depths, all unconcerned with the raving wind. She felt comforted and strengthened, and when she went back to bed she rested in the sense of strength and comfort. But she did not sleep.

She was hardly aware that she was not sleeping, as the hours passed unmarked, until, in a sudden lull of the wind, a voice struck her ear, a voice speaking rapidly and eagerly. She sprang to her feet. The voice came from her father's room. Had some one lost his way in the night, and had her father taken him in? It did not sound like a conversation; it was monotonous, unvarying, unnatural. She hastily threw on a dressing-gown, and crept to her father's door. She recognized his voice now, but the words were incoherent. He was ill, he was delirious. There was no light within. She opened the door and whispered "Papa," but he did not hear her. In a moment she had lighted a lamp; another moment, and she stood beside him. He was sitting straight up in his bed, talking and gesticulating violently; his eyes glittered in the lamplight, his face showed haggard and intense.

Elizabeth placed the lamp upon a stand close at hand.

"Papa," she said, "don't you know me? I'm Elizabeth."

He caught at the name.

"You lie!" he cried shrilly. "Elizabeth's dead! I won't have her talked about! She's dead, I say! Hush-sh! Hush-sh! Don't wake her up. Sleep's a good thing — a good thing."

On the table where she had placed the lamp was a tiny bottle marked "chloral." There was also a glass of water upset upon the table. Stanwood's clothing and other belongings lay scattered upon the floor. She had never before seen his room disordered. Well! he was ill, and here she was to take care of him.

He was not talking so fast now, but what he said was even more incoherent. The light and the presence of another person in the room seemed to confuse and trouble him. She took his hand and felt the pulse. The hand was hot, and grasped hers convulsively. She put his coat over his shoulders, and then she sat with her arm about him, and gradually he stopped talking, and turned his face to hers with a questioning look.

"What can I do for you, papa? Tell me if there is anything I can do for you."

"Do for me?" he repeated.

"Yes, dear. Is there nothing I can do, nothing I can get for you?"

"Get for me?"

He drew off from her a little, and a crafty look, utterly foreign to the man's nature, came into the tense face.

"I don't suppose you've got a drop of whisky!" he said, insinuatingly.

The sound of the word upon his own lips seemed to bring the excitement back on him. "Whisky! Yes, that's it! I don't care who knows it! Whisky! Whisky!" He fairly hissed the words.

For the first time since she came into the room Elizabeth was frightened.

"I think you ought to have a doctor," she said.

She felt him lean against her again, and she gently lowered him to the pillow. His head sank back, and he lay there with white lips and closed lids. She knelt beside him, watching his every breath. After a few minutes he opened his eyes. They were dull, but no longer wild.

"Ought you not to have a doctor, papa dear?" she asked.

Intelligence came struggling back into his face.

"No, my dear," he said, gathering himself for a strong effort. "I have had attacks like this before."

"And a stimulant is all you need?"

"All I need," he muttered. His eyes closed, and his breath came even and deep.

Elizabeth knelt there, thankful that he slept. How white his lips were! How spent he looked! He had asked for whisky. Perhaps even in his delirium he knew what he wanted; perhaps a stimulant was all he needed. Of course it was! How stupid not to have understood!

She hurried to her room and got a small brandy-flask that had been given her for the journey. She had emptied it for a sick man on the train.

She went back to her father. He was sleeping heavily. She glanced at his watch lying upon the table beside the chloral bottle. One o'clock! She wondered whether the "store" would be open. She would hate to go to a saloon. But then, that was no matter. If her father needed a stimulant he must have it. She dressed herself quickly, and put her purse and the brandy-flask into her pocket. Then she hurried to the shed, where she saddled the bronco. Her father had once told her that she would have made a first-rate cow-boy. Well, now was her chance to prove it.

The colliers, who had taken refuge from the wind on the south side of the shed, came trot-

ENGRAVED BY H. DAVIDSON.

"THE GIRL SAT GAZING AT THE VIEW HE LOVED."

ting in at the open door, and assembled, a curious little shadowy group, about her. But they soon dropped off to sleep, and when she led the bronco out and closed the door upon them, a feeble wag of a tail or two was all the evidence of interest they gave.

She twisted the bridle round a post and slipped into the house for one more look at her patient. He was sleeping profoundly. She placed the lamp upon the floor in a corner, so that the bed was in shadow. Then she came back to the bedside, and watched the sleeper again for a moment. She touched his forehead, and found it damp and cool. The fever was past. Perhaps he was right; there was no need of a doctor—it was nothing serious. Perhaps the stuff in that little bottle had done something queer to him. A stimulant was all he needed. But he needed that, for his face was pitifully pallid and drawn.

A moment later the bronco was bearing her swiftly through the night, his hoof-falls echoing in a dull rhythm. The wind still came in gusts, blowing straight into her face, but it was warm and pleasant. When she had passed through the gate of the ranch the road went between wire fences, straight north to Cameron City. Now and then a group of horses, roused, perhaps, by her approach, stood with their heads over the fence watching her pass, while the wind stretched their manes and tails out straight to one side. She wished she could stop and make friends with them, but there was no time for that. Her father might wake up and call for her. So on she sped, waking the cattle on either side of the road, startling more than one prowling coyote, and causing more than one prairie-dog, snug in his hole, to fancy it must be morning. And the great night, encompassing the world, gleaming in the heavens, brooding upon the earth, made itself known to her for the first time. Elizabeth never forgot that ride through the beautiful brooding night. Nature seemed larger and deeper and grander to her ever after.

As they came among the houses of the town she reined in the bronco and went quietly, lest she should wake the people. There was a light burning in the room over the store, and the window was open. A woman answered her summons. It was the wife of the storekeeper. Her husband was absent, she said, and she was up with a sick baby. She readily filled the little flask, and was sympathetic and eager to help. Should n't she send somebody over to the ranch? There was n't any doctor in Cameron City, but Cy Willows knew a heap about physic.

No. Elizabeth said her father was better already, only he seemed in need of a stimulant. No, she did not want an escort. The night was

lovely, and she would n't miss her solitary ride home for anything. She was so glad Mrs. Stiles had the whisky. It would be just what her father needed when he waked up.

And when, some hours later, Jacob Stanwood awoke, he found his daughter sitting beside him in the gray dawn.

"Why, Elizabeth," he said, "is anything the matter? Did I disturb you?"

She leaned toward him, and laid her hand on his.

"You were ill in the night, papa, and asked for a stimulant, and I got it for you."

"A stimulant?" he repeated vaguely. "What stimulant? Where did you get it?"

"I got it at the store. It's whisky."

"Whisky?" he cried, with a sudden, eager gleam.

Elizabeth was enchanted to find that she had done the right thing.

"Here it is, papa," she said, drawing the flask from her pocket, and pouring a little of the contents into a glass that stood ready.

He watched her with that intense, eager gleam.

"Fill it up! Fill it up!" he cried impatiently. "A drop like that is no good to a man."

He was sitting straight up again, just as she found him in the night. He reached his thin hand for the glass, which he clutched tightly. The smell of the liquor was strong in the room. His eyes were glittering with excitement.

The girl stood beside him, contemplating with affectionate delight the success of her experiment. Her utter innocence and unsuspiciousness smote him to the heart. Something stayed his hand so that he did not even lift the glass to his lips. Slowly, with his eyes fixed upon the sweet, young face, he extended his arm out over the side of the bed, the glass shaking plainly in his hold. She did not notice it; she was looking into his face, which had softened strangely.

"Elizabeth," he said.

There was a sound of breaking glass, and a strong smell of liquor pouring out upon the floor.

"Oh, papa!" she cried, distressed.

He had sunk back against the pillows, pale with exhaustion. But when she lifted the fragments of the glass, saying: "Is n't it a pity, papa?" he only answered in his usual tone, "There's no harm done, my dear. I don't believe it was just what I needed, after all."

He smiled with a new, indescribable sweetness and weariness.

"I think I could sleep now," he said.

At noon Stanwood was quite himself again: himself and more, he thought, with some surprise. He would not have owned that it was a sense of victory that had put new life into his

" 'ELIZABETH.' "

ENGRAVED BY PETER AITKEN.

veins. Victory over a vulgar passion must partake somewhat of the vulgarity of the passion itself. No, Stanwood was not the man to glory in such a conquest. But he could, at last, glory in this daughter of his.

As she told him with sparkling eyes of her inspiring ride through the brooding night, her courage and her innocence seemed to him like a fair, beneficent miracle. But he made no comment upon her story. He only sat in the doorway, looking down the road where he had watched her approach a few weeks ago; and when she said, noting his abstraction, "A penny for your thoughts, papa!" he asked, in a purely conversational tone, "Elizabeth,"—she always

loved to hear him say "Elizabeth,"—"Elizabeth, do you think it would make Nick very mad indeed if we were to go snacks?"

"Mad as hops!" she cried.

"Then let 's do it!"

Elizabeth beamed.

"And Elizabeth, there 's no place like Switzerland in summer. Let 's pack up and go!"

"Let us!" she answered, very softly, with only a little exultant tremor on the words.

She never guessed all that she had won that day; she only knew that life stretched on before her, a long, sunny pathway, where she and her father might walk together in the daily and hourly good-comradeship that she loved.

Anna Fuller.

"THE BROODING NIGHT."

TIME'S LAPIDARY.

AS joys the skilful, stern artificer
 When gems are laid within his eager hand,
 And he, surveying, thinketh diversely,
 His proud soul flaming with creative fire,
 And full of possibilities divine:
 "This blood-red ruby, dancing fauns shall tread;
 Upon that sapphire stand a god; this sard
 A mystic symbol bear; that emerald
 Will I compel to sweet Diana's face;
 Yea, all to strength and beauty will I shape!"

So I, when out of treasures of light
 The new day spreads before me all its hours,
 Think to create on them the fairest forms:
 This fill with work, and that with fancy free,
 And this with brooding thought; this with swift speech,
 And this with idleness; and all for thee
 Who art the soul of all, the life of each.

Anna C. Brackett.

IN THE GOBI DESERT.

ACROSS ASIA ON A BICYCLE.

V—OVER THE GOBI DESERT AND THROUGH THE WESTERN GATE OF THE GREAT WALL.¹

RUSSIAN influence, which even now predominates at Kuldja, was forcibly indicated, the day after our arrival, during our investigations as to the validity of our Chinese passports for the journey to Peking. The Russian consul, whose favor we had secured in advance through letters from Governor Ivanoff at Vernoye, had pronounced them not only good, but by far the best that had been presented by any traveler entering China at this point. After endeavoring to dissuade us from what he called a foolhardy undertaking, even with the most valuable papers, he sent us, with his interpreter, to the Kuldja Tootai for the proper visé.

That dignitary, although deeply interested, was almost amused at the boldness of our en-

terprise. He said that no passport would insure success by the method we proposed to pursue; that, before he could allow us to make the venture, we must wait for an order from Peking. This, he said, would subject us to considerable delay and expense, even if the telegraph and post were utilized through Siberia and Kiakhta. This was discouraging indeed. But when we discovered, a few minutes later, that his highness had to call in the learned secretary to trace our proposed route for him on the map of China, and even to locate the capital, Peking, we began to question his knowledge of Chinese diplomacy. The matter was again referred to the consul, who reported back the following day that his previous assurances were reliable, that the Tootai would make the necessary visés, and send away at once, by the regular relay post across the empire, an open letter that could be read by the officials along the route, and be delivered long before our arrival at Peking. Such easy success we had not anticipated. The difficulty, as well as necessity, of obtaining the proper credentials for traveling in China was impressed upon us by the arrest the previous day of three Afghan visitors, and by the fact that a German traveler had been refused, just a few weeks before, permission even to cross the Mazart pass into Kashgar. So much, we thought, for Russian friendship.

Upon this assurance of at least official consent to hazard the journey to Peking, a telegram was sent to the chief of police at Tomsk, to whose care we had directed our letters, photographic material, and bicycle supplies to be sent from London in the expectation of being forced to take the Siberian route. These last

A MAID OF WESTERN CHINA.

could not have been dispensed with much longer, as our cushion-tires, ball-bearings, and axles were badly worn, while the rim of one of the rear wheels was broken in eight places for the lack of spokes. These supplies, however, did not reach us till six weeks after the date of our telegram, to which a prepaid reply was received, after a week's delay, asking in advance for the extra postage. This, with that prepaid from London, amounted to just fifty dollars. The warm weather, after the extreme cold of a Siberian winter, had caused the tires to stretch so much beyond their intended size that, on their arrival, they were almost unfit for use. Some of our photographic material also had been spoiled through the useless inspection of postal officials.

The delay thus caused was well utilized in familiarizing ourselves as much as possible with the language and characteristics of the Chinese, for, as we were without guides, interpreters, or servants, and in some places lacked even offi-

cial assistance, no travelers, perhaps, were ever more dependent upon the people than ourselves. The Chinese language, the most primitive in the world, is, for this very reason perhaps, the hardest to learn. Its poverty of words reduces its grammar almost to a question of syntax and intonation. Many a time our expressions, by a wrong inflection, would convey a meaning different from the one intended. Even when told the difference, our ears could not detect it.

Our work of preparation was principally a process of elimination. We now had to prepare for a forced march in case of necessity. Handle-bars and seat-posts were shortened to save weight, and even the leather baggage-carriers, fitting in the frames of the machines, which we ourselves had patented before leaving England, were replaced by a couple of sleeping-bags made for us out of woolen shawls, and Chinese oiled-canvas. The cutting off of buttons and extra parts of our clothing, as well as the shaving

MONUMENT TO THE BUILDER OF A BRIDGE.

of our heads and faces, was also included by our friends in the list of curtailments. For the same reason one of our cameras, which we always carried on our backs, and refilled at night under the bed-clothes, we sold to a Chinese photographer at Suidun, to make room for an extra provision-bag. The surplus film, with our extra baggage, was shipped by post, via Siberia and Kiakhta, to meet us on our arrival in Peking.

And now the money problem was the most perplexing of all. "This alone," said the Russian consul, "if nothing else, will defeat your plans." Those western bankers who advertise to furnish "letters of credit to any part of the world" are, to say the least, rather sweeping in their assertions. At any rate, our own London letter was of no use beyond the Bosphorus, except with the Persian imperial banks run by

RIDING BEFORE THE GOVERNOR OF MANAS.

an English syndicate. At the American Bible House at Constantinople we were allowed, as a personal favor, to buy drafts on the various missionaries along the route through Asiatic Turkey. But in Central Asia we found that the Russian bankers and merchants would not handle English paper, and we were therefore compelled to send our letter of credit by mail to Moscow. Thither we had recently sent it on leaving Tashkend, with instructions to remit in currency to Irkutsk, Siberia. We now had to telegraph to that point to re-forward over the Kiakhta post-route to Peking. With the cash on hand, and the proceeds of the camera, sold for more than half its weight in silver, four and one third pounds, we thought we had sufficient money to carry us, or, rather,

MONUMENT TO A PRIEST AT URUMTSI.

A BANK IN URUMTSI.

as much as we could carry, to that point; for the weight of the Chinese money necessary for a journey of over three thousand miles was, as the Russian consul thought, one of the greatest of our almost insurmountable obstacles. In the interior of China there is no coin except the *chen*, or *sapeks*, an alloy of copper and tin, in the form of a disk, having a hole in the center by which the coins may be strung together. The very recently coined *liang*, or *tael*, the Mexican piaster specially minted for the Chinese market, and the other foreign coins, have not yet penetrated from the coast. For six hundred miles over the border, however, we found both the Russian money and language serviceable among the Tatar merchants, while the *tenga*, or Kashgar silver-piece, was preferred by the natives even beyond the Gobi, being much handier than the larger or smaller bits of silver broken from the *yamba* bricks. All, however, would have to be weighed in the *tinza*, or small Chinese scales we carried with us, and on which were

marked the *sun*, *tchan*, and *liang* of the monetary scale. But the value of these terms is reckoned in *chen*, and changes with almost every district. This necessity for vigilance, together with the frequency of bad silver and loaded *yambas*, and the propensity of the Chinese to "knock down" on even the smallest purchase, tends to convert a traveler in China into a veritable Shylock. There being no banks or exchanges in the interior, we were obliged to purchase at Kuldja all the silver we would need for the entire journey of over three thousand miles. "How much would it take?" was the question that our past experience in Asiatic travel now aided us to answer. That our calculations were close is proved by the fact that we reached Peking with silver in our pockets to the value of half a dollar. Our money now constituted the principal part of our luggage, which, with camera and film, weighed just twenty-five pounds apiece. Most of the silver was chopped up into small bits, and placed in the hollow tu-

A CHINESE PEDDLER FROM BARKUL.

THE STATION OF KHANG-TSWANG-POOH.

bing of the machines to conceal it from Chinese inquisitiveness, if not something worse. We are glad to say, however, that no attempt at robbery was ever discovered, although efforts at extortion were frequent, and sometimes, as will appear, of a serious nature.

The blowing of the long horns and boom of the mortar cannon at the fort awoke us at daylight on the morning of July 13. Farewells had been said the night before. Only our good-hearted Russian host was up to put an extra morsel in our provision-bag, for, as he said, we could get no food until we reached the Kirghiz aouls on the high plateau of the Talki pass, by which we were to cut across over unbeaten paths to the regular so-called imperial highway, running from Suidun. From the Catholic missionaries at Kuldja we had obtained very accurate information about this route as far as

the Gobi desert. The expression Tian Shan Pe-lu, or northern Tian Shan route, in opposition to the Tian Shan Nan-lu, or southern Tian Shan route, shows that the Chinese had fully appreciated the importance of this historic highway, which continues the road running from the extreme western gate of the Great Wall obliquely across Mongolian Kan-su, through Hami and Barkul, to Urumtsi. From here the two natural highways lead, one to the headwaters of the Black Irtysh, the other to the passes leading into the Ili valley, and other routes of the Arolo-Caspian depression. The latter route, which is now commanded at intervals by Chinese forts and military settlements, was recently relinquished by Russia only when she had obtained a more permanent footing on the former in the trading-posts of Chuguchak and Kobdo, for she very early recognized the importance of this most natural entry to the only feasible route across the Chinese empire. In a glowing

CHINESE GRAVES ON THE ROAD TO HAMI.

sunset, at the end of a hot day's climb, we looked for the last time over the Ili valley, and at dusk, an hour later, rolled into one of the Kirghiz aouls that are here scattered among the rich pasturage of the plateau.

Even here we found that our reputation had extended from Kuldja. The chief advanced with *amans* of welcome, and the heavy-matted curtains in the kibitka doorway were raised, as we passed, in token of honor. When the refreshing kumiss was served around the evening camp-fire, the dangers of the journey through China were discussed among our hosts with frequent looks of misgiving. Thus, from first to last, every judgment was against us, and every prediction was of failure, if not of something worse; and now, as we stole out from the tent by the light of the rising moon, even the specter-like mountain-peaks around us, like symbols of coming events, were casting their shadows before. There was something so illusive in the scene as to make it very impressive. In the

STATION OF SEB-BOO-TCHAN.

morning, early, a score of horsemen were ready to escort us on the road. At parting they all dismounted and uttered a prayer to Allah for our safety; and then as we rode away, drew their fingers across their throats in silence, and waved a solemn good-by. Such was the almost superstitious fear of these western nomads for the land which once sent forth a Yengiz Khan along this very highway.

Down the narrow valley of the Kuitun, which flows into the Ebi-nor, startling the mountain deer from the brink of the tree-arched rivulet, we reached a spot which once was the haunt of a band of those border-robbers about whom we had heard so much from our apprehensive friends. At the base of a volcano-shaped mountain lay the ruins of their former dens, from which only a year ago they were wont to sally forth on the passing caravans. When they were exterminated by the government, the head of their chief, with its dangling queue, was mounted on a pole near by, and preserved in a cage from birds of prey, as a warning to all others who might aspire to the same notoriety. In this lonely spot we were forced to spend the night, as here occurred, through the carelessness of the Kuldja Russian blacksmith, a very serious break in one of our gear wheels. It was too late in the day to walk back the sixteen miles to the Kirghiz encampment, and there obtain horses for the remaining fifty-eight miles to Kuldja, for nowhere else, we concluded, could such a break be mended. Our sleeping-bags were now put to a severe test between the damp ground and the heavy mountain dew. The penetrating cold, and the occasional panther-like cry of some prowling animal, kept us awake the greater part of the night, awaiting with revolvers in hand some expected attack.

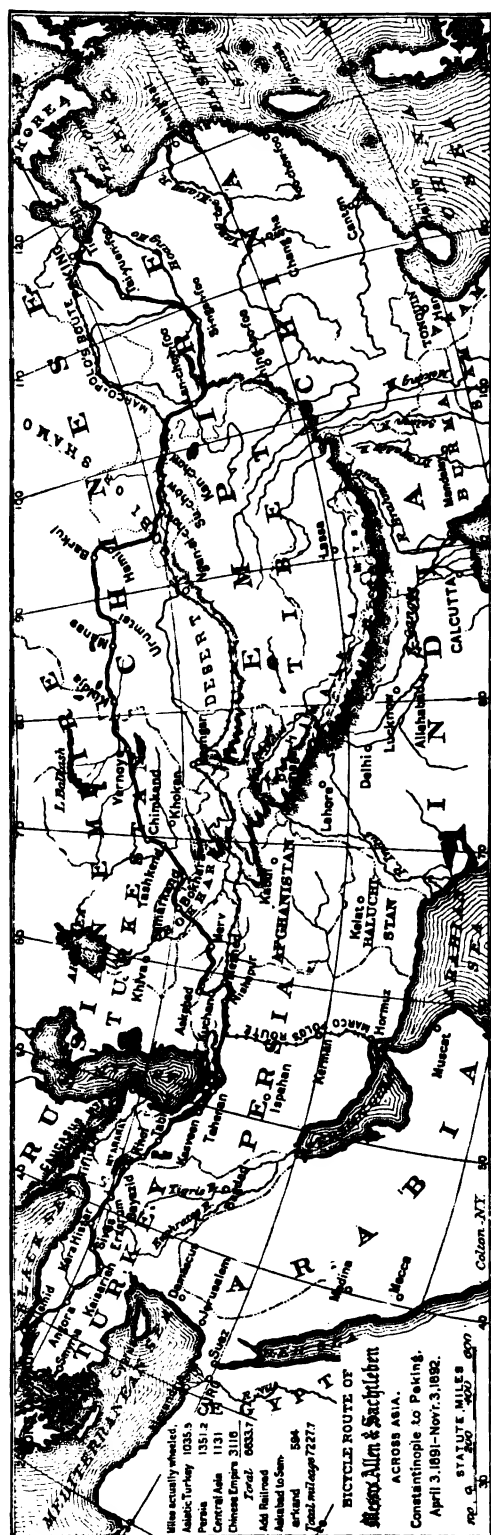

Five days later we had repassed this spot and were toiling over the sand and saline-covered depression of the great "Han-Hai," or Dried-up Sea. The mountain freshets, dissolving the salt from their sandy channels, carry it down in solution and deposit it with evaporation in massive layers, forming a comparatively hard roadway in the midst of the shifting sand-dunes. Over these latter our progress was extremely slow. One stretch of fifteen miles, which it took us six hours to cover, was as formidable as any part of the Turkoman desert along the Transcaspian Railway. At an altitude of only six hundred feet above the sea, according to our aneroid barometer, and beneath the rays of a July sun against which even our felt caps were not much protection, we were half-dragging, half-pushing, our wheels through a foot of sand, and slapping at the mosquitos swarming upon our necks and faces. These pests, which throughout this low country are the largest and most numerous we have ever met, are

bred in the intermediate swamps, which exist only through the negligence of the neighboring villagers. At night smoldering fires, which half suffocate the human inmates, are built before the doors and windows to keep out the intruding insects. All travelers wear gloves, and a huge hood covering the head and face up to the eyes, and in their hands carry a horse-tail switch to lash back and forth over their shoulders. Being without such protection we suffered both day and night.

The mountain freshets all along the road to Urumtsi were more frequent and dangerous than any we had yet encountered. Toward evening the melting snows, and the condensing currents from the plain heated during the day, fill and overflow the channels that in the morning are almost dry. One stream, with its ten branches, swept the stones and boulders over a shifting channel one mile in width. It was when wading through such streams as this where every effort was required to balance ourselves and our luggage, that the mosquitos would make up for lost time with impunity. The river, before reaching Manas, was so swift and deep as to necessitate the use of regular government carts. A team of three horses, on making a misstep, were shifted away from the ford into deep water and carried far down the stream. A caravan of Chinese traveling-vans, loaded with goods from India, were crossing at the time, on their way to the outlying provinces and the Russian border. General Bauman at Vernoye had informed us that in this way English goods were swung clear around the circle and brought into Russia through the unguarded back door.

With constant wading and tramping, our Russian shoes and stockings, one of which was almost torn off by the sly grab of a Chinese spaniel, were no longer fit for use. In their place we were now obliged to purchase the short, white cloth Chinese socks and string sandals, which for mere cycling purposes and wading streams proved an excellent substitute, being light and soft on the feet and very quickly dried. The calves of our legs, however, being left bare, we were obliged, for state occasions at least, to retain and utilize the upper portion of our old stockings. It was owing to this scantiness of wardrobe that we were obliged when taking a bath by the roadside streams to make a quick wash of our linen, and put it on wet to dry, or allow it to flutter from the handle-bars as we rode along. It was astonishing even to ourselves how little a man required when once beyond the pale of western conventionalities.

From Manas to Urumtsi we began to strike more tillage and fertility. Maize, wheat, and rice were growing, but rather low and thin. The last is by no means the staple food of China, as is commonly supposed, except in the

southern portion. In the northern, and especially the outlying, provinces it is considered more a luxury for the wealthy. Millet and coarse flour, from which the *mien* or dough-strings are made, is the foundation, at least, for more than half the subsistence of the common classes. Nor is there much truth, we think, in the assertion that Chinamen eat rats, although we sometimes regretted that they did not. After a month or more without meat a dish of rats would have been relished, had we been able to get it. On the other hand we have learned that there is a society of Chinamen who are vegetarians from choice, and still another that will eat the meat of no animal, such as the ass, horse, dog, etc., which can serve man in a better way.

Urumtsi, or Hun-miao (red temple) of the Chinese, still retains its ancient prestige in being the seat of government for the viceroyalty of Sin-tsiang, which includes all that portion of western China lying without the limit of Mongolia and Tibet. Thanks to its happy position, it has always rapidly recovered after every fresh disaster. It now does considerable trade with Russia through the town of Chuguchak, and with China through the great gap which here occurs in the Tian Shan range. It lies in a picturesque amphitheater behind the solitary "Holy Mount," which towers above a well-constructed bridge across its swiftly flowing river. This city was one of our principal landmarks across the empire; a long stage of the journey was here completed.

On entering a Chinese city we always made it a rule to run rapidly through until we came to an inn, and then lock up our wheels before the crowd could collect. Urumtsi, however, was too large and intricate for such a maneuver. We were obliged to dismount in the principal thoroughfare. The excited throng pressed in upon us. Among them was a Chinaman who could talk a little Russian, and who undertook to direct us to a comfortable inn at the far end of the city. This street parade gathered to the inn yard an overwhelming mob, and announced to the whole community that "the foreign horses" had come. It had been posted, we were told, a month before, that "two people of the new world" were coming through on "strange iron horses," and every one was requested not to molest them. By this, public curiosity was raised to the highest pitch. When we returned from supper at a neighboring restaurant, we were treated to a novel scene. The doors and windows of our apartments had been blocked with boxes, bales of cotton, and huge cart-wheels to keep out the irrepressible throng. Our host was agitated to tears; he came out ringing his hands, and urging upon us that any attempt on our part

to enter would cause a rush that would break his house down. We listened to his entreaties on the condition that we should be allowed to mount to the roof with a ladder, to get away from the annoying curiosity of the crowd. There we sat through the evening twilight, while the crowd below, somewhat balked, but not discouraged, stood taking in every move. Nightfall and a drizzling rain came at last to our relief.

The next morning a squad of soldiers was despatched to raise the siege, and at the same time presents began to arrive from the various officials, from the Tsongtu, or viceroy, down to the superintendent of the local prisons. The matter of how much to accept of a Chinese present, and how much to pay for it, in the way of a tip to the bearer, is one of the finest points of that finest of fine arts, Chinese etiquette; and yet in the midst of such an abundance and variety we were hopelessly at sea. Fruits and teas were brought, together with meats and chickens, and even a live sheep. Our Chinese visiting-cards—with the Chinese the great insignia of rank—were now returned for those sent with the presents, and the hour appointed for the exhibition of our bicycles as requested.

Long before the time, the streets and house-tops leading from the inn to the viceroy's palace at the far end of the city began to fill with people, and soldiers were detailed at our request to make an opening for us to ride through abreast. This, however, did not prevent the crowd from pushing us against each other, or sticking sticks in the wheels, or throwing their hats and shoes in front of us, as we rode by. When in sight of the viceroy's palace, they closed in on us entirely. It was the worst jam we had ever been in. By no possibility could we mount our machines, although the mob was growing more and more impatient. They kept shouting for us to ride, but would give us no room. Those on the outside pushed the inner ones against us. With the greatest difficulty could we preserve our equilibrium, and prevent the wheels from being crushed, as we surged along toward the palace gate; while all the time our Russian interpreter, Mafoo, on horseback in front, continued to shout and gesticulate in the wildest manner above their heads. Twenty soldiers had been stationed at the palace gate to keep back the mob with cudgels. When we reached them, they pulled us and our wheels quickly through into the inclosure, and then tried to stem the tide by belaboring the heads and shoulders in reach, including those of our unfortunate interpreter, Mafoo. But it was no use. Everything was swept away before this surging wave of humanity. The viceroy himself, who now came out to receive us, was powerless. All he could do was to request them to make room around the pal-

ace courtyard for the coming exhibition. Thousands of thumbs were uplifted that afternoon, in praise of the wonderful *twoe-tah-cheh*, or two-wheeled carts, as they witnessed our modest attempt at trick riding and special manoeuvring. After refreshments in the palace, to which we were invited by the viceroy, we were counseled to leave by a rear door, and return by a roundabout way to the inn, leaving the mob to wait till dark for our exit from the front.

The restaurant or tea-house in China takes the place of the western club-room. All the current news and gossip is here circulated and discussed over their eating or gambling. One of their games of chance, which we have frequently noticed, seems to consist in throwing their fingers at one another, and shouting at the top of their voices. It is really a matching of numbers, for which the Chinamen make signs on their fingers, up to the numeral ten. Our entry into a crowded *dungan*, or native Mohammedan restaurant, the next morning, was the signal for exciting accounts of the events of the previous day. We were immediately invited to take tea with this one, a morning dish of *tung-posas*, or nut and sugar dumplings, with another, while a third came over with his can of *sojeu*, or Chinese gin, with an invitation "to join him." The Chinese of all nations seem to live in order to eat, and from this race of epicures has developed a nation of excellent cooks. Our fare in China, outside the Gobi district, was far better than in Turkey or Persia, and, for this reason, we were better able to endure the increased hardships. A plate of sliced meat stewed with vegetables, and served with a piquant sauce, sliced radishes and onions with vinegar, two loaves of Chinese *mo-mo*, or steamed bread, and a pot of tea, would usually cost us about three and one quarter cents apiece. Everything in China is sliced so that it can be eaten with the chop-sticks. These we at length learned to manipulate with sufficient dexterity to pick up a dove's egg—the highest attainment in the chop-stick art. The Chinese have rather a sour than a sweet tooth. Sugar is rarely used in anything, and never in tea. The steeped tea-flowers, which the higher classes use, are really more tasty without it. In many of the smaller towns, our visits to the restaurant would sometimes result in considerable damage to their keepers, for the crowd would swarm in after us, knocking over the table, stools, and crockery as they went, and collect in a circle around us to watch the "foreigners" eat, and to add their opium and tobacco smoke to the suffocating atmosphere.

A visit to the local mint in Urumtsi revealed to us the primitive method of making the *chen*, or money-disks before mentioned. Each is molded instead of cut and stamped as in the

West. By its superintendent we were invited to a special breakfast on the morning of our departure.

The Chinese are the only people in the Orient, and, so far as we know, in the European and Asiatic continents, who resemble the Americans in their love for a good, substantial morning meal. This was much better adapted to our purpose than the Russian custom, which compelled us to do the greater part of our day's work on merely bread and weak tea.

From Urumtsi we had decided to take the northern route to Hami, via Gutchen and Barkul, in order to avoid as much as possible the sands of the Tarim basin on the southern slope of the Tian Shan Mountains. Two guards were commissioned by the viceroy to take us in charge, and hand us over to the next relay station. Papers were given them to be signed by the succeeding authorities on our safe arrival. This plan had been adopted by every chief mandarin along the route, in order, not only to follow out the request of the London minister as written on the passport, but principally to do us honor in return for the favor of a bicycle exhibition; but many times we would leave our discomfited guards to return with unsigned papers. Had we been traveling in the ordinary way, not only these favors might not have been shown us, but our project entirely defeated by local obstructions, as was the case with many who attempted the same journey by caravan. To the good-will of the mandarins, as well as the people, an indispensable concomitant of a journey through China, our bicycles were after all our best passports. They everywhere overcame the antipathy for the foreigner, and made us cordially welcome.

The costumes of our soldiers were strikingly picturesque. Over the front and back of the scarlet waistcoats were worked in black silk letters their military credentials. Over their full baggy trousers were drawn their riding overalls, which cover only the front and sides of the legs, the back being cut out just above the cloth top of their Chinese boots. Instead of a cap, they wear a piece of printed cloth wrapped tightly around the head, like the American washerwomen. Their well-cushioned saddles did not save them from the constant jolting to which our high speed subjected them. At every stopping-place they would hold forth at length to the curious crowd about their roadside experiences. It was amusing to hear their graphic descriptions of the mysterious "ding," by which they referred to the ring of the cyclometer at every mile. But the phrase *quai-ti-henn* (very fast), which concluded almost every sentence, showed what feature impressed them most. Then, too, they disliked very much to travel in the heat of the day, for all summer

traveling in China is done at night. They would wake us up many hours before daylight to make a start, despite our previous request to be left alone. Our week's run to Barkul was made, with a good natural road and favoring conditions, at the rate of fifty-three miles per day, eight miles more than our general average across the empire. From Kuldja to the Great Wall, where our cyclometer broke, we took accurate measurements of the distances. In this way, we soon discovered that the length of a Chinese *li* was even more changeable than the value of the *tael*. According to time and place, from 185 to 250 were variously reckoned to a degree, while even a difference in direction would very often make a considerable difference in the distance. It is needless to say that, at this rate, the guards did not stay with us. Official courtesy was now confined to despatches sent in advance. Through this exceptionally wild district were encountered several herds of antelope and wild asses, which the natives were hunting with their long, heavy, fork-resting rifles. Through the exceptional tameness of the jack-rabbits along the road, we were sometimes enabled to procure with a revolver the luxury of a meat supper.

At Barkul (Tatar) the first evidence of English influence began to appear in the place of the fading Russian, although the traces of Russian manufacture were by no means wanting far beyond the Great Wall. English pulverized sugar now began to take the place of Russian lump. India rubber, instead of the Russianized French *elastique*, was the native name for our rubber tires. English letters, too, could be recognized on the second-hand paper and bagging appropriated to the natives's use, and even the gilded buttons worn by the soldiers bore the stamp of "treble gilt." From here the road to Hami turns abruptly south, and by a pass of over nine thousand feet crosses the declining spurs of the Tian Shan Mountains, which stand like a barrier between the two great historic highways, deflecting the westward waves of migration, some to Kashgaria and others to Zungaria. On the southern slope of the pass we met with many large caravans of donkeys, dragging down pine-logs to serve as poles in the proposed extension of the telegraph-line from Su-Chou to Urumtsi. In June of this year the following item appeared in the newspapers:

Within a few months Peking will be united by wire with St. Petersburg; and, in consequence, with the telegraph system of the entire civilized world. According to the latest issue of the *Turkestan "Gazette,"* the telegraph-line from Peking has been brought as far west as the city of Kashgar. The European end of the line is at Osh, and a small stretch of about 140 miles now alone breaks

the direct telegraph communication from the Atlantic to the Pacific.

Hami is one of those cities which may be regarded as indispensable. At the edge of the Great Gobi and the converging point of the Nan-lu and Pe-lu—that is, the southern and northern routes to the western world—this oasis is a necessary resting-place. During our stop of two days, to make necessary repairs and recuperate our strength for the hardships of the desert, the usual calls were exchanged with the leading officials. In the matter of social politeness the Chinese, especially the “literati,” have reason to look down upon the barbarians of the west. Politeness has been likened generally to an air-cushion. There is nothing in it, but it eases the jolts wonderfully. As a mere ritual of technicalities it has perhaps reached its highest point in China. The multitude of honorific titles, so bewildering and even maddening to the Occidental, are here used simply to keep in view the fixed relations of graduated superiority. When wishing to be exceptionally courteous to “the foreigners,” the more experienced mandarins would lay their doubled fists in the palms of our hands, instead of raising them in front of their foreheads, with the usual salutation *Homa*. In shaking hands with a Chinaman we thus very often had our hands full. After the exchange of visiting-cards, as an indication that their visits would be welcome, they would come on foot, in carts, or palanquins, according to their rank, and always attended by a larger or smaller retinue. Our return visits would always be made by request, on the wheels, either alone or with our interpreter, if we could find one, for our Chinese was as yet painfully defective. Russian had served us in good stead, though not always directly. In a conversation with the Tootai of Schicho, for instance, our Russian had to be translated into Turki and thence interpreted in Chinese. The more intelligent of these conversations were about our own and other countries of the world, especially England and Russia, who, it was rumored, had gone to war on the Afghanistan border. But the most of them generally consisted of a series of trivial interrogations beginning usually with: “How old are you?” Owing to our beards, which were now full grown, and which had gained for us the frequent title of *yeh renn*, or wild men, the guesses were far above the mark. One was even as high as sixty years, for the reason, as was stated, that no Chinaman could raise such a beard before that age. We were frequently surprised at their persistence in calling us brothers when there was no apparent reason for it, and were finally told that we must be “because we were both named *Mister* on our passports.”

It was already dusk on the evening of August 10 when we drew up to the hamlet of Shang-loo-shwee at the end of the Hami oasis. The great Gobi, in its awful loneliness, stretched out before us, like a vast ocean of endless space. The growing darkness threw its mantle on the scene, and left imagination to picture for us the nightmare of our boyhood days. We seemed, as it were, to be standing at the end of the world, looking out into the realm of nowhere. Foreboding thoughts disturbed our repose, as we contemplated the four hundred miles of this barren stretch to the Great Wall of China. With an early morning start, however, we struck out at once over the eighty-five miles of the Takla Makan sands. This was the worst we could have, for beyond the caravan station of Kooshee we would strike the projecting limits of Mongolian Kan-su. This narrow tract, now lying to our left between Hami and the Nan Shan mountains, is characterized by considerable diversity in its surface, soil, and climate. Traversed by several copious streams from the Nan Shan Mountains, and the moisture-laden currents from the Bay of Bengal and the Brahmaputra valley, its “desert” stretches are not the dismal solitudes of the Tarim Basin or the “Black” and “Red” sands of Central Asia. Water is found almost everywhere near the surface, and springs bubble up in the hollows, often encircled by exterior oases. Everywhere the ground is traversable by horses and carts. This comparatively fertile tract, cutting the Gobi into two great sections, has been, ever since its conquest two thousand years ago, of vast importance to China, being the only feasible avenue of communication with the western provinces, and the more important link in the only great highway across the empire. A regular line of caravan stations is maintained by the constant traffic both in winter and summer. But we were now on a bit of the genuine Gobi—that is, “Sandy Desert”—of the Mongolian, or “Shamo” of the Chinese. Everywhere was the same interminable picture of vast undulating plains of shifting reddish sands, interspersed with quartz pebbles, agates, and carnelians, and relieved here and there by patches of wiry shrubs, used as fuel at the desert stations, or lines of hillocks succeeding each other like waves on the surface of the shoreless deep. The wind, even more than the natural barrenness of the soil, prevents the growth of any vegetation except low, pliant herbage. Withered plants are uprooted and scattered by the gale like patches of foam on the stormy sea. These terrible winds, which of course were against us, with the frequently heavy cart-tracks, would make it quite impossible to ride. The monotony of many weary hours of plodding was relieved only by the bones of some abandoned beast of

burden, or the occasional train of Chinese carts, or rather two-wheeled vans, loaded with merchandise, and drawn by five to six horses or mules. For miles away they would see us coming, and crane their necks in wondering gaze as we approached. The mulish leaders, with distended ears, would view our strange-looking vehicles with suspicion, and then lurch far out in their twenty-foot traces, pulling the heavily loaded vehicles from the deep-rutted track. But the drivers were too busy with their eyes to notice any little divergence of this kind. Dumb with astonishment they continued to watch us till we disappeared again toward the opposite horizon. Farther on we would meet a party of Chinese emigrants or exiles, on their way to the fertile regions that skirt the northern and southern slopes of the Tian Shan Mountains. By these people even the distant valley of the Ili is being largely populated. Being on foot, with their extraordinary loads balanced on flexible shoulder-poles, these poor fellows could make only one station, or from twelve to twenty miles a day. In the presence of their patience and endurance, we were ashamed to think of such a thing as hardship.

The station-houses on the desert were nothing more than a collection of mud huts near a surface well of strongly brackish water. Here, most of the caravans would put up during the day, and travel at night. There was no such thing as a restaurant; each one by turn must do his own cooking in the inn kitchen, open to all. We, of course, were expected to carry our own provisions and do our own culinary work like any other respectable travelers. This we had frequently done before where restaurants were not to be found. Many a time we would enter an inn with our arms filled with provisions, purchased at the neighboring bazaars, take possession of the oven and cooking utensils, and proceed to get up an American meal, while all the time a hundred eyes or more would be staring at us in blank amazement. But here on the desert we could buy nothing but very coarse flour. When asked if they had an egg or a piece of vegetable, they would shout "*Ma-you*" ("There is none") in a tone of rebuke, as much as to say: "My conscience! man, what do you expect on the Gobi?" We would have to be content with our own tea made in the iron pot, fitting in the top of the mud oven, and a kind of sweetened bread made up with our supply of sugar brought from Hami. This we nicknamed our "Gobi cake," although it did taste rather strongly of brackish water and the garlic of previous contents of the one common cooking-pot. We would usually take a large supply for road use on the following day, or, as sometimes proved, for the midnight meal of the half-starved inn-

dog. The interim between the evening meal and bedtime was always employed in writing notes by the feeble, flickering light of a primitive taper-lamp, which was the best we had throughout the Chinese journey.

A description of traveling in China would by no means be complete without some mention of the vermin which infest, not only inns and houses, but the persons of nearly all the lower classes. Lice and fleas seem to be the *sine qua non* of Chinese life, and in fact the itching with some seems to furnish the only occasion for exercise. We have seen even shopkeepers before their doors on a sunny afternoon, amusing themselves by picking these insidious creatures from their inner garments. They are one of the necessary evils it seems, and no secret is made of it. The sleeping *kangs* of the Chinese inns, which are made of beaten earth and heated in winter like an oven, harbor these pests the year round, not to mention the filthy coverlets and greasy pillows that were sometimes offered us. Had we not had our own sleeping-bags, and used the camera, provision-bag, and coats for pillows, our life would have been intolerable. As it was there was but little rest for the weary.

The longest station on the desert was thirty-one miles. This was the only time that we suffered at all with thirst. In addition to the high mean elevation of the Gobi, about four thousand feet, we had cloudy weather for a considerable portion of the journey, and, in the Kan-su district, even a heavy thunder-shower. These occasional summer rains form, here and there, temporary meres and lakes, which are soon evaporated, leaving nothing behind except a saline efflorescence. Elsewhere the ground is furrowed by sudden torrents tearing down the slopes of the occasional hills or mountains. These dried up river-beds furnished the only continuously hard surfaces we found on the Gobi; although even here we were sometimes brought up with a round turn in a chuck hole, with the sand flying above our heads.

Our aneroid barometer registered approximately six thousand five hundred feet, when we reached at dusk the summit of the highest range of hills we encountered on the desert journey. But instead of the station-hut we expected to find, we were confronted by an old Mongolian monastery. These institutions, we had found, were generally situated as this one, at the top of some difficult mountain-pass or at the mouth of some cavernous gorge, where the pious intercessors might, to the best advantage, strive to appease the wrathful forces of nature. In this line of duty the lama was no doubt engaged when we walked into his feebly-lighted room, but, like all orientals, he would let nothing interfere with the performance of his religious duties. With his

gaze centered upon one spot, his fingers flew over the string of beads in his lap, and his tongue over the stereotyped prayers, with a rapidity that made our head swim. We stood unnoticed till the end, when we were at once invited to a cup of tea, and directed to our destination, five *li* beyond. Toward this we plodded through the growing darkness and rapidly cooling atmosphere; for in its extremes of temperature the Gobi is at once both Siberian and Indian, and that, too, within the short period of a few hours. Some of the mornings of what proved to be very hot days were cold enough to make our extremities fairly tingle.

A constant diet of bread and tea, together with the hard physical exercise and mental anxiety, caused our strength at length to fail.

The constant drinking of brackish water made one of us so ill that he could retain no food. A high fever set in on the evening of August 15, and as we pulled into the station of Bay-doon-sah, he was forced to go to bed at once. The other, with the aid of our small medicine supply, endeavored to ward off the ominous symptoms. In his anxiety, however, to do all that was possible he made a serious blunder. Instead of antipyrin he administered the poison, sulphate of zinc, which we carried to relieve our eyes when inflamed by the alkali dust. This was swallowed before the truth was discovered. It was an anxious moment for us both when we picked up the paper from the floor and read the inscription. We could do nothing but look at each other in silence. Happily it was an overdose, and the vomiting which immediately followed relieved both the patient and the anxious doctor. What to do we did not know. The patient now suggested that his companion should go on without him, and, if possible, send back medical aid or proper food; but not to remain and get worse himself. He, on the other hand, refused to leave without the other. Then too, the outlying town of Ngan-si-chou, the first where proper food and water could be obtained was only one day's journey away. Another effort was decided upon. But when morning came, a violent hurricane from the southeast swept the sand in our faces, and fairly blew the sick man over on his wheel. Famishing with thirst, tired beyond expression, and burning with fever as well as the withering heat, we reached at last the bank of the Su-la-ho. Eagerly we plunged into its sluggish waters, and waded through under the walls of Ngan-si-chou.

Ngan-si-chou was almost completely destroyed during the late Dungan rebellion. Little is now to be seen except heaps of rubbish, ruined temples, and the scattered fragments of idols. The neglected gardens no longer check the advancing sands, which in some places were

drifting over the ramparts. Through its abandoned gateway we almost staggered with weakness, and directed our course to the miserable bazaar. The only meat we could find was pork, that shibboleth between Mohammedanism and Confucianism. The Dungan restaurant-keeper would not cook it, and only after much persuasion consented to have it prepared outside and brought back to be eaten beneath his roof. With better water and more substantial food we began, from this time on, to recuperate. But before us still a strong head wind was sweeping over the many desert stretches that lay between the oases along the Su-la-ho, and with the constant walking our sandals and socks were almost worn away. For this reason we were delayed one evening in reaching the town of Dyou-min-shan. In the lonely stillness of its twilight a horseman was approaching across the barren plain, bearing a huge Chinese lantern in his hand, and singing aloud, as is a Chinaman's custom, to drive off the evil spirits of the night. He started back, as we suddenly appeared, and then dismounted, hurriedly, to throw his lantern's glare upon us. "Are you the two Americans?" he asked in an agitated manner. His question was surprising. Out in this desert country we were not aware that our identity was known, or our visit expected. He then explained that he had been instructed by the magistrate of Dyou-min-shan to go out and look for us, and escort us into the town. He also mentioned in this connection the name of Ling Darin—a name that we had heard spoken of almost with veneration ever since leaving Urumtsi. Who this personage was we were unable to find out beyond that he was an influential mandarin in the city of Su-chou, now only a day's journey away.

Near that same fortieth parallel of latitude on which our Asiatic journey was begun and ended, we now struck, at its extreme western limit, the Great Wall of China. The Kiayukuan, or "Jade Gate," by which it is here intersected, was originally so called from the fact that it led into the Khotan country, whence the Chinese traders brought back the precious mineral. This, with the Shanghai-kuan near the sea, and the Yuamin-kuan, on the Nankow Pass, are the principal gateways in this "wall of ten thousand *li*," which, until forced by Yenghiz Khan, protected the empire from the Mongolian nomads for a period of fourteen hundred years. In its present condition the Great Wall belongs to various epochs. With the sudden and violent transitions of temperature in the severe Mongolian climate, it may be doubted whether any portion of Shi Hoangti's original work still survives. Nearly all the eastern section, from Ordos to the Yellow Sea, was rebuilt in the fifth century, and

the double rampart along the northwest frontier of the plains of Peking was twice restored in the fifteenth and sixteenth. North of Peking, where this prodigious structure has a mean height of about twenty-six feet, and width of twenty feet, it is still in a state of perfect repair, whereas in many western districts along the Gobi frontier, as here before us, it is little more than an earthen rampart about fifteen feet in height, while for considerable distances, as along the road from Su-chou to Kan-chou, it has entirely disappeared for miles at a stretch. Both the gate and the wall at this point had been recently repaired. We could now see it rising and falling in picturesque undulations as far as the Tibetan ranges. There it stops altogether, after a westward course of over fifteen hundred miles. In view of what was before us, we could not but smile as we thought of that French abbé who undertook, in an elaborate volume, to prove that the "Great Wall of China" was nothing more than a myth.

We were now past another long anticipated land-mark, and before us, far down in the plain, lay the city of Su-chou, which, as the terminal point of the Chinese telegraph line, would bring us again into electric touch with the civilized world. But between us and our goal lay the Edzina River, now swollen by a recent freshet. We began to wade cautiously through with luggage and wheels balanced on our shoulders. But just at that moment we perceived, approaching from the distance, what we took to be a mounted Chinese mandarin, and his servant leading behind him two richly caparisoned and riderless horses. At sight of us they spurred ahead, and reached the opposite bank just as we passed the middle of the stream. The leader now rose in his stirrups, waved his hat in the air and shouted, in clear though broken English, "Well, gentlemen, you have arrived at last!" To hear our mother tongue so unexpectedly spoken in this out-of-the-way part of the world, was startling. This strange individual, although clad in the regular mandarin garb, was light-complexioned, and had an auburn instead of a black queue dangling from his shaven head. He grasped us warmly by the hand as we came dripping out of the water, while all the time his benevolent countenance fairly beamed with joy. "I am glad to see you, gentlemen," he said. "I was afraid you would be taken sick on the road ever since I heard you had started across China. I just got the news five minutes ago that you were at Kiayu-kuan, and immediately came out with these two horses to bring you across the river, which I feared would be too deep and swift for you. Mount your ponies, and we will ride into the city together."

It was some time before the idea flashed

across our minds that this might indeed be the mysterious Ling Darin about whom we had heard so much. "Yes," said he, "that is what I am called here, but my real name is Splingard." He then went on to tell us that he was a Belgian by birth; that he had traveled extensively through China, as the companion of Baron Richthofen, and had thus become so thoroughly acquainted with the country and its people that, on his return to the coast he had been offered by the Chinese government the position of custom mandarin at Su-chou, a position just then established for the levying of duty on the Russian goods passing in through the northwest provinces; that he had adopted the Chinese dress and mode of living, and had even married, many years ago, a Chinese girl educated at the Catholic schools in Tientsin. We were so absorbed in this romantic history that we scarcely noticed the crowds that lined the streets leading to the Ling Darin's palace, until the boom of a cannon recalled us to our situation. From the smile on the jolly face beside us, we knew at once whom we could hold responsible for this reception. The palace gates were now thrown open by a host of servants, and in our rags and tatters we rolled at once from the hardships of the inhospitable desert into the lap of luxury.

A surplus is not always so easily disposed of as a deficit—at least we were inclined to think so in the case of our Su-chou diet. The Ling Darin's table, which, for the exceptional occasion, was set in the foreign fashion with knives and forks, fairly teemed with abundance and variety. There was even butter, made from the milk of the Tibetan yak, and condensed milk for our coffee, the first we had tasted since leaving Turkey, more than a year before. The Ling Darin informed us that a can of this milk, which he once presented to Chinese friends, had been mistaken for a face cosmetic, and was so used by the ladies of the family. The lack of butter has led many of the missionaries in China to substitute lard, while the Chinese fry their fat cakes in various oils. The Ling Darin's wife we found an excellent and even artistic cook, while his buxom twin daughters could read and write their own language—a rare accomplishment for a Chinese woman. Being unaccustomed to foreign manners, they would never eat at the same table with us, but would come in during the evening with their mother, to join the family circle and read aloud to us some of their father's official despatches. This they would do with remarkable fluency and intelligence.

As guests of our highly respected and even venerated host, we were visited by nearly all the magistrates of the city. The Ling Darin was never before compelled to answer so

many questions. In self-defense he was at last forced to get up a stereotyped speech to deliver on each social occasion. The people, too, besieged the palace gates, and clamored for an exhibition. Although our own clothes had been sent away to be boiled, we could not plead this as an excuse. The flowing Chinese garments which had been provided from the private wardrobe of the Ling Darin fluttered wildly in the breeze, as we rode out through the city at the appointed hour. Our Chinese shoes, also, were constantly slipping off, and as we raised the foot to readjust them, a shout went up from the crowd for what they thought was some fancy touch in the way of riding.

From the barrenness of the Gobi to the rank vegetation of the Edzina valley, where the grass and grain were actually falling over from excessive weight, was a most relieving change. Water was everywhere. Even the roadway served in

A ROAD MARK IN THE Gobi DESERT.

cret of their success seems to lie in the care they take to replenish the soil. All the sewage of the towns is carried out every morning at day-break by special coolies, to be preserved for manure; while the dried herbs, straw, roots, and other vegetable refuse, are economized with the greatest care for fuel. The Chinese peasant offsets the rudeness of his implements with manual skill. He weeds the ground so carefully that there is scarcely a leaf above the ground that does not appertain to the crop. All kinds of pumps and hydraulic wheels are worked, either by the hand, animals, or the wind. The system of tillage, therefore, resembles market-gardening rather than the broad method of cultivation common in Europe and America. The land is too valuable to be devoted to pasture, and the forests nearly everywhere have been sacrificed to tillage to such an extent that the material for the enormously thick native coffins has now to be imported from abroad.

A TRAIL IN THE Gobi DESERT.

many places as a temporary irrigating canal. On the journey to Kan-chou we were sometimes compelled to ride on the narrow mud-wall fences that separated the flooded fields of wheat, millet, and sorghum, the prevailing cereals north of the Hoang-ho River. Fields of rice and the opium poppy were sometimes met with, but of the silk-worm and tea-plant, which furnish the great staples of the Chinese export trade, we saw absolutely nothing on our route through the northern provinces. Apart from the "Yellow Lands" of the Hoang-ho, which need no manure, the arable regions of China seem to have maintained their fecundity for over four thousand years, entirely through the thoughtful care of the peasantry in restoring to the soil, under another form, all that the crops have taken from it. The plowing of the Chinese is very poor. They scarcely do more than scratch the surface of the ground with their bent-stick plows, wooden-tooth drills, and wicker-work harrows; and instead of straight lines, so dear to the eye of a Western farmer, the ridges and furrows are as crooked as serpents. The real se-

Streams and irrigating ditches were so frequent that we were continually saturated with water or covered with mud. Our bare arms and legs were so tanned and coated that we were once asked by a group of squalid villagers if "foreigners" ever bathed like themselves. On dashing down into a village, we would

A WASTE OF BLACK SAND IN THE GOBI.

produce consternation or fright, especially among the women and children, but after the first onset, giggling would generally follow, for our appearance, especially from the rear, seemed to strike them as extremely ridiculous. The wheel itself presented various aspects to their ignorant fancies. It was called the "flying machine" and "foot-going carriage," while some even took it for the "five-wheel cart," or locomotive, about which they had heard only the vaguest rumors. Their ignorance of its source of motive power often prompted them to name it the "self-moving cart," just as the natives of Shanghai are wont to call the electric-light "the self-coming moon."

In one out-of-the-way village of northwestern China, we were evidently taken for some species of centaurs; the people came up to examine us while on the wheel to see whether or no rider and wheel were one. We became so harassed with importunities to ride that we

were compelled at last to seek relief in subterfuge, for an absolute refusal, we found, was of no avail. We would promise to ride for a certain sum of money, thinking thus to throw the burden of refusal on themselves. But, nothing daunted, they would pass round the hat. On several occasions, when told that eggs could not be bought in the community, an offer of an exhibition would bring them out by the dozen. In the same way we received presents of tea, and by this means our cash expenses were considerably curtailed. The interest in the "foreign horses" was sometimes so great as to stop business and even amusements. A rather notable incident of this kind occurred on one of the Chinese holidays. The flag-decked streets, as we rode through, were filled with the neighboring peasantry, attracted by some traveling theatrical troupe engaged for the occasion. In fact, a performance was just

RIDING BY THE GREAT WALL ON THE ROAD TO SU-CHOU.

WITHIN THE WESTERN GATE OF THE GREAT WALL.

then in progress at the open-air theater close at hand. Before we were aware of it we had rolled into its crowded auditorium. The women were sitting on improvised benches, fanning and gossiping, while the men stood about in listless groups. But suddenly their attention was aroused by the counter attraction, and a general rush followed, to the great detriment of the temporary peddlers' stands erected for the occasion. Although entirely deserted, and no doubt consumed with curiosity, the actors could not lose what the Chinese call "face." They still continued their hideous noises, pantomimes, and dialogues to the empty seats.

The last fifty miles into Liang-chou, a city founded by a Catholic Chinaman over two hundred years ago, we were compelled to make on foot, owing to an accident that caused us serious

trouble all through the remainder of our Chinese journey. In a rapid descent by a narrow pathway, the pedal of one of the machines struck upon a protuberance, concealed by a tuft of grass, snapping off the axle, and scattering the ball-bearings over the ground. For some miles we pushed along on the bare axle inverted in the pedal-crank. But the wrenching the machine thus received soon began to tell. With a sudden jolt on a steep descent, it collapsed entirely, and precipitated the rider over the handle-bars. The lower part of the frame had broken short off, where it was previously cracked, and had bent the top bar almost double in the fall. In this sad plight, we were rejoiced to find in the "City under the Shade" the Scotch missionary, Mr. Laughton, who had founded here the most remote of the China Inland Missions. But even with

A TYPICAL RECEPTION IN A CHINESE TOWN.

ROPES, CORDS, AND CROCKERY FOR SALE.

his assistance, and that of the best native mechanic, our repairs were ineffective. At several points along the route we were delayed on this account. At last the front and rear parts of the machine became entirely separated. There was no such thing as steel to be found in the country, no tools fit to work with, and no one who knew the first principles of soldering. After endeavoring to convince the native blacksmiths that a delicate bicycle would not stand pounding like a Chinese cart-wheel, we took the matter into our own hands. An iron bar was placed in the hollow tubing to hold it in shape, and a band of telegraph wire passed round from front to rear, along the upper and lower rods, and then twisted so as to bring the two parts as tightly together as possible. With a waddling frame, and patched rear-wheel describing eccentric revolutions, we must have presented a rather comical appearance over the remaining thousand miles to the coast.

Across the Yellow Hoang-ho, which is the largest river we encountered in Asia, a pontoon bridge leads into the city of Lan-chou-foo. Its strategical position at the point where the Hoang-ho makes its great bend to the north, and where the gateway of the West begins, as well as its picturesque location in one of the greatest fruit-bearing districts of China, makes it one of the most important cities of the empire. On the commanding heights across the river, we stopped to photograph the picturesque scene. As usual, the crowd swarmed in front of the camera to gaze into the mysterious lens. All the missionaries we had met cautioned us against taking photographs in China, lest we should do violence to the many popular superstitions, but the only trouble we ever experienced in this respect was in arousing popular curiosity. We soon learned that in order to get something besides Chinese heads in our pictures it was necessary first to

SCENE IN A TOWN OF WESTERN CHINA.

BRICK-MAKERS MIXING STRAW AND CLAY.

point the camera in the opposite direction, and then wheel suddenly round to the scene we wished to take. As we crossed the river, the bridge of boats so creaked and swayed beneath the rushing rabble, that we were glad to stand once more upon the terra firma of the city streets, which were here paved with granite and marble blocks. As we rode down the principal thoroughfare, amid the usual din and uproar, a well-dressed Chinaman rushed out from one of the stores and grabbed us by the arm. "Do you speak English?" he shouted, with an accent so like an American, that we leaped from our wheels at once, and grasped his hand as that of a fellow countryman. This, in fact, he proved to be in everything but birth. He was one of that party of mandarins' sons which had been sent over to our country some years ago, as an experiment by the Chinese

government, to receive a thorough American training. We cannot here give the history of that experiment, as Mr. Woo related it — how they were subsequently accused of cutting off their queues and becoming denationalized; how, in consequence, they were recalled to their native land, and degraded rather than elevated, both by the people and the government, because they were foreign in their sentiments and habits; and how, at last, they gradually began to force recognition through the power of merit alone. He had now been sent out by the government to engineer the extension of the telegraph line from Su-chou to Urumtsi, for it was feared by the government that the employment of a foreigner in this capacity would only increase the power for evil which the natives already attributed to this foreign innovation. The similarity in the phrases, *telegraph pole* and *dry hea-*

CARRIERS OF MUD MORTAR.

MISSIONARIES AT LAN-CHOU-FOO.

ven had inspired the common belief that the line of poles then stretching across the country was responsible for the long-existing drought. In one night several miles of poles were sawed short off, by the secret order of a banded conspiracy. After several decapitations, the poles were now being restored, and labeled with the words, "Put up by order of the Emperor."

In company with the English missionary, Mr. Redfern, while attempting to get out of the city on the way to his mountain home, we were caught in another jam. He counseled us to conceal the weapons we were carrying in our belts, for fear the sight of them should incite the mob to some act of violence. Our own experience, however, had taught us that a revolver in China was worth nothing if not shown. For persistence, this mob surpassed any we had ever seen. They followed us out of the city and over the three miles' stretch to the mission prem-

ises, and there announced their intention of remaining indefinitely. Again Mr. Redfern feared some outbreak, and counseled us to return to the city and apply to the viceroy himself for protection. This proved a good move. A special exhibition on the palace parade-grounds gained for us the valuable favor of one who was only fourth in rank to the emperor himself. A body-guard of soldiers was furnished, not only during our sojourn in the city, but for the journey to Singan-foo, on which a good reception was everywhere insured by an official despatch sent in advance. In order to secure for us future respect, a small flag with the government stamp and of yellow color was given us to fly by the side of our "stars and stripes." On this was inscribed the title of "The Traveling Students," as well as answers to the more frequent of the common questions—our nationality, destination, and age. The best mechanic in the local cannon-foundry was then ordered to make, at government expense, whatever repairs were possible on our disabled machines. This, however, as it proved, was not much; most of his time was spent in taking measurements and patterns for another purpose. If his intentions have been carried out, Lan-chou-foo is to-day possessed of a "foot-moving-carriage" of home production.

Our sojourn in this city is especially associated with the three names of Woo, Choo, and Moo — names by no means uncommon in Chinese nomenclature. We heard of a boy named the abstract numeral, "sixty-five," because his grandfather happened to reach that age on the very day of his birth. Mr. Moo was the local

TWO PAGODAS AT LAN-CHOU-FOO.

telegraph operator, with whom we, and our American friends Woo and Shanghai, associated. All operators in the Chinese telegraph system are required to read and write English. The school established for this purpose at Lan-chou we occasionally visited, and assisted the Chinese schoolmaster to hear the recitations from Routledge's spelling-book. He, in turn, was a frequent partaker of our "foreign chows," which our English-speaking friends served with knives and forks borrowed from the missionaries. Lily and bamboo roots, shark's fins and swallows' nests, and many other Chinese delicacies, were now served in abundance, and with the ever-accompanying bowl of rice. In the matter of eating and drinking, Chinese formality is extreme. A round table is the only one that can be used in an aristocratic household. The seat of honor is always the one next to the wall. Not a mouthful can be taken until the host raises his chop-sticks in the air, and gives the signal. Silence then prevails; for Confucius says: "When a man eats he has no time for talk." When a cup of tea is served to any one in a social party, he must offer it to every one in the room, no matter how many there are, before proceeding to drink himself. The real basis of Chinese politeness seems to be this: They must be polite enough to offer, and you must be polite enough to refuse. Our ignorance of this great underlying principle during the early part of the Chinese journey led us into errors both many and grievous. In order to show a desire to be sociable, we accepted almost everything that was offered us, to the great chagrin, we fear, of the courteous donors.

JOSEPH ADDISON.

ADDISON, THE HUMORIST.

HERE is not a name in the entire range of English literature to which so full and universal an appreciation has been given by posterity as to that of Addison. He had his critics in his day: he had, indeed, more than critics, and from one quarter at least has received in his breast the fiercest and sharpest sting which a friend estranged could put into poetic vengeance. But the burden even of contemporary voices was always overwhelmingly in his favor, and nowadays there is no one in the world, we believe, who has other than gentle words for the gentle writer—the finest critic, the finest gentleman, the most tender humorist, of his age. It is not only admiration, but a sort of personal affection with which we look back, detecting in all the bustling companies of that witty and depraved period his genial figure, with a delightful simplicity in the midst of all the formalism, and whole-heartedness among the conceits and pretensions, of the fops and the wits, the intriguing statesmen and busy conspirators, of an age in which public faith can scarcely be said to have existed at all. Addison is the very embodiment of that delightful gift of humor on which we pride ourselves so much as a specially English quality. That in its way his style is the perfection of English style is less dear and delightful to us than that what it conveys is the perfection of feeling. His art is the antipodes of that satirical art which allows human excellence only to gird at it, and insinuate motives which diminish or destroy. Addison, on the other hand, allows imperfections which his interpretation turns into something sweeter than virtue, and throws a delightful gleam of love and laughter upon the eccentricities and characteristic follies of individual nature. That he sees everything is one of the conditions of his genial forgiveness of all that is not mean, or base, or cruel. With these he makes no terms.

This most loved of English writers was the son of one of those English parsons who confuse our belief in the extremely unfavorable account of the condition of country clergymen given by both the graver and the lighter historians of the time. Neither Parson Adams in his virtue, nor Parson Trulliber in his grossness, nor Macaulay's keen and clear picture, nor Thackeray's fine, disrespectful studies of the chaplain

who marries the waiting-maid, seem to afford us any guidance to the nature of the household which the Rev. Launcelot Addison, after many wanderings and experiences, set up in the little parish of Milston in Wiltshire somewhere about the year 1670. Steele's description of it has, no doubt, the artificial form affected by the age, and sets it forth as one of those models of perfection, and examples to the world, which nowadays we are more disposed to distrust and laugh at than to follow. Dr. Addison had seen the world in no very brilliant or luxurious way. He had been chaplain at Dunkirk, and afterward at Tangiers among the Moors, upon which latter strange experience he wrote a book; and he rose afterward to be dean of Lichfield, a dignified clergyman. One of the brothers went to India, and attained to some eminence; the other was eventually, like Joseph, a fellow of Magdalen. They dispersed themselves in the world as the children of a clergyman might very well do at the present day, and it is evident belonged distinctly to the caste of gentlemen. The sons—or at least the son with whom we have specially to do, after sundry local schoolings, went to the Charterhouse, which he left at fifteen for Oxford, perhaps because of his unusual advancement, but more probably because the custom of the time sent boys earlier to the university, as is still the practice in Scotland. Addison was much distinguished in that elegant branch of learning, the writing of Latin verse, a kind of distinction which remains dear to the finest minds, in spite of all the remarks concerning its inutility, and the time wasted in acquiring the art, which the rest of the world has so largely indulged in. A copy of verses upon the accession of King William, written while he was still a very youthful scholar at Queen's College,—no more than seventeen,—got him his first promotion. The boy's verses came perhaps from some proud tutor at Queen's, boasting what could be done under the cupola in the High street,—finer than anything attempted in more distinguished seats of learning,—into the hands of the Provost of Magdalen, to the amazement and envy of that more learned corporation. There had been no election of scholars in the previous year, during the melancholy time when the college was embroiled with King James, and the courtly Quaker Penn had all the disturbed and troubled fellows under his heel; but now that freedom had returned with the revo-

ENGRAVED BY PETER AITKEN; FROM MEZZOTINT BY JOHN SMITH.

AFTER THE PAINTING BY SIR GODFREY KNELLER.

SIDNEY, EARL OF GODOLPHIN.

lution and the Heaven-sent William, there was room for a double number of distinguished poor demies. Dr. Lancaster of Magdalen decided at once that to leave such Latinity as that of the young author of these verses to a college never very great in such gifts would be a sin against his own, and young Addison was accordingly elected to all the privileges of a Magdalen demyship. The stranger may realize still in the quiet of the cloistered shades how the shy young student wandered in Addison's Walk, and pondered his verses, and formed the delicate wealth of speech which was to distinguish him from all his companions. He spent about ten years in his college, first as a student, and then as a fellow, in the position which, perhaps, is more ideal for a scholar than any other in Christendom. But the young man was not much more enlightened than the other young

men of his age, notwithstanding his genius at Latin verses, and that still finer genius which had not as yet come to utterance. He wrote an "Account of the Greatest English Poets," not much wiser than the school-boy essays of our own day which set Lord Tennyson and Mr. Browning down in their right places. Addison went further. He leaves out all mention of Shakspere, and speaks of Cowley as a "mighty genius." He describes "the spacious times of great Elizabeth" as "a barbarous age," amused by "Old Spenser" with "long-spun allegories" and "dull morals," which have lost all power to charm an age of understanding. The youth indeed, ran amuck among all the greatest names till we shiver at his temerity. But he knew better afterward, and, if he still condescended a little to his elders and betters, learned to love and comprehend them, too.

It would seem that he wavered for a time whether he should not take orders, a step necessary to retain his fellowship, and dedicate himself to the church, as was the wish of his father. The manner in which the question was decided is curiously characteristic of the age. The matter came to the ears of Charles Montague, afterward Lord Halifax, himself an elegant scholar, and at that time in office. He wrote to the authorities of Magdalen, begging that Addison might not be urged into holy orders, and in the mean time took more active measures to secure him for the state. Lord Somers was equally interested in the young man's career. Between them the two statesmen secured for him a pension of three hundred a year, on no pretense of work to be done or duty fulfilled, but merely that he might be able to prepare himself the better for the public service, and be thus at hand and ready when his work was wanted. Public opinion has risen up nowadays against any such arrangement, and much slighter efforts at patronage would now be denounced as a job over all England. And yet one wonders whether it was so profitless a proceeding as we think it. Addison was worth more than the money to England. To be sure, without the money he would still have been Addison; yet something of the mellow sweetness of humanity in him was, no doubt, due to this fostering of his youth.

He went abroad in 1699, and addressed himself in the first place to the learning of French, which he did slowly at Blois, without apparently gaining much enlightenment as to the state of France or the other countries which he visited in his prolonged tour. No doubt, with his pension and the income of his fellowship, Addison traveled like a young man of fortune and fashion in those times of leisure, with excellent introductions everywhere, seeing the best society, and the greatest men both in rank and letters. Boileau admired his Latin verses as much as the English statesmen did, and the young man went upon his way more and more convinced that Latin verses were the high road to fame. From France he went to Italy, making a classical pilgrimage. "Throughout," says Mr. Leslie Stephen, quaintly, "if we are to judge by his narrative, he seems to have considered the scenery as designed to illustrate his beloved poets."

When Addison returned home after four years of classical wanderings, it was to prospects sadly overcast. King William had died a year before, which had stopped his pension; Halifax was out of office, and all the hopes of public life, for which he had been training himself, seemed to drop as he came back. It is said that during the last year he had charge of a pupil; but there is no proof of the state-

ment, nor has the pupil ever been identified by name. An offer was made to him to accompany upon his travels a son of the Duke of Somerset, his services in that office to be paid by the present of a hundred guineas at the year's end, which did not seem to Addison an advantageous offer; but this, which came to nothing, is the only authentic reference to any possible "bear-leading" such as Thackeray refers to in "Esmond"; and fine as is the sketch made by that kindred humorist, he seems to exaggerate at once the poverty and the neglect into which for the moment Addison fell. He returned to England in 1703, being then thirty-one, full of every accomplishment, but with only his fellowship to depend upon. But if he carried a disappointed or despondent heart, he never made any moan on the subject, and, it is very likely, enjoyed his freedom and the happy sense of being at home like other young men. He seems to have been at once advanced to the membership of the Kit-Cat Club, which would supply him with the finest of company, and a center for the life which otherwise must have appeared as if it had come to a broken end. It was not long, however, that this period of neglect was suffered to last, and once more the transaction which elevated Addison to the sphere in which he passed the rest of his life is admirably characteristic of the period, and, alas! profoundly unlike anything that could happen to a young man of genius now.

We will not return again to any bewildering discussion of the Whigs and Tories of Queen Anne, but only say that Godolphin and Marlborough, those "great twin brethren" of the state, had come into the possession of England. The Lord Treasurer, who had everything in his hands at home, while his great partner fought and conquered abroad, was almost comically at a loss how to sound the trumpet of warlike success so as to excite the country, and, if possible, turn the heads of the discontented. He went to Halifax to ask where he could find what was wanted—a poet. So it happened that that day, all blazing in gold lace and splendor, the coach of the Chancellor of the Exchequer stopped before the little shop in the Haymarket over which the young scholar had his airy abode; and that great personage clambered up the long flights of stairs, carrying with him, very possibly, the patent of the appointment which was an earnest of what the powers that were could do for Addison. This was how the great poem of the "Campaign," that illustrious composition, was brought into being. Poems made to order seldom fulfil expectation, but in this case there was no disappointment. Godolphin and England alike were delighted, and Addison's life and success were at once secured, yet no one now, save as an illustration of his-

tory, would think of reading the "Campaign," though it served Addison well.

Two years later he was promoted to be one of the under-secretaries of state, and from that time languished no more in the cold shade of obscurity, where Halifax had upbraided the Government for leaving him. He was not a man born to linger there. Shy though he was, and little apt to put himself forward, this favorite of the muses—to use the phraseology of his time—was also the favorite of fortune. Everything that he touched thrived with him.

This event brought more than mere prosperity to the fortunate young man. If he had been already of note enough to belong to the Kit-Cat Club, with what a blaze of modest glory would he now appear!—not swelling in self-conceit, like so many of the wits; not full of silent passion, like the strange big Irish clergyman who pushed into the chattering company in the coffee-house, and astounded them with his masterful and arrogant ways; but always modest—never heard at all in a large company, opening out a little when the group dispersed and an audience fit but few gathered around him, but with one companion *half* divine. The one companion by and by became often that very same Irishman whose silent prowl about the room in which he knew nobody had amused all the luckier members. It was then that the "Travels in Italy" were published, while the fame of the "Campaign" was still warm; and Addison gave his new friend a copy inscribed to "Jonathan Swift, the most agreeable companion, the truest friend, and the greatest genius of his age." They were both in their prime—Swift thirty-eight, Addison five years younger, still young enough to hope for everything that could befall a man. Addison gave "his little senate laws" for many years in these convivial meetings, and all who surrounded him adored him. But Swift was never again so close a member of the little company. Politics, and the curious part which the Irish parson took in them, separated him from the consistent and moderate politician who acted faithfully with his party, and who was always true, whoever might be false. But Swift held fast to Addison so far, at least, as feeling was concerned. Over and over he repeated the sentiment, that "if he had a mind to be king he would hardly be refused."

In 1708 Addison lost his post as under-secretary by a change of the ministry, or rather of the minister, it being the habit in those days to form a government piecemeal, a Whig here, a Tory there, as favor or circumstances required, so that it was by no means needful that all should go out or come in together. But no sooner was the under-secretary deprived of one place than he obtained another, that of Secretary to the Lord-Lieutenant of Ireland—

the same office, we presume, as that which is now called Chief-Secretary for Ireland, though its seriousness and power are now so much greater. In those days there was no Irish people to deal with, however; only a very lively, contentious, pushing, and place-hunting community—the Protestant English-Irish, which, so far as literature and public knowledge go, has by mistake been accepted as the type of the Celt, a much darker and less simple character. The wild, mystic, morose, and often cruel nature of the native race, with its gleams of poetry, and dreams of fortune, has turned out a very different thing to reckon with. Addison's post was "very lucrative," we are told,—in fees and pieces of patronage, no doubt, for the income was only £2000 a year,—and he soon acquired an even greater popularity on the one side of the Channel than on the other. Something amiable and conciliatory must have rayed out of the man: otherwise it is curious to understand the popularity in brilliant and talkative Dublin of a stranger whose chief efforts in conversation were only to be accomplished *à-le-à-le-à-le*. But he had the foil of a detestable and detested chief—Wharton, whose corrupt and brutal character gave double acceptance to the Secretary's charm and goodness, and the Tories contended with the Whigs, says Swift, as to which should speak best of this favorite of fortune.

It was while Addison was in Ireland, thus gathering golden opinions, that an event occurred which was of the utmost importance to his reputation, so far, especially, as posterity was concerned. Among the little band of friends over whom he held a kind of genial sway, and who acknowledged his superiority with boundless devotion, was one who was more nearly his equal than any other of the band; a friend of youth, one of those erratic but generous natures whose love of excellence is almost rapturous, though they are unable themselves to keep up to the high level they approve. Steele can never be forgotten where Addison is honored. He had been at Charterhouse and at Oxford along with his friend, and no doubt it was a wonder among the reading men, in their earlier days, how it was that the correct, the polished, the irreproachable scholar of Magdalen, with his quiet ways, could put up with that gay scapegrace who was perpetually in trouble. But Addison was not a mere "spectator" so far as the friend of his youth was concerned. When he began to rise, there seems little reason to doubt that he pulled Steele up with him, introducing him to the notice of the fine people who in those days might make the fortune of a gentlemanly and clever adventurer, and that either by his own interest, or by that of one of his powerful friends, he procured him a place, and

started him in public life. Steele had already floated into literature, and whether it is true or not that Addison helped him in the concoction of one play at least, it is clear that the latter kept his purse and his heart well open to his friend, now a man about town, ruffling at the coffee-houses with the best, and full of that energy and readiness which so often strike out new ways of working, though it may require steadier heads to carry them out.

It was, however, while Addison was in Ireland that Steele was moved by the most important of these original impulses, an idea full, as it proved, of merit and practical use. Journalism was then in its infancy. A "News-Letter" or a "Flying Post"—a shabby broad-sheet containing the bulletin of a battle, a formal and brief notice of parliamentary proceedings, an account of some monstrous birth, as a child with two heads, or that perennial gooseberry which has survived into our own time, and an elaborate list of births, deaths, and marriages—was almost all that existed in the way of public record. The post to which Steele had been appointed was that of *Gazetteer*, which naturally led him to the consideration of such matters; and among the crowd of projects which worked together in his "barmy noddle," there suddenly surged uppermost the idea of a paper which should come out on the post days, the Tuesdays, Thursdays, and Saturdays which were, up to that time, the only days of communication with the country—a paper written after the fancy of the time, in itself a letter from the wits and the knowing persons in town, revealing not only the existing state of public affairs, but all those exquisite particulars of society which have always been the delight of country circles, and which were doubly sure to please at a time when society was governed by talk, when all public criticism was verbal, and the echoes of the wits in the coffee-houses were blown about on all the breezes. Steele saw at once what a thing it would be to convey these impressions at first hand, in a privileged "Tatler," direct to the houses of the gentry all over the country. Perhaps he did not perceive at first what a still finer thing it would be to have them served up with the foaming chocolate, or fragrant tea, at every breakfast in Mayfair.

Steele had gone on for some numbers before his new venture attracted the attention of Addison. He recognized whose the hand was from a classical criticism in the sixth number which he himself had made to Steele; and he must have been pleased with the idea, since he soon after appears as a coadjutor, sending his contributions from the Secretary's office in Dublin. There has been a great and prolonged controversy upon the respective merits of these two friends: some, and first among them Ma-

caulay, will have it that Addison had all the merit of the publication. "Almost everything good in the 'Tatler' was his," says the historian. But there are many who, despite Macaulay's great authority, find a certain difficulty in distinguishing Addison from Steele and Steele from Addison, and are inclined to find Steele as entertaining and as gifted as his friend. Indeed, we think in these early essays at least, it would be a mistake for the critic to risk his reputation on the superiority of Addison. He set up no higher standard than that which his friend had raised, but fell into the same humor, adding his contribution of social pictures with less force of moral generally, and with more delicacy of workmanship, but with no remarkable preëminence. The character of the publication changed gradually as the great new pen came into it; but whether by Addison's influence, or by the mere action of time and a sense of what suited the audience he had obtained,—which a soul so sympathetic as Steele's would naturally divine with readiness,—no one can tell. Gradually the news which at first had regularly filled a column dropped away. It had been, no doubt, well authenticated news, the freshest and best, as it came from the authorized hand of the *Gazetteer*; but either Steele got tired of supplying it, or a sense of the inexpediency of publishing anything which might displease his patrons and the Government convinced him that it was unnecessary.

The "Tatler" ended in January, 1711; the "Spectator" began in March of the same year. The one died only to be replaced by the other. It is said that Addison did not know of his friend's intention to cut the "Tatler" short, and it was he who was the chief agent in beginning the "Spectator." Therefore it may have been that the breach was only an impatience of Steele's, to which his slow, less impulsive, and more constant comrade could not permanently consent. No doubt Addison had by this time learned the advantage of such a mode of utterance, and felt how entirely it suited his own manner of work and constitution of mind. There is, perhaps, no book which is so characteristic of an epoch in history, and none which gives so clear a conception of the English world of the time. We sit and look on,—always amused, often instructed, while the delicate panorama unfolds before us,—and see everything pass—the fine coaches, the gentlemen on foot, the parsons in their gowns, the young Templars jesting in the doorways; but always with the little monologue going on which accompanies the movement, and runs off into a hundred byways of thought, sometimes serious, sometimes gay, often with no particular connection with the many-colored streams of passers-by, yet never obscuring our

sight of them as they come and go. Like other men, he takes it for granted that the fashion of his contemporaries is to go on forever. For posterity that smiling, keen observer takes no thought.

But of all the things that Addison did, there remains one preëminent creation which is his chief claim to immortality. "The Campaign" has disappeared out of literature; "Cato" is known only by a few much-quoted lines; the "Spectator" itself, though a work which "no gentleman's library can be without," dwells generally in a dignified retirement there, and is seldom seen on any table but the student's, though we are all supposed to be familiar with it; but Sir Roger de Coverley is the familiar friend of most people who have read anything at all, and the acquaintance by sight, if we may so speak, of everybody. There is no form better known in all literature. His simple rustic state, his modest sense of his own importance, his kind and genial patronage of the younger world, which would laugh at him if it were not overawed by his modesty and goodness, and which still sniggers in its sleeve at all those kind, ridiculous ways of his as he walks about in London, taken in on all sides, with his hand always in his purse, and his heart in its right place, and always familiar and delightful. We learn with a kind of shock that it was Steele who first introduced this perfect gentleman to the world, and can only hope that he was Addison's idea from the first, and that he did not merely snatch out of his friend's hands, and appropriate, a conception so entirely according to his own heart. To Steele, too, we are indebted for some pretty scenes in the brief history: for Will the Huntsman's wooing, which is the most delicate little enamel, and for the knight's own love-making, which, however, is pushed a little too near absurdity. But it is Addison who leads him forth among his country neighbors, and to the assizes, and meets the gipsies with him, and brings him up to town, carrying him to Westminster, and to Spring Gardens, in the wherry with the one-legged waterman, and to the play.

We have all met in later years a certain Colonel Newcome, who is very like Sir Roger, one of his descendants, though he died a bachelor. But the Worcestershire knight was the first of his lineage, and few are the gifted hands who have succeeded in framing men after his model. We seem to know Sir Roger from our cradle, though we may never even have read the few chapters of his history. This is the one infallible distinction of genius above all commoner endowments. Of all the actors in that stirring time Sir Roger remains the most living and real. The queen and her court are no more than shadows moving across the historic stage. Halifax, and Somers, and Harley, and even the

great Bolingbroke, what are they to us? Figures confused and uncertain, that appear and disappear.

We are not informed that the "Tatler" and the "Spectator," the real foundations of his fame, gave Addison any help in his career. That was assured by the "Campaign." He received his first post, that of "a commissionership with £200 a year," at once, in the end of 1704. In 1706 he became Under-Secretary. In 1708 his chief, Lord Sunderland, was dismissed, and Addison along with him; but he stepped immediately into the Irish Secretaryship. Two years afterward Addison, with his leaders, was once more out of office; but in 1714 they came triumphantly back, and he rose to the height of political elevation as Secretary of State, with a seat in the Cabinet. Though he did not retain this position long, on account of his failing health, he retired on a pension of £1500 a year. In 1711, at a period when he was supposed to be at a low ebb of fortune, in the cold shade of political opposition, he was able to buy the estate of Bilton, near Rugby, for which he paid £10,000 — which is not bad for a moment of misfortune. The success of the "Spectator," however, which was more his than Steele's (as the "Tatler" had been much more Steele's than Addison's), was apparently very considerable; Addison himself says, in an early number, that it had reached the circulation of 3000 copies a day. On a special occasion 14,000 copies are spoken of; and the passing of the Stamp Act, which destroyed many of the weaker publications of the time, did comparatively little harm to the "Spectator," which doubled its price without much diminishing its popularity. It had also what no other daily possessed, and very few periodicals of any time ever reach, the advantage of a permanent issue afterward in a succession of volumes, of which the first edition seems to have reached an issue of 10,000 copies. Fortunate writers! pleasant public!

The "Spectator" ended with the year 1712, having existed less than two years. Whether the authors had found their audience beginning to fail, or their inspiration, or, as is most likely had considered it wise, to forestall the possibility of either catastrophe, we are not informed. Almost immediately after the conclusion of this the greatest undertaking of his life, Addison plunged into what probably appeared to the weakness of the contemporary vision a much greater undertaking, the production of his tragedy "Cato," which made a commotion such as few plays did even at that period. It was partly as a political movement, to stir up the patriotism and love of liberty which were supposed to be failing under the dominion of the Tories, suspected of all manner of evil designs, that his Whig friends urged Addison to bring out the great play which had been simmering in his

brain since his travels, and which had no doubt been read in detached acts and pieces of declamation to all his literary friends. These friends had received several additions in the meantime, especially in the person of Pope, who was still young enough to be proud of Addison's notice, yet remarkable enough to be intrusted with the composition of a prologue to the great man's work. Swift, notwithstanding the coldness which had ensued between them on his change of politics, was still sufficiently in Addison's friendship to be present at a rehearsal, and the whole town on both sides was moved with excitement and expectation. On the first night, "Our house," says Cibber, "was in a manner invested, and entrance demanded by twelve o'clock at noon; and before one it was not wide enough for many who came too late for their places."

Of this great tragedy, which turned the head of London, and which the two great political parties vied with each other in applauding, there are only a few lines virtually existing nowadays. To be sure, it is in print, with the rest of Addison's works, to be read by whosoever will. But very few avail themselves of that privilege.

The end of a man's life is seldom so interesting as the beginning. After he has achieved all of which he is capable, our interest is more usually a sad than a cheerful one. Addison made in 1716 what seems to have been an ambitious marriage, though he was not the man, one would think, to care for the rank which gave his wife always a distinct personality and another name than his. The Countess of Warwick was, however, it would appear, a beautiful woman. She had the charge of a troublesome boy, for whom, no doubt, she would be eager to have the advice of such a man as Mr. Addison, whom all the world respected and admired. The little house at Chelsea (the house was called Sanford Manor House, and was figured some years ago against its present doleful background of gasometers in *THE CENTURY*) which that statesman had acquired, and where he delighted to withdraw from the noise and contention of town, was within reach through the fields of Holland House, the residence of Lady Warwick.

Addison was forty, and her ladyship had been a widow for fifteen years; but there is no reason for concluding that there was no romance in the wedding, which, however, is always a nervous sort of business under such circumstances. There was the boy, too, to be taken into account, who evidently was not a nice boy, but a tale-bearer, who did not love his mother's faithful lover, and made mischief when he could. There seems no evidence, however, that the marriage was unhappy, beyond a malicious note

of Pope's, which all the commentators have enlarged. The poor women who have the misfortune to be married to men of genius fare badly at the hands of the critics. There seems no warrant whatever for Thackeray's picture of the vulgar vixen whom he calls Mrs. Steele. Steele's letters exist, but not those of poor Prue, who was so sadly tried in her husband; and so that suffering woman has to suffer over again in her reputation after her life's trouble is over. It is very unfair to the poor women who have left no champions behind.

The end of our "Spectator's" life, was, however, clouded with more than one unfortunate quarrel, the greatest of which has left its sting behind to quiver in Addison's name as long as Pope and he are known. It is neither necessary nor edifying to enter at length into the bitterness of the past. Pope fancied himself aggrieved in various ways by the man who had warmly acknowledged his youthful merits, and received him (though so much his senior in years and fame) on a footing of equality, and who all through never spoke an ill-natured word of the waspish little poet.

Addison did not end his periodical work with the "Spectator." He took up that familiar character once again for a short time, long enough to produce an additional volume,—the eighth,—in which he had no longer the help of his own vivacious companion. The series is full of fine things, but we are not sure, though Macaulay thinks otherwise, that we do not a little miss the light and shade which Steele helped to supply. And other publications followed. Steele himself set up the "Guardian," in which Addison had little share; and various others after that in which the latter had no share at all. And Addison himself had a "Freeholder," in which he said some notable things; but these are all dead and gone, like so much of the contemporary furnishings of the age. Students find and read them in the old, collected editions; but life and recollection have gone out of them. Perhaps his own time even had by then got as much as it could enjoy and digest out of Addison. We, at least, have done so after nearly two centuries, and are capable of no more.

Thackeray has a little scoff at him as a man without passion. But Addison's fine and meditative genius had no need of passion. He is the "Spectator" of humankind. He had little temptation in his own calm nature to descend into the arena: the honors of the fight came to him somehow without any soil of the actual engagement. But it is not his part to fight. He makes no pretense of any inclination that way. He is the looker-on, and, as such, more valuable than a thousand men-at-arms.

A BACHELOR MAID.

By MRS. BURTON HARRISON,

Author of "The Anglomaniacs," "Sweet Bells Out of Tune," "Belhaven Tales," etc.

WITH PICTURES BY IRVING R. WILES.

V.

GOOD Briton, says Henley, must wear his heart in his breeches-pocket, or anywhere but on his sleeve. Alec Gordon, a good American, did not consign to his breeches-pocket the heart so unceremoniously

returned to him by the girl he loved, although he certainly did not wear it upon his sleeve. He put it, rather, into an office envelop stamped with the firm's name, tied it with legal tape, and consigned it to a pigeon-hole of his desk. There was work in plenty, and of a congenial sort, ahead of him, without forever playing the lorn lover. When he awoke on a bright, crisp Sunday morning, the day following his meeting with Marion at Mrs. Romaine's luncheon, and went to his window to fill his lungs with invigorating air, he felt that delight in living, that renewal of mind and body after healthy sleep, which is nearest akin to being born again in the flesh.

A church-bell, sounding near, did not act upon him like a prick of conscience, as it does upon older people who have nearly lived their span. He liked its reminder of peace and order in the calm of the usually noisy streets, as he did the Puritan demureness of many of the groups trooping churchward, and the quiet space to think and be glad in his youth and strength. Through his veins ran an exulting sense that the world outside his narrow chamber was his heritage, where there was nothing seriously awry in which he might not take a hand for bettering it.

But while, in bright day, the image of his lost love may not have glowed as effectively as in the mystery of night, when others around it had faded, his loyalty to her and to her father remained undiminished. He was not satisfied with the new inmate of their home. The hold Sara Stauffer had evidently acquired there made him vaguely uncomfortable. That afternoon he should make it his business to warn the judge in plain words that his daughter's friend was an unsafe guide for a girl full of opinions, like tendrils swaying in the wind, seeking a support to cling to. Disagreeable as this

task might be, it was rendered doubly obligatory upon him by the fact that from him had originally come the urgent request that a companion to Marion's solitude should be provided according to her wish.

Strengthened in disagreeable resolution by bath and toilet and a cup of tea, he stopped, on his way out of the building, at the quarters of his friend Clarkson. Of this gentleman he caught a glimpse in his inner room, in light attire, engaged in a matinal exercise of lifting himself some hundreds of times successively upon his toes, with a view to the ultimate enlargement of a pair of unsatisfying calves.

"Sit down, old chap," called out Clarkson, cheerfully. "I'm on my last hundred, and shall be with you in a minute — ninety-four, ninety-five, ninety-six — I'm really tremendously encouraged. Talk about climbing Alps — ninety-seven, ninety-eight — it's nothing to this — ninety-nine, one hundred — there! I really believe I'll be able to wear knickerbockers this summer. Though the increase in girth is slow, I don't find the exercise half so tiresome as I did, and I mean to give the thing full trial. Stop and breakfast with me, won't you? Can't promise you much to eat; but I'll have my tea and toast and an egg in, directly."

"It is so late now, I'm going to lunch with my maiden aunts, instead of breakfasting," said Gordon. "There's a matter I want to consult you about. I think you told me you have a relative who was or is one of the instructors at Somerville College?"

"Yes," said Clarkson, emerging in a gorgeous dressing-gown. "A cousin — about my age — brought up in our house. Don't mind telling you that I'd have married her once, if she'd have had me. But she preferred single-blessedness, and illimitable power to boss. Nice little fortune of her own, too. Teaches because she likes it. Writes pamphlets — all that sort of thing. Fine woman, though — very."

"Could I trouble you to find out from her, in confidence, any information they may have in the faculty about a lady who was once an inmate of their institution?"

"Gad! you speak as if it were a lunatic asylum, Gordon," said Clarkson, with a grin. "What you mean is a 'student of their university.'"

"Not a student — a teacher," said Gordon, giving the name of the object of his search.

"A client, eh?"

"I am acting in the interest of a friend; and I need not tell you that whatever information I receive will be treated with respect, and brought to bear only upon righteous ends."

"I'll write to Kitty to-day — Katharine — I beg her pardon. And to think, Gordon, that woman — nicest creature you ever saw — round and rosy, with dimples — by George! such dimples! — might have been my wife long ago, if she had n't sacrificed us both to an ideal. Said I would n't sympathize with her aims, and therefore she could n't make me happy. Here am I, an old bach.; and she a spinster of thirty-five — pretty, still! Well, hearts don't break, Gordon; hearts *don't* break, in this world. Look at that for a pair of calves, now. Pretty fair, aren't they? Not quite up to silk fleshings for a fancy ball perhaps — but fair. I'm thinking of going in for a new health-food I've seen greatly advertised for fattening, if I could be sure of getting it properly cooked at the club. That's one advantage a man has when he's married, Gordon. He can keep at it till they cook things to suit him in his home; but the nuisance of trying to teach those servants at the club is — why, sir, I —"

"I won't keep you from your breakfast, longer," said Gordon, smiling. "Good-by, and thank you for your promised coöperation in my little affair."

"Little affair," he repeated to himself on his way to luncheon with his aunts. "That's a misnomer. Marion's life, heretofore, has been like a fair white page. What may not that woman inscribe on it? For I do not, I cannot, feel satisfied there is not a niche sealed up in Madame Stauffer's past, that contains some record of a moral warfare with society in which she has been worsted. She is a mistress in the art of self-control, but I saw in her eyes that which sought to evade the too close scrutiny of mine. It was but for an instant, but the red flag warned me; and for Marion's sake, I pray God the woman may be got out of Marion's home and thoughts as quickly as possible."

THE Misses Stella, Clarissa, and Euphemia Gordon enjoyed the claim to respectful consideration, rare in New York of the present day, of residing in the house where they, and their father before them, had first seen the light.

Now well advanced in years, these maidens, whose fortune was to descend to the son of their younger brother Alexander, had survived the old-time pretension of their family to "lead New York." From time to time, indeed, they received their friends in this house built by their grandfather on a suburban property of

his near the Hudson River, in preference to a site of greater value in Broadway, because the old gentleman feared the noise and dust of a post-road outside the windows of his wife's drawing-room. On such occasions — although fashion, save when engaged in paying its respects to the Gordons, had kept aloof from the spot now hemmed in by houses given over as tenements to an encroaching population of foreigners, its garden overshadowed by an elevated railway — "every one" was there, because not to be seen there would have argued unacquaintance with the "best old stock."

Newcomers and youngsters of the ruling generation might stray through the large, dull rooms, wondering how life could have been endured upon carpets artlessly sprinkled with the lily and the rose, amid furnishings of rose-wood and satin damask, girandoles with twinkling lusters, florid mirror-frames, and statuettes on pedestals in every other window. But still society respected the Gordon house, and obeyed its summons as of yore. In the eyes of some ancients there lingered about the place a softly lambent halo, recalling the merry days of their youth. It was all very well, they would allege, for brilliant latter-day architects to reproduce, for new people with long purses, purely "colonial" interiors, and call them a revival of the best of early American art. Early America never dreamed of such beauty and harmony as these artists evolve for their clients. But, with all its sins against modern creeds in decoration, here were the actual surroundings of the gentlefolk who were the founders of their body social. One must needs be a Gordon to display, on a center-table with a marble top, a wreath of shell-flowers under a dome of glass.

As far as Alec knew, this wreath had never left this table. So, also, on a little mahogany stand in the dining-room, a "Scott's Bible" still nestled in a worsted mat. This he could not see without a vision of himself in infancy at family prayers, fatally impelled by original sin to kneel where he could have an eye upon a certain china basket containing crullers, kept always upon the buffet. Abhorring at this date of his life the old Dutch dainty as he had loved it then, it was yet inextricably associated in his mind with the act of devotion.

Through a like twist of psychology, he could never kiss the ivory-tinted cheek of his Aunt Stella, presented to him by that gentle old lady, without fancying he perceived the scent of rose geranium in the air. He had always heard of her "dressed for a party" in a book-muslin, with a blue scarf, a cameo brooch, a camellia with rose-geranium leaves in the hair behind her ear. This tradition of the family beauty equipped for conquest, as described to him in

childhood, was indelible; as likewise the picture of Aunt Clarissa dancing a shawl dance for the company at a ball given upon her "coming out." Alec quite believed he had seen the latter performance, although a reflection upon dates would have proved it impossible.

The same endurance of early impressions upon the mind of a child kept in him a faint belief in the ability of puzzle-cards tied together with faded ribbon to amuse a visitor. Nor did he doubt that Aunt Clarissa had an "admirable finger" for the guitar; and he sympathized earnestly when Aunt Stella confided to him that, in deference to a promise once extracted by her mama, she had never read any of the works of Lord Byron!

His two elder aunts, who were twins, were sitting together awaiting summons to the early dinner that on Sunday did duty for luncheon, when Gordon was shown into their presence.

The dim room, its shutters bowed to keep sunshine from the carpet, the gray cerements upon chairs and sofas, the tiny coal-fire in the grate, Miss Stella's pug, and Miss Clarissa's pussy, were all as usual.

The sisters, having returned from morning service, were, according to custom, engaged in analyzing the sermon until the dinner-bell should ring.

As the young man entered, Aunt Stella arose automatically and presented her cheek for his salute. Alec knew just how many steps he would have to make across the hearth-rug to meet Aunt Clarissa and *her* cheek. Then, sitting between them, he heard from Aunt Stella the exact condition of Aunt Clarissa's health, and from Aunt Clarissa how the last medicine had affected Aunt Stella's harmless malady. It was next in order to stroke the cat, which, advancing to greet him, made of her back an arch against his leg, and the pug, which, resting his forefeet on Gordon's knee, wheezed an asthmatic "how d' ye do."

"And Aunt Effie?" asked Alec, cheerfully.

Aunt Stella cleared her throat in a feebly deprecating fashion. Aunt Clarissa did likewise.

"Euphemia has not yet returned from service," said the twins, reluctantly.

"She still keeps up her preaching to those poor people in the Hell's Kitchen district?"

"Oh, yes, my dear Alexander; she still does," said Aunt Stella, the readier speaker of the two. "When I think of my poor mama, who was the most shrinking and sensitive of females, of my papa, who had a horror of ladies of our position being put before the public in any way — I really am almost glad they are spared Euphemia's extraordinary conduct. To teach in a Sunday-school — that, indeed, is one thing; but to conduct a service of her own arrangement, — a service *not in the prayer-book*, — to

stand on a platform and speak before the men and women of that horrible quarter!"

"Yes, my dear Alexander, in spite of all we can say," chimed in Aunt Clarissa. "It is not only that she has the most shocking-looking characters calling here and waiting in the hall; that she receives visits from people who, I know, had just as soon as not throw a bomb into our dining-room if they caught a glimpse of the plate upon the side-board; that she attends meetings, and offers resolutions just like a man; but she now writes for the newspapers — and what is going to become of us, Heaven knows!"

"At Effie's age, she should be more careful than she is of appearances," began Miss Stella; "not even a maid to attend her when she goes into those dreadful places!"

"At fifty-odd I think Aunt Effie might be trusted," said Alec, smiling; and the midday meal being announced, his energies were for a time devoted to carving a turkey upon a willow-pattern dish, and to appeasing the pangs of his vigorous appetite.

"What has Aunt Effie been writing about to the newspapers?" he said, at a convenient opportunity.

"Hush!" said Aunt Stella, warningly, till assured that the servant was out of hearing. "We try to keep it from our people, Alexander. It is a great sorrow, but we must bear it as we can. It was bad enough when she wrote a letter defending the character of a Greek flower-seller unjustly arrested, and even went into court to testify to his good character; but what will you say to her communicating to the press a new scheme she has for the cremation of — I hate to mention it at table — of — garbage in the flats of poor people?"

"Kitchen refuse would have been a better word, sister," said Clarissa, in mild rebuke. "Yes! What a subject for a refined, elegant female. Why, she should not know that such a thing exists!"

"It is a mystery I can never solve, why Euphemia, who was given just the advantages we had, should be so far from sharing our tastes and occupations."

"Alec, my lad, you're as welcome as flowers in March," exclaimed a hearty voice; and Miss Euphemia Gordon, in a tailor-made suit of masculine cut, and a pointed felt hat, walked into the dining-room, and took her place, after greeting her nephew with a stout shake of the hand.

Between the pastel tints and old-time poses of her sisters, this daughter of the house of Gordon resembled a vigorous sketch in black and white. Stout of frame, and never in her best days called handsome, Miss Effie's face was radiant with health, good-nature, and indomitable purpose.

Luncheon over, she carried Alec away to her own room, an apartment severely devoted to papers, a table with a type-writer between two southern windows full of sunshine, some chairs, and a desk, of which the pigeon-holes were well filled with neatly parceled documents. Here Miss Effie transacted the business of her life—in its broadest and truest sense the business of other people's lives.

"Now, answer me," she asked, wasting no words in preliminaries, "what did you mean by going off on that journey without coming to tell me in person of your trouble with Marion?"

"I simply could not speak of it," he said.

"I ought by this time to know the Gordon lock-jaw," she said, sitting down in her office-chair, opposite him. "Well, are you disposed to be more communicative now?"

"I ought to hold you accountable, Aunt Effie," he answered, with a half smile. "It is your creed that has infected her. And all this while I was comforting myself with the idea that, if Marion's indulgence in certain notions should make her turn out to be such a big-souled woman, helpful to herself and all around her, as you are, they could do her only good."

While he told her in brief his story, Miss Effie, listening, let the tenderness of her nature creep into her homely face.

"My boy," she said softly, when he had done, "don't you know we women have to learn our wisdom as you men do—by experiments, blunders, and new experiments controlled by experience? And don't you know my ideal society, wherein men and women shall work side by side, having share and share alike of the duties, responsibilities, and rewards of life? I had hoped that you and Marion were going to be its corner-stones; and if she has stumbled and fallen away from you in the darkness before dawn, I mean to believe that you will grope till you find each other's hands again, and grasp them never to be separated."

"I'm afraid you're a dreamer, dear Aunt Effie," the young man said sadly.

"It's the first time I've been accused of it, then. Bless me, Alec, don't I *know* this girl is just stifled by the life she's been leading as a polite slave of the nineteenth century in America. She must have time and opportunity to gratify her longing for a certain independence of thought and action; to find out for herself the values of the prizes of life, before she settles down to the task of being a wife and mother. She can't compromise with her conscience, to sacrifice to the petty duties of home her mental powers, until she has tested the exercise of them in a wider field. You ask me what she wants to do—what she thinks she can do? You don't know, I don't know; perhaps she does n't know yet.

But she has put to herself the question that is the question of the age: 'What am I? What do I mean to be? Am I not folding my talent in a napkin, by just allowing a man to love me and loving him in return? Who knows how long this love will last intact? When I look around me, what do I see but strained, disillusioned couples, who live together because they have sworn to do so, whose hearts are cold, whose spirits hold each other forever to account?' Marion may not recognize this, but it is what makes her fearful. The sense of her responsibility to herself is just now greater than her desire for love."

"Decidedly greater," said the young man, with a reddening face, as he got up to walk about the room.

"Now, Alec, don't be miffed with your plain-speaking old auntie. If Marion knew you as I do, she would have no fear. Be fair; and own that if all girls weighed as well their chances of married happiness, there would be fewer of the fearful mistakes we see about us. But no! Most of them go to the altar, their heads dizzy with their own importance, with thoughts of their presents, bridesmaids, jewels, establishment, at the side of a lover who swears they are perfection. How many of these escape the hour of bewildered dismay when they realize the bond that makes them subject for life to a man they can have known only on the surface? I believe if wedding-presents could be made into a pile, and the wife of a month could offer herself upon them in *suttee*, it would be a not uncommon event."

"You are not cheering, Aunt Effie."

"But I speak the truth—the truth that mothers know, and yet hide under wedding frippery, giving their girls no chance to discover it, until too late. It seems to me that, until girls are educated to think and act more freely, even the foreign fashion of the parents deciding for them in marriage would be a wiser one than that now prevailing."

"No fault can be found with the average young woman's willingness to 'know all things,'" said Gordon. "That is, if we are to judge by the freedom of speech and discussion that seems to be the outcome of young woman's emancipation. I declare to you, Aunt Effie, my gorge rises at the books I hear discussed in modern drawing-rooms. I am told even school-girls read these stories, written by women 'with a purpose,' happily sometimes too well-veiled to be perceived by their innocent readers. But who knows, if they are to explore all veins of thought, what our girls will not come to knowing or surmising? No, no; the girl of my imagination, like that of every honest and healthy-minded young man, is the old-fashioned Una sitting upon the lion's back, passing unsmirched

through the world—the girl who loves and trusts, and accepts with womanly dignity the lot her Creator has set aside for her. As to some of the advisers of young femininity in these days—those who rant and shriek, and ferment society without arriving at any result—may the Lord settle with them according to their deserts for the mischief they are doing!”

“I don’t know what they are reading, and I don’t go to the play,” said Miss Effie. “When I want to be entertained I just take down a volume of Sir Walter Scott, or Thackeray, or Dumas. I feel no call to investigate these Ibsens and Maeterlincks, and the queer English novels—written generally by women—I see mentioned in the newspapers.”

“I wish there were more like you, Aunt Effie, and you might bring us over to your way of thinking.”

“Oh, my dear, I am just a plain old woman, not clever or progressive, in the ‘highfalutin’ modern sense. Long ago I found out my work, and I am happy without husband or chick or child. I have never had experience of the feverish mental conditions of many women of this hour—but I can understand them, and, in a degree, sympathize with them. I believe they will end in something sane and sound. And, to come back to where we started,—to Marion,—I repeat that she is developing in a period when women no longer accept their fate blindly. She knows it would be as disastrous to you both, to devote her life to a union in which she is not absolutely sure of her willingness to submit to a tremendous will like yours, as to live that life in any pure self-indulgence.”

“Marion could hardly have felt herself called on to sacrifice anything that was good in her to selfish or trivial demands from me,” he said coldly.

“There, there, I’ve cut you, without intending it. I know you, but how can she? How can any girl know the lover who is captive to her youth and beauty? She sees you through a veil, dimly. Bide your time, and I trust she will come back to you—for, oh, Alec! what a grand couple you would make!”

Aunt Effie’s all-feminine burst of admiring championship was too much for her nephew’s sense of humor. He laughed; she laughed, patted his head, made him light a fresh cigar; and stretched upon her hard little lounge, he entered into one of the long, intimate talks he well knew how to value.

LATER that afternoon Gordon met Strémof, and took him to the Irvings’s house. They found Marion in the drawing-room, who told them that Madame Stauffer, having letters to finish, would join them before long.

Then Gordon, seeing Strémof’s anxiety for

a conversation with Miss Irving in which he might not be always a third between two people so linked by past relation, took the opportunity to seek the interview with Marion’s father to which he was urged by conscience rather than by inclination. There was no false sentiment in his mind about ousting the homeless little person safely ensconced in Marion’s chamber, in possession of all the privileges of Marion’s dwelling. If she were, as he honestly believed, dangerous to Marion’s peace, then go she must. And yet he wished it could have been another than himself who was to sow the seed of doubt of her in the judge’s unsuspecting mind.

Thus pricked by regret, he opened the door of the library—a spot where he had never failed to find the warmest welcome; and there saw what intensified his original mistrust.

In his great armchair, his hands folded, leaning back with a look of entire mental satisfaction, sat the handsome judge, over whose fine clear-cut features the firelight played with cheering warmth. At the end of the table nearest him, Sara Stauffer, pencil in hand, was checking off a catalogue of an expected sale of books, writing upon the margin notes at the dictation of his honor.

Gordon well knew the task. It was one in which he had often served the judge as Madame Stauffer was now serving him. Judge Irving had no instinct of the solitary bookworm who burrows in the dark. He liked to discuss, with some confidential and appreciative spirit, values, editions, bindings, the existence of possible duplicates of the volumes he desired. Once acquired, the books were apt to remain upon their shelves, unless taken down for dusting or to display to envying connoisseurs.

It was not the service yielded by Sara Stauffer that made Gordon conscious of a stab of disagreeable surprise. That might have been exacted by the judge from any one intelligent enough to render it, and tactful enough to make him think all the wisdom in the matter came from him. In the curves at the corners of the judge’s lips Gordon could read vanity well satisfied by daintiest feeding. After all, what could a dependent creature like this do better, to make herself welcome in a house where a guest stopping over night had been till now a thing almost unknown? No, it was not the subtle incense which Sara had been burning under the judge’s nostrils that Gordon objected to. If poor Marion had burnt more of that, she would have had an easier lot. But it was another one of those momentary flashes of self-consciousness he met in Sara’s eyes, when she thus unexpectedly confronted him, that made him pause, uncertain how to move next in his game against her. He could not tell whether she

meant defiance, or protest, or appeal. Perhaps all three. But the expression was withdrawn as nimbly as the tongue of a toad after his winged prey is secured. It was succeeded in her soft, dark orbs by a look of ingenuous welcome.

"There, you have come! I resign my task," she said, rising, while the beaming countenance of the judge became never so little blank. "Judge Irving feared you had forgotten him, and he wanted so much to be prepared for this sale on Wednesday. Don't criticize the paucity or the ignorance of my notes, please. I am only an humble understudy, who has taken the place of the leading man upon occasion."

"She has done it remarkably well, Alec," said the judge, rallying. "I may say that I never before met a lady who had her grasp of the thing. But I won't detain you, Madame Stauffer. After dinner you will give us some Chopin, perhaps."

"It is so good of you to listen. Marion and I are so proud of the success of our little home musicales," she said, with perfect propriety. "If Mr. Gordon is dining with you, perhaps he too will do us the honor afterward to be a listener to one of our four-handed pieces —"

"It's not those things I care much about," said the candid judge. "It's when you play without knowing beforehand what you are going to fall upon. By George! Gordon, that's wonderful! If you have n't heard her, you've a treat before you."

"If I know anything is expected of me, I invariably fall flat," said Sara, laughing, on her way out of the door.

Gordon, who closed it after her, was rather smitten with a certain meek grace of her manner,—a resignation to her position as entertaining supernumerary,—as was apparently the judge.

"Pity a fine creature like that should be put to the right about to make her own meager living," said his honor. "Do you know, Gordon, I was meaning to consult you about an idea I've got of asking her to—er—ah—accept compensation as a kind of—er—ah—librarian for me, and at the same time a companion to Marion, who is never happy out of her sight."

"What do you know of Madame Stauffer?" asked Gordon, from whose path the first stone was thus felicitously rolled away.

"Know—er—ah—why—she was an instructor at Somerville College. I have often heard you vaunt the intelligence and good judgment of that faculty."

"But before? Since? I understand how Marion answers these questions; but that is not enough indorsement for the woman who is to make a permanent part of your home, and to be the guiding influence of Marion's life."

An expression that began with foolishness and ended with vexation came upon his honor's face. His temper, always ready to explode upon being crossed or dictated to, flew to the relief of the situation. To Gordon he was simply cross, to Marion he would have been insufferably rude. In sufficiently plain terms he announced himself quite able to take care of the interests of his household without interference from without. He eulogized the sterling excellence, above all the submissiveness of character, of the cause of their dissension; and summed her up by saying that, for a woman, she had an amount of good common sense that would keep her from making mistakes or committing follies, no matter what the provocation.

Alec, who, on the judge's outbreak of irritation, had begun to poke at a lump of cannel-coal, here succeeded in shattering it into a glowing mass, licked by tongues of livid flame that spread radiance to the farthest ends of the room. It was growing dark, and the lamps had not yet been brought in; but this enabled him to give another glance at his senior's countenance, in which he read something sufficiently startling to make him wish at once to change the subject.

A feature of the ebullitions of Judge Irving's temper was that, without opposition, they died out as quickly as they came. He was really so well satisfied with his own importance and his own judgment, it did not seem worth while to contend for them. Having sufficiently silenced Gordon upon the point under dispute, he turned the conversation to the young lawyer's chances for political advancement; upon which topic, to the exclusion of all such minor matters as women and their influence for good or ill, they talked until dinner-time.

Strémof, who had awaited Gordon's return until he could wait no more, had long ago taken his leave. One or two other people had dropped in; but Sara Stauffer did not appear, and, when Marion was free to go up-stairs and look for her, she found her door locked, and Sara protesting through the key-hole that she was dressing for dinner, and would join her below in due time. But Sara had not been dressing for dinner ever since she left the library. For a long time she had been pacing her floor in a stormy wrath that shook her frail figure like a reed. Then she had thrown herself across her bed and sobbed, shedding hot tears of a nature we must hope the Higher Woman will never be called upon to shed—tears of rage and defiance, mingled with over-mastering love for one of the abject creatures born into the world to be woman's cross and curse! Sara may perhaps be pardoned this weakness, when we reflect that it was the first time in her thirty years of varied experience she had ever known

the bitter-sweet experience of caring for another more than for herself.

When she appeared at dinner she found their party of three supplemented by Gordon, who had been induced by the judge to remain as he was, in morning clothes. Not the closest student of the human mask could have read in hers a trace of the storm that had recently swept over it. So gracious, graceful, modest, yet entertaining withal, was she, that even Gordon was drawn into the circle influenced by her. Marion, effacing herself, looked proudly on at the irresistible effect of Sara's charm upon Alec.

And the judge! What had become of the testy, elderly gentleman who usually occupied that chair at the head of the table, who either fretted at the butler about the wines, the joint, the game, the salads, or else sat in gloomy silence that fell over his household like a pall? He was gone, and in his place sat a youngish, alert, courteous, good-looking stranger, the model of a judge off duty, a judge relaxed, a genial, considerate parent, and host, and master!

So far did the little candle of Sara Stauffer throw its beams. And, after dinner, when she sat down behind the pianoforte in the half darkness of the lamp-lighted music-room, and played uninterruptedly for half an hour, Gordon felt himself impelled to go over to her side; and, when he reached her, he stopped short, wondering why he had done this thing.

"You won't condemn my fingering," she said, audibly to the others. "I am aware that according to rule it is lamentably defective. I should be afraid to play before Baron Strémof, for example."

"But you have a gift of going straight to the heart with your music, that is of all gifts the most charming," he said enthusiastically. He stood there for a moment, and, as she played louder, added in a lower tone:

"I think you are a Pied Piper of Hamelin, to have lifted me from my chair, and brought me across the room, for what reason I know not."

She did not answer, but her music just then conveyed such "divine enchanting ravishment" the young man felt his steady brain invaded by something marvelously like personal attraction to the player. He wondered if it were true that, in the dusky corner where she was niched, he heard a half-breathed sigh.

The music stopped with a crash. With a petulant movement Sara arose from her seat, and went over to sit on a stool by Marion, resting her elbow in the girl's lap.

The judge, of whom this pretty picture was in full view, was quite carried out of himself by enthusiasm.

"By Jove!" he said, gallantly, "Madame Stauffer has bewitched us all! Gordon stands

there moonstruck; I believe Marion has been — crying, and I — by Jove!" he repeated, smiling ecstatically, but at a loss for further words.

Gordon, saying good-night, got out into the street as quickly as possible. He had a confused idea that Marion's eyes had met his with a look of triumph, and that before he had finished shaking hands with her, they had sought Sara's face with reverent admiration. The cool air, a brisk walk down the avenue, restored his balance and made him see things as they were.

"The little Lorelei is stronger than I thought; but she has done no more than make an ass of me for a minute and a half. The question is, what is her game? That, I shall make it my business to find out. . . . I wonder what Aunt Effie, who is a shrewd old dear, meant by supposing Marion would, of her own accord, come back to me. To-night she might have been a star trembling upon a lonely peak, so far away she seemed."

When he reached his room, he took out of a desk an imperial photograph of Marion which he had asked her to let him keep. As he gazed at it, a sweet, human look of love and trust he had sometimes seen there made a fresh imprint upon his heart.

"There is none like you, dear," he said loyally. "After this, either I win you back, or no woman shall claim me. And now, God speed my quest!"

VI.

THREE weeks later saw Alec Gordon again in the hall of Judge Irving's house, asking, with conventional indifference, the conventional question if "the ladies" were at home. The man who had admitted him, professing to be unaware of the movements of Madame Stauffer, said that he knew that Miss Irving had gone to attend a meeting of the University Settlement Association, as he himself had given the order to the coachman to drive there.

"Very well, Hilary," said Mr. Gordon, who was in reality well informed as to the point upon which he sought enlightenment. "Then you will probably find Madame Stauffer in the drawing-room; so give her my card, and say that I shall not detain her long."

Madame Stauffer *was* in the drawing-room. When Gordon entered that apartment, he had a sudden realizing sense of the fine way in which she had incorporated herself with her surroundings. Her face, figure, and dress had equally improved in appearance. There was in her manner a species of elegant nonchalance that allowed no hint to escape of her transitory relations with the luxury of this house and furniture. The sun shining too brightly upon her face

through a screen of azaleas in the window, she bade the servant lower the shade as though her life had been spent in controlling that servant and that shade. But Gordon, as he drew up a chair facing her, noticed that she shrank a little from his scrutiny.

"Would you not rather sit here?" she asked, indicating a place beside her.

"Thanks," he said coolly; "I took this chair, with my back to the light, the better to see your face."

"Outspoken, as usual," she answered, winning a little, but holding her head up bravely, as she confronted him.

"Yes; I rarely lose time when I see my point, and have an opportunity to go to it direct."

"Dear me! what is it you want to say to me?" she exclaimed. "When I received your note, and made a point of meeting its request, I was plunged into agreeable curiosity."

"I have not often had a visit to make that cost me so much hesitation—so much genuine regret," he said, with a touch of honest feeling in his voice.

"More and more tragic," she replied, smiling pleasantly, "when I consider how chary you have taken pains to be of your visits in general."

"Madame Stauffer, I am sorry for you," he went on bluntly. "But when you took up your abode in this house, you must have counted upon the risk you ran."

"Wait," said Sara, shutting her eyes. She wanted one moment alone with her own thoughts.

She knew, now, that he had found out that in her life which she had desired above all things to conceal; and the knowledge that from him the blow of exposure was to come was more than she could bear.

"I see that you understand me," said the quiet, persistent voice.

"So it was for this you wished to see me alone," she cried bitterly. "I—blind fool—who fancied that it was, perhaps, for other things; I, who dreamed there could be such a being as a big-hearted, unselfish man that, seeing the struggle of a woman against fate, might stretch out over her the mantle of his generosity—his pity—his—but no—no! They are all alike. Cruel, implacable, they ruin and they condemn."

"I cannot imagine why you use these very inappropriate words to me," he said.

"Oh! you do not? You refuse to see what is near you,—what might have been so much to you,—what would have made of your life one long brilliant career of success over your fellow-men? How could you fancy—a man born to be a ruler—that a wife like Marion Irving, a cold, half-developed dreamer, could sat-

isfy the needs of your nature—inspire you to great deeds?"

"It is I who am dreaming, or else you are mad that you say, or I think you say, things like this to me."

"Why should I not say them to you as well as you say them to another, or to me? Are we not equal souls?"

"I think not," he said, looking down upon her with a look that left her no rag of delusion as to his feeling toward her. "I beg your pardon if I seem brutal. But I cannot delay what I came here to say. I don't need to go into particulars. For some time past I have been engaged in satisfying certain doubts of mine about you, and I have succeeded. There is not in my mind a shadow of uncertainty as to the fact that you must not remain a day longer under this roof."

"Do you mean to tell *them*?" she said in a low, strained voice he hardly recognized.

"Why need I tell them? Why need I so pain her?"

"*Her—her!* it's all for her," she cried desperately. "For *her*—you have done *me* this wrong."

"If you wish me to say it, knowing your past, what in the world else *could* I have done?"

"How came you to set out in your noble quest for information about my past?"

"Because, from the first, I felt that somebody should know, better than any body did know, who it was that had been admitted into the most sacred confidences of Marion Irving's life, to influence her thought and actions. I inquired from your late employers at the college. They referred me to some people in Chicago. The track ended there. When you were next heard of it was in the South, under your present name—to which you have no lawful right."

"Well, granted that I went away with Dr. Stauffer, who had persuaded me to live according to his theories. I was deluded by a specious fanatic, a brilliant madman. I believed in him; he almost broke my heart and spirit, but he is dead. The world was all before me, the future long in which to live down six months of folly."

"People of my way of thinking have a harsher name for it," he said.

"You are pitiless! But it is over, I tell you. No one knows, unless you choose to publish it. Why is not the world wide enough for you and me?"

"It is wide enough, and I am not without pity. If you go from here at once, to-morrow afternoon, as soon as you can make arrangements to do so that will not arouse suspicion in our friends; if you will promise me to hold no future communication with Marion or her father, I shall see that you suffer no material loss."

"It needed only this!" she cried, bursting into tears.

Gordon walked up and down the room till she had spent the first force of her emotion. The experience thus coming to him of a nature divided against itself, in which an unconquerable passion for him had arisen to bear down all obstacles presented by her alleged principles of independence, was interesting enough to be dangerous to his resolution. He returned to her side, and stood there for a moment hesitating.

"You must know it is my desire to spare you anything more than it is absolutely needful for me to inflict — that makes me propose what so wounds you," he said finally. "In leaving here, you will be less than ever prepared to battle with the hardships of the world. You *must* let me help you financially — as a loan — as you will; you must not refuse me."

She had ceased sobbing, and now sprang up beside him, and laid her hand upon his arm.

"You do care then? You care, even a little bit."

"I care? Certainly. For what do you take me?"

"Enough to give me a little longer time?" she pleaded eagerly, her face kindling.

Her eyes sought his with magnetic influence. If ever in her life, she was under the spell of a genuine feeling. As they stood so, together, the door of the drawing-room opened, and Marion came in. Sara, who must have known who the intruder was, did not alter her position by a hair's breadth. It was Gordon who started violently away from her, and went over to take Marion by the hand.

"What is it?" said Marion, a shade paler.

Then Sara, for a moment unbalanced, sent a look of swift appeal to Gordon. But the sight of Marion had brushed all cobwebs from the man's brain. He saw the edge of the chasm he had grazed in passing. He stood erect, fearless, unmerciful — a righteous judge.

"Your friend has been telling me, Marion, that to-morrow she must leave you," he said distinctly, and without a tremor in his voice.

"To-morrow?" echoed Marion, without moving toward Sara.

"To-morrow afternoon, I believe you said, Madame Stauffer? If there is anything I can do to assist you in your preparations for departure, you will command me?"

Sara Stauffer did not answer him. Turning swiftly, she swept by the two, and left them alone together.

"What does this mean?" again asked Marion.

"Marion, you trust me?" he answered, trying to take her hand, which she withdrew.

"I have had a shock," she said mechani-

cally, going over to drop into a seat by the fire.

Gordon recognized that she would be relieved by his absence, but he could not go without one other word.

"Marion," he said, following her that he might speak in a low tone. "It's a pity you came in when you did, and it's a double pity I can't explain to you what you *naturally* can't understand. But I cannot. My lips are sealed. I have got to throw myself upon all the kind feeling you ever had for me. This is a pretty rough trick for Fortune to play me. Surely we've known each other long enough and well enough for you to believe me, without question, when I say there has been nothing between me and that woman you might not know, if you *could* know — but you can't. She is going out of your life to-morrow, as suddenly as she came in to it. Be kind to her, for she needs you. But for God's sake, believe me, and don't try to keep her in this house."

"The best kindness to me, just now, would be to leave me," the girl said; and he could see that she spoke the truth. With an inarticulate exclamation, driven from him by his thought of her vigil, soon to come with a tremendous disillusion, he left her.

For the remainder of the day he had, about the whole matter, a defeated and miserable feeling that gave him a sleepless night. The darkness into which his wide-open eyes stared was peopled for him by visions of possibilities arising out of his interference, and the luckless turn it had taken. The scene with Sara, upon which Marion had come so inopportunistically, now took on a complexion most unpleasant. What use might not that exquisitely artful person (of whose passion for him, however, it did not occur to his masculine mind to doubt the sincerity) make of the situation Marion had discovered, further to poison Marion's mind? What would it avail him to get rid of Sara, if he was to lose Marion in a way far worse than by the breaking of their late engagement? And whose part would the judge take in the matter — the judge who, having carried his point in offering to Madame Stauffer a salary as secretary for himself and companion for his daughter, had found himself so evidently comfortable and at ease in the new relation?

The night, that brings counsel, did not answer any of these questions to Gordon's satisfaction. He arose jaded and out of humor; went down-town to his affairs; went into court, to be disgusted with his own performance in a particularly interesting case; and on reaching his rooms to dress for dinner, found, cooling his little heels in the passage-way outside his door, a messenger boy, bearing a note, for which he was instructed to await the answer.

The envelop, addressed in Marion's handwriting, excited so lively a commotion in Gordon's breast that he struck three matches before he could light the gas. His hand trembled as he tore the note open. But all minor sensations of any description were destined to be swept away in a flood of angry astonishment when his mind grasped the actual meaning of the words he read.

Come to me if you can. I must have advice, and I have no one to whom to turn. My father married her to-day at twelve; and they have gone away on a wedding-journey. Of this I have just been informed by letter.

Gordon, having enlisted his good Aunt Effie to go with him to Marion, sat that evening in the library of Judge Irving's house, turning over and over in his hand a letter. It was from Sara and read:

It is better so, my darling Marion. When I saw last night your confusion and distress at the announcement of my intention to leave to-day—when you did not come near me once during my packing this morning,—I was so grieved at the misunderstanding—I longed, a thousand times over, to tell you my secret, and to weep it out upon your breast. But your father's wishes—henceforth the law of my life—were inflexible. He said that in a position like ours nothing would be gained by previous discussion of our intention. During my talk last night with him in the library, when you were shut up in your room, he exacted from me a promise to put our plan—for which I may tell you he has for some time had all the preliminaries arranged—into execution, before speaking of it to you. Ah! my Marion, if you are inclined to blame me, think what you—he—and your dear home have been to the friendless stranger, and say whether I could resist making them my own. When, after a few days' absence, we come back to you, may I not count upon a renewal of our sweet tie, our friendship, now to be one for life? May not our tastes, our aims, our energies, work together more closely than before? Consider, as I have, that in your isolated position you need me as much as I need you. I shall be so kind, so tender, your life will be smoothed in many respects, I promise. Let nothing drive from your heart one who, whatever comes, will ever hold you close in hers! Your SARA.

While the two women, up in Marion's room, were discussing the matter in the aspect it would present to friends and society at large, Gordon felt the sting of his defeat to be more poignant, the more he contemplated its various faces known only to himself. That Sara had effected her victory over him by a dazzling sloop, he had reluctantly to confess. For so many weeks he had carried about with him the uncomfortable knowledge of her interest in himself far

beyond an ordinary interest, he had entirely ceased to apprehend danger from the direction in which it had finally and decisively come. He now cursed himself as an infatuated idiot not to have suspected that this adventuress was well equipped at every point; that, failing her schemes upon him, she would immediately resort to the act that had placed her in sacred safety forever, beyond the reach of his knowledge of her past. That, after all, was the rub. To save Marion and Marion's name from the exposure of Sara Stauffer's past, he would henceforth have to spend his best efforts in concealing it. In all human probability the question, unless he brought it up, would never present itself to threaten the peace of the Irving household. His investigation of the facts, known to few, and carefully concealed, had been made with difficulty; and even those from whom he had procured information did not suspect his object. Never did an ingenious piece of detective work reward its contriver with such a thankless ending. With all his heart he wished himself free of the secret; and then cast about him for a means of meeting a demand for explanation sure to come from Marion.

"You are still here, Alec?" said Marion, entering the room. "I fancied you would stay till I could have a talk alone with you. It was a kind thought to bring your Aunt Effie to me, and, whatever comes, I thank you for it."

"Whatever comes!" Gordon, who had risen to meet her, stood while she sat down. He had a queer feeling of complicity in the wrong that, in a few hours, had changed her to a woman of marble, with bright, glittering eyes in which there were no tears. He waited. For the life of him he could not speak.

"When you came here yesterday, am I wrong in thinking it was by appointment with—*her*?" she said.

"I had written asking her to receive me, and she had fixed that hour."

"Had you then any suspicion of her intentions to do what she has done?"

"None. It came upon me like a thunder-clap," he said frankly.

"And yet, when I came into the room, there was something between you, far out of the common," she went on, trying to weigh her words. "If it was not about my father, it must have been—on your own account," she burst out, losing her self-possession. "Oh! what is the hateful mystery? Either she is a miracle of deceit, or you—you, the one whom it is my first impulse to trust and believe in—have been hiding something from me. Alec, when I found myself alone to-day, in my distraction I wrote first to you. As soon as I had sent the message, I remembered the circumstance of yesterday, and I wanted to recall the note. I think if it had

not occurred to you to bring your Aunt Effie with you, I should have asked to be excused when you came. And yet, how can I believe you are other than I have always known you — incapable of betraying our friendship?"

"You are right, Marion. I am incapable of betraying our friendship," he said, greatly touched. "If ever in my life I wanted to do anything, it is at this minute to give you the fullest possible explanation of what you ask. But it is simply impossible. For myself, you might read every thought of my heart; but unless you can trust me, I must go away and leave you, and bear, as I can, the misfortune of the accident that has placed me in this position."

"Then I will alter the form of my question," she said, after thinking for a time. "Tell me what you would counsel me to do. Is there known to you any reason, apart from her duplicity to me, why I may not accept this woman as my father's wife, live under the same roof with her, put the best face before the world upon the situation?"

She gazed at him steadily. The color rose into Gordon's face. He turned aside, and walked to the far end of the room and looked through the window into the night.

"I am answered," said Marion, drearily.

"Marion, you are putting me in a position that is intolerable," he exclaimed, returning to her side. "May I not beg you, in justice to me, to withdraw that question? Consider that you are asking me about your father's wife."

"Then you *do* think that it is my duty to receive her as such?" she cried, pathetically eager, it seemed to him, to cling to her last illusion. "Oh, Alec! Hard as I may seem, I am almost desperate. I want to forgive, I want to forget. I want to live down the cruel doubts I have had of her, and the constant feeling I have that she has used me, and everything around me, for her own purposes. But I can't. I will not attempt to struggle, if I must end by disastrous failure. There is only one way to meet the crisis. I must go out of this house. I cannot wait them here."

"Could you not come to *me*, Marion?" he said tenderly.

"No, no, not that! Don't make me sorry I sent for you in my overpowering trouble."

Gordon started as if he had been stung.

"I did not mean to hurt you," she added quickly. "But you must see I am in no condition to talk of what I have just succeeded in putting out of my thoughts. It is not that I do not believe in you. I do; and I ask your pardon for a doubt born of extraordinary circumstances."

"I believe you never loved me," he said, cut by her measured tone.

"At any rate, I thought so once," she returned, covering her eyes wearily with her hand, as she rested her elbow on the table. "Since we have been parted, I have almost thought I was mistaken; there have seemed to be things so much more incumbent upon me than loving. In place of the heart I used to have, there is now a spot sealed under a stone. The person who has come nearest to touching it is dear Miss Effie Gordon; but I am afraid even she will be discouraged."

"You will let Aunt Effie take charge of you?" he said, catching at a straw.

"Your aunt? Your nearest relative? I think not. It would only complicate matters. No, she sees that, as I do; and in the last hour she has helped me to come to a decision about my future. Feeling as I do, I cannot stay here till they return. I shall find a place to go to; and trust me, I shall do nothing that either you or Miss Effie would disapprove of. If you choose, I will promise to be guided by her advice in everything about the change. But as, henceforth, I am to live to myself, I think I might begin now to act independently. A woman of twenty-five is no child, Alec. Don't look at me with such doubtful eyes, because I am going out to meet the world."

Insensibly, she had fallen into the old attitude of appealing to his judgment.

"What, in God's name, do you know about the world?" he burst out irrepressibly.

"It is time that I should, then," she said, with an answering spark of spirit. "I am a thousand times better equipped in means and education than most of the other women who are forced into the conflict by necessity. Is it not my plain duty to correct the defects of my environment?"

Gordon looked about the room, to whose interior of mellow beauty no sound of the street penetrated.

"And you, who have lived all your sheltered life in *this*," he said, "think you can step outside of it, alone, without definite aims, with no protection? Have you ever fancied what it would be to be left in the street at midnight, unable to get within your own door? The helplessness of woman when she is bereft of the shield of conventionality is something you never have had to contemplate, and that I cannot contemplate for you."

"What, then, do you propose for me, Alec?" she said, quietly.

Gordon was silent.

"Not a residence under the roof of either of my uncles, even if their wives would have me? I can hardly go back to college — though, indeed, I have thought of teaching there, if they would make a place for me. In the seven days' wonder this affair of my father's is going to

"IT NEEDED ONLY THIS," SHE CRIED."

make, surely the best thing I can do is to keep out of sight and chance of comment. Miss Effie says she will help me when I have determined — and since we have been talking I *have* determined — to make a home for myself."

Gordon looked at her in surprise. In spite of the marks of deep distress upon her face, it had been lighted from within by the new flame of resolution that transfigured her.

Miss Effie, coming in, saw also the expression of Marion's countenance, and, going up to her briskly, put a kind arm around the girl's shoulders.

"Courage, my dear!" the old maid said in her hearty voice. "The hardest thing in all this world is to be true to one's self. If I don't mistake, you have been asking this boy of mine the question why you may not belong to yourself, and *perhaps* he has not been able to answer you. What you are striving for is neither unwomanly nor revolutionary; it is a thousand

times better for you to work out your own experiment in your own way than to let yourself be cramped and choked by mere conventionality. And, after all, who knows but the opportunity that has come to you in this unwelcome fashion may prove a blessing in disguise?"

"You will excuse me from discussing it further," Gordon said stiffly. Just now he was irritated against all the world, including honest Aunt Effie; and his only idea of an appropriate exit from the situation was an exit from the house.

After this, he would let the women manage affairs for themselves; and when Marion should want him again, she must ask twice before he would adventure himself to a like experience. Even his dismay at the fate that had overtaken his old friend, the judge, was subordinated to the thought that Marion was now free to roam unchecked in the dangerous field of modern feminine independence.

(To be continued.)

Constance Cary Harrison.

COLOR AT THE FAR NORTH.

WITH PICTURES FROM PAINTINGS BY THE AUTHOR.

THE members of the Peary Relief Expedition, in their quest after Lieutenant Peary and his party, sailed out of the beautiful harbor of St. John's, Newfoundland, in the steamer *Kite*, and a week later, with awe and expectation, I saw the *Kite's* black prow plowing its way at last through Northern waters, and became fully aware that we were finally launched into the regions of desolation; for the sad experiences of so many brave explorers have cast a black pall over this vast expanse of the almost unknown. There are no forests, as we measure them, the birch and willow being only two inches in height, and its meager quota of humanity clings wisely to the sea-coast. Summer is only too brief, and, for the rest of the year, night obscures the sun.

Nevertheless, from an artistic standpoint, we found a land of beauty, with seas and skies of surpassing loveliness. The intensity and brilliance of color impress the beholder as something supernatural. Our sojourn was from the middle of July, through August, and a few days of September — a period when the polar latitudes are teeming with animal, insect, and plant life. Of this brief period only am I qualified to speak; but from the accounts given

by those who have passed through the long, dreaded night season, the phenomena occurring in the heavens are most beautiful. The chief peculiarity of color at the North, so far as my short experience tells me, is that there are no semitones, the general effect being either very black or just the opposite, intensely brilliant and rich in color. In fact, a summer's midnight at the North has all the brilliance of our brightest noon, with the added intensity and richness of our most vivid sunsets, while noon, when the sun is obscured by threatening masses of storm-clouds, is black. Indeed, it is the true land of "impressionism." Appreciating the difficulty of depicting in an adequate manner the true force of these color-changes, I shall endeavor simply to characterize a few of the many we beheld with breathless delight.

On Friday, July 8, we sighted the first evidence of our approach to these strange regions. Far away to the north, the horizon — a band of silver — betokened the presence of an "ice-flow," while the reflection from its surface, called the "ice-blink," threw a fine pinkish mist, bow-shaped, into a setting of dark-gray fog and sea. After this short prelude, our vessel was enveloped in a labyrinth of mist, which lasted for days. On July 12 as if by magic the fog lifted, disclosing Greenland's stately, cathedral-like

AN ARCTIC CATHEDRAL, MELVILLE BAY, 9.30 A. M., JULY 20, 1892.

ENGRAVED BY HENRY WOLF.

craggs in bluish purple and silvery blues. Pure white glaciers chiseled beautiful forms through their rocky fastnesses, winding their inevitable way to a sea of dark dun purple, the surface of which was of a peculiarly muddy consistency. The sad color of the water was enhanced by countless phantomlike grotesques in ice, which passed silently by, beautiful in opalescent blues and shades of malachite green, their tops reddish by contrast with the purplish water that surged over their polished bases. Wild fowl uttered harsh cries as they flew, and there were strange blowing sounds as the huge black tail and fins of the whale sprang out clear and distinct from the sea preparatory to a long deep dive. We were opposite Godthaab, where Nansen and his followers landed after their arduous journey across the "Inland Isle." In crossing the Arctic circle we saw the midnight sun for the first time — a sunset, or rather a temporary setting of his majesty, for the rising was almost immediate. Brighter than a brilliant twilight, it was most regal and splendid.

The lonely little *Kite* rose and fell on long heaving masses of imperial purple seas, shimmering and vibrating in interminable borderings of gold, and tones of ruby, sapphire, amethyst, and emerald. Overhead were the same colors in fantastic cloud-forms half-hiding the sun, with the peculiar calm and dignity of aerial creation.

Unusually fortunate as to weather, our way kept bright most of the time, and we anchored opposite Upernavik on Sunday, July 17, at 11 P. M., in perfect calm. The sun ruled supreme,

a disk of golden fire which scintillated and sparkled in myriad hues of gold. The deep, glassy surface reflected back his molten golds. Separating sky and sea, lofty, darker-hued promontories and islands, bathed in gold, stretched away in far perspectives, and colossal icebergs of golden white and rich blues filled sleeping channel and fiord, almost lost in a haze of powdered gold and orange just beneath the sun, and coming out in strong clear blues and greens against jagged masses of purpled peaks in the distance, and dun-colored rocks in the foreground.

Extremes in color-effects seemed to follow one another more closely in Melville Bay than elsewhere.

I remember one brilliant morning when the measureless ether overhead, a hue of exquisite blue, repeated itself in the perfect mirror of the sea. Far away, on the otherwise clear-cut horizon, a line of pure white ice shimmered its light up through a pinkish, yellow stratum of mist, which bathed in delicate greenish blue an enormous iceberg that strongly resembled an ancient cathedral. In the afternoon the sky, a threatening black, overhung a vast, contorted sheet of white and pink, composed of ice-floe and colossal bergs looming up above its mass at intervals, with deep, black patches of water, the whole carrying the eye to the horizon — a tapering band of deep, rich blue merging into the sky. In the immediate foreground of the ice-floe, near the water's edge, were shallow pools of delicate blues, purples, and greens.

Of the wealth of color in flower, lichen, and

moss; of its curious riches as manifested in insect, shell, and animal life, and of its wonderful limning skill as shown on the great inland ice, ice-cap, and glacier, I have neither a wizard-like power of enchantment — a distinctive uncanniness that, basilisk-like, both attracts and repels. Great nature's pitilessness broods over it with a force and penetration

AN AURORA BORREALIS SEEN OFF GODTHAAB, 9 P. M., SEPTEMBER 3, 1892. ENGRAVED BY CHARLES STATE.

purpose nor pen to write. This new world of color awaits the one who can truly describe it. In all these color-effects at the North there lies possibly not equaled, and surely not surpassed, in any other known quarter of our globe. It is a land of beautiful and awesome dreams.

Frederick Wilbert Stokes.

IN MID OCEAN.

THOU hast not here the limit of a shore ;
 No wing, no star, hints of a beating heart ;
 No sail, or near or far, thou seest more :
 Alone, with two infinities, thou art.

Charlotte Fiske Bates.

POE IN PHILADELPHIA.¹

SELECTIONS FROM THE CORRESPONDENCE OF EDGAR ALLAN POE.

EDITED BY GEORGE E. WOODBERRY.

POE removed from New York to Philadelphia in the summer of 1838. He worked for the booksellers, the magazines, annuals, and newspapers, and won repute by the tales of "The Fall of the House of Usher," "Ligeia," and "William Wilson." He published early in 1839 a manual of conchology, pirating the text, and at the end of the year the two volumes of the "Tales of the Arabesque and Grotesque." In May, 1839, he was engaged by William E. Burton as assistant editor of "The Gentleman's Magazine," and held the post until June, 1840, when the two parted under circumstances of mutual vexation. The only public reason given by Burton occurs on the cover of "The Gentleman's Magazine" for September, 1840: "Our friend at Portland may rest assured that we were ignorant of the non-transmission of his numbers. His name was erased from our list by the person whose 'infirmities' have caused us much annoyance."

This bears out the statement of C. J. Alexander, the publisher of the magazine, that Poe's habits were one cause of the difficulty. The matter is fully dealt with in the biographies. Poe was anxious to have a magazine of his own, and planned "The Penn Magazine," which was announced to appear on January 1, 1841. The scheme had been growing in his mind for a year. Lack of funds prevented its realization. Meanwhile George R. Graham had bought "The

Gentleman's Magazine" in October, 1840, and merged it with his own periodical "The Casket"; and having had dealings with Poe in connection with other publications, he offered him a share in the editorship of the new "Graham's Magazine," which he accepted, as was

announced February 20, 1841. Poe remained with Graham until April 1, 1842, when the May number was prepared, and was succeeded in his chair by Griswold, who was offered the post April 20, and had accepted it by May 1. During his connection with "Graham's" Poe had not abandoned his plan of "The Penn Magazine," but in the latter half of 1841 had hoped to persuade Graham to abandon the present magazine, and join him in the new venture. The reasons for his leaving "Graham's" were of the same nature

as those which had occasioned his previous changes of editorial employment, but he remained on terms of intercourse with both Graham and Griswold. He at once advertised "The Penn Magazine," and solicited subscribers and funds; but when he at last succeeded in making a contract with Thomas C. Clarke, owner of the Philadelphia "Saturday Museum," about January 1, 1843, it was decided to call the new magazine "The Stylus." In the interest of this plan his biography by Hirst, with his likeness, was published in the "Saturday Museum" of March 4, 1843, with the announcement of "The Stylus"; but this scheme also failed. During these years he had made an effort to obtain employment in some government office, and had given some public lectures. Early in 1844 he left

Philadelphia, and removed once more to New York.

The facts thus briefly stated are necessary to the understanding of the following letters, which are one of the main sources of his biography for this period. The first important letter contains Burton's offer of the assistant editorship of "The Gentleman's Magazine."

BURTON TO POE.

PHILADELPHIA, May 10, 1839.

EDGAR A. POE, Esq.

MY DEAR SIR: I have given your proposal a fair consideration. I wish to form some such engagement as that which you have proposed, and know of no one more likely to suit my views than yourself. The expenses of the Magazine are already wofully heavy; more so than my circulation warrants. I am certain that my expenditure exceeds that of any publication now extant, including the monthlies which are double in price. Competition is high — new claimants are daily rising. I am therefore compelled to give expensive plates, thicker paper, and better printing than my antagonists, or allow them to win the goal. My contributors cost me something handsome, and the losses upon credit, exchange, etc., are becoming frequent and serious. I mention this list of difficulties as some slight reason why I do not close with your offer, which is indubitably liberal, without any delay.

Shall we say ten dollars per week for the remaining portion of this year? Should we remain together, which I see no reason to negative, your proposition shall be in force for 1840. A month's notice to be given on either side previous to a separation.

Two hours a day, except occasionally, will, I believe, be sufficient for all required, except in the production of any article of your own. At all events you could easily find time for any other light avocation — supposing that you did not exercise your talents in behalf of any publication interfering with the prospects of the G. M.

I shall dine at home to-day at 3. If you will cut your mutton with me, good. If not, write or see me at your leisure. I am, my dear Sir, your obedt. Servt.,

W. E. BURTON.

Poe had through life the habit of sending his better tales and poems to distinguished literary men, and soliciting thereby their attention. One or two instances of this have been mentioned. He kept the replies, and was thus enabled to append to Hirst's biography of him in the Philadelphia "Saturday Museum" a long list of encomiums, in addition to such as had been publicly made. The following letter from Washington Irving was written in acknowledgment of "William Wilson," which had followed the "House of Usher," as a means of introduction, and the substance of it, much altered and somewhat garbled, appeared in the list referred to, and affords a striking instance of how Poe dealt with such correspondence.

IRVING TO POE.

NEWBURG, November 6, 1839.

DEAR SIR: The magazine you were so kind as to send me, being directed to New York, instead of Tarrytown, did not reach me for some time. This, together with an unfortunate habit of procrastination, must plead my apology for the tardiness of my reply. I have read your little tale of "William Wilson" with much pleasure. It is managed in a highly picturesque style, and the singular and mysterious interest is well sustained throughout. I repeat what I have said in regard to a previous production, which you did me the favor to send me, that I cannot but think a series of articles of like style and merit would be extremely well received by the public.

I could add for your private ear, that I think the last tale much the best, in regard to style. It is simpler. In your first you have been too anxious to present your picture vividly to the eye, or too distrustful of your effect, and have laid on too much coloring. It is erring on the best side — the side of luxuriance. That tale might be improved by relieving the style from some of the epithets. There is no danger of destroying its graphic effect, which is powerful. With best wishes for your success, I am, my dear sir, yours respectfully,

WASHINGTON IRVING.

Philip Pendleton Cooke was another author to whom Poe introduced himself by means of a tale. On September 16, 1839, Cooke wrote a long and most appreciative letter in answer, with interesting criticism; but there is room here only for Poe's reply.

POE TO COOKE.

PHILADELPHIA, September 21, 1839.

MY DEAR SIR: I received your letter this morning — and read it with more pleasure than I can well express. You wrong me, indeed, in supposing that I meant one word of mere flattery in what I said. I have an inveterate habit of speaking the truth — and had I not valued your opinion more highly than that of any man in America I should not have written you as I did.

I say that I read your letter with delight. In fact I am aware of no delight greater than that of feeling one's self appreciated (in such wild matters as "Ligeia") by those in whose judgment one has faith. You read my most intimate spirit "like a book," and with the single exception of D'Israeli, I have had communication with no other person who does. Willis had a glimpse of it — Judge Tucker saw about one half way through — but your ideas are the very echo of my own. I am very far from meaning to flatter — I am flattered and honored. Beside me is now lying a letter from Washington Irving in which he speaks with enthusiasm of a late tale of mine, "The Fall of the House of Usher," — and in which he promises to make his opinion public, upon the first opportunity, — but from the bottom of my heart I assure you, I regard his best word as but dust in the balance when weighed with those discrim-

NATHANIEL P. WILLIS.

inating opinions of your own, which teach me that you feel and perceive.

Touching "Ligeia" you are right—all right—throughout. The *gradual* perception of the fact that Ligeia lives again in the person of Rowena is a far loftier and more thrilling idea than the one I have embodied. It offers in my opinion, the widest possible scope to the imagination—it might be rendered even sublime. And this idea was mine—had I never written before I should have adopted it—but then there is "Morella." Do you remember there the *gradual* conviction on the part of the parent that the spirit of the first Morella tenants the person of the second? It was necessary, since "Morella" was written, to modify "Ligeia." I was forced to be content with a sudden half-consciousness, on the part of the narrator, that Ligeia stood before him. One point I have not fully carried out—I should have inti-

mated that the *will* did not perfect its intention—there should have been a relapse—a final one—and Ligeia (who had only succeeded in so much as to convey an idea of the truth to the narrator) should be at length entombed as Rowena—the bodily alterations having gradually faded away.

But since "Morella" is upon record I will suffer "Ligeia" to remain as it is. Your word that it is "intelligible" suffices—and your commentary sustains your word. As for the mob—let them talk on. I should be grieved if I thought they comprehended me here. The "saith Verulam" shall be put right—your "impertinence" is quite pertinent.

I send the "Gentleman's Magazine" (July, August, September). Do not think of subscribing. The criticisms are not worth your notice. Of course I pay no attention to them—for there are two of us.

It is not pleasant to be taxed with the twaddle of other people, or to let other people be taxed with ours. Therefore for the present I remain upon my oars — merely penning an occasional paragraph, without care. The critiques, such as they are, are all mine in the July number and all mine in the August and September with the exception of the three first in each — which are by Burton. As soon as Fate allows I will have a Magazine of my own — and will endeavor to kick up a dust. Do you ever see the "Pittsburg Examiner" (a New Monthly)? I wrote a Review of "Tortosa," at some length in the July number. In the October number of the "Gentleman's Magazine," I will have "William Wilson" from "The Gift" for 1840. This tale I think you will like — it is perhaps the best, although not the last, I have done. During the autumn I will publish all in two volumes — and now I have done with my egotism.

It makes me laugh to hear you speaking about "romantic young persons" as of a race with whom, for the future, you have nothing to do. You need not attempt to shake off or to banter off Romance. It is an evil you will never get rid of to the end of your days. It is a part of yourself — a portion of your soul. Age will only mellow it a little, and give it a holier tone. I will give your contributions a hearty welcome, and the choicest position in the magazine. Sincerely yours,

EDGAR A. POE.

The correspondence thus begun was continued in a friendly spirit for some years, and a later example is given.

A single letter of Poe to Longfellow was written to solicit his assistance in the magazine projected by Poe in connection with Graham, in 1841, to which reference has been made. It is of the nature of a circular letter, and is nearly the same as a letter to Kennedy, June 22, 1841. The editor has also seen elsewhere a letter of the same tenor to Cooper, the novelist. Longfellow never exhibited toward Poe so appreciative a feeling as did his other contemporaries, and the bitterness with which Poe attacked him at a later period may be partly accounted for on this ground. The letter which follows is an excellent example of the business side of Poe's capacity for literature:

POE TO LONGFELLOW.

PHILADELPHIA, June 22, 1841.

DEAR SIR: Your letter of the 19th May was received. I regret to find my anticipations confirmed, and that you cannot make it convenient to accept Mr. Graham's proposition. Will you now pardon me for making another?

I need not call your attention to the signs of the times in respect to magazine literature. You will admit that the tendency of the age lies in this way — so far at least as regards the lighter letters. The brief, the terse, the condensed, and the easily circulated will take place of the diffuse, the ponderous, and the inaccessible. Even our

reviews (*lucus a non lucendo*) are found too massive for the taste of the day: I do not mean for the taste of the tasteless, but for that of the few. In the mean time the finest minds of Europe are beginning to lend their spirit to magazines. In this country, unhappily, we have not any journal of the class which either can afford to offer pecuniary inducement to the highest talent, or which would be, in all respects, a fitting vehicle for its thoughts. In the supply of this deficiency there would be a point gained; and in the hope of at least partially supplying it, Mr. Graham and myself propose to establish a monthly Magazine.

The amplest funds will be embarked in the undertaking. The work will be an octavo of 96 pages. The paper will be of excellent quality — possibly finer than that upon which your "Hyperion" was printed. The type will be new (always new), clear, and bold, with distinct face. The matter will be disposed in a single column. The printing will be done upon a hand-press in the best manner. There will be a broad margin. There will be no engravings, except occasional woodcuts (by Adams) when demanded in obvious illustration of the text; and, when so required, they will be worked in with the type — not upon separate pages as in "Arcturus." The stitching will be done in the French style, permitting the book to lie fully open. Upon the cover, and throughout, the endeavour will be to preserve the greatest purity of taste consistent with decision and force. The price will be five dollars.

The chief feature in the literary department will be that of contributions from the most distinguished pens (of America) exclusively; or if this plan cannot be wholly carried out, we propose, at least, to make arrangements (if possible) with yourself, Mr. Irving, Mr. Cooper, Mr. Paulding, Mr. Bryant, Mr. Halleck, Mr. Willis, and one or two others. In fact, our ability to make these arrangements is a condition without which the Magazine will not go into operation; and my object in writing you this letter is to ascertain how far I may look to yourself for aid.

In your former note you spoke of present engagements. The proposed journal will not be commenced until January 1, 1842.

It would be desirable that you should agree to furnish one paper each month, — prose or poetry, absolute or serial, — and of such length as you might deem proper. Should illustrations be desired by you, these will be engraved at our expense, from designs at your own, superintended by yourself. We leave the matter of terms, as before, to your own decision. The sums agreed upon would be paid as you might suggest. It would be necessary that our agreement should be made for one year — during which period you should be pledged not to write for any other (American) Magazine.

With this letter I despatch one of the same tenor to each of the gentlemen before named. If you cannot consent to an unconditional reply, will you be kind enough to say whether you will write for us upon condition that we succeed in our engagements with the others — specifying what others. With high respect, your obedient,

EDGAR A. POE.

The earliest letter of Willis to Poe, in these papers, is in reply to a request for contributions to "Graham's," but there had been previous correspondence.

WILLIS TO POE.

GLENMARY, November 30, 1841.

MY DEAR SIR: You cannot have received my letter written in answer to yours some time since (say a month ago) in which I stated that I was under contract to Mr. Godey to write for no other periodical in Philadelphia than the "Lady's Book," for one year — 1842. I said also that if he were willing, I should be very happy to send you *poetry* (he bargaining for *prose*), but that without his consent I could do nothing. From a very handsome notice of "Graham's Magazine" which I saw in the "Lady's Book," I presumed Godey and Graham were the best of friends and would manage it between them. Still, I do not understand your request — for the "Lady Jane" will be published (all they agreed for — 100 stanzas) in their own paper before January 1, and, of course, any extract would not be original. Any periodical is at liberty to copy, for though Wilson has taken out a copyright, I should always consider copying it too much of a compliment to be resented.

Mr. Godey has been very liberal with me, and pays me quite enough for the exclusive use of my name in Philadelphia, and I can do nothing unless you procure his written agreement to it, of course. I am very sorry to refuse any thing to a writer whom I so much admire as yourself, and to a magazine as good as "Graham's." But you will acknowledge I am "in a tight place."

Begging my compliments to Mr. Graham, I remain, yours very truly. N. P. WILLIS.

Did you ever send me the magazine containing my autograph? I have never seen it.

The two following letters from Dickens, which are published by the kind permission of his only surviving literary executor, Miss Hogarth, are self-explanatory. He is said to have been much impressed by Poe's prophetic analysis of the plot of "Barnaby Rudge," which appeared in the Philadelphia "Saturday Evening Post," May 1, 1841; but no other connection between the two writers is known.

DICKENS TO POE.

UNITED STATES HOTEL, March 6, 1842.

MY DEAR SIR: I shall be very glad to see you whenever you will do me the favor to call. I think I am more likely to be in the way between half-past eleven and twelve, than at any other time. I have glanced over the books you have been so kind as to send me, and more particularly at the papers to which you called my attention. I have the greater pleasure in expressing my desire to see you on this account. Apropos of the "construction" of "Caleb Williams," do you know that Godwin wrote it *backwards*, — the last vol-

ume first, — and that when he had produced the hunting down of Caleb, and the catastrophe, he waited for months, casting about for a means of accounting for what he had done? Faithfully yours always,

CHARLES DICKENS.

DICKENS TO POE.

LONDON, 1 DEVONSHIRE TERRACE,
YORK GATE, REGENT'S PARK,

November 27, 1842.

DEAR SIR: By some strange accident (I presume it must have been through some mistake on the part of Mr. Putnam in the great quantity of business he had to arrange for me), I have never been able to find among my papers, since I came to England, the letter you wrote to me at New York. But I read it there, and think I am correct in believing that it charged me with no other mission than that which you had already entrusted to me by word of mouth. Believe me that it never, for a moment, escaped my recollection; and that I have done all in my power to bring it to a successful issue — I regret to say, in vain.

I should have forwarded you the accompanying letter from Mr. Moxon before now, but that I have delayed doing so in the hope that some other channel for the publication of our book on this side of the water would present itself to me. I am, however, unable to report any success. I have mentioned it to publishers with whom I have influence, but they have, one and all, declined the venture. And the only consolation I can give you is that I do not believe any collection of detached pieces by an unknown writer, even though he were an Englishman, would be at all likely to find a publisher in this metropolis just now.

Do not for a moment suppose that I have ever thought of you but with a pleasant recollection; and that I am not at all times prepared to forward your views in this country, if I can. Faithfully yours,

CHARLES DICKENS.

The most important correspondence of Poe in the Philadelphia period, besides that with Lowell and Snodgrass of Baltimore, was conducted with Frederick William Thomas, and it is noticeable for the element of comradeship which is seldom met with in the letters of his other correspondents. Thomas continued faithful to the end, and was plainly attached to Poe. At the time the correspondence begins he was living in St. Louis, but soon removed to Washington, where he was in the employ of the Government. He was the author of "Clinton Bradshaw," "Howard Pinckney," "East and West," and other minor writings, and was interested in the magazine literature of the day. His letters are too many and too voluminous to publish in full; their topics were the things of the day; but in all that concerns Poe the writer was genuinely in earnest, and he took pains to serve him. The praise and encouragement he gave Poe were unstinted; he endeavored to aid him by obtaining newspaper advertisement of his various

schemes for a magazine, and by urging him to renewed efforts to start it, as plan after plan failed; and in particular he tried hard to obtain a government appointment for him. The history of this last scheme is here fully told. But only the entire text of Thomas's letters would do justice to his devotion to Poe's interests, and his constant and affectionate personal feeling. Dow, whose name often occurs in the correspondence, was a friend of Poe and Thomas, and a magazine writer of the time. The series here given covers the biographical data. Thomas's first letter was dated August 24, 1840. The first letter of importance is the following:

POE TO THOMAS.

PHILADELPHIA, November 23, 1840.

MY DEAR THOMAS: I only received yours of the sixth about an hour ago, having been out of town for the last ten days. Believe me, I was very glad to hear from you—for in truth I had given you up. I did not get the [St. Louis] "Bulletin" you sent, but saw the notice at the Exchange. The "Bulletin" has always been very kind to me, and I am at a loss to know who edits it—will you let me into this secret when you write again? Neither did "Howard Pinckney" come to hand. Upon receipt of your letter, just now, I called at Congress Hall—but no books. Mr. Bateman had been there, and gone, forgetting to leave them. I shall get them on his return. Meantime, and long ago, I have read the novel, with its predecessors. I like "Howard P[inckney]" very well—better than "E[ast] and W[est]," and not nearly so well as "C[linton] B[radshaw]." You give yourself up to your own nature (which is a noble one, upon my soul) in "Clinton Bradshaw"; but in "Howard Pinckney" you abandon the broad rough road for the dainty by-paths of authorism. In the former you are interested in what you write, and write to please, pleasantly; in the latter, having gained a name, you write to maintain it, and the effort becomes apparent. This consciousness of reputation leads you so frequently into those literary and other disquisitions about which we quarreled at Studevant's. If you would send the public opinion to the devil, forgetting that a public existed, and write from the natural promptings of your own spirit, you would do wonders. In a word, *abandon* is wanting in "Howard Pinckney,"—and when I say this you must know that I mean a high compliment—for they to whom this very *abandon* may be safely suggested are very few indeed, and belong to the loftier class of writers. I would say more of "Howard Pinckney," but nothing in the shape of criticism can be well said *in petto*, and I intend to speak fully of the novel in the first number of the "Penn Magazine"—which I am happy to say will appear in January. I may just observe now, however, that I pitied you when I saw the blunders, typographical and Frostigraphical—although to do Frost justice, I do not think he looked at the proofs at all.

Thank you a thousand times for your good

wishes and kind offers. I shall wait anxiously for the promised article. I should like to have it, if possible, in the first sheet, which goes to press early in December. But I know that I may depend upon you, and therefore say no more upon this head. For the rest, your own experience and friendship will suggest the modes by which you may serve me in St. Louis. Perhaps you may be able to have the accompanying "Prospectus" (which you will see differs from the first) inserted once or twice in some of the city papers—if you can accomplish this without trouble I shall be greatly obliged to you. Have you heard that that illustrious graduate of St. John's College, Cambridge (Billy Barlow [Burton]), has sold his magazine to Graham, of the "Casket"?

Mrs. Clemm and Virginia unite with me in the kindest remembrance to yourself and sister—with whom your conversation (always turning upon the "one loved name") has already made us all so well acquainted. How long will it be before I see you again? Write immediately.

Yours most truly, E. A. P.

THOMAS TO POE.

WASHINGTON, May 20, 1841.

... How would you like to be an office-holder here at \$1500 per year payable monthly by Uncle Sam, who, however slack he may be to his general creditors, pays his officials with due punctuality? How would you like it? You stroll to your office a little after nine in the morning leisurely, and you stroll from it a little after two in the afternoon homeward to dinner and return no more that day. If, during office hours, you have anything to do, it is an agreeable relaxation from the monotonous laziness of the day. You have on your desk everything in the writing line in apple-pie order, and if you choose to lucubrate in a literary way why you can lucubrate.

Come on and apply for a clerkship; you can follow literature here as well as where you are—and think of the money to be made by it—"Think of that, Master Brook," as Sir John sayeth. Write to me, if you love me, on the reception of this...

My kindest regards to your mother and wife.

Your friend, F. W. THOMAS.

THOMAS TO POE.

WASHINGTON, July 1, 1841.

MY DEAR POE: Yours of June 26 [printed by Stoddard] I received yesterday. I trust, my dear friend, that you can obtain an appointment. President Tyler I have not even seen except in passing in his carriage—never having called at the White House since the death of Harrison, except to see the sons of the President, and then they were not in. Could n't you slip on here, and see the President yourself? Or if you would prefer it, I will see him for you. But perhaps your application had better be made through some one who has influence with the executive. I have heard you say that J. P. Kennedy had a regard for you. He is here a Congressman, and would serve you—would he not? Your friend,

F. W. THOMAS.

The reply to the preceding is printed by Stoddard.

THOMAS TO POE.

WASHINGTON, August 30, 1841.

MY DEAR POE: . . . I wrote you that I saw Kennedy, and that he expressed his willingness to aid you in any way in his power. Since, I have conversed with the President's sons about you; they think the President will be able and willing to give you a situation, but they say, and I felt the truth of the remark before it was made, that at the present crisis, when everything is "hurly-burly," it would be of no avail to apply to him. He is much perplexed, as you may suppose, amidst the conflicting parties, the anticipated cabinet break up, &c. As soon as times get a little more quiet I will wait on the President myself, and write you of the interview.

Your cryptography makes quite a talk here. Hampton tells me he had quite a demand for your August number containing it.

Your friend, F. W. THOMAS.

ROBERT TYLER TO POE.

WHITE HOUSE, March 31, 1842.

MY DEAR SIR: I have received your letter in which you express your belief that Judge Blythe will appoint you to a situation in the Custom House, provided you have a reiteration of my former recommendations of you. It gives me pleasure to say to you that it would gratify me *very sensibly* to see you appointed by Judge Blythe. I am satisfied that no one is more competent, or would be more satisfactory in the discharge of any duty connected with the office. Believe me, my dear sir, truly yours, [Signature cut out].

THOMAS TO POE.

WASHINGTON, May 21, 1842.

MY DEAR POE: I fear you have been reproaching me with neglect in not answering yours of March 13 before. If you have, you have done me injustice.

I knew it would be of no avail to submit your proposition to Robert Tyler, with regard to any pecuniary aid which he might extend to your undertaking, as he has nothing but his salary of \$1500, and his situation requires more than its expenditure. In a literary point of view he would gladly aid you, but his time is so taken up with political and other matters that his contributions would be few and far between.

I therefore thought I could aid you better by interesting him in you personally, without your appearing, as it were, personally in the matter. In consequence I took occasion to speak of you to him frequently in a way that friendship and a profound respect for your genius and acquirements dictated. He thinks of you as highly as I do.

Last night I was speaking of you, and took occasion to suggest that a situation in the Custom House, Philadelphia, might be acceptable to you, as Lamb (Charles) had held a somewhat

similar appointment, etc, etc, and as it would leave you leisure to pursue your literary pursuits. Robert replied that he felt confident that such a situation could be obtained for you in the course of two or three months at farthest, as certain vacancies would then occur.

What say you to such a plan? Official life is not laborious — and a situation that would suit you and place you beyond the necessity of employing your pen, he says he can obtain for you there.

Let me hear from you as soon as convenient upon this subject.

I assure you, Poe, that not an occasion has offered when in the remotest way I thought I could serve you, that I did not avail myself of it — but I would not write upon mere conjectures that something available was about to occur. So my motives must be an apology, my friend, for my long silence.

Besides, I could not obtain for you, and I have tried repeatedly, Clay's report on the copyright question. I may be yet successful. If I had obtained it I might have written sooner — having that to write about.

Yes, I saw Dickens, but only at the dinner which a few of us gave him here — I liked him very much, though. You certainly exhibited great sagacity in your criticism on "Barnaby Rudge." I have not yet read it — but I mean to do so, and then read your criticism, which I have put by for that purpose.

Somebody told me, for I have not seen it in print, that you and Graham had parted company. Is it so? . . . Your friend, F. W. THOMAS.

POE TO THOMAS.

PHILADELPHIA, May 25, 1842.

MY DEAR THOMAS: Through an accident I have only just now received yours of the 21st. Believe me, I never dreamed of doubting your friendship, or of reproaching you for your silence. I knew you had good reasons for it; and, in this matter, I feel that you have acted for me more judiciously, by far, than I should have done for myself. You have shown yourself, from the first hour of our acquaintance, that *rara avis in terris* — "a true friend." Nor am I the man to be unmindful of your kindness.

What you say respecting a situation in the Custom House here gives me new life. Nothing could more precisely meet my views. Could I obtain such an appointment, I would be enabled thoroughly to carry out all my ambitious projects. It would relieve me of all care as regards a mere subsistence, and thus allow me time for thought, which, in fact, is action. I repeat that I would ask for nothing farther or better than a situation such as you mention. If the salary will barely enable me to live I shall be content. Will you say as much for me to Mr. Tyler, and express to him my sincere gratitude for the interest he takes in my welfare?

The report of my having parted company with Graham is correct; although in the forthcoming June number there is no announcement to that effect; nor had the papers any authority for the statement made. My duties ceased with the May

number. I shall continue to contribute occasionally. Griswold succeeds me. My reason for resigning was disgust with the namby-pamby character of the Magazine—a character which it was impossible to eradicate. I allude to the contemptible pictures, fashion-plates, music, and love-tales. The salary, moreover, did not pay me for the labour which I was forced to bestow. With Graham, who is really a very gentlemanly, although an exceedingly weak, man, I had no misunderstanding. I am rejoiced to say that my dear little wife is much better, and I have strong hope of her ultimate recovery. She desires her kindest regards—as also Mrs. Clemm.

I have moved from the old place—but should you pay an unexpected visit to Philadelphia, you will find my address at Graham's. I would give the world to shake you by the hand; and have a thousand things to talk about which would not come within the compass of a letter. Write immediately upon receipt of this, if possible, and do let me know something of yourself, your own doings and prospects: see how excellent an example of egotism I set you. Here is a letter nearly every word of which is about myself or my individual affairs. You saw White—little Tom. I am anxious to know what he said about things in general. He is a *character* if ever one was. God bless you—

EDGAR A. POE.

A letter of Poe to Thomas, September 12, 1842, is printed by Stoddard.

POE TO THOMAS.

PHILADELPHIA, Sept. [21], 1842.

MY DEAR THOMAS: I am afraid you will think that I keep my promises but indifferently well, since I failed to make my appearance at Congress Hall on Sunday, and I now, therefore, write to apologize. The will to be with you was not wanting—but, upon reaching home on Saturday night, I was taken with a severe chill and fever—the latter keeping me company all next day. I found myself too ill to venture out, but, nevertheless, would have done so had I been able to obtain the consent of all parties. As it was, I was quite in a quandary, for we kept no servant and no messenger could be procured in the neighborhood. I contented myself with the reflection that you would not think it necessary to wait for me very long after nine o'clock, and that you were not quite so implacable in your resentments as myself. I was much in hope that you would have made your way out in the afternoon. Virginia and Mrs. C[lemm] were much grieved at not being able to bid you farewell.

I perceive by Du Solle's paper that you saw him. He announced your presence in the city on Sunday in very handsome terms. I am about going on a pilgrimage this morning, to hunt up a copy of "Clinton Bradshaw," and will send it to you as soon as procured. Excuse the brevity of this letter, for I am still very unwell, and believe me most gratefully and sincerely your friend,

EDGAR A. POE.

The following letter is from a copy of the original in the possession of C. W. Frederickson, Esq., and was not among those originally in the papers furnished to Griswold.

POE TO THOMAS.

PHILADELPHIA, November 19, 1842.

MY DEAR FRIEND: Your letter of the 14th gave me new hope—only to be dashed to the ground. On the day of its receipt, some of the papers announced four removals and appointments. Among the latter I observed the name—Pogue. Upon inquiry among those behind the curtain, I soon found that no such person as—Pogue had any expectation of an appointment, and that the name was a misprint or rather a misunderstanding of the reporters, who had heard *my own* name spoken of at the Custom House. I waited two days, without calling on Mr. Smith, as he had twice told me that "he would send for me, when he wished to swear me in." To-day, however, hearing nothing from him, I called. I asked him if he had no good news for me yet. He replied, "No, I am instructed to make no more removals." At this, being much astonished, I mentioned that I had heard, through a friend, from Mr. Rob Tyler, that he was requested to appoint me. At these words he said roughly—"From *whom* did you say?" I replied, from Mr. Robert Tyler. I wish you could have seen the scoundrel,—for scoundrel, my dear Thomas, in your private ear, *he is*,—"From *Robert* Tyler!" says he—"Hem! I have received orders from *President* Tyler to make no more appointments, and shall make none." Immediately afterward, he acknowledged that he had made one appointment *since* these instructions.

Mr. Smith has excited the thorough disgust of every Tyler man here. He is a Whig of the worst stamp, and will appoint none but Whigs if he can possibly avoid it. People here laugh at the idea of his being a Tyler man. He is notoriously not such. As for me, he has treated me most shamefully. In my case, there was no need of any political shuffling or lying. I proffered my willingness to postpone my claims to those of political claimants, but he told me, upon my first interview after the election, that if I would call on the fourth day he would swear me in. I called and he was not at home. On the next day I called again and saw him, when he told me that he would send a messenger for me when ready: this without even inquiring my place of residence, showing that he had, from the first, no design of appointing me. Well, I waited nearly a month, when, finding nearly all the appointments made, I again called. He did not even ask me to be seated—scarcely spoke—muttered the words "I will send for you, Mr. Poe"—and that was all. My next and last interview was to-day—as I have just described. The whole *manner* of the man, from the first, convinced me that he would not appoint me if he could help it. Hence the uneasiness I expressed to you when here. Now, my dear Thomas, this insult is not *to me*, so much as to your friend Mr. Robert Tyler, who was so kind as to promise, and who requested, my appointment.

It seems to me that the only way to serve me *now* is to lay the matter once again before Mr. Tyler, and, if possible through him, to procure a few lines *from the President*, directing Mr. Smith to give me the place. With these credentials he would scarcely again refuse. But I leave all to your better judgment.

You can have no idea of the low ruffians and boobies—men, too, without a shadow of political influence or *caste*—who have received office over my head. If Smith had the feelings of a gentleman, he would have perceived that, from the very character of my claim,—by which I mean my *want* of claim,—he should have made my appointment an early one. It was a gratuitous favor intended me by Mr. Rob Tyler, and he (Smith) has done *his* best to deprive this favor of all its grace by delay. I could have forgiven all but the innumerable and altogether *unnecessary* falsehoods with which he insulted my common sense day after day.

I would write more, my dear Thomas, but my heart is too heavy. You have felt the misery of hope deferred, and will feel for me. Believe me ever your true friend,
EDGAR A. POE.

Write soon, and if possible relieve my suspense. You cannot imagine the trouble I am in, and have been in for the past two months—unable to enter into any literary arrangements, or in fact to do anything, being in hourly expectation of getting the place.

THOMAS TO POE.

WASHINGTON, February 1, 1843.

MY DEAR POE: You judged rightly I did not write to you [while] waiting “for some definite action of Congress on Smith’s case.” I feel most anxious (?) in the matter for you, my friend. About the biography. [Poe desired Thomas to write the sketch of him afterward done by Hirst] I duly received your notes, and determined at the earliest moment to take it in hand. Congress is now, you know, in session, and my labors at the department are terrible while it continues. There (?) I have set myself about writing out the notes, and there (?) I have been taken off. It would be a labor of love with me, Poe, as you know, and let who will do it now, some of these days I will do it better unless they do it d—d well. I could not do it until Congress adjourns, and not speedily then—I am so much occupied. I therefore think it best to send you the MS. as you request, but I do it with regret. I should be most glad to greet you in the capital. Come on if possible.

Yes, I saw the “Saturday Museum” in Mr. Robert Tyler’s room, and happened to light upon the article in which we are mentioned. I read that portion of it to him, and shall take care that he is not misinformed on the subject. I remember Mr. Hirst.

Why the d—d I did you not give me an inkling of what your good luck is. I was at a party last night, and came to the department rather dull, but when I opened your letter, and read, “In high spirits, Yours truly, E. A. Poe,” I rose to “high spirits” myself. I assure you, Poe, that nothing gives me greater pleasure than to know that you are well

and doing well. Remember me most affectionately to your mother and lady, and believe me truly your friend,
F. W. THOMAS.

POE TO THOMAS.

PHILADELPHIA, February 25, 1843.

MY DEAR THOMAS: Herewith I forward a “Saturday Museum” containing a Biography and caricature, both of myself. I am ugly enough, God knows, but not *quite* so bad as that. The biographer is H. W. Hirst of this city. I put into his hands your package, as returned, and he has taken the liberty of stating his indebtedness for memoranda to yourself—a slight extension of the truth for which I pray you to excuse him. He is a warm friend of yours by the by—and a warm friend is a matter of moment at all times, but especially in this age of lukewarmness. I have also been guilty of an indiscretion [in the Hirst biography] in quoting from a private letter of yours to myself—I could not forego the temptation of letting the world know how well you thought of me.

On the outside of the paper you will see a Prospectus of “The Stylus”—my old “Penn” revived and remodeled under better auspices. I am anxious to hear your opinion of it. I have managed *at last* to secure, I think, the great object—a partner [T. C. Clarke, owner of the “Saturday Museum”] possessing ample capital, and, at the same time, so little self-esteem as to allow me entire control of the editorial conduct. He gives me, also, a half interest, and is to furnish funds for all the business operations—I agreeing to supply, for the first year, the literary matter. This will puzzle me no little, but I must do my best—write as much as possible myself, under my own name and pseudonyms, and hope for the casual aid of my friends, until the first stage of infancy is surpassed. The articles of copartnership have been signed and sealed for some weeks, and I should have written you before, informing you of my good luck, but that I was in hope of sending you, at the same time, a specimen-sheet. Some little delay has occurred in getting it out on account of paper. In the mean time, all arrangements are progressing with spirit. We shall make the most magnificent magazine, as regards externals, ever seen. The finest paper, bold type, in single column, and superb wood-engravings in the manner of the French illustrated edition of “Gil Blas” by Gigoux, or “Robinson Crusoe” by Grandville.

There are three objects I would give a great deal to accomplish. Of the first I have some hope, but of the two last exceedingly little, unless you aid me. In the first place, I wish an article from yourself for my opening number; in the second, one from Mr. Rob Tyler; in the third, one from Judge Upshur. If I could get all this, I should be made, but I despair. Judge Upshur wrote some things for “The Messenger” during my editorship, and if I could get him interested in the scheme he *might*, by good management, be induced to give me an article, I care not how brief, or on what subject, *with his name*. It would be worth to me at least \$500, and give me *caste* at once. I think him, as a reasoner, as a speaker,

and as a writer, absolutely unsurpassed. I have the *very highest* opinion of his abilities. There is no man in America from whom I so strongly covet an article. Is it procurable?

In a few weeks, at farthest, I hope to take you by the hand. In the mean time write, and let me know how you come on. About a week since I enclosed an introductory letter to yourself in one to a friend of mine (Professor Wyatt) now in Washington. I presume you have seen him. He is much of a gentleman, and I think you will be pleased with him.

Virginia and Mrs. Clemm beg to be remembered. Truly your friend, EDGAR A. POE.

P. S. Smith not rejected yet! Ah, if I could only get the inspectorship, or something similar, *now* — how completely it would put me out of all difficulty.

Early in March Poe went to Washington to make a personal appeal for office. The visit became a "spree." The story of it has been partly told by Gill, who prints a letter from Poe to Clarke, March 11, and one from Dow to Clarke, March 12. The following letter was used by the present editor, who had received a manuscript copy of it from another source, in his biography of Poe, but the letter was not printed. The note attached to it by Thomas relieves somewhat the impression it might otherwise make.

POE TO THOMAS AND DOW.

PHILADELPHIA, March 16, 1843.

MY DEAR THOMAS AND DOW: I arrived here in perfect safety, and *sober*, about half-past four last evening — nothing occurring on the road of any consequence. I shaved and breakfasted in Baltimore, and lunched on the Susquehanna, and by the time I got to Philadelphia felt quite decent. Mrs. Clemm was expecting me at the car-office. I went immediately home, took a warm bath and supper, and then went to Clarke's [his partner in "The Stylus"]. I never saw a man in my life more surprised to see another. He thought by Dow's epistle that I must not only be dead but buried, and would as soon have thought of seeing his great-great-grandmother. He received me, therefore, very cordially, and made light of the matter. I told him what had been agreed upon — that I was a little sick, and that Dow, knowing I had been, in times past, given to spreeing upon an extensive scale, had become unduly alarmed etc., etc. — that when I found he had written, I thought it best to come home. He said my trip had improved me, and that he had never *seen me looking so well!* — and I don't believe I ever did. This morning I took medicine, and, as it is a snowy day will avail myself of the excuse to stay at home — so that by to-morrow I shall be *really* as well as ever. Virginia's health is about the same; but her distress of mind had been even more than I had anticipated. She desires her *kindest* remembrances to both of you — as also does Mrs. C.

Clarke, it appears, wrote to Dow, who must have received the letter this morning. Please re-

inclose the letter to me, here, so that I may know how to guide myself. And, Thomas, do write immediately as proposed. If *possible*, enclose a line from Rob Tyler — but I fear under the circumstances, it is not so. I blame no one but myself.

The letter which I looked for, and which I wished returned, is not on its way — reason, no money forthcoming — Lowell had not yet sent it. He is ill in New York, of ophthalmia. Immediately upon receipt of it, or before, I will forward the money you were both so kind as to lend, which is eight to Dow, and three and a half to Thomas. What a confounded business I have got myself into, attempting to write a letter to two people at once!

However, this is for Dow. My dear fellow, thank you a thousand times for your kindness and great forbearance, and don't say a word about the cloak turned inside out, or other peccadilloes of that nature. Also, express to your wife my deep regret for the vexation I must have occasioned her. Send me, also, if you can, the letter to Blythe. Call, also, at the barber's shop just above Fuller's and pay for me a levy which I believe I owe. And now, God bless you, for a nobler fellow never lived.

And this is for Thomas. My dear friend, forgive me my petulance and don't believe I think all I said. Believe me, I am very grateful to you for your many attentions and forbearances, and the time will never come when I shall forget either them or you. Remember me most kindly to Dr. Lacey — also to the Don, whose mustachios I do admire after all, and who has about the finest figure I ever beheld — also to Dr. Frailey. Please express my regret to Mr. Fuller for making such a fool of myself in his house, and say to him (if you think it necessary) that I should not have got half so drunk on his excellent port wine but for the rummy coffee with which I was forced to wash it down. I would be glad, too, if you would take an opportunity of saying to Mr. Rob Tyler that if he *can* look over matters and get me the inspectorship, I will join the Washingtonians forthwith. I am as serious as a judge — and much [more] so than many. I think it would be a feather in Mr. Tyler's cap to save from the perils of mint julep — and "Port wines" — a young man of whom all the world thinks so well and who thinks so remarkably well of himself. And now, my dear friends, good-by, and believe me most truly yours,
EDGAR A. POE.

Upon getting here I found numerous letters of subscribers to my magazine — for which no canvass has yet been made. This was unexpected and cheering. Did you say, Dow, that Commodore Elliot had desired me to put down his name? Is it so, or did I dream it? At all events, when you see him, present my respects and thanks. Thomas, you will remember that Dr. Lacey wished me to put him down — but I don't know his first name — please let me have it.

[NOTE BY THOMAS: This letter explains itself. While his friends were trying to get Poe a place he came on to Washington in the way he mentions. He was soon quite sick, and while he

was so Dow wrote to one of his friends in Philadelphia about him! Poor fellow. A place had been promised his friends for him, and in that state of suspense which is so trying to all men, and particularly to men of imagination, he presented himself in Washington certainly not in a way to advance his interests. I have seen a great deal of Poe, and it was his excessive and at times marked sociability [?] which forced him into his "frolics," rather than any mere morbid appetite for drink, but if he took but one glass of weak wine or beer or cider, the Rubicon of the cup had been passed with him, and it almost always ended in excess and sickness. But he fought against the propensity as hard as ever Coleridge fought against it, and I am inclined to believe, after his sad experience and suffering, if he could have gotten office with a fixed salary, beyond the need of literary labour, that he would have redeemed himself, at least at this time. The accounts of his derelictions in this respect after I knew him were very much exaggerated. I have seen men who drank bottles of wine to Poe's wine-glasses who yet escaped all imputations of intemperance. His was one of those temperaments whose only safety is in total abstinence. He suffered terribly after any indiscretion. And, after all, what Byron said of Sheridan was truer of Poe:

. . . Ah, little do they know
That what to them seemed vice might be but woe.

And, moreover, there is a great deal of heart-ache in the jestings of this letter. T.]

THOMAS TO POE.

WASHINGTON, March 27, 1843.

MY DEAR FRIEND: Yours of the 10th I duly received. I would have answered it immediately, but my desk got so behindhand during my illness, when you were here, that every moment of my time has been engaged in bringing it up.

Dow's epistle, I suppose, astounded your folks. He tells me that he mentions a conversation with me in it. Our friend Dow, you know, is an imaginative man, and he thought that you, as we say in the West, had "[word illegible] for high timber." I have had a hearty laugh at him for his fears. I am glad to learn that you are well.

I rejoice to know that your wife is better. I cannot leave the office at present to see Robert Tyler, as you suggest, to get a line from him. But this I can tell you, that the President yesterday asked me many questions about you, and spoke of you kindly. John Tyler, who was by, told the President that he wished he would give you an office in Philadelphia, and before he could reply a servant entered and called him out. John had heard of your frolic from a man who saw you in it, but I made light of the matter when he mentioned it to me, and he seemed to think nothing of it himself. He seems to feel a deep interest in you — Robert was not by. I feel satisfied that I can get you something from his pen for your Magazine. He lately made a speech here on St. Patrick's day, which has won for him great applause — you will find it in the "Intelligencer" of this morning. Read it and tell me what you think

of it. I write in the greatest haste, and have not your letter by me, so reply to it from memory. Write as soon as you get this. Be of good cheer. I trust to see you an official yet. In the greatest haste, Yours truly,
F. W. THOMAS.

The other letters of this series belong to a later period.

A second frequent correspondent of Poe in those years was John Tomlin of Jackson, Tennessee, a magazine-writer of no lasting note, but warm in his friendly feeling to Poe. His letters are of slight interest in themselves, but among them is that in which he incloses the letter of L. A. Wilmer, author of the "Quacks of Helicon," which caused a rupture of one of Poe's oldest friendships, already noticed by his biographers. It is interesting to see what Wilmer actually said, for Poe never forgave him.

TOMLIN TO POE.

JACKSON, TENNESSEE, September 10, 1843.

DEAR SIR: My friendship for you, and nothing else, has prevailed on me to enclose you the letter of L. A. Wilmer, Esquire. But I much fear that in doing it I have violated somewhat the rules that govern correspondence in such matters. Believing, however, that your great good sense will but protect my honor in this transaction, I remain with affectionate regard, Yours ever,
JNO. TOMLIN.

WILMER TO TOMLIN.

PHILADELPHIA, May 20, 1843,

DEAR SIR: . . . Literary affairs are at a very low ebb in this city at present.

Edgar A. Poe (you know him by character, no doubt, if not personally) has become one of the strangest of our literati. He and I are old friends — have known each other from boyhood, and it gives me inexpressible pain to notice the vagaries to which he has lately become subject. Poor fellow! he is not a teetotaler by any means, and I fear he is going headlong to destruction, moral, physical, and intellectual. . . . Your obliged and sincere friend,
L. A. WILMER.

TOMLIN TO POE.

JACKSON, TENNESSEE, February 23, 1844.

DEAR SIR: I have had no letter from you since I sent you the libellous letter of L. A. Wilmer. Did you inflict on him a chastisement equal to the injury he designed, by the publication of such slanders? Previous to the reception of that letter, I had entertained a good opinion of the "Quacks of Helicon" man, and it had been brought about in a great measure by your review of the book. In his former letters, he not only spoke kindly of you, but seemed disposed to become your advocate against the *litterateurs* of Philadelphia. I hope that you will forgive him, and that he will go and "sin no more." Your review of "Orion" in the February or March number of "Graham's," I have read with much pleasure. The article is one of great ability. I know of no writer whose success

in life would give me more sincere pleasure than that of yourself.

Hoping soon to hear from you, I remain ever,
Your friend,
JNO. TOMLIN.

The following letter is the only one which connects Poe with his relatives during this period.

WILLIAM POE TO POE.

BALTIMORE, June 15, 1843.

DEAR EDGAR: I wrote you on the 15th ulto. since which time I have received nothing from you; mine was in answer to a letter received giving an account of your many recent reverses, and I fear it was in a style not relished by you, but in great sincerity of feeling for you and yours I wrote it, and the reason why I presumed to be so free in my expressions was in consequence of the great friendship I feel for you, and interest I take in your welfare, and therefore hoped to hear again from you, and of your wife's being better, and your recovery from the sickness and despondency you were suffering when you last wrote. I still write from the same motives. I observed in the "Baltimore Sun" newspaper in an editorial that you have again lately been successful in having awarded to

you a prize of \$100 by the "Dollar Newspaper" for a tale called the "Gold Bug," which gave me much pleasure, and hope it came in time to relieve you from some of your pecuniary wants. Ought you ever to give up in despair when you have such resources as your well-stored mind to apply to? Let me entreat you then to persevere, for I hope the time is not far distant when a change will take place in your affairs and place you beyond want in this world.

Will you write to me freely, and let me know what are your prospects in getting out "The Stylus," and how your wife is, and Mrs. Clemm—how is she? It would give me pleasure to hear from her. There is one thing I am anxious to caution you against, and which has been a great enemy to our family,—I hope, however, in your case, it may prove unnecessary,—"a too free use of the Bottle." Too many, and especially literary characters, have sought to drown their sorrows and disappointments by this means, but in vain, and only, when it has been too late, discovered it to be a deeper source of misery. But enough of this, say you, and so say I: therefore, hoping this may find you in better spirits and better prospects of future happiness, I subscribe myself,
Yours affectionately,
WILLIAM POE.

"THE WHIRLIGIG OF TIME."

By the Author of "Their Exits and Their Entrances," etc.

RS. Outton entered the room, and slowly crossed to the fireplace. The lamps were lighted, but there was not enough light to enable her to see the face of the clock until she stood upon the black bearskin rug that lay across the hearth. When at length she could distinguish the position of the hands upon the dial, she gave a slight, impatient toss of the head, and reaching around the corner of the mantel, touched the button of the electric bell with a short, decided gesture.

The door was opened almost immediately, and the servant appeared.

"Is Mr. Outton in?" she asked quickly.

"Yes, madam," answered the man; "he came in half an hour ago."

"It is twenty-five minutes to eight," she continued, half to herself. Then she added, "You need not serve dinner. I will ring."

The servant departed, and Mrs. Outton took up the evening paper, which lay out-spread upon the table. She glanced at the list of deaths and marriages, and read the prognostications as to the weather for the following day; the account of a meeting for the purpose of advancing the cause of Woman Suffrage failed

to interest her, but she finished an article about the prospects of the opera for the coming season. Then she put down the sheet, and again glanced at the gilded timepiece. She was about to rise, when, once more, the door was opened, and a figure appeared in the brighter light that shone from the hall beyond.

"Sidney!" she exclaimed reproachfully.

"I know—I know I'm late," he said contritely.

"You say 'I know—I know,'" she went on, "just as if that were an excuse for your being late instead of the very best reason why you should n't be. Strange that people," she continued meditatively, "and especially husbands, when they say that they *know* a thing, always seem to think that they have met every objection—done everything that the occasion demands, and are then clearly convinced that they should be immediately pardoned on the spot."

"But," began Outton, "as there is n't any one dining here to-night, and I had a match at pool on at the club—"

"But there is some one," she interrupted.

"I did n't know," continued Outton; "you said this morning—"

"How many times have you said in the morning that there would n't be any one, and

how many times have you asked some one before the day was out?"

"Often," admitted Outton.

"That's just what has happened. I have asked some one, and please don't think me cross, but I was afraid that you would n't get down in time—"

"Florence," said Outton, "the advantage or the disadvantage with you is this—that you have got shoved along a little. Your good-nature begins where other people's leaves off. You are impatient about a small accident, but make it a misfortune, and you are serenity itself."

"That is very pretty and magnanimous," she said, "and I wonder if it is true."

"You have a great deal of the did-n't-mind-death-but-could-n't-bear-pinching spirit about you," continued Outton. "But where is your guest? I might have devoted a few more calm moments to making myself beautiful, instead of hurrying as if the house were on fire."

"It's the strangest thing," she exclaimed, seating herself on the arm of a chair, "and you'll never imagine who it is. But I sha'n't make you guess. It was Winifred Valence."

"Winifred Valence!" said Outton. "I haven't seen her all winter."

"That's just the strange part of it—no more have I, and it was such an accident, my seeing her now. Oh, these accidents are perfectly maddening, so much seems to depend upon them! Now, to-day, if I had n't happened to pick up a pin—"

"Pick up a pin!" repeated Outton.

"Yes, pick up a pin. Nothing more or less. I was in the brougham, and was taking that beautiful piece of 'guinea stitch' that was made by great-grandmama to Mrs. Lydeckker for the Loan Collection, when the idea that it would certainly be lost came over me, and I was seized with a sudden fright. I had the card that was to go with it, but I thought they would surely be separated. I was just going to go back to the house when I saw in the lining of the carriage a pin that I had picked up,—'see a pin,' you know,—and I took that, and pinned the ticket firmly on the stuff. It was all right then, and so I drove to Mrs. Lydeckker's, left the thing, and, as I was coming down the steps, met Winifred Valence coming up. We could n't talk very well there, and so I asked her to come to-night."

"I don't see," commented Outton, "that there is anything so very momentous about all this."

"No," she replied, absently; "but there might have been. Oh, do you know," she hurried on, "that I never have seen Winifred looking so well. And, Sidney," continued his wife, "you can't imagine how happy she seems. You

remember that there was a time when she appeared very dissatisfied; but now she is perfectly radiant. I never could believe that any one could change so; it must all be because of what she is doing."

"Indeed!" said Outton, interestedly.

"Yes," continued Mrs. Outton; "she is occupied in such glorious work. Once she thought of going in for kindergartening, but she gave that up, and now she is doing something for working-girls. I don't understand it exactly," she hurried on, "but what she is accomplishing is perfectly splendid. She is exerting an influence—furnishing an example."

"It's very interesting," commented her husband.

"And if you could see her face! You know that she was always so beautiful that it was a pleasure to look at her, but now it is perfectly transcendent. I suppose it is the spiritual peace—the knowledge that she is doing good—"

"I'm glad," said Outton.

"She always was a girl of a great deal of character, and I was always anxious about the way that she would come out," continued Mrs. Outton. "With all her great, splendid, noble nature, it would be such a pity if she had made a mistake. But now I am sure that she is on the right way, and has at last found what is best for her. An existence of self-renunciation and constant ministration to others—"

"It does not seem a particularly joyous prospect for a girl of not more than six or seven and twenty, who's as good-looking as she is," commented Outton.

"That's because you look at it in a worldly way," responded his wife. "I might say the same about another, but with Winifred it is different. She will be here in a few minutes, and you will see."

"And so Winifred Valence is never to be married," mused Outton. "Really, it's rather queer."

"What?" asked Mrs. Outton, indifferently.

"I met Cuthbert Clarges this afternoon," said Outton.

"You did?" said Mrs. Outton, looking up in her surprise. "I thought he had gone to Europe."

"So did I," continued Outton; "but it seems that he did not go after all. Been here all winter—"

"Where in the world—" cried Mrs. Outton.

"That's just what I said—'where in the world?'" Outton interrupted. "He told me that he had been living quietly and working hard—had n't been inside of a drawing-room or a club for months. He has lodgings downtown, and has been going in for politics—"

"Strange we have n't heard of him."

"I don't know," objected Outton. "Often

you don't run on a fellow in six months, even when he is traveling with your own crowd, and it is n't surprising that one should lose sight of Clarges when he's been playing with politics and all that sort of thing. Queer, though, was n't it, that I should meet him? You remember there was a time when you thought that if Winifred and he only could meet they would fall in love with each other at sight, and that it would be the best thing that could happen to them."

"And one afternoon I tried to bring them together," laughed Mrs. Outton.

"And they would n't 'bring,'" he said. "You never did have any luck in assisting fate."

"Fate!" exclaimed Mrs. Outton, contemptuously; "that's too dignified a name for it. Everything is just really silly accident, like my seeing Winifred just because I happened to pick up a pin."

"It is singular sometimes," admitted Outton. "Now I should n't have seen Clarges this afternoon if it had n't been for the most absurd and trivial thing."

"I've no doubt," agreed Mrs. Outton.

"I was standing," he continued, "on the corner of Madison Avenue and Madison Square, and intended to go to the club at the corner of Fifth Avenue and Thirty-second street. Now it was just as short and easy to go across Twenty-sixth street and go up Fifth Avenue as it was to go up Madison Avenue and go across Thirty-second street, and I hesitated—you know how one often hesitates in taking one direction or the other when all's exactly equal."

"And what did you do?"

"I went across Twenty-sixth street and up Fifth Avenue because as I looked up Madison Avenue I noticed a cat on an area railing, and you know I dislike cats."

"And that decided you?" she asked.

"One way was just as good as another, and when the equilibrium is perfect even such a circumstance as that may settle the question."

"And then you met Cuthbert," said Mrs. Outton.

"Yes," he replied; "and induced him to come into the club."

"And *that*—just because you happened to dislike cats!" ejaculated Mrs. Outton. "Oh, it is humiliating to think that so much depends on so little."

"But there was n't anything."

"There might have been," she answered eagerly; "one never knows—for if you had n't hated cats then you never would have come on Cuthbert, and taken him to the club, and in that time something might have happened to him that might have been of the utmost importance to him, and even have made the greatest difference to others."

"For example," laughed Outton, "since he is in politics he might have met some other man who might have taken him somewhere, which might have brought him in contact with certain politicians; and this might have led to his being nominated and elected as member of the Assembly, where he might have made such a position that he became governor and afterward President; and then some international question coming up, and he being where he was and the person he is, there might have been a war which otherwise might never have taken place, and the history of two nations might have been changed, and the fate of the human race made different just because I happened to dislike cats. Oh, as you say, one never can tell."

"Yes," said Mrs. Outton, seriously; "that all would be possible. Stranger things have happened and—is n't it maddening? But how did he look?"

"As well as possible—hearty and happy."

"I'm charmed," said Mrs. Outton. "The last time that I had any talk with him he appeared so very despondent."

"He is n't now," responded Outton. "I never saw any one more full of life and hope. This reforming business seems to agree with him wonderfully."

"I knew that it was only necessary for him to find an interest, and he would be perfectly happy."

"He's got it," said Outton. "He seems wrapped up heart and soul in what he is at. And so enthusiastic—he was always pounding me on the back or shaking me by the hand."

"How unlike him!" commented Mrs. Outton in astonishment.

"Was n't it?" assented Outton. "Oh, you'd never know him, he has so completely changed."

"I should like to see him," said his wife, admiringly.

"I've asked him to dinner."

"When?" demanded Mrs. Outton.

A sudden shade of anxiety fell on Outton's face, and his brow wrinkled thoughtfully.

"What is it?" she asked anxiously.

But Outton did not answer; he only caressed his chin and gazed pensively at the floor.

"What is it, dear?" urged Mrs. Outton.

"I'm trying to think," he replied absently.

"It certainly is an unusual occupation with you, and difficult," she said; "but really you need not make such faces about it."

"I'm trying to remember when I *did* ask him," said Outton. "I distinctly recollect that I invited him most urgently—and then I was carried away to play that game of pool—and I did n't see him again—and," he concluded helplessly, "I wonder if he thought I

could have meant to-day. I told him the hour — but I did n't say anything about the day, and —"

"Sidney!" interrupted Mrs. Outton, very reproachfully.

"What difference does it make if he does come?" exclaimed Outton, defiantly.

"When Winifred is coming!"

"That will make it all the better — balance the table and give her a young man."

For a moment Mrs. Outton did not speak.

"Sidney," she said at length, "I don't want those two to meet."

"Why," he asked in amazement, "I thought that once you were all anxiety that they should."

"But it is different now," she went on. "Then they were both discontented and without any purpose; now they are evidently perfectly happy, and clearly carrying out most successfully the lives for which they are most fitted."

"And if they met?" inquired Outton.

"They would fall in love with each other," she replied, "and marry, and that would be such a commonplace ending of what is now so beautiful. There are plenty of ordinary people to marry and make each other happy, but it is not often you find two people who are so manifestly intended to do good to the world at large. Think how useful he may be in improving the city government,— and the man who took me in to dinner last night said that it needed improving so very badly,— and think how helpful she is to all those poor struggling girls, who know so little how to do anything for themselves. Just to have them marry like any one else — oh, it would be a crime to allow it — and Sidney — do you — do you think that he believed that you meant him to come to-night?"

"I don't know," replied Outton.

"It is too bad," said Mrs. Outton. "Something momentous *has* happened. These two people are going to be brought together, and will fall in love with each other, and marry, and their lives will be altered and spoiled just because I picked up a pin and you dislike cats."

As the door opened both anxiously looked up, but it was only the servant who had appeared before that now slowly entered.

"A note, sir," he said, giving Outton an envelop; "just brought by a messenger, and he says there's an answer, sir."

Outton tore open the cover, and glanced down the sheet that he had hastily drawn forth.

"What is it?" asked Mrs. Outton, curiously, as she saw the smile that came upon the face of her husband.

"A note from Clarges," he said, breaking

into a laugh, and then reading: "My dear Sidney, on what day did you ask me to dine? I somehow took it for granted that you meant to-day, but as I have been dressing, the idea has suddenly dawned upon me that you may have meant some other time, and that this evening you may have set aside for the celebration of some Eleusinian mysteries, and that I might be in the way. Behold me all arrayed, but puzzled as to what to do. Will you kindly set my anxious mind at rest, and let me know by the messenger whether it is to be now or another time —"

"Oh," exclaimed Mrs. Outton, "is n't it fortunate! Now you can write and say that you meant to-morrow or some other day, and they will not meet, and it will be all right."

"I'll give you the answer in a moment," said Outton to the servant, and then, after the door was shut, "Now, really, you know, why not let him come? I'm sure Winifred would like him—"

"That's just it," urged Mrs. Outton; "it would be a *coup de foudre*, and everything would be spoiled. They shall not meet — now, Sidney dear, be good —"

"Very well," responded Outton; "I'll write and say that I'm an imbecile, and that he had better dine with us on Thursday."

"Yes," she murmured, as he scratched off a few lines; "that will be quite right, and tell him how very much I want to see him, and that he must be sure not to have any other engagement."

Outton handed the note that he had written to his wife, and she read it slowly.

"Very nice," she commented; "and I never could forgive myself if I had anything to do with breaking up what is going so splendidly. It would be wrong, and if I can help it nothing shall happen."

She handed the note back to Outton with the aspect of one who mildly defies fate, and he, rising, rang the bell. The door was almost immediately opened.

"A note, madam," said the servant who entered, as he advanced toward her. "A messenger has just left it."

"What can it be?" she exclaimed. "Why," she cried, as she turned the page and glanced at the end, "it's from Winifred. What does she mean?" Turning back, Mrs. Outton read from the beginning: "Dear Florence, how will you ever forgive me—but really you must. Even at this eleventh hour — indeed, I should think it is fully fifty-nine seconds over — I must write to you that I cannot come. There was an important —" "important" underlined," interposed Mrs. Outton — "important engagement that I thought was off, but that I find is on, and that I cannot disregard. I know that

you might think horrid things of me, but you won't, and I am sure that you *can't*!"—"can't" underlined," interposed Mrs. Outton—"when I tell you my reason, as I shall. You said there was no one else coming, and therefore my not appearing won't put you out, or I should n't do it. Please forgive me, and believe that you will think that it is all right when I explain, and also that I am very penitently and gratefully yours, Winifred Valence."

"What does it mean?" asked Mrs. Outton, folding the sheet. "What can it mean?"

"I'm sure I don't know," replied Outton, shaking his head.

"And she used to be so careful," moaned Mrs. Outton.

"It's probable that she's got into queer ways with her informal manner of life—"

"Nothing of the sort," interrupted his wife, shortly. "Winifred always was and always will be a lady, and a few months of a different existence could n't possibly change her. She must have some very good reason, or she never could do such a thing."

"Lupton is waiting," suggested Outton.

"Oh, yes," said Mrs. Outton; "there is nothing to be done. She is not coming, and we had better have dinner."

"But my note to Clarges," prompted Outton.

"Yes, to be sure," exclaimed his wife; "I had quite forgotten that. The messenger is still waiting. Lupton can give it to him."

"But—" began Outton.

"Sidney," said Mrs. Outton, "please do not have any ideas. You know that there are times when there is nothing so irritating as ideas—in other people."

"But I'm sure that you'd want me to make the suggestion. Since Winifred is not coming, and Clarges is all ready to come—"

"To be sure," assented Mrs. Outton, promptly; "write another note at once, and assure him that we are pining for his presence."

Again seating himself at the table, Outton rapidly wrote a few lines, placed the paper on which they were written in an envelop, which he closed and handed to Lupton, who immediately left the room.

"There," he said, tearing up the note that he had first written, and throwing the fragments into the fire, "that seems arranged at last, and to have come out all right after all."

"Yes," assented Mrs. Outton, doubtfully; "but think how easily it all might have been otherwise."

"We can't have dinner until Clarges comes," continued Outton, looking at the clock, and then taking out his watch with the distrust which a man always has for every timepiece but that which he himself carries. "However,

he's only three blocks away, and ought to be here immediately."

For some time they both sat in silence, while the clock ticked steadily on.

"Sidney," said Mrs. Outton at length, "do you really believe that we are perfectly helpless?"

"Helpless?" asked Outton in astonishment.

"I mean," explained Mrs. Outton, "that we are wholly the slaves of chance incidents like—"

"Like your picking up pins, and my disliking cats?" he suggested.

"Yes," she replied; "do you think that we can't do anything, but that everything happens *for* us? It almost seems so, and I don't want to believe it. I try not to believe it, and yet I can't but believe it. Now, just see to-night what a chain of accidents—"

"We do seem rather to be struggling in the meshes of circumstances," said Outton; "but who can tell? It may be that, after all, accidents are merely guide-posts along the road of life, that would tell us, if we only knew how to read the language of the land, the way that we really ought to go."

"Oh, Sidney," exclaimed Mrs. Outton, "what a beautiful thought, and how beautifully expressed!"

"Pretty good, I do think," said Outton, "for a man who has been waiting ten minutes for dinner, and who, in his innermost soul, feels sure that the soup is going to come up cold; but I suppose the philosophic mood with which I bear it naturally induces philosophic thought."

"And you really, really think," she urged, "that everything is not so bad as it seems?"

"It's just this way," went on Outton, argumentatively: "you are on a railway train that is carrying you along, but you have a right to get off at any station you please."

"But you may be carried past your station, or you may get on the wrong train."

"That's your lookout," said her husband, "and that's where the voluntary agency comes in. Of course people make mistakes, but it's not about that, as I understand, that you are troubled. What makes you unhappy is to think that when people don't make mistakes everything may come out wrong."

"Yes," assented Mrs. Outton.

"Of course, you have to take your chances," he continued, "and success in this life may be defined as ability *plus* an accident."

"Really, Sidney," said Mrs. Outton, "you are very epigrammatic this evening. But you see there's the accident—that's the trouble. If there had n't been a revolution, Napoleon never would have been an emperor."

"But if he had n't been an emperor, with his ability, some circumstance would have come,

out of the infinite number that are always happening, that would have enabled him to be something else."

"Yes," urged Mrs. Outton; "but it would have been 'something else' that he would have been, and suppose that he had only wanted to be an emperor. Now, the question here is about a man marrying a woman. A man does n't want to marry *any* woman, and if by fate he does n't get the particular woman, his whole life is spoiled, and if a man's whole life is to depend upon the fact that one person, for example, happened to pick up a pin!"

"And another happened to dislike cats," completed Outton.

"Why, is life really worth living anyway?" concluded Mrs. Outton, with a sudden burst of despairing animosity. "And so we come back just to where we started."

"And so people always will," said Outton. 'Is life worth living?' We're living it, and can't do anything else, and that question is like the one put by that fellow in 'Punch' to the other fellow about 'going across' when they're both on the ocean steamer."

"How long he is—" began Mrs. Outton, when the door was opened by Lupton, with his usual slow reluctance; "Winifred—you!" she exclaimed, as she rose to her feet.

"Yes—I—" cried Miss Valence, entering almost out of breath. "Wait a moment—I have hurried so—I have come after all."

"So I see," observed Mrs. Outton.

"It has all been so complicated," panted Miss Valence; "and when, just now,—almost the very instant after I had sent you my note,—I found that there was a mistake about the evening, and there was n't anything that I had to do, I came immediately on. The brougham was still at the door, and I jumped into it, and told them to drive fast. I thought I could get here before my note,—you know messenger-boys are so slow,—but I asked Lupton, and he told me in the hall that you had received it, and—"

"Do sit down," said Outton, with whom Winifred had shaken hands while she was speaking. "It was a close finish, and you only lost by a neck."

"As I could get here so almost immediately," she continued, "I knew that even if the note did come before I did that you could n't have made any change, and, of course, when I found I could come, I did come at once."

"Yes, indeed," assented Mrs. Outton, "of course—certainly."

"Why!" exclaimed Winifred, glancing from one to the other, "you *did* want me, did n't you?"

"Yes, dear," answered Mrs. Outton, crossing over to Winifred, and kissing her. "Of

course we are very glad. But it is so sudden—so unexpected—rather a shock."

"The truth is," explained Outton, "that Florence has had a bad attack of her old doubts as to the general rightness of things. You remember that she was always rebellious about the rather undue influence fate seems to have in human affairs, and she has at times resented what she feels to be an encroachment on her own province."

"I am sure," said Mrs. Outton, pointedly, "that *now* I am perfectly convinced that we are the mere toys of destiny."

"You see how hardly she takes it?" he said.

"Isn't it provoking?" demanded Mrs. Outton.

"What is it?" asked Winifred. "I'm sure it's not nice of you to talk before me in this enigmatical manner. Tell me at once."

"I can't now," said Mrs. Outton, shaking her head. "But—you poor child, you little know."

"Why am I a poor child?" asked the girl.

"Oh, simply," said Outton, "because it is your misfortune to be a part of our helpless and ineffectual humanity. That is only her way of putting it, that is all. She may call you a blind agent or an aimless stone in a moment; still, you must n't mind."

"But, Winifred," went on Mrs. Outton, with unrelaxed seriousness, "you said that you would tell me why you thought you could not come."

She looked at Miss Valence solemnly as she resumed her place; but the girl did not at once answer.

"Why—I—" Winifred began, hesitating, "I said that, Florence, when I was n't coming, but now that I am here I am sure that you are so glad to see me that you don't care anything for the reason why I might not have come, and it's just as if I had n't said it."

"I will not be put off with any such flippant answers," announced Mrs. Outton, severely; "I want to understand this mystery."

"Indeed—and indeed, Florence," begged the girl, "I cannot tell you now—some time,—soon—oh—Mr. Outton, won't you ring for dinner?"

"I can't," replied Outton, "until our other guest arrives."

"There is some one else coming?" said Winifred in surprise.

"Yes," said Mrs. Outton; "it was one of Sidney's most monumental blunders. He did n't know whether he asked a man to dinner or not, and the man did n't know if he were asked, and he wrote to find out, and when we thought that you were n't coming, we sent word to him to come."

"How curious!" said Winifred, with wide-opened eyes.

"Very curious—and what is more, very trying," commented Mrs. Outton.

"Who is it?" demanded Winifred.

"A man who has been out of the country a great deal, and who has been living very quietly since he came back. I never should have thought of asking you together, but now that he is here, you won't mind."

"Why, is n't he interesting?" asked the girl.

"It is n't exactly that," murmured Mrs. Outton,—she had never been able to succeed in telling her fibs in her natural voice,—“for he is—in a way—”

"But who is he?" insisted the girl.

Miss Valence had hardly spoken when Lup-ton, throwing back the door, announced:

"Mr. Clarges."

"Good evening," said the newcomer, advancing, and shaking hands with Mrs. Outton. "And I hope you'll forgive me for having kept you waiting, but really, you know, I did n't see exactly what to do. The invitation that Sidney gave me when I came to think over it was so exceedingly vague that I did n't dare appear without further confirmation—"

"I know Sidney's inscrutable ways," said Mrs. Outton; "and I understand perfectly."

"It was awfully careless of me, I confess," said Outton.

"And Mr. Clarges—Miss Valence," interrupted his wife.

Winifred had taken her stand on the opposite side of the fireplace, and Clarges, in his eagerness to make his apologies, had made his way so rapidly across the floor that he, evidently, had not noticed there was any one in the room beside his host and hostess. Now he turned hastily, and for an instant the two gazed at each other, the astonishment that had showed in her eyes from his entrance quickly appearing in his.

"Cuthbert—you—" she began.

"Winifred—I—" he stammered.

"Why, you know one another!" cried the astounded Mrs. Outton.

"Yes," said Clarges, crossing and taking the hand that Winifred held out to him. "I believe that we do."

"A little," said Winifred, as she laughed aloud.

"Oh!" gasped Mrs. Outton, utterly unable to form articulate speech.

"It has n't perhaps been for a long time," said Clarges, and then he laughed too.

"No," continued Winifred; "but—oh—why not tell them now? Every one will know to-morrow, and I was going to write it the first thing in the morning."

Mrs. Outton stared at her guest in helpless amazement.

"I—we—you tell them," said the girl, her hand going out to Clarges.

"The truth is," he said, reddening a little, "that I asked Miss Valence if she would marry me, and she has done me the honor to say 'Yes,' and now we are engaged."

"Hooray!" cried Outton, emphatically.

"This is *too* much," exclaimed Mrs. Outton, sinking back in her chair. "Now, really—"

"But it is so good, and I know you will be so glad because I am," said the girl crossing and standing before her, radiantly smiling.

"How long has it been?" demanded Mrs. Outton.

"Oh," replied Winifred, "for some time—for three months. There were a lot of reasons why we did n't announce it sooner, but now every one will know."

"And that is the reason why you have been so quiet?" Mrs. Outton continued unbendingly.

"Yes, of course," the girl answered simply. Then, after a moment's thought, she added: "I had a lot of time, too, and I felt that I ought to try and do some good. I was so happy—"

"And this was the cause of your particularly evident joyousness?"

"I suppose that it was," admitted Miss Valence.

"Winifred," said Mrs. Outton, solemnly, "you're a delusion and a disappointment, and—I don't know what to say."

"Why?" asked Miss Valence.

"Because," replied Mrs. Outton, "I was so pleased that a girl could be, as I thought, so happy in doing what you were doing. I expected to point to you as an example of what pleasure a woman could take in a wholly independent life—and then," concluded Mrs. Outton, mournfully, "to find that it was a man after all."

"And I suppose," said Outton suddenly to Clarges, where he stood a little in the background, "that's the reason you were so evidently jolly, and that saving your country and all that sort of thing had nothing to do with your pounding me on the back after all."

"Certainly not," said Clarges.

"I don't care," admitted Outton; "and I congratulate you, and wish you long life and happiness."

"And to think that I have been trying to keep you two apart!" moaned Mrs. Outton.

"Have you?" asked Winifred. "That's really the funny part of it. The reason I wrote you that I could n't come was because I got a note from Cuthbert asking if he could see me this evening—we had n't met since morning—"

"That," interposed Clarges, "was before I realized that Sidney might have meant to ask me to dinner to-night."

"And of course I said 'Yes,'" continued Miss Valence.

"And," continued Mrs. Outton, "you were going to throw me over."

"Going to throw you over!" said Miss Valence, gaily. "I should have done it without a thought."

"And what prevented you?"

"I got word from Cuthbert saying that at the last minute he discovered that he had committed himself for a dinner—"

"I'd just got word from Sidney," explained Clarges, "that I really was expected to-night."

"I am astonished you too did n't throw us over," said Outton.

"Oh, I should," admitted Clarges, serenely, "only it was so very late, you know."

"I'm glad that you have some conscience left," said Outton. "But if you knew the trouble that we've had about you people, and you have been engaged all the time!"

"I certainly tried to bring it about once before," exclaimed Mrs. Outton, "and it was a miserable failure."

"And how did you meet?" asked Outton.

"In the most natural way," said Clarges—"at the ball in the country this Christmas at the Kerchevals's."

"Just as any two people belonging to the same world would have met," added Winifred.

"And I have been trying to keep you apart," repeated Mrs. Outton, returning to her grievance; "and it would n't have made any difference if I had."

"And my dislike for cats would n't have mattered," remarked Outton.

"Or my picking up pins—but then it *might*, you know," said his wife. "It's only an accident that it was n't an accident."

"What do you mean?" asked Winifred.

"I'll tell you another time, my dear," said Mrs. Outton. "And now, Sidney, really you had better ring for dinner. Oh," she concluded, "to think that I have been trying to keep you apart! Really, it has been a perfect farce."

George A. Hibbard.

OLD DUTCH MASTERS.

GABRIEL METSU (1630-1667).

GABRIEL METSU, with a few other Dutchmen—such as Terburg, Mieris, and Netscher, take us into the dwellings of the wealthy and refined, and afford us a glimpse of the elegancies of Dutch life amid sumptuous appointments. We admire the hangings and furniture of the apartments, the walls aglow with stamped leather relieved by ebony frames of mirrors, the great chimney with its sculptured marble frieze and pillars, the brocaded bed-hangings, the richly decorated cabinets and wardrobes, all so daintily neat and bright—fit setting for the fair dames and their admirers, all in rich and rare costumes, and rustling in satins and brocades.

But Metsu, it seems to me, is preëminent among his class in that he subordinates his rich accessories so that they appear but the natural adornments and appendages of his noble and beautiful characters. So marvelously has the artist endowed his beings with personality and life, that we are attracted at once to his interesting personages, and insensibly are led to speculate as to the nature and disposition of their minds. On the opposite page is an engraving of one of Metsu's best works, entitled "Un Militaire Recevant une Jeune

Dame," which is to be seen at the Louvre, and is full of his finest qualities. What delicate observation of character there is here! This military personage,—a perfect gentleman, albeit a trifle affected in his gravity,—ceremoniously standing and saluting the lady—what an air of quality he has! His jeweled trappings count for nothing in comparison with the courtly dignity and repose that are shown in his whole bearing. And the lady—what a charming frankness speaks not only from her countenance, but from the gesture and attitude of her whole being! One feels that she must have been a lovely person.

The composition is simply faultless in the arrangement and balance of its parts. Take the group of the man, the tapestried table upon which the jug is conspicuous, and the chair from which the gauntlet has fallen—how finely this mass is counterbalanced by the group of the lady, the boy, and the dog! To consider well the disposition of the several objects in their relation to one another is an instructive study. There is nothing superfluous or wanting, and everything is adjusted with the nicest taste and judgment. Notice, for instance, how the glove upon the floor, with the walking-stick above it, offsets the "value" of the dog upon the opposite side.

"UN MILITAIRE RECEVANT UNE JEUNE DAME." BY GABRIEL METSU.

In the lighting of the figure of the woman, how the strong juxtaposition of the white kerchief about the head and shoulders with the black velvet bodice of the dress makes the background swim! Unfortunately, the picture has been darkened a little by time, though the beauty and refinement of its coloring, and the delicacy of its workmanship, are still a delight.

Metsu was a master of *chiaroscuro*, and one of the greatest of the Dutch painters. He was a native of Leyden, and was born in 1630. Gerard Dou is said to have been his early in-

structor, and already in 1644, when only fourteen years old, he had become a member of the Leyden Guild of Painters. In 1650 he removed to Amsterdam, where he came under the influence of Rembrandt, and where he probably spent the greater part of his life, of which, however, very little is known. There exist between 120 and 130 of his paintings, scattered for the most part among the public and private collections of Europe.

Metsu died at Amsterdam in 1667, at the early age of thirty-seven years.

A HERO OF PEACE.

(ROBERT ROSS: MURDERED AT THE POLLS IN TROY, MARCH 6, 1894.)

NO bugle on the blast
Calls warriors face to face.
Grim battle being forever past,
Gone is the hero-race.

Ah, no! There is no peace!
If liberty shall live,
Never may freemen dare to cease
Their love, their life, to give.

Unto the patriot's heart
The silent summons comes;
Not braver he who does his part
To the sound of beating drums.

And thou who gavest youth,
And life, and all most dear —
Sweet soul, impassionate of truth,
White on thy murdered bier!

Thy deed, thy date, thy name,
Are wreathed with deathless flowers;
Thy fate shall be the guiding flame
That lights to nobler hours.

A JAUNT INTO CORSICA.

WITH ILLUSTRATIONS FROM NATURE BY A. CASTAIGNE.

A TYPE.

center of it noticed a white marble statue of Napoleon as First Consul. It stands facing the sea, with Elba in full view, the towering mountains of which look over upon Corsica. I never realized before how near Elba is to Corsica.

Bastia, the busiest commercial place in Corsica, contains nearly 21,000 inhabitants, and was the capital of the island down to 1811, when at the request of "Madame Mère," the mother of Napoleon, the emperor removed the seat of government to Ajaccio. Bastia is over five hundred years old, and is defended by a strong castle, or bastion, which gave rise to the name.

It was in the month of May that I landed at Bastia, in the island of Corsica, and found myself at once confronted by reminders of Napoleon. On my way to the hotel we passed the Promenade St. Nicholas, and in the

The old town with the citadel rises above the more modern quarter, which lies near the harbor.

I had given orders for the porter to waken me at five, as the train left for Ajaccio at six. I awoke about five, but as no porter appeared, I dressed myself, and went down-stairs to find him asleep, and everything locked up. I roused him, settled my bill, and started out to find the railway-station, walking by the marble statue of Napoleon, which I photographed. The guide-books have much to say about the late rising of foreigners, but this does not apply to the common people, for no matter how early I have arisen when abroad, I have always found the streets astir. On this occasion, in the Promenade St. Nicholas, the seats were filled with the residents of the town, who were smoking and chatting as though they had been there all night. I hired a Corsican to carry my luggage to the station, which we reached after passing through some hilly back streets, and, on arriving there, found it still closed. Nearly all the railway-stations of Europe have a clock prominently hung on the platform,

SUNRISE IN THE CORSICAN MOUNTAINS.

CORTE.

ENGRAVED BY PETER AITKEN.

and when I saw the clock at this station nearly an hour slower than mine, I thought it was not going. It took me some time to learn that Corsica, being a French province, is governed by French time, which is three quarters of an hour slower than Italian. As this dawned upon me, I understood why I had not been called by the porter, and why the railway-station had not yet opened its doors.

On presenting myself at the ticket-office window, later, I laid down my Italian bank-notes and asked for a ticket to Corte, when, to my dismay, I learned that Italian paper-money would not pass in Corsica. Here was a dilemma that I had not anticipated, for all my money was Italian. I showed the agent the entire contents of my pocket-books, and explained with English words, poor Italian, and violent gesticulations, that it was all I had, and that I must go on the train. He told me I must go to the bank, and have my money changed. As the train would start at six o'clock, and it was then nearly that hour, I looked upon this advice as a miserable joke. Before starting for Corsica, I was particular to consult my "Baedeker," which informed me that Italian money was good in Corsica; but it did not say that said money must be in gold or silver, and as "rag" money is almost universally used in

Italy, I did not think of exchanging my paper money for hard money. I wandered about meditating what to do, and finally consulted my conversation-book, in which I found a sentence which I thought fitted my case,—which read "I will pay you for your trouble,"—and which I repeated to the ticket-agent. He sent a man out the back door, who wrote upon a piece of paper that if I would allow him to discount my money fifty per cent, he would sell me a ticket. I eagerly clutched at the proposition, and took a ticket for Corte in this expensive manner. The cars and locomotives were tiny, and the passengers primitive. The road rapidly penetrated the island, and we passed through a number of tunnels, one of them a long one, and by little stations that indulged in such names as Chichio, Furiani, Biguglia, Borgo, and Casamozza.

Arrived at Corte, a town on the Tavignano, of five thousand inhabitants, one of the first objects I noticed was the lofty citadel which commands the place, which, in the wars of former centuries, rendered the town a keenly contested point. In Paoli's time Corte was the central point of his democratic government. I visited his study in the Palazzo di Corte, and was shown the window shutters, lined with cork for additional precaution, and walked through

A CORSICAN GIRL OF THE PRESENT TIME.

the council chambers. In the Place Paoli, the principal square, stands a bronze statue of Pasquale Paoli himself.

Here it was necessary to leave the cars for the diligence, and I therefore booked at the railway-station for a first-class ticket in a crazy-looking, dilapidated stage.

How can I describe that never-to-be-forgotten romantic ride across the mountains of Corsica? The conductor blew his horn, the driver thrashed his horses with his merciless, long-lashed whip, and the boy driving the lead horse pounded his weak-looking steed, and our heavy-laden diligence moved off, leaving the gaping crowd looking after us. As the roads in Corsica

are in the same perfect condition that European roads generally are, we moved up the mountain at a good pace.

The mountains of the island are very steep, so that our rise was rapid, and we were not long in reaching a great height, from which a magnificent panorama was enjoyed. I beheld the greater part of the island: to the north, the Capo Corso; to the west, Porto, Sagona, and Ajaccio. To the east, the blue Mediterranean was plainly visible, dotted with the islands of Monte Cristo, Pianosa, Capraja, and Elba, and farther away was the mainland of Italy. The entire island resembled a vast rocky relief-map, its principal mountain-chains, with

ENGRAVED BY CHARLES STATE.

THE BIRTHPLACE OF NAPOLEON I., FROM THE KEEPER'S GARDEN.

their rivers and valleys, being distinctly recognizable. To the right of us, on the lofty summits of Monte Rotondo, were fields of snow and ice, with the greenest of verdure close to the snow. At the side of the road, for miles, were little brooks, and on the edges of these brooks were washerwomen, who cast inquiring glances upon us as we whirled by.

After going about half the distance between Corte and Vizzavona, the evidences of the construction of the intermediate sections of the railroad became apparent. The laborers on the excavations for the bridges and in the heavy cuts were many of them women, young girls, and boys, and all, including the men, carried the dirt and stone out in baskets on their heads. By this slow, toilsome method is all this work done, and it appeared to me that the work would be interminable, but I was told that the contractors were under heavy bonds to complete the road in the time contracted for, and that it would certainly be accomplished.

In passing through the quaint villages, among them Serraggio, Lugo, and S. Pietro di Ve-

naco, I was struck by the costumes of the villagers. Nearly all of the peasant men and women of Corsica that I saw were clad in the most somber manner. The men wore dark brown or black corduroy or velveteen suits, with heavy hobnail boots, and black broad-brimmed sombreros. Not satisfied, apparently, with this heavy coat and trousers, each wore a heavy vest of the same material. Around the waist each wore a broad red sash with ends hanging down at the side, which set off the black or brown suit. The women were dressed mostly in black from head to foot, with black shawls on their heads, and a pretty face was very rare among them. They will not compare with the Italians for beauty of person.

The horse is the beast of burden commonly used in Corsica, and but few mules or donkeys are seen, which appears strange when we know that Sardinia supplies so many of these little animals to Italy. One wonders that they are not more extensively used in Corsica.

At Vizzavona I again paid double fare with my Italian paper-money, and went on my way relieved that even that was accepted. The scenery at this point is of the grandest character, with Monte d'Oro on the north and Monte Renoso on the south, each about 8000 feet high, and capped with

a snowy mantle. We entered a long tunnel under the Pass of Vizzavona (or La Foce), nearly 4000 feet high, and on emerging from the tunnel found ourselves in the valley of the Gravone, near Bocognano. Our tiny train sped on through Carbuccia, Mazzana, and Caldaniccia, and soon came to the well-cultivated plain of Campodoloro, passing splendid stretches of forest, which clad the slopes and presented many beautiful views.

Just at nightfall we reached Ajaccio, the capital of the island. It is most beautifully situated on an extensive bay, but instead of being

A DOOR-STEP, AJACCIO.

ON THE ROOFS, AJACCIO.

hilly, the town is built upon a plain, and the streets are laid out with considerable regularity, and are of good width. The background of the town is formed by imposing mountains, which are often covered with snow and ice until late in the summer. The inhabitants number nearly twenty thousand, and the streets present a modern, Parisian air. The large hotels were closed for the winter season, so I went rather unwillingly to the *Hôtel de France*. It was kept by a bright-looking Corsican woman, who was in charge, while her husband officiated in the kitchen, and was only seen occasionally. Her son had just returned from Germany, with a fine education; but with all their varied talents, not one of them could articulate a word of English. By this time I began to long for some one to speak with in my mother tongue, and was greatly gratified when they brought from the dining-room the head-waiter, a young German who informed me in very fair English that he had lived in London as a waiter. By special arrangement with my landlady the German head-waiter was detailed to accompany me on a number of my tramps. As he had been in Corsica only about eight months, he naturally could not give me much information as to localities, and at his suggestion we added to our party the chief cook, a native-born Corsican, who was well versed in the history of the town.

One morning early, with camera in hand, I wended my way through the streets to the *Place Letizia*. I was much surprised to find that *Place Letizia* was a short, narrow street not over eight or ten feet wide. A short

distance up this narrow way stands the four-story, yellowish gray house which was the birthplace of Napoleon Bonaparte. I did not wonder, as I stood before the house, that it was difficult to take a good picture of it, because it is impossible to get far enough away from it. Opposite the house is a small park or garden, to one side of which is attached the dwelling in which lives the concierge who has charge of the celebrated house. He permitted me to go up to his garret window to get a view, looking out upon the house from that direction. Standing in front of the house, I observed an old crone seated at a third-story window of a house at the back of the little old yard, and holding up a franc in my fingers to her, and touching my camera, I caused her to understand that if she would allow me to go up to her room to get a photograph of the house, I would give her a franc for the privilege. She smiled her assent, and the little daughter of the concierge escorted me around by a rear way, up-stairs, to her room.

Later, I entered the birthplace and early home of the greatest personage of modern times, and ascended the stairs to the second floor. I involuntarily removed my hat as I was ushered into the room, where, before me, stood the writing-desk used by Napoleon. I passed through the ball-room, now called the conversation-room, where, standing against the wall, was the card-table with checker-board at which Napoleon used to play. In his mother's room stood the frame of a plain, painted bedstead, without slats or bedding, upon which Napoleon's mother slept, and in the corner of the room was a plain, narrow settee, or couch, covered with inexpensive woolen material, upon which the child Napoleon was unexpectedly born; for it will be remembered that his mother was

ENGRAVED BY PETER AFFKEN.

THE STATUES IN THE PLACE BONAPARTE, AJACCIO.

IN THE OLD QUARTER OF AJACCIO.

taken ill at the cathedral, and was hastily removed to her home upon this couch, and the child was born before the mother could be removed to her bed.

In a small room in the back part of the house Napoleon slept when a boy, and the same simple bedstead stands there to-day that he occupied for a number of years, but no bedding is now upon it. In the fireplace are the same old andirons which were then in use, and on the bureau stood a little mirror in which he had gazed when arranging his toilet.

The upper rooms of the house had been occupied by Princess Marianna, who died a few weeks before my arrival. She was the widow of Louis Lucien, who was the son of Lucien Bonaparte, brother of Napoleon. The house

belongs to the ex-empress Eugénie, to whom it was willed by Napoleon III. No other person will hereafter be allowed to occupy it, and it will henceforth be preserved intact, as a relic of the greatest member of the Bonaparte family.

The general air of the house is gloomy, owing to its unfurnished appearance. The wood and tile floors are bare; there is not a curtain at the windows, and some of the rooms are entirely empty. A few pictures are hung upon the walls, among them some photographs of the Arenenberg château in Switzerland, the home of Queen Hortense, which afterward became the property of her son, Napoleon III. I also noticed a little pen-and-ink sketch made by the ill-fated Prince Imperial. In the ball-room

ONE WHO SAW NAPOLEON.

are a number of sconces hanging high upon the walls.

There are so few visitors to this house that the concierge has not been spoiled by them, and I soon found that one could do pretty much as one pleased in the way of taking photographs of the various rooms and their contents, and I lost no time in availing myself of the opportunity.

Not far from the Place Letizia is found a

neat little park filled with every variety of tropical plants, and adorned with marble fountains, with carved lions, from the mouths of which water was flowing. Surmounting the group is a marble statue of Napoleon as first consul. The statue does not possess any great merit, and is only another evidence of the prominence of the Bonaparte family in the place.

Continuing my walk, on each side of which

A CORSICAN PATRIOT, OF THE OLD DAYS.

stood a row of large, healthy palm-trees, I reached the Place Bonaparte, where I found a group of statues, the duplicate of which does not exist. In the center is a bronze equestrian statue of Napoleon clad as a Roman emperor, and, standing on four pedestals, at each corner of a large base, are figures of his four brothers, Joseph, Lucien, Louis, and Jerome, clad as Roman senators.

On Sunday morning I visited the hôtel de ville located near the market-place, which is devoted almost exclusively to a collection of relics relating to the Bonaparte family. Upon the wall was a full-length portrait of Charles Bonaparte, the father of Napoleon, clad in scarlet coat and fine lace, and near him his son Joseph, in his robes as King of Spain. Over the mantel-

piece was the portrait of his uncle, Cardinal Fesch, in the brilliant gown of a cardinal, while here and there upon the walls were numerous pictures of Napoleon's mother, and of various other members of the Bonaparte family. In one corner, standing upon the floor, was an ugly life-size marble statue of Jerome Bonaparte as King of Würtemberg, presented by himself to his native town, and on many pedestals were bronze and marble busts of "Madame Mère," the little King of Rome, and the Prince Imperial, none of which I had ever before seen. Upon marble tables were several clocks belonging to the family, and on one of the tables was the bronze mask of Napoleon, taken immediately after death, by the order of the Abbé Vignali, who was sent by Cardinal Fesch to

St. Helena to administer the last sacred rites to the dying emperor. Scattered about the room were the remains of the finest furniture from the house of Cardinal Fesch, among which the chairs were especially showy.

As I wended my way down the Rue Fesch, a dirty narrow street filled mostly with shops, I found the gray building called Chapelle Fesch, built to contain the remains of the mother of Napoleon, of Cardinal Fesch, and of other members of the Bonaparte family. On entering, I found myself in a little church fitted up with seats, all of them completely covered with black cloth, which had not been removed since the recent death of Princess Marianna. A woman in charge of the church took a light, and escorted me to the crypt under the church, to see the tombs. By the light of one poor candle in the hands of my guide, I perceived that the tombs were sealed with blocks of black marble, and all

a large collection of pictures, a library of thirty thousand volumes, and a collection of Corsican minerals, which were bequeathed to the town by the cardinal. In the courtyard stands an uninteresting bronze statue of Cardinal Fesch, which was placed there by the town since his death.

The cathedral in Ajaccio, where Napoleon was baptized, is a plain, unimposing, dingy edifice. There is no inscription in or about the cathedral referring to Napoleon, and I was compelled to be satisfied with the possession of a rare lithograph copy of his birth and baptism from the register of the cathedral.

Not far from the cathedral, overlooking the bay, stand the fortifications of Ajaccio, surrounded by a large moat, and garrisoned by French troops. All this work was done under the charge of Napoleon, when he was a young lieutenant engaged in the service of General

DRAWN BY ERIC PAPE.

FROM A PHOTOGRAPH.

A MOUNTAIN HOME IN CORSICA.

that was cut upon the slab containing the remains of Napoleon's mother was the simple inscription, "Letizia Bonaparte, Mater Regum" (mother of kings).

Adjoining the Chapelle Fesch is the Collège Fesch, founded by Cardinal Fesch, containing

Paoli, at the time when Corsica was striving with Italy for her independence.

I drove one day with the English consul through the streets of the town out into the suburbs, where, just beyond the built-up portions, we found Napoleon's grotto, whither he

AN ARTIST'S FANCIES OF NAPOLEON: IN AJACCIO IN 1769.

was wont to retire and meditate when a boy. It is one of the most enticing places about Ajaccio, and one does not wonder that Napoleon loved to go there.

We continued our drive out into the country until we reached a house standing well back from the road, with beautiful grounds and filled with flowers of every description. It was unnecessary to be told, upon seeing the eagles along the front edge of the roof, that this in some manner was connected with the history of Napoleon. This place was the home of Madame Letizia Bonaparte after Napoleon became great, and here she spent much of her time. The property is now owned by Count and Countess Bocciochi, the grandson of Eliza, one of the sisters of Napoleon. As the house

stands upon an elevation, it affords a good view of the surrounding country and the adjoining town of Ajaccio.

One must not think, however, that the Bonaparte family is all that there is to interest the tourist in Ajaccio, for the town itself, with its curious shops, makes the time pass very rapidly. In looking in at the shop-windows, I observed many stilettos and daggers of a form found only in Corsica. These daggers are manufactured in the most elaborate styles, with jeweled handles, and some of them are very expensive. The blades bear various suggestive mottos, such as "Vendetta," "Mort," and a sentence which, translated into English, reads, "Death to our foes." These knives are temptingly exposed for sale in the majority of

the stores of the place, and I was repeatedly urged by the shopkeepers to purchase one to take home with me. They are also manufactured in the form of miniature breastpins of gold and silver, with tiny red coral and onyx handles. This brings to mind the much-talked-of vendetta, which has existed for centuries in the island, and, notwithstanding the restraining and softening effects of advancing civilization, still exists.

Spring of Solario, commanding charming views of the town, the harbor, the gulf, and the mountains. On the way we passed the Jardin Peraldi, where splendid mandarin and other oranges are grown. The road on the north side of the bay passing the Hospice Eugénie, although destitute of shade, also affords a charming walk.

But my time was up, and I was unwillingly obliged to take my departure, and accordingly purchased a second-class ticket, which was

AN ARTIST'S FANCIES OF NAPOLEON: IN THE GROTTA.

A visit to Ajaccio would not be complete without going to the market-place and observing the curious-looking peasants with their little stock of fruit and vegetables displayed for sale. Such luscious strawberries, bright, red cherries, such peas, potatoes, onions, and radishes, I did not find anywhere else. After the small wild strawberries which are everywhere used in Italy, these Corsican berries were unusually attractive and appetizing.

One of the pleasantest walks in Ajaccio is afforded by the prolongation of Cours Grandval, which crosses the Place Casone and gradually ascends the olive-clad slopes to the

good enough, for I found scarcely a passenger in the first-class railway compartments in Corsica.

In due time we reached Vizzavona, and I secured my seat with the driver before leaving the train, and our diligence, with the three horses and the much-abused lead horse, was soon on its way through the valley of the Vecchió, an affluent of the Tavignano. After leaving Vivario, a pleasant mountain village, our course lay along a chain of mountains, the vast height to which they rise within a comparatively small space imparting a wild and imposing character to the scenery.

AN ARTIST'S FANCIES OF NAPOLEON: PLAYING AT WAR.

Nine tenths of the area of the island is uncultivated, while the heights for the most part are clothed with magnificent forests. The soft air was laden with spicy, aromatic odors of a rich flora. As our poor horses started down the mountain, the driver would put on the brake, and they would gallop at full speed over the roads, which are never dusty, and are made of granite almost as white as chalk and as smooth as the best road in any city park. We turned

corners in the road so sharply as almost to dislodge me from my seat, and I held my breath many times, thinking that the diligence would certainly be overturned. At one time, for nearly half an hour, did we see-saw down one of these mountains, and it seemed as though the village was coming up to us, with the steeple and the tile roof of a little Catholic church approaching nearer and nearer at every turn. After the customary changes of horses, we reached Corte,

AN ARTIST'S FANCIES OF NAPOLEON: THE FIRST CONQUEST.

where the train was in waiting to carry us to Bastia, which we reached in the evening.

The next morning we were in the harbor of Leghorn. The little boats flocked about us, on one of which I embarked from the ladder on the side of the ship, and soon found my-

self once more upon Italian soil, where, after a perfunctory examination of my luggage in the custom-house, I was permitted to go on my way to my hotel; and my long-expected trip to Corsica and the home of Napoleon was ended.

Charles H. Adams.

AT REST.

SHALL I lie down to sleep, and see no more
 The splendid affluence of earth and sky;
 The proud procession of the stars go by;
 The white moon sway the sea and woo the shore;
 The morning lark to the far heavens soar;
 The nightingale with the soft dusk draw nigh;
 The summer roses bud, and bloom, and die;
 Will life and life's delight for me be o'er?
 Nay! I shall be, in my low, silent home,
 Of all Earth's gracious ministries aware:
 Glad with the gladness of the risen day,
 Or gently sad with sadness of the gloam,
 Yet done with striving and foreclosed of care—
 "At rest—at rest!"—what better thing to say?

DANIEL O'CONNELL.

RECOLLECTIONS OF AUBREY DE VERE.

CHILDHOOD AND BOYHOOD.

I.

MY earliest recollections are of our Irish home, Curragh Chase, and I always see it bathed as in summer sunshine. It was not once, however, as it is now. At the bottom of the lawn there now spreads a lake, but at that time it was rich meadow-land, divided by a slender stream, with fair green hills beyond. The pleasure-ground now blends insensibly with the lawns and woods; but it had then a wall around it, which, as my father's old friend and school-fellow, Sir Thomas Acland, said on

visiting us, when both had left youth behind, gave it a look of monastic seclusion. It was then divided into four grassy spaces, as smooth as velvet, and bright with many a flower-bed. I can still see the deer park, and the deer bounding from brake to brake of low-spreading oak and birch; the gathering of the poor on Sunday evenings at the gates of the long ash avenue for their rural dance; and the gay, though half bashful, confidence with which some rosy pretty peasant girl would advance, and drop a courtesy before one of our party, or some visitor at the "big house," that courtesy being an invitation

to dance. There was also a little open in the woods in which the neighbors danced; nor have I yet forgotten the vexation with which I found myself once snatched up and carried home to bed by one of those "merry maids whose tresses tossed in light," and who lost little time in returning to the revel.

It was a time at which opposites of all sorts oddly combined. The country-gentlemen were then looked up to as so many little princes, and the poor would have gladly adopted them as chiefs, like those of old, had they cared to accept that position; yet there was great familiarity in the intercourse of classes. It was all strangely mixed with simplicity of life. My grandmother drove about the park with her four grays and an outrider, while my father, with whom she lived, had his four blacks and an outrider; yet dinner, which was at five o'clock, would have been far from satisfactory to a diner-out of the present day. What a stranger would have thought ostentation was often a necessity, for the roads were generally carried over high hills. I well remember my grandmother's beautiful but melancholy black eyes, her ways at once authoritative and affectionate, and the reverence with which she was regarded by all. Nor have I forgotten her good-night to us children: "God bless you, child, and make a good man of you"; nor the loud laugh once when the youngest of us, not to be outdone in civility, responded, "God bless you, grandmother, and make a good woman of you."

We cared less for my grandfather, for though Curragh Chase, his chief residence, had always been our home, he lived much elsewhere. He was regarded as a man of remarkable ability, which he seldom turned to serious purpose. That ability was early marked, and Lord Shelburne, then high in office, when on a visit at our house, was so much struck by the boy that he turned to his father, and said: "Place that boy in my hands! I will give him a political education, get him into parliament on his coming of age, and he will turn out a great man—" an offer which was not accepted, and accordingly the boy was brought up to be an Irish squire, at a time when England may have "expected every man to do his duty," and Ireland expected every man to do, possibly some other man's duty, but, in any case, whatever amused him—ride well, stand by a friend, say good things, and fight duels.

In those days a duel was the most mirthful of pastimes, and in Dublin there still remains a tradition of two lawyers,—one the biggest, and the other the smallest, man in Irish society,—who met in the Phoenix Park, just after sunrise, to indulge in that amusement. As they approached each other, the big man set his glass to his eye,

and exclaimed: "But where is my honorable opponent? For I really cannot see him."

"What 's that he 's saying?" demanded the little man.

"I just remarked," replied the big man, "that I am so large that if you miss me, you are like the man who, when he took aim at the parish church, never succeeded in hitting the parish."

"What is that big 'Golumbus' of a man babbling about?" was his small antagonist's rejoinder. "That I can't miss him, and he cannot see me? Let his second get a bit of white chalk, and draw my exact size and shape on that huge carcass of his; and any bullet of mine that hits outside that white line shall not count."

My grandfather had no taste for duels. At a great public dinner, among the "healths" proposed was that of Lord Castlereagh, to whom my grandfather, then a member of the Irish parliament, was known to have a special aversion. All looked toward his seat, wondering how he would meet the dilemma; for the refusal to drink to a toast could then be expiated only by a duel. The glasses filled, he was the first to rise; he lifted his own, and said: "Here 's to the health of my Lord Castlereagh!" adding, with a significant expression of face, "the Lord be troublesome to him!"

My grandfather always gave the sagest advice to a friend, but generally acted himself from whim. Once when walking in a London street, he passed a room in which an auction was going on, and, attracted by the noise, entered it. The property set up for auction was the Island of Lundy in the Bristol Channel. He knew nothing whatsoever about it, but when the auctioneer proclaimed that it had never paid either tax or tithe, that it acknowledged neither king nor parliament, nor law civil or ecclesiastical, and that its proprietor was pope and emperor at once in his own scanty domain, he made a bid, and the island was knocked down to him. It turned out a good speculation. It paid its cost by the sale of rabbits; and whenever its purchaser chanced to have picked a quarrel with England and Ireland at the same time, it was a hermitage to which he could always retire and meditate. He planted there a small Irish colony, and drew up for them a very compendious code, including a quaint law of divorce in case of matrimonial disputes. In money matters he was adventurous and unlucky. He lost about £15,000 by cards, and then renounced them. He is said to have also lost about half the family property through some trivial offense given to his father. In other matters he was more fortunate. During the war he raised two regiments consisting of the sons of farmers, his own tenants and those of his neighbors, and bestowed a captain's commis-

sion on his only son, then a boy of five. I remember my father describing the pride with which he strutted about in his scarlet uniform, when the general rode out to review these regiments. "But where is the captain?" exclaimed the veteran. "Here I am," shouted the child. "But, my little man, you are too young to fight!" "Not at all," was the answer: "let the French land, and" — waving his sword in the air — "I will cut off their heads!" Alas! the hard-hearted Englishman "disbanded the captain," as the poor people described his act, and the youthful warrior lost forever the opportunity of humbling that "Corsican adventurer" who had called England a "nation of shopkeepers" and affirmed that the lions on her standard were only leopards.

My grandfather was the most popular of our country-gentlemen, because he had a great love for the poor, and always helped them at a pinch. A very old tenant once told me many stories illustrating this side of his character. Here is one of them. A young man was tried for murder, having killed a member of a rival faction in a faction-fight. The judge, reluctant to sentence him to death on account of his youth, turned to him and said: "Is there any one in court who could speak as to your character?" The youth looked round the court, and then said sadly, "There is no man here, my lord, that I know." At that my grandfather chanced to walk into the grand-jury gallery. He saw at once how matters stood. He called out, "You are a queer boy that don't know a friend when you see him!" The boy was quick-witted; he answered, "Oh, then, 't is myself that is proud to see your honor here this day!" "Well," said the judge, "Sir Vere, since you know that boy, will you tell us what you know of him?" "I will, my lord," said my grandfather; "and what I can tell you is this — that from the very first day that ever I saw him to this minute, I never knew anything of him that was not very good." The old tenant ended his tale by striking his hands together and exclaiming, "And he never to have clapped his eye upon the boy till that minute!" The boy escaped being hanged. Such traits make a man popular in Ireland; and it is said that at his funeral the keening (funeral wail) for many a mile was such as had rarely been heard. Not long ago I came upon a letter from an English minister of the day, informing him that the patent for his peerage, an English one, was ready. It seems, however, that at the last moment he changed his mind and declined it. Possibly there was some one to whom "he would not give so much satisfaction" as that of seeing him take a peerage.

The poorer class in those days seldom wore shoes or stockings. That they did not count a

hardship. On the contrary, they found these appendages irksome; and at a later time often carried their shoes in their hands till near a town. Many of their houses were but hovels without chimneys or windows. The real patience, or rather cheerfulness, with which such hardships were borne should be recollected by such as justly complain of more recent violences committed in retaliation for imaginary wrongs. At that time the mass of the people spoke Irish, not English, habitually. They did not read; and if they had read they would have found no publications that preached Jacobinism. They were faithful, notwithstanding, to their political traditions. No one could keep an orange lily in the garden, though planted by known enemies of the Orange party. It was sure to be thrown over the wall, while we were informed that there were some "bad mimbers" in the neighborhood whom no vigilance could keep from stealing. We had at one time an excellent gardener, but he was an Orangeman from the "Black North." He had brought with him a big blunderbuss for the pacification of the South; and he boasted much of its capabilities. One night a number of men with blackened faces burst open the window of his bedroom, which was on the ground floor. The family were then in England, except two young lady relatives. One of them hid in a garret, the other made her appearance on the field of action, attended only by two maids, without fear and without cause for fear. The men listened to her rebuke with respect, and spared the life of the Orange gardener, after making him, however, swear to return forthwith to the North. They took away his blunderbuss, but a few days later wrote a letter stating that it would be found under a particular tree; and there it was found.

The extreme poverty here described will suggest the thought that the proprietor class had been very remiss in the discharge of their duties. That charge would be only partly true. They did not feel that poverty as much as they ought to have felt it; but neither did the Irish poor themselves, in ordinary times. The penal laws were still sufficiently recent to live on in their consequences; and one of these was, as Edmund Burke affirmed, a legislative mandate, "Thou shalt not improve." In prohibiting property to the mass of the people they had proscribed industry; but they could not prevent early marriages; and the consequence was that between the huge population and the scanty means of support there existed no proportion. The problem had become too vast to be solved by any efforts of individual proprietors, had they been ever so dutiful, able, and wealthy. The farms were too small for scientific cultivation; and if they had been consolidated, multitudes

must have been deprived of all support. The farms were not, it is true, laid out for cultivation at the landlord's cost, as in England; but if they had been, wherever competition for land existed, those improvements must have been paid for by a rent proportionately increased, as in England. Neither the proprietor nor tenant possessed the capital necessary for such improvements; but the poor man's capital was his labor, and the system which grew up in Ireland was the best at that time, not only for the landlord, but even more for the tenant, because he had thus his earnings at once as a farmer and as a laborer. Again, the laborer's pay was deplorably low; but the work given for it was proportionately low. That arrangement also grew naturally out of the circumstances of the country. If the rate of wages had been higher, the labor would then have been unproductive; and half the laborers must have been thrown out of employment, since even at a low rate of wages there was not work for the laborer for more than half the week. The low rate of wages simply distributed a small labor-fund among a large number of half-laborers. A philanthropist who doubled the rate of wages would only have increased the evil in the long run: for he would have drawn in upon a small neighborhood a double population with an artificial and therefore ephemeral support. Eventually the Irish population, wholly unemployed during a large portion of the year, was reckoned at two millions. A remedy for all this was indeed most necessary, but it did not rest with the individual proprietor, but with the state. It must have begun with a vast system of state-aided emigration to the colonies, where large aids both before and after their arrival should have been provided for the early settlers. The work would have been costly; but "these are heroic works and worthy kings." Ireland had early done what unaided energy could do in the way of emigration; but the effort was wholly insufficient, while also attended by needless suffering and a scant reward at best. Such state aid was a debt of honor on the part of the state; but the impulse thus given to the growth of her colonies, and the extension of her markets, would have eventually repaid that cost, a large proportion of which might have been justly charged upon the Irish property thus rendered capable of indefinite improvement. The land-laws in Ireland would have worked as they did in England when the pre-condition had been fulfilled, that is, a state of things substantially similar in the two countries. But this would have demanded assisted emigration, and such aid to industrial enterprises at home as the legislation of past times had rendered necessary.

The disproportion between the vast population and the slender means for their support

continued to increase year by year; I remember hearing in my boyhood my father frequently lamenting the blindness of statesmen who paid no serious attention to it. His political predictions generally turned out true. "We sit in a boat the gunwale of which is nearly level with the water," he used to say. "How will it be when the waves rise?" The waves rose in the famine of 1847-50, and his words recurred to me. They would have been heard often and far if he had had a parliamentary career. Unluckily, he stumbled at its threshold. He stood as a candidate for his county at the election of, I think, 1820. At that time to represent a county was a great distinction, and one sometimes sought from lower motives. My father stood for his county because he wished to benefit his country. But he stood a week too late; and the clouds of letters sent daily to the post were often answered by regrets that the votes of the writers had not been asked until they had been promised to another. Elections then lasted for a fortnight in Ireland, and were times of fierce excitement, though politics had little to do with it; for as Mr. Manners Sutton, when Speaker of the House of Commons, said to an Irish member, "Your country has no politics." At that time tenants invariably voted with their landlords,—it was an immemorial right,—and the story went that one night when an unpopular landlord had locked up forty of his tenants in a barn close to the town where an election was held, a discussion arose among them as to the expediency, not of voting against him, but of hanging themselves from the rafters to spite him the next morning when he unlocked the door. My father was strongly in favor of Catholic Emancipation, and was popular among the poor. He was popular also among the country-gentlemen. Every day the excitement increased; every road and every street, as we drove about, resounded with party cries, and I remember seeing quite a little boy waving his cap round his head, and shouting, "Long live Sir Aubrey, and long die Colonel O'Grady!"—the rival candidate. I can also remember being frightened by hearing that if my father were beaten it would be by the votes of "dead men"—that meant, of deceased freeholders whose names remained accidentally on the registry lists, and who were personated by impostors. During the last few days of the election the race was a neck-and-neck one. At last it was decided after an odd fashion. A country-gentleman with whom my father had always been on the friendliest terms, and who had waited for the last day of the polling in order to impart a more emphatic character to his proceeding, rode into Limerick at the head of his numerous tenantry, and voted against him! Between the two there had never been a cool-

ness; but many years before he had had a quarrel with my father's uncle, the Earl of Limerick; he had vowed revenge, and the opportunity had come. My father was a man of great magnanimity, and never resented injuries. Somebody once said of him, "Others forgive injuries, but he entirely forgets them, and that very soon." His conduct to the friend who had thus deprived him of a political career illustrated the old saying, "It takes two to quarrel." The intercourse between the families continued as before. Our vindictive neighbor was a friendly man when not crossed, having high breeding and great abilities; though, being, like most Irish gentlemen, without ambition, he never turned them to account. I remember his walking up and down our library years afterward, with his hands locked together behind his back, his head bent low before him, and his long, white hair streaming back over his shoulders, and hearing him say: "It is a great thing to be able to look back on a long life, and record, as I can, that never once did any man injure me but sooner or later I had my revenge." What he thus recorded he certainly regarded as a merit. An evil tradition had generated a "false conscience." He was like an Indian chief who had never forsaken a friend, or complained of a pang, or left a scalp on the head of an enemy of his tribe.

That disastrous vindictiveness is often found in races whose sympathies are no less keen, but who have only half emerged from an early stage of civilization; and it may then be combined with the most sensitive heart, and the strongest spirit of self-sacrifice. It is the barbaric element surviving in a society in which the Christian element may also be strong in many hearts, but into which the conventional ingredient of civilization has not yet entered. In Ireland the faction-fights then so common witnessed to the intensity of a perverted fidelity. They were regarded as a just retribution avenging a wrong inflicted perhaps a century before. Neither the civil nor the ecclesiastical power could restrain them. I remember a good old priest describing one of these faction-fights to me. When the day appointed for the terrible periodic rite had arrived, the two factions met at the place usually set apart for it, and stood face to face with a considerable space between them. The priest rode along the line dismounted, knelt down, lifted his hands, and solemnly adjured both factions, in the name of God, to depart, and not imbrue their native land with the blood of brothers. They thanked him with great reverence, and then requested him, as he had acquitted himself of his duty, to take his departure. He mounted, and rode to the top of an adjoining hill, on which was stationed a considerable body of cavalry and several ma-

gistrates, one of whom, a venerable old man, beckoned him to his carriage-window, and said to him with great agitation, "Sir, this is a dreadful sight!" "I pitied him," said the priest to me, "and desired him not to take on in that way, since there was no help for it." Then the two factions raised a great shout, and met in the middle space; the next moment the cavalry charged down the hill, and rode right over both.

I remember a touching incident in connection with the faction-fights. While the agitation for repeal was going on, O'Connell, both on religious and political grounds, made a great attempt to put them down, for he was quite sincere in his frequent assertion that "he who commits a crime is the enemy of his country." With the aid of the Catholic clergy he induced the rival factions in many parts of Ireland to meet at their parish church, renounce their ancient enmities, and shake hands. A relative of mine then traveling through the country observed a great crowd around a village church. He got out of his carriage, and entered the church. It was a "reconciliation" meeting. Two old gray-haired men, leaders of two rival factions, advanced slowly, with several halts, from the opposite ends of the church to the middle; stood there silent, face to face, and at last shook hands. The next moment one of them dashed himself down on the stone pavement, and cried aloud, "O my son, my murdered son! I have clasped the hand that shed the last drop of thy blood!"

The earliest political event which I remember is the death of King George III. We children were all great loyalists; on this occasion we were put into mourning, and I believe that our grief on that occasion was very real, though not very lasting. Soon afterward we migrated to Mount Treacherd, the residence of my maternal grandmother, on the banks of the Shannon. Many a day was spent sailing in a little open boat, with three masts, and four sails, now by the ivied cliff and fair wooded shores of Cahircon, now among the islands at the mouth of the Fergus, now beneath the heathy hills that overhang Foynes. I well recollect my father's characteristic remark on the far nobler view we should have had if only on one of those hills there had chanced to stand another castle like "Shanet," a ruined keep of the Desmond, which crowned an eminence a few miles inland. He pointed also to Knock-Patrick, and told us how from its summit Ireland's great apostle had sent his benediction over all the lands to the south and west. Sometimes we made our way down the river, past Glin, Tarbert, and Kilrush, saw near its mouth the island of Scatterry, the lonely hermitage of St. Lenanus, and the long line of Ballibunion's

cliffs, with their submarine palace of caves, the sound of which, after a storm, was heard, in one wind, thirty miles off. I have never since felt anything like that terrible sense of loneliness which penetrated my whole being the evening of our arrival, when I was left for an hour alone, and looked westward over "the spacious Shannon spreading like a sea," and diversified only by a few black-sailed turf-boats far apart.

The next year we went to England. We traveled in a very large old family-coach with our own four horses. It took us four days to reach Dublin, and twice as many more to reach London. On the second evening, at Maryborough, we were informed that we should have an interesting sight the next morning at breakfast, as a man was then to be hanged on a platform just opposite our windows. We started accordingly an hour earlier than had been intended. Steamboats were then in a very early stage of their existence, and seven hours were dolorously spent before we landed at Holyhead. The slow rate at which we traveled showed us, however, many fair sights which the traveler now misses. I remember vividly the interest with which we saw King George IV. drawn by six cream-colored horses in his state coach, with the Duke of York beside him, and the Duke of Wellington opposite, on the occasion of a dissolution of Parliament. I remember no less, as in duty bound, our French governess, who told me, then eight years old, that I should never forget her, because she had taught me to write. She had, I believe, but one fault, viz., that, though not pretty, her manners were so perfect, and she was at once so brilliant and so "spiritual," that at evening parties she attracted more attention than any other lady in the room. She was an ardent Bonapartist, and her sister had married a brother of the Emperor Napoleon. At one time there was on a visit to us a young French lady, an equally ardent Legitimist, and I used to hear people marvel at the skill with which in their passages of arms the two politicians united the extreme of politeness with sarcastic bitterness.

During our residence in London my father published his first drama, "Julian the Apostate," and also his second, "The Duke of Mercia," both of which were highly praised in the periodicals, though neither had a large circulation. No poet was then popular except Byron, who must have deprived the world of as much poetry as he ever produced. I remember asking my father whether Byron or Scott was the greater man, and his answering, "Scott — because he is as great, and he is a good man also."

We passed a delightful summer on Richmond Hill, in a house then adjoining the "Star and

Garter." It was there, released from the streets, that I first felt the delight which comes to us from beautiful scenery, though Richmond lacked the nobler mountain range of Galtymore (Spenser's "Old Father Mole"), which raised the scenes amid which I had passed my earlier childhood to a higher order of beauty. We daily watched the sunsets from Richmond Terrace, with the Thames, reddened but glassy still, winding away among leagues of rich lowlands, "a haunt of ancient peace"; the hedge-rows trees crowding so closely together that, at a distance, the rich pasture-lands and stately homes embosomed in them seemed destined to be reabsorbed into that primeval forest which still waged a peaceful war with that "sweet enemy," modern civilization. Still more charming to my imagination were the long avenues and solemn groves of Ham House, within whose inclosure the venerable mansion looked content to stand half-hidden and guarded by its grim iron gates. I did not associate it with the historical events which it records, but with a German fairy-tale about a witch whose delight was to entice young lovers into her forest, then change them into birds, and hang them up in the cages that lined the corridors of her palace prison. Every year I revisit those scenes, and wonder at the recollection that our parents, with whom we first enjoyed them, seemed then to us to be elderly persons. They had not reached one half the ordinary life of man, for they had married at eighteen and seventeen.

Next summer was passed by us in a place called Ruxley near the village of Esher. It had a small but lovely lawn, in the middle of which stood two venerable cedar-trees; beyond it was a wood, and on the other side a common on which we played cricket. In the neighborhood we visited many beautiful places, especially Hampton Court, with its palatial gardens and priceless cartoons; Bushey Park, with its vast horse-chestnut avenue; Clermont; Kingston; and Boxhill, with its box-trees, in some cases, nearly as large, if I remember aright, as birch-trees. Close to us was a high hill from which we used to fly our kites, instructed in that art by our tutor, William St. George Palissier, the descendant of a French family exiled by the revocation of the Edict of Nantes. He was a very remarkable man, judging him by the impression he made on others as well as by my own recollections. He had a massive intellect, vigorously trained and richly stored; high principles, both moral and religious; a lofty sense of honor; perhaps too much self-confidence, which some would have called self-assertion, for he habitually spoke, though never discourteously, with the tone of a superior. He was a great classical scholar, and well acquainted with the best literature of modern countries,

especially the chief English poets and theologians. In person he was short and thick, with strong features, and a fine forehead, which I remember describing as "bursting with sense," for I had an enthusiastic admiration for him. That sentiment he was very far from reciprocating; for, so slow was I at my Latin for a boy of ten years, that he desired me to discard it altogether, inasmuch as I was an idiot. I asked him what, that being the case, I was to do; to which he replied that I might cultivate the moral faculties, since I had not the intellectual, and also make traceries of maps, laying them level upon glass. I asked next whether the moral faculties or the intellectual were the better; to which he replied that the moral were, seeing that good men took such with them to heaven, whereas the intellectual faculties underwent some strange revolution after death—an answer which entirely contented me. A few weeks afterward my father asked me some questions respecting my studies, and I replied that I had abandoned them all by my tutor's advice on account of being an idiot, and spent my time tracing maps on glass, and cultivating the moral qualities. With this state of things my father was far from being contented, and he told my tutor that the more stupid I was, the more trouble he should have taken with me. My Latin grammar was resumed, and when one day at our historical lesson I repeated to my tutor by heart the speech of Scipio Africanus to Hannibal before the battle of Zama, in place of giving merely the substance of it, he seemed surprised, and confided to me his opinion that possibly I might one day cease to be an idiot. Probably his earlier impression was not far astray, for when I began with arithmetic, several weeks elapsed before I could understand the process of "carrying" at the end of a line of figures in addition. He accompanied us when we returned to Curragh Chase, and there continued to read aloud to us the plays of Shakspeare, as he had previously read them, to our intense delight, at Ruxley. He was a magnificent dramatic reader, and these Shaksperian readings were perhaps the most stimulating part of our education. In about a year more he left us and settled at Carnarvon, a grievous loss to us, as I have always believed. He was careful of our religious instruction after a certain "high and dry" fashion, and constantly inculcated on us rectitude, purpose, and energy, his praise of the last being expressed in the saying, "There are three letters of more value than all the rest in the alphabet, viz., N. R. G." We had many later tutors, but none like him. The best of these was Edward Johnstone, a most kindly, upright, and religious man, who afterward became

a clergyman. He was an ardent admirer of Wordsworth, and the first to point out to me the extraordinary merits of his "Vernal Ode." One of our tutors I remember chiefly from his oddness. He used to ride with me, but never would leap a wall on a Sunday, because, as he remarked, "If I were killed while riding on a Sunday, my friends would not pity me."

Some four or five years after our return to Ireland passed away in a quiet routine of studies, wanderings in the woods, occupation in the garden, in which each of us had a little territory of his own, and pleasant readings aloud in the evening, our book being generally one that combined instruction with amusement, such as travels or biographies, seldom a novel, except when Walter Scott had brightened all the households in the land with another of his delightful romances. Sometimes a speech of Brougham's, Plunket's, or Canning's was read aloud; some of which had passages which strongly moved our youthful imaginations, such as Canning's celebrated boast in connection with his recognition of the independence of the South American republics—"I called a new world into existence to redress the balance of the old." It would have been difficult not to have caught a portion of the enthusiasm with which Canning was at that time spoken of by his friends (while even his enemies often contented themselves with calling him "a splendid Evil"), and of their delight when, on the death of Lord Liverpool, King George IV. reluctantly made him prime minister. On the other hand, the fanatics of the day abhorred him, and all the more for having allied himself with the leading Whigs, and discarded Lord Eldon and the high Tories. Unhappily, he died too soon to carry Catholic Emancipation, which in that case would not have needed to be carried through intimidation, and by statesmen who on principle had always resisted it. When the "Clare Election" was won by O'Connell, my father expressed his certainty that Catholic Emancipation must follow inevitably. It proved so. Before another year had passed (that of 1829), the hills were covered with bonfires celebrating the passing of "The Bill." I was then fifteen, and I well remember climbing to the top of a high pillar on the summit of a hill opposite our house, though how the feat was achieved I cannot conceive, and standing upon it for many minutes, waving a lighted torch round my head in the gathering darkness. Alas! like the concession of "Grattan's Parliament" in 1782, it had been a concession to fear, not to principle; it included, in deference to unworthy prejudices, several provisions of a petty and offensive character; and for forty years it continued to be unaccompanied by that which, thirty years previously, Pitt had perceived to

be its necessary supplement, viz., religious equality. The ancient religious patrimony of Ireland continued to be the endowment of a small minority, and "Protestant Ascendancy" continued to maintain in Ireland a war of religion where otherwise the old war of races would soon have been forgotten.

WHEN Catholic Emancipation was conceded, half the political world thought that Ireland was to become a paradise, and the other half, that she was to become a pandemonium. They were both mistaken; for several years there was no very marked change. In it two antagonistic parties had long been accustomed to quarreling, and when there was nothing to quarrel about, life seemed a little dull, and each of them would have been in sympathy with Paley, who, when the Archbishop of York boasted to him in glowing terms that he and his wife, though married for fifty years, had never had a difference, replied, "Mighty flat, my lord, mighty flat!" Our home life pursued the even tenor of its way. We, the three elder brothers, worked at our classics in the morning, and in the afternoon took a long walk or a long ride, for each of us boasted a horse, though we seldom rode together; and in the evening there was often music, especially when Lord Montague was with us, for he and his sister, my mother, had been used to play duets from Mozart in their youth, he on the flute and she on the pianoforte, and they continued the habit in advanced life. At Christmas we used to visit at Adare Manor. It was a gay as well as a friendly and hospitable house; after dinner we had private theatricals, games of all sorts, dances, and, in the day, pleasant wanderings beside the beautiful Maique, which mirrored in waters that, even when swiftest, seldom lost their transparency as stately a row of elms, ninety feet high, as England herself can boast, and the venerable ruins of a castle which belonged to the Kildares, though islanded, as it were, in a territory almost all the rest of which belonged to the Desmond branch of the same Geraldine race. Adare, then as now a singularly pretty village, had for centuries been a walled town. It had seen many battles, and had been more than once burned down; but it was famous chiefly for the number of its monastic institutions, still represented by the ruins of a Franciscan convent, as well as by one of the Trinitarian, and one of the Augustinian order, the churches of which have been restored, and are now used, one for Catholic, and the other for Protestant worship. The Knights Templars once possessed a house at Adare; but its site cannot now be discovered.

Among our Christmas holidays at Adare there is one which I am not likely ever to for-

get. About eight miles from the village rises a hill eight hundred feet in elevation, with a singularly graceful outline, named "Knockfierna," or the "Hill of the Fairies," because in popular belief it abounded in the "Good People," then universally believed in by the Gaelic race in Ireland. We set off to climb it one day soon after breakfast — *we* meaning my two elder brothers and I, and the son of our host, Lord Adare, afterward well known as Earl of Dunraven, the author of two valuable works, "Memorials of Adare," and an excellent work on Irish antiquities. Two other members of the exploring party were our tutor, and a friend of Adare's several years older than he. It was hard walking, especially after the ascent of the hill began; we had to climb many walls and ditches, and to force our way through many a narrow lane. We had brought no luncheon with us, and before we reached the summit the winter sun had sunk considerably. We walked about the hilltop for some time admiring the view, a very fine one, though, like many Irish views, somewhat dreary, from the comparative absence of trees, the amount of moorland intersected by winding streams, and the number of ruins, many of them modern. All at once we discovered that we were faint with hunger, and so much fatigued that without refreshment we could hardly make our way home. Half-way down the hill stood a farm-house. The farmer was most courteous, but, alas! there was not a morsel of food in his house. What he had he gave, and that was cider, for which, like the Irish peasant of that day, he would take no payment. Each of us drank only one cider-glass of it, and we took our departure, cheered, but by no means invigorated. After we had walked for ten minutes one of us became so sleepy that he could hardly walk, and his nearest neighbor at once gave him an arm. A little later the same complaint was made by another of us, and the same friendly aid was forced upon him. But in a few minutes more not only were we unable to walk, but we were unable to stand, the only exceptions being the two among us who were no longer boys — our tutor and Adare's friend. Never shall I forget their astonishment first, and afterward their vexation. They were in some degree in charge of us, and the responsibility seemed to rest upon them. The Christmas evening was closing around us; there was no help near, and apparently no reason why our sleep should not last till sunrise. They argued, they expostulated, they pushed us, and they pulled us; but all would not do. I was the last to give way; and my last recollection is that my second brother had just succeeded in climbing to the top of a wooden gate, but could not lift his leg over it, and lay upon his face along it. Our tutor stamped

up and down the road indulging largely in his favorite ejaculation, "Gracious patience! gracious patience!" to which my brother replied with his last gleam of wakeful intelligence, "There is one very amiable trait about you, Mr. Johnstone: you are never tired of toasting your absent friends." The next moment he rolled over and slept beside us in the mud. The cider had affected our brains because our stomachs were empty. In about a quarter of an hour the trance was dissolved almost as suddenly as it fell on us: and we walked forward very mirthfully, reaching home just in time to hear the dressing-bell ring. Only one light shone through the mullioned windows of the manor-house; and I remember Adare's remark as we drew near: "Beside that light my little sisters sits weeping. She is sure that I am dead." At dinner we told the story of our adventures, and it excited much laughter. Lord Dunraven "moralized the tale." "You see, young gentlemen, each of you undertook to support and guide his neighbor, though not one of you could take care of himself. That is the way of Ireland. You will help your neighbor best by taking care each of himself." His advice was like that of another old Irish gentleman, a relative of mine, whose "good night" to his grandchildren often ended with this counsel, "Take good care of yourself, child; and your friends will love you all the better."

Lord Dunraven was certainly one of the most sagacious and remarkable of those whom I associated with those old days. He had re-

presented our county in the House of Commons in three successive parliaments, and was by some regarded as the best speaker among the Irish members, though so sensitive was his temperament that to address a board of magistrates or of poor-law guardians was to him a painful effort. It was in conversation, when he forgot that he had an audience, and was only thinking aloud, that his keenness of wit, discriminate selection of language, force, and felicity of illustration, made themselves most felt. He was much given to reflection on practical, not abstract, subjects, and held strong opinions on the ethics of life, which challenged attention all the more because it was never as the preacher or the moralist that he spoke, but as one recording what observation or experience had impressed upon a clear intelligence. I well remember his once saying, while a pale blue eye kindled with conviction: "Some people do wrong because they regard that as a proof of their cleverness. Their cleverness is the cleverness of an old Irish beggar-woman who has dreamed that she found a crock of gold in some particular spot under the wall of a neighboring ruin. She rushes to it, kneels down, and drags at the loose basement with her withered old hands till the stones higher up get loosened, and tumble on her head. Nothing that is wrong is ever a success except for the moment. The nature of things is against it. The man who undertakes the enterprise is contending against a law or a fate that is irresistible."

Aubrey de Vere.

A GENTLEMAN VAGABOND.

FOUND the major standing in front of Delmonico's, interviewing a large, bare-headed personage, in brown cloth spotted with brass buttons. The major was in search of his very particular friend, Mr.

John Hardy of Madison Square, and the personage in brown and brass was rather languidly indicating, by a limp and undecisive forefinger, a route through a section of the city which, correctly followed, would have landed the major in the East River.

I knew him by the peculiar slant of his slouch hat, the rosy glow of his face, and the way in which his trousers clung to the curves of his well-developed legs, and ended in a sprawl which

half covered his shoes. I recognized, too, a carpet-bag, a ninety-nine-cent affair, an "occasion," with galvanized iron clasps and paper-leather sides—the kind opened with your thumb.

The major—or, to be more definite, Major Tom Slocomb of Pocomoke—was from one of the lower counties of the Chesapeake. He was supposed to own what remained of a vast colonial estate, situated on an island in the bay, consisting of several thousand acres of land and water,—mostly water,—a manor house, once painted white, and a number of out-buildings in various stages of dilapidation and decay.

In his early penniless life he had migrated from his more northern native State, settled in the county, and, shortly after his arrival, had married the relict of the late lamented Major John Talbot of Pocomoke, greatly to the sur-

prise and against the protest of many eminent Pocomokians, who boasted of the purity and antiquity of the Talbot blood, and who could not look on in silence, and see it degraded and diluted by an alliance with a "harf strainer or worse," or, as one possible Talbot heir put it, "a picayune, low-down corncracker, suh, without blood or breedin'."

So far as the ancestry of the Slocomb family was concerned, it was, I regret to say, a trifle indefinite. It really could not, with any degree of certainty, be traced back farther than the day of the major's arrival at Pocomoke, notwithstanding the major's several claims that his ancestors came over in the *Mayflower*, that his grandfather fought with General Washington, and that his own early life had been spent on the James River. These statements, to thoughtful Pocomokians, seemed so conflicting and improbable, that his neighbors and acquaintances ascribed them to that total disregard for salient facts which characterized the major's speech, or to the vagaries of that rich and vivid imagination which made his conquest of the widow so easy and complete.

Gradually, however, through the influence of his wife, and of his own unruffled good-humor and unselfishness, the antipathy wore off. As years sped on, no one, except the proudest and loftiest Pocomokian, would have cared to trace the Slocomb blood any farther back than the graft upon the Talbot tree. Neither did the major. In fact, the brief honeymoon of five years left so profound an impression upon his after life that, to use his own words, his birth and marriage had occurred at the identical moment—he had never lived until then.

There was no question in the minds of his neighbors but the major, in his endeavor to keep up to the traditions of his estimable wife's first husband, did maintain his new social position with more than ordinary liberality. Like all new vigorous grafts on an old stock, he not only blossomed out with extraordinary richness, but in the process converted the supporting family tree into a safe conduit for his own daily sap. In fact, it was universally admitted that could the constant drain of his hospitality and its contingent expenditures have been brought clearly to the attention of the original proprietor of the estate, its draft-power was generous enough to have raised that distinguished military gentleman out of his grave.

With the laudable desire of conciliating the rightful owners of the soil, the major had, indeed, not only espoused with all the ardor of the new settler their several articles of political faith,—loyalty to the State, belief in the justice and humanity of slavery, and the omnipotent rights of man—white, of course,—but he had, too, strange to say, fallen into the

peculiar pronunciation of his Southern friends, dropping his final *g*'s, and slurring his *r*'s, thus acquiring that soft cadence of speech which makes their dialect so delicious.

As to his title of "Major," no one in or out of the county could tell where it originated. So far as the records of his county showed, he had belonged to no regularly organized company of militia, neither had he won his laurels on either side during the war; nor yet had the shifting politics of his State ever made it necessary for its chief magistrate to honor him with a staff appointment of like grade. When pressed, he would tell you confidentially that he had really inherited the title from his wife, whose first husband, as was well known, had earned and borne that military distinction; adding tenderly, that she had been so long accustomed to the honor that he thought it incumbent upon him to continue it; he had held on to it after her death simply out of respect to her memory. It was such delicate adaptability as this, such consideration as to details, coupled with so genuine an admiration for one of the best blood in the county,—Mrs. Talbot had been of excellent family, a Tolman of Kent County,—that helped to make a place for the major among his neighbors, and even to gain for him a certain kind of popularity among his adopted associates. "My dear friends," he would say, when, after her death, some new extravagance was commented upon, "I felt I owed it to the memory of that queen among women, suh—Major Talbot's widow."

But the major was still interviewing Delmonico's flunky, oblivious of everything but the purpose in view, when I touched his shoulder, and extended my hand.

"God bless me! Not you? Well, by gravy! Here, now, colonel, you can tell me where Jack Hardy lives. I 've been for half an hour walkin' round this garden lookin' for him. I lost the letter with the number in it, so I came over here to Delmonico's—Jack dines here often, I know, 'cause he told me so. I was at his quarters once myself, but 't was in the night. I am completely bamboozled. Left home yesterday—brought up a couple of thoroughbred dogs that the owner would n't trust with anybody but me, and then, too, I wanted to see Jack."

I am not a colonel of course, but promotions are easy with the major.

"Certainly; Jack lives right opposite. Give me your bag."

He refused, and rattled on, upbraiding me for not coming down to Crab Island last spring with the "boys" when the ducks were flying, punctuating his remarks here and there with his delight at seeing me looking so well, his joy at being near enough to Jack to shake the dear fellow by the hand, and the inexpressible

ecstasy of being once more in New York, the center of fashion and wealth, "with mo' comfo't to the square inch than any other spot on this terrestrial ball."

Crab Island, it is well to add, is the landed estate formerly belonging to the first, original, and genuine major, afterward to his wife, and then through moral suasion, a high sense of wifely duty, and a cast-iron will and testament, — the first exercised by the major, the second possessed by the wife, despite the Pocomokians, and the third compiled by her lawyer, — finally becoming the property of the major himself. In late years, however, I regret to say that either the major's habits, his generosity, or his desire to keep up the establishment purely out of respect to her memory, had compelled him to part with certain proprietary interests in the estate to the mortgage department of a grasping insurance company, in the proportion of a proverbial picnic oyster stew — one part oyster and nine parts hot water. I regret also to be obliged to state that the major's interest did not lie in the oyster, but that it did in the hot water — boiling hot when the interest fell due.

The "boys" referred to were members of a certain "Ducking Club" situated within rifle-shot of the major's house on the island, of which Hardy was president. They all delighted in the major's society, really loving him for many qualities known only to his intimates.

Hardy, I knew, was not at home. This, however, never prevented his colored servant, Jefferson, from being always ready at a moment's notice to welcome the unexpected friend. In another instant I had rung Hardy's bell, — third on right, — and Jefferson, in faultless evening attire, was carrying the major's "occasion" to the suite of apartments on the third floor front.

Jefferson needs a word of comment. Although born and bred a slave, he is the product of a newer and higher civilization. There is, to be exact, hardly a trace of the old South left in him — hardly a mark of the pit of slavery from which he was digged. His speech is as faultless as his dress, even if, like it, a trifle ornate. He is clean, close-shaven, immaculate, well-groomed, silent — reminding me always of a mahogany-colored Greek professor, even to his eye-glasses. He keeps his rooms in admirable order, and his household accounts with absolute accuracy; never spilled a drop of claret, mixed a warm cocktail, or served a cold plate in his life; is devoted to Hardy, and so punctiliously polite to his master's friends and guests that it is a pleasure to have him serve you.

Strange to say, this punctilious politeness does not extend to the major, and since the occurrence of an incident connected with this very bag to be related shortly, it has ceased altogether. Whether it is that Jefferson has always

seen through the peculiar varnish that makes bright the major's veneer, or whether in an unguarded moment, on a previous visit, the major gave way to some such outburst as he would have inflicted upon the domestics of his own establishment, forgetting for the time the superior position to which Jefferson's breeding and education entitled him, I cannot say, but certain it is that while to all outward appearances Jefferson served the major with every indication of attention and humility, I could see under it all a quiet reserve which marked the line of unqualified disapproval. This was evident even in the way he carried the major's bag — holding it out by the straps, not as became the handling of a receptacle containing a gentleman's wardrobe, but by the neck, so to speak — as a dog to be dropped in the gutter.

He unpacked this bag, of course, and with the same perfunctory care that he would have bestowed on the contents of a Bond street Gladstone, smothering his contempt for its contents, and indulging in a prolonged chuckle when he found no trace of a most important part of a gentleman's wardrobe. It was, therefore, with a certain grim humor that, when he showed the major to his room that night, he led gradually up to a question which the unpacking a few hours before had rendered inevitable.

"Mr. Hardy's orders are that I should inform every gentleman when he retires that there's plenty of whisky and cigars on the sideboard, and that —" here Jefferson glanced at the bag — "and that if any gentleman came unprepared there was a pair of pajamas in the closet."

"Pajamas! I never wore a pair of 'em in my life, Jefferson; but you can put the whisky and the cigars on the chair by my bed, in case I wake in the night."

When Jefferson, in answer to my inquiries as to how the major had passed the night, related this incident to me the following morning, I could still detect, under all his deference and respect toward his master's guest, a certain manner and air plainly implying that, so far as the major and himself were concerned, every other but the most diplomatic of relations had been suspended.

The major, by the time I arrived the next day, was in full possession of my friend's home. The only change in his dress was in the appearance of his shoes, polished by Jefferson to a point verging on patent leather, and the adoption of a black alpaca coat, which, although it wrinkled at the seams with a certain home-made air, still fitted his fat shoulders very well. To this were added a fresh shirt and collar, a white tie, nankeen vest, and the same tight-fitting, splay-footed trousers, enriched by a crease of Jefferson's own making.

As he lay sprawled out on Hardy's divan, with his round, rosy, clean-shaven face, good-humored mouth, and white teeth, the whole enlivened by a pair of twinkling eyes, you forgot for the moment that he was not really the sole owner of the establishment. Further intercourse thoroughly convinced you of a similar lapse of memory on the part of the major.

"My dear colonel, let me welcome you to my New York home!" he exclaimed, without rising from the divan. "Draw up a chair; have a mouthful of mocha? Jefferson makes it delicious. Or shall I call him to broil another po'ter-house steak? No? Then let me ring for some cigars," and he touched the bell.

To lie on a divan, reach out one arm, and, with the expenditure of less energy than would open a match-box, to press a button summoning an attendant with all the unlimited comforts of life — juleps, cigars, coffee, cocktails, morning papers, fans, matches out of arm's reach, everything that soul could covet and heart long for; to see all these several commodities and luxuries develop, take shape, and materialize while he lay flat on his back — this to the major was civilization.

"But, colonel, befo' you sit down, fling yo' eye over that garden in the square. Nature in her springtime, suh!"

I agreed with the major, and was about to take in the view over the tree-tops, when he tucked another cushion under his head, elongated his left leg until it reached the window-sill, thus completely monopolizing the window, and continued without drawing a breath:

"And I am so comfo'table here. I had a po'ter-house steak this mornin' — you 're sure you won't have one?" I shook my head. "A po'ter-house steak, suh, that 'll haunt my memory for days. We, of co'se, have at home every variety of fish, plenty of soft-shell crabs, and 'casionally a canvasback, when Hardy or some of my friends are lucky enough to hit one, but no meat that is wo'th the cookin'. By the by, I 've come to take Jack home with me; the early strawberries are in their prime, now. You will join us, of course?"

Before I could reply, Jefferson entered the room, laid a tray of cigars and cigarettes with a small silver alcohol lamp at my elbow, and, with a certain inquiring and, I thought, slightly surprised glance at the major's sprawling attitude, noiselessly withdrew. The major must have caught the expression on Jefferson's face, for he dropped his telescope leg, and straightened up his back, with the sudden awkward movement of a similarly placed lounge surprised by a lady in a hotel parlor. The incident, too, seemed to knock the enthusiasm out of him, for after a moment he exclaimed in rather a subdued tone:

"Rather remarkable nigger, this servant of Jack's. I s'pose it is the influence of yo' New York ways, but I am not accustomed to his kind."

I began to defend Jefferson, but he raised both hands in protest:

"Yes, I know — education and thirty dollars a month. All very fine, but give me the old house-servants of the South — the old Anthonys, and Keziahs, and Rachels. They never went about rigged up like a stick of black sealing-wax in a suit of black co't-plaster. They were easy-go'in' and comfortable. Yo' interest was their interest; they bore yo' name, looked after yo' children, and could look after yo' house, too. Now see this nigger of Jack's; he's better dressed than I am, tips round as solemn on his toes as a marsh-crane, and yet I 'll bet a dollar he 's as slick and cold-hearted as a high-water clam. That 's what education has done for *him*. What comfort could anybody have with half a dozen such tombstones standin' behind his chair, and watchin' every mouthful that went down his throat?"

"You never knew Anthony, my old butler? Well, I want to tell you, he *was* a servant, he was. During Mrs. Slocomb's life" — here the major assumed a reminiscent air, pinching his fat chin with his thumb and forefinger — "we had, of co'se, a lot of niggers; but this man Anthony! By gravy! when he filled yo' glass with some of the old Madeira that had rusted away in my cellar for half a century," — here the major slipped his thumb into the arm-hole of his vest, — "it tasted like the nectar of the gods, just from the way Anthony poured it out."

"But you ought to have seen him move round the table when dinner was over! He 'd draw himself up like a drum-major, and throw back the mahogany doors for the ladies to retire, with an air that was captivat'in'." The major was now on his feet — his reminiscent mood was one of his best. "That 's been a good many years ago, colonel, but I can see him now just as plain as if he stood before me, with his white cotton gloves, white vest, and green coat with brass buttons, standin' behind Mrs. Slocomb's chair. I can see the old sidebo'd, suh, covered with George III. silver, heirlooms of a century" — here the major passed his hand across his eyes with a trance-like movement; "I can see the great Italian marble mantels suppo'ted on lions' heads, the inlaid floor and wainscotin'" — here the major sank upon the divan again, shutting both eyes reverently, as if these memories of the past were a sort of religion with him.

"And the way those niggers loved us! Sit down here, and let me tell you." I obeyed cheerfully. One of the major's most delightful accomplishments was his complete mastery of

the art of story-telling. "I once received," continued the major, "a telegram from a very intimate friend of mine, a distinguished Baltimorean,—the Nestor of the Maryland bar, suh,—informin' me that he was on his way South, and that he would make my house his home on the followin' night." The major's eyes were still shut. He had passed out of his reverential mood, but the effort to be absolutely exact demanded concentration.

"I immediately called up Anthony, and told him that Judge Spofford of the Supreme Co't of Maryland would arrive the next day, and that I wanted the best dinner that could be served in the county, and the best bottle of wine in my cellar." The facts having been correctly stated, the major assumed his normal facial expression.

"What I'm tellin' you occurred after the war, remember, when putty near everybody down our way was busted. Most of our niggers had run away — all 'cept our old house-servants, who never forgot our family pride and our noble struggle to keep up appearances. Well, suh, when Spofford arrived Anthony carried his bag to his room, and when dinner was announced, if it *was* my own table, I must say that it cert'ly did fair'ly groan with the delicacies of the season. After the crabs had been taken off,—we were alone, Mrs. Slocomb havin' gone to Baltimore',—I said to the judge: 'Yo' Honor, I am now about to delight yo' palate with the very best bottle of old Madeira that ever passed yo' lips. A wine that will warm yo' heart, and unbutton the top button of yo' vest. It is part of a special importation presented to Mrs. Slocomb's father by the captain of one of his ships — Anthony, go down into the wine-cellar, the inner cellar, Anthony, and bring me a bottle of that old Madeira of '37—stop, Anthony; make it '39. I think, judge, it is a little dryer.' Well, Anthony bowed, and left the room, and in a few moments he came back, set a lighted candle on the mantel, and leanin' over my chair, said in a loud whisper: 'De cellar am locked, suh, and I'm 'feard Mis' Slocomb dun tuk de key.' " "Well, s'pose she has," I said; "put yo' knee against it, and fo'ce the do'."

"Here the judge called out, 'Why, major, I could n't think of—'

" 'Now yo' Honor,' said I, 'please don't say a word. This is my affair. The lock is not of the slightest consequence. I'm d—d if you sha'n't taste that wine, if I have to blow out the cellar walls.'

"Now I want to tell you, colonel, that at that time I had n't had a bottle of any kind of wine in my cellar for five years." Here the major shut one eye, laid his forefinger against his nose, and gave vent to a smothered chuckle that fully explained his own sense of the joke.

"I did n't, of co'se, want to tell the judge so. I knew it would only distress him to know how badly pressed we were, and then, you see, he had sort of come upon me unawares—" this seriously, as if, after all, I now had the true reason. "In a few minutes back comes Anthony, solemn as an owl. 'Major,' said he, 'I done did all I c'u'd, an' dere ain't no way 'cept breakin' down de do'. Las' time I done dat, Mis' Slocomb neber forgib me fer a week.'

"The judge jumped up. 'Major, I won't have you breakin' yo' locks and annoyin' Mrs. Slocomb, and I ought not to drink yo' high-flavored Madeira, neither; my doctor told me only last week I must stop that kind of thing. If yo' servant will go up-stairs and get a bottle of whisky out of my bag, it's just what I ought to drink.'

" 'Of co'se, yo' Honor,' I said, 'when you put it on a matter of yo' health I am helpless; that paralyzes my hospitality; I have not a word to say. Anthony, go up-stairs and get the bottle.' And we drank the judge's whisky! Now see the devotion and loyalty of that old negro servant! Do you think this marsh-crane of Jack's—"

Here the subject of his criticism opened the door, ushering in half a dozen gentlemen, and among them the rightful host, just returned after a week's absence—cutting off the major's outburst, and producing another equally explosive:

"Why, Jack!"

Before the two men grasp hands I must, in all justice to the major, say that he not only had a sincere admiration for Jack's surroundings, but also for Jack himself, and that while he had not the slightest compunction in sharing or, for that matter, monopolizing his hospitality, he would have been equally generous in return had it been possible for him to revive the old days, and to afford a *menage* equally lavish.

It is needless for me to make a like statement for Jack. One half the major's age, trained to practical business life from boyhood, frank, spontaneous, every inch a man, kindly natured, a deep student, for one so young, of men as well as of books, it was not to be wondered at that not only the major but that every one else who knew him loved him. The major really interested him enormously. He represented a type which was new to him, and which it delighted him to study. The major's heartiness, his magnificent disregard for *meum* and *tuum*, his unique and picturesque mendacity, his grandiloquent manners at times, studied, as he knew, from some example of the old régime, whom he either consciously or unconsciously imitated, his peculiar devotion to the memory of his late wife—all appealed

o Jack's sense of humor, and to his enjoyment of anything out of the common. Under all this he saw, too, away down in the major's heart, beneath these several layers, a substratum of true kindness and tenderness.

This kindness, I know, pleased Jack best of all.

So when the major sprang up in delight, calling out, "Why, Jack!" it was with very genuine, although quite opposite individual, sympathies, that the two men shook hands. It was beautiful, too, to see the major welcome Jack to his own apartments, dragging up the most comfortable chair in the room, forcing him into it, and tucking a cushion under his head, or ringing up Jefferson every few moments for some new luxury. These he would catch away from that perfectly trained servant's tray, serving them himself, rattling on all the time as to how sorry he was that he did not know the exact hour at which Jack would arrive, that he might have had breakfast on the table — had it been hot on the road? — how well he was looking, etc.

It was specially interesting, besides, after the proper introductions had been made, to note the way in which Jack's friends, inoculated with the contagion of the major's mood, and carried away by his breezy, buoyant enthusiasm, encouraged the major to flow on, interjecting little asides about his horses and farm stock, agreeing to a man that the two-year old colt — a pure creation on the moment of the major — would certainly beat the record and make the major's fortune, and inquiring with great solicitude whether the major felt quite sure that the addition to the stables which he contemplated would be large enough to accommodate his stud, with other similar inquiries which, while indefinite and tentative, were, so to speak, but flies thrown out on the stream of talk — the major rising continuously, seizing the bait, and rushing headlong over sunken rocks and through tangled vines of the improbable in a way that would have done credit to a Munchausen of older date. As for Jack, he let him run on. One plank in the platform of his hospitality was to give every guest a free rein.

Before the men separated for the day, the major had invited each individual person to make Crab Island his home for the balance of his life, regretting that no woman now graced his table since Mrs. Slocomb's death, — "Major Talbot's widow — Major John Talbot of Pocomoke, suh," — placing his stables, his cellar, and his servants at their disposal, and arranging for everybody to meet everybody else the following day in Baltimore, the major starting that night, and Jack and his friends the next day. The whole party would then take

passage on board one of the Chesapeake Bay boats, arriving off Crab Island at daylight the succeeding morning.

This was said with a spring and joyousness of manner, and a certain quickness of movement, that would surprise those unfamiliar with some of the peculiarities of Widow Talbot's second husband. For with that true spirit of vagabondage which saturated him, next to the exquisite luxury of lying sprawled on a lounge with a noiseless servant attached to the other end of an electric wire, nothing delighted the major so much as an outing, and no member of any such junketing party, be it said, was more popular every hour of the journey. He could be host, servant, cook, chambermaid, errand-boy, and *grand seigneur* again in the same hour, adapting himself to every emergency that arose. His good humor was perennial, unceasing, one constant flow, and never checked. He took care of the dogs, unpacked the bags, laid out everybody's linen, saw that the sheets were dry, received all callers so that the boys might sleep in the afternoon, did all the disagreeable and uncomfortable things himself, and let everybody else have all the fun. He did all this unconsciously, graciously, and simply because he could not help it. When the outing ended, you parted from him with all the regret that you would from some chum of your college days. As for him, he never wanted it to end. There was no office, nor law case, nor sick patient, nor ugly partner, nor complication of any kind, commercial, social, or professional, which could affect the major. For him life was one prolonged drift: so long as the last man remained he could stay. When he left, if there was enough in the larder to last over night, the major always made another day of it.

II.

THE major was standing on the wharf in Baltimore, nervously consulting his watch, when Jack and I stepped from a cab next day.

"Well, by gravy! is this all? Where are the others?"

"They 'll be down in the morning, major," said Jack. "Where shall we send this baggage?"

"Here, just give it to me! Po'ter, po'ter!" in a stentorian voice — "Take these bags and guns, and put 'em on the upper deck alongside of my luggage. Now, gentlemen, just a sip of somethin' befo' they haul the gang-plank — we 've six minutes yet."

The bar was opposite the landing. On the way over, the major confided to Jack full information regarding the state-rooms, remarking that he had selected the "fo' best on the upper deck," and that he would have paid

for them himself only a friend had disappointed him. It was evident that the major had determined that the hospitality of his State should begin near the border-line, even if Jack paid the bills.

It was evident, too, that the barkeeper knew his peculiarities, for a tall, black bottle with a movable cork — a porcelain marble confined in a miniature bird-cage — was passed to the major before he had opened his mouth. When he did open it there was no audible protest as regards the selection by the barkeeper; and when he closed it again it was over a considerable portion of its liquid contents — the flow line having fallen some three fingers. It is, however, fair to the major to say that only one third of this amount was tucked away under his own waistcoat.

The trip down the bay was particularly enjoyable, brightened outside on the water by the most brilliant of sunsets, the afternoon sky a glory of purple and gold, and made gay and delightful inside the after-cabin by the charm of the major's talk — the whole passenger-list listening as he skipped from politics and the fine arts to literature, tarrying a moment in his flight to discuss a yellow-backed book that had just been published, and coming to a full stop with the remark:

"And you have n't read that book, Jack — that scurrilous attack on the industries of the South? My dear fellow! I'm astounded that a man of yo' gifts should not — here — just do me the favor to look through my baggage on the upper deck, and bring me a couple of books lyin' on top of my dressin'-case."

"Which trunk, major?" asked Jack, a slight smile playing around his mouth.

"Why, my sole-leather trunk, of co'se; or perhaps that English hat-box — no, stop, Jack, come to think, it is in the small valise. Here, take my keys," said the major, straightening his back, squeezing his fat hand into the pocket of his skin-tight trousers, and fishing up with his forefinger a small bunch of keys. "Right on top, Jack, you can't miss it."

"Is n't he just too lovely for anything?" said Jack to me, when we reached the upper deck — I had followed him out. "He 's wearing now the only decent suit of clothes he owns, and the rest of his wardrobe you could stuff into a band-box. English sole-leather trunk! Here, put your thumb on that catch," and he threw out the major's bag — the one, of course, that Jefferson unpacked, with the galvanized-iron clasps and paper-leather sides.

It seemed more rotund, and heavier, and more important looking than when I handled it that afternoon in front of Delmonico's, with rather a well-fed, even a bloated, appearance. The clasps, too, seemed to have all they could

do to keep its mouth shut, while the hinges bulged in an ominous way.

I started one clasp, the other gave way with a burst, and the next instant, to my horror, the major's wardrobe littered the deck. First the books, then a package of tobacco, then the one shirt, porcelain-finished collars, and the other necessities, including a pair of slippers and a comb. Next, three bundles loosely wrapped, one containing two wax dolls, the others some small toys, and a cheap Noah's ark, and last of all, wrapped up in coarse, yellow butcher's paper, stained and moist, a freshly cut porter-house steak.

Jack roared with laughter, as he replaced the contents. "Yes; toys for the little children — he never goes back without something for them if it takes his last dollar; tobacco for his old cook, Rachel; not a thing for himself, you see — and this steak! Who do you suppose he bought that for?"

"Did you find it?" called out the major, as we reentered the cabin.

"Yes; but it was n't in the English trunk," said Jack, handing back the keys.

"Of co'se not; did n't I tell you it was in the small bag? Now, gentlemen, listen!" turning the leaves. "Here is a man who has the impertinence to say that our industries are paralyzed. It is not our industries; it is our people. Robbed of their patrimony, their fields laid waste, their estates confiscated by a system of foreclosure lackin' every vestige of decency and co'tesy, — Shylocks wantin' their pound of flesh on the very hour and day, — why should n't they be paralyzed?" He laughed heartily. "You know Colonel Dorsey Kent, Jack, don't you?"

Jack did not, but the owners of several names on the passenger-list did, nodding their heads, and hitching their camp-stools closer.

"Well, Kent was the only man I ever knew who ever held out against the damnable oligarchy."

Here an old fellow in a butternut suit, with a half-moon of white whiskers tied under his chin, leaned forward in rapt attention.

The major braced himself, and continued: "Kent, gentlemen, as many of you know, lived with his maiden sister over on Tinker Neck, on the same piece of ground where he was bo'n. She had a life interest in the house and property, and it was so nominated in the bond. Well, when it got down to hog and hominy, and very little of that, she told Kent she was goin' to let the place to a strawberry-planter from Philadelphia, and go to Baltimo' to teach school. She was sorry to break up the home, but there was nothin' else to do. Well, it hurt Kent, for he was a very tender-hearted man.

"'You don't say so, Jane,' said he, 'and you

raised here! Is n't that very sudden?' She told him it was, and asked him what he was going to do?

"'Me, Jane? I sha'n't do anythin'. I shall stay here. If your money affairs are so badly mixed up that you're obliged to leave yo' home, I am very deeply grieved, but I am powerless to help. I am not responsible for the way this war ended. I was born here, and here I am going to stay.' And he did. She rented him with the house—he to have three meals a day, and a room over the kitchen.

"For two years after that Kent was so disgusted with life, and the turn of events, that he used to lie out on a rawhide, under a big sycamore-tree in front of the po'ch, and get a farm nigger to pull him round into the shade by the tail of the hide, till the grass was wore as bare as yo' hand. Then he got a bias-cut rockin'-chair, and rocked himself round.

"The strawberry man said, of co'se, that he was too lazy to live. But I look deeper than that. To me, gentlemen, it was a crushin', silent protest against the money power of our times. And it never broke his spirit, neither. Why, when the census man came down the year befo' his death, he found the colonel sittin' in his rockin'-chair bare-headed. Without havin' the decency to take off his own hat, or even ask Kent's permission, the census man began askin' questions—all kinds, as those fellows do. Colonel Kent let him ramble on for a while, then he brought him up standin'—

"'Who did you say you were, suh?'

"'The United States census-taker.'

"'Ah, a message from the enemy. Take a seat on the grass.'

"'It's only a matter of form,' said the man.

"'So I presume, and very bad form, suh,' looking at the hat still on the man's head. 'But go on.'

"'Well, what 's yo' business?' asked the agent.

"'My business, suh?' said the colonel, risin' from his chair, mad clear through—'I've no business, suh. I am a prisoner of war waitin' to be exchanged!' and he stomped into the house."

Here the major burst into a laugh, straightened himself up to his full height, squeezed the keys back into his pocket, and said he must take a look into the state-rooms on the deck to see if they were all ready for his friends for the night.

Some hours later, when I turned in for the night, he was still talking, his hearty laugh ringing out every few moments. Only the white-whiskered man was left. The other camp-stools were empty.

III.

At early dawn the steamboat slowed down; a scow, manned by two barefooted negroes

with sweep oars, rounded to, and in a few moments the major, two guns, two valises, Jack, and I were safely landed on its wet bottom, the major's bag with its precious contents stowed between his knees.

A mile or more away lay Crab Island, the landed estate of our host—a delicate, green thread on the horizon line, broken by two knots, one evidently a large house with chimneys, and the other a clump of trees. The larger knot proved to be the manor house that sheltered the belongings of the major, with the wine-cellar of marvelous vintage, the table that groaned, the folding mahogany doors that swung back for bebies of beauties, and perhaps, for all I knew, the gray-haired, ebony butler in the green coat. The smaller knot, Jack said, screened from public view the little club-house belonging to his friends and himself.

With the first gleam of the rising sun there came into view on the near end of the island the rickety outline of a palsied old dock, clutching with one arm a group of piles anchored in the marsh grass, and extending the other as if in welcome to the slow-moving scow. We accepted the invitation, threw a line over a thumb of a pile, and in five minutes were seated in a country stage. Ten more, and we backed up to an old-fashioned colonial porch, with sloping roof and dormer windows supported by high white columns. Leaning over the broken railing of the porch was a half-grown negro boy, hatless and bare-footed; inside the door, looking furtively out, half concealing her face with her apron, stood an old negro woman, her head bound with a bandana kerchief, while peeping from behind an outbuilding was a group of children in sunbonnets and straw hats—"the farmer's boys and girls," the major said, waving his hand, as we drove up, his eyes brightening. Then there was the usual collection of farm-yard fowl, beside two great hounds, who visited each one of us in turn, their noses rubbing our knees.

If the major, now that he was on his native heath, and in full sight of his surroundings, realized in his own mind any difference between the Eldorado which his eloquence had conjured up in my own mind, and the hard, cold facts before me, he gave no outward sign. To all appearances, judging from his perfect ease and good temper, the paint-scaled pillars were the finest of Carrara marble, the bare floors were carpeted with the softest fabrics of Turkish looms, and the big, sparsely furnished rooms were so many salons, where princes trod in pride and fair ladies stepped a measure.

The only remark he made was in answer to a look of surprise on my face when I peered curiously into the bare hall, and made a cursory mental inventory of its contents.

"Yes, colonel; you will find, I regret to say, some slight changes since the old days. Then, too, my home is in slight confusion owin' to the spring cleanin', and a good many things have been put away."

I looked to Jack for explanation, but if that thoroughbred knew where the major had permanently put the last batch of his furniture, or whether it had been "put" at all, he too gave no outward sign.

As for the servants, were there not old Rachel and Sam, chef and valet? What more could one want? The major's voice, too, had lost none of its persuasive powers.

"Here, Sam, you black imp, carry yo' Mars-ter Jack's gun and things to my room, and, Rachel, take the colonel's bag to the sea room, next to the dinin'-hall. Breakfast in an hour, gentlemen, as Mrs. Slocomb used to say."

I found only a bed covered with a quilt, an old table with small drawers, a wash-stand, two chairs, and a desk on three legs. The walls were bare except for a fly-stained map yellow with age. As I passed through the sitting-room, Rachel preceding me with my traps, I caught a glimpse of traces of better times. There was a plain wooden mantelpiece, a wide fireplace with big brass andirons, a sideboard with and without brass handles and a limited number of claw feet,—which, if brought under the spell of the scraper and varnish-pot might once more regain its lost estate,—a corner-cupboard built into the wall, half full of fragments of old china, and, to do justice to the major's former statement, there was also a pair of dull old mahogany doors with glass knobs separating the room from some undiscovered unknown territory of bareness and emptiness beyond. Anthony might have thrown these open for the beves of beauties so picturesquely described by the major, but where were the

Chippendale furniture, the George III. silver, the Italian marble mantels with carved lions' heads, the marquetry floors and cabinets?

I determined to end my mental suspense. The old woman was opening the windows, letting in the fresh breath of a honeysuckle, and framing a view of the sea beyond.

"How long have you lived here, aunty?"

"'Most fo'ty years, sah. Long 'fo' Massa John Talbot died."

"Where 's old Anthony?" I said.

"What Anthony? De fust major's body-servant?"

"Yes."

"Go 'long, honey. He 's daid dese twenty years. Daid two years 'fo' Massa Slocomb married Mis' Talbot."

Was it, then, another of the major's tributes—this whole story of Anthony and the Madeira of '39? How he must have loved this dear relict of his military predecessor!

An hour later the major strolled into the sitting-room, his arm through Jack's.

"Grand old place, is it not?" he said, turning to me. "Full of historic interest. Of co'se the damnable oligarchy has stripped us, but—"

Here Aunt Rachel flopped in—her slippers, I mean; the sound was distinctly audible.

"Bre'kfus', major."

"All right, Rachel. Come, gentlemen!"

When we were all seated, the major leaned back in his chair, toyed with his knife a moment, and said with an air of great deliberation:

"Gentlemen, when I was in New York, I discovered that the fashionable dish of the day was a po'ter-house steak. So when I knew you were coming, I wired my agent in Baltimo' to go to Lexington market, and to send me down on ice the best steak he could buy fo' money. It is now befo' you. Jack, shall I cut you a piece of the tenderloin?"

F. Hopkinson Smith.

SORROW.

THE youthful heart in its first sorrow cries:
 "None suffer as I suffer! None can know
 Such misery and live!" and grief's surprise
 Enhances thus its woe.

The heart grown old, whom Sorrow leads aside
 From paths of happiness to know her face,
 Submissive breathes: "Yes; men have lived and died
 By myriads in this place!"
 And feels, with added pang, that grief as keen
 Is, and has been.

Lilla Cabot Perry.

LOVE IN IDLENESS.

A FORTNIGHT AT BAR HARBOR.

BY F. MARION CRAWFORD,

Author of "Mr. Isaacs," "Saracinesca," "Paul Patoff," "Katharine Lauderdale," etc.

VIII.

IT was in this way," said Fanny. "Mr. Brinsley brought a letter of introduction from cousin Frank. You know who Frank is, don't you? He's the brother of the three Miss Miners."

"Of course," nodded Lawrence; "everybody knows Frank Miner."

"And he knows everybody. But he did n't say much in his note, and Cordelia has written to him since, because she wants to know all about Mr. Brinsley; and it appears that Frank has only met him once or twice at a club, and does n't know anything about him. However, it does n't matter. The main point is that he called the day after we got here, and in twenty-four hours we were all in love with him."

"Please don't include yourself," said Lawrence, his delicate face betraying that he winced.

"I will include myself, because it's true," answered Fanny, very much in earnest. "I should not put it just in that way about myself, perhaps — but I took a fancy to him, and I took him to drive, and I found that he could drive quite as well as I, and we went out riding with a party, and he rides like an angel — he really does — it's divine. And then I tried him in the boat, and he was good at that. So I began to like him very much."

"They're all excellent reasons for liking a man," observed Lawrence, with a little contempt.

"Don't scoff at things you can't do yourself," said Fanny, severely. "It's not in good taste. Besides, I don't care. All women admire men who are stronger and quicker and better with their hands than other men. One always thinks they must be braver, too."

"Yes, that's true," assented Lawrence, seeking to retrieve himself by meekness.

"And they generally are. It takes courage to ride well, and it needs nerve to handle a boat in a squall. I don't mean to say that you can't be brave if you don't know how to do those things. That would be nonsense. You, for instance — you could learn. Only nobody has ever taught you anything, and you're getting old."

Lawrence laughed outright, and forgot his ill-humor in a moment.

"Oh, I don't mean really old," said Fanny, immediately. "I only mean that one ought to learn when one is a child, as I did. Then it's no trouble, you see, and one never forgets. Now, Mr. Brinsley began young —"

"Yes," interrupted the young man; "I should say so. I'm sorry I did n't."

"So am I. It would have been so nice to do things —"

She stopped abruptly, and pulled up a blade of rank grass, which she proceeded to twist thoughtfully round her finger.

"I should n't like you to think I was a flirt," she said, suddenly turning her gray eyes upon him.

He met her glance curiously, being considerably surprised by her remark.

"Because I sometimes think I am, myself," she added, still looking at him. "Do you think so?" she asked earnestly. "What is a flirt, anyway?"

"A woman who draws a man on for the pleasure of breaking his heart, I suppose," answered Lawrence, keeping his eyes fixed intently on hers.

"Then I'm only half a flirt," said Fanny, "because I only draw a man on, without meaning to break anybody's heart."

"Don't," said Lawrence. "It hurts, you know."

"I wonder —" the young girl laughed a little, and turned away from his eyes.

"What?"

"Whether it really hurts." She bit the end of the grass blade, and slowly tore it with her teeth, looking dreamily across the brook.

"Don't try it, at all events."

"Mr. Brinsley does n't seem to mind."

"Brinsley is n't a human being," said Lawrence, savagely.

"What is he, then?"

"A fraud — of some sort. I don't care. I hate him!"

"You're hard on Mr. Brinsley," observed Fanny, slowly, and watching her companion sideways.

"Considering what you've been saying about him —"

"I said nothing about him except that I began by liking him awfully."

"Well—you left the rest to my imagination. I did as well as I could. If you did n't hate yourself, you 'd hardly have been telling me all this, would you?"

"Oh—I don't know. I might be going to ask your advice about—about him."

"Take him out in your boat and drown him," suggested Lawrence. "That 's my advice about him."

"What has he done to you, Mr. Lawrence?" inquired Fanny, gravely. "Why do you hate him so?"

"Why? It 's plain enough, it seems to me—plain as a—what do you call the thing?"

"Plain as a marlinspike, you mean. Only it is n't. I want to know two things. Do you think I 'm a flirt? And why do you want me to murder poor, innocent Mr. Brinsley? Do you mind answering?"

Lawrence's dark eyes began to gleam angrily. He bit his pipe, and pulled at it, though it had gone out; then he took it from his lips, and answered deliberately.

"If you are a flirt, Miss Trehearne, I don't wish Brinsley any further damage. He 'll do very well in your hands, I 'm sure. I have no anxiety."

"I would n't hurt a fly," said Fanny—"if I liked the fly," she added.

"I believe the spider said something to the same effect when he invited the fly into his parlor."

At this a dark flush rose in the girl's cheeks.

"You 're rude, Mr. Lawrence," she said.

"I 'm sorry, Miss Trehearne—but you 're unkind, so you 'll please to excuse me."

Instead of flushing, as she did, Lawrence turned slowly pale, as was his nature.

"Even if I were,—but I 'm not,—that 's no reason why you should be rude."

"I did n't mean to be rude," answered Lawrence. "I don't see what I said that was so very dreadful."

"It was much worse than anything I said," retorted Fanny, biting her blade of grass again, "because I did n't say anything at all, you know. Oh, well—if you 'll say you 're sorry, we 'll bury it."

"I 'm sorry," said Lawrence, without the least show of contrition.

"I was going to tell you such lots of things about myself," said the young girl. "You 've made me forget them all. What was I talking about when we began to fight? I began by saying that I liked you, and you 've been horrid ever since. I won't say that again, at all events."

"Excuse me; you began by saying that you 'd liked Brinsley—liked him awfully, you

said. It must have been awful; anything connected with Brinsley is necessarily awful."

"There you go again. Don't bolt so—it makes bad running. I told you why I liked him so much at first, and you admitted that it was natural. Do you remember that? Well—that is n't all. After I liked him, I began to care for him. I told you that, too. Horrid of me, was n't it?"

"Horrid!"

"I wish you would n't agree with me all the time!" exclaimed Fanny, impatiently. "You know I really did care—a little. And then one day in the cat-boat he asked me—" she stopped, and looked at Lawrence.

"To marry him? Why don't you say it? It would n't surprise me a bit."

"No," said Fanny, slowly; "he did n't ask me to marry him."

"In Heaven's name, what did he ask you?" inquired Lawrence, exasperated to impatience.

"Oh—I don't know. It was something about the channel between Bar and Sheep, I believe. Nothing very important, anyway. I 'm not sure that I could remember if I tried."

"Then—excuse me, but what 's the point?"

"Oh—I know," exclaimed Fanny, as though suddenly recollecting something. "Not that it matters much, but I like to be accurate. It was about the bell-buoy off Sheep Porcupine. You know, I showed it to you the other day. Well—I told him how it had been carried away in a storm some time ago, and that this was a new one. And the next day I heard him telling Augusta all about it, as though he had known before, you see."

"Well—that was n't exactly a crime," observed Lawrence, who could not understand at all. "You 'd told him—"

"Yes, but he said he remembered the old one. That was impossible, as he had n't known anything about it. It was a little slip, but it made me open my eyes and watch him. I used to think he was perfection until then."

"Oh, I see. That was when you first began to find out that he was n't quite straight."

"Exactly. It made all the difference. I 've caught him more than once since then. The other night it was too much for me when he talked about the navy, so I promptly smashed him. He knows that I know, now."

"I should think so. All the same—I don't mean to be rude this time, Miss Trehearne—"

"Be careful!"

"No; I 'll risk it. Just now when you said he had 'asked you' you stopped short. You knew I should believe that you had been going to say that he had asked you to marry him, did n't you?"

"Oh, I know. I could n't help it. I believe I really am a flirt, after all."

"I should n't like to believe it," said Lawrence, gravely.

"Nor I, either. I only wanted to see how you 'd look if you thought he 'd offered himself just then."

"Just then! Do you mean to say that he has offered himself at any other time?"

"Now you 're rude again—only I forgive you, because you don't know that you are. It's rude to ask such questions, so I 'll be polite and refuse to answer. Not that there 's any good reason why he should n't have asked me to marry him, you know. The fact that you hate him is n't a reason."

"But you do yourself."

"Not at all. At least, I have n't said so. I wish you 'd listen to me, Mr. Lawrence, instead of interrupting me with questions every other moment. How in the world am I to make a confession if you won't let me say two words?"

"Are you going to make a confession?" asked Lawrence, incredulously. "It's all chaff, you know."

Fanny turned her cool eyes upon him instantly.

"There 's a lot besides chaff," she said in a very different tone. "I can be in earnest, too, when I care."

She certainly emphasized the last three words in a way which might have meant much, accompanied as they were by her steady look. Lawrence felt himself growing a little pale again.

"Do you care?" he asked, and his voice shook perceptibly.

"For Mr. Brinsley?" inquired Fanny, instantly changing her tone again, and beginning to laugh.

"No—for me."

"For you! Oh, dear, what a question!" She laughed outright.

Lawrence leaned down, and knocked the ashes out of his pipe against the toe of his heavy walking-shoe without saying a word. Then he put the pipe into his pocket. She watched him.

"You 've no right to be angry this time," she said; "but you are."

The young man faced her quietly, and waited a moment before he spoke.

"You 're playing with me," he said calmly and without emphasis, as stating a fact.

"Of course I am," laughed Fanny Trehearne. "What did you expect? But I 'm sorry that you 've found it out," she added, with appalling cynicism. "It won't be fun any more."

"Unless we both play," suggested Lawrence, who had either recovered his temper very quickly, or possessed a better control over it than Fanny had supposed.

"All right!" she exclaimed cheerfully.

"Let 's play—let us play! That sounds solemn, somehow—I wonder why? Oh, of course—it 's like 'Let us pray' in church."

Lawrence laughed dryly.

"Let us pray beforehand for the one who gets the worst of it," he said. "He or she will need it. But I shall win at the game, you know. That 's a foregone conclusion."

Fanny was surprised and amused at the confidence he suddenly affected—very unlike his habitual modesty and self-effacement.

"You seem to be pretty sure of yourself," she answered. "What shall the forfeit be, as they say in the children's games?"

"To marry or not to marry, at the discretion of the winner. I think that 's fair, don't you? I should n't like to propose anything serious—the head of Roger Brinsley in a charger, for instance."

Fanny laughed again.

"Yes; it 's very well," she protested. "But of course the one who loses will be in earnest, and the one who wins will not."

"He may be by that time," suggested Lawrence.

"Don't say 'he' so confidently. I mean to win. Besides, are we starting fair? Of course I don't care an atom for you, but don't you care for me—just a little?"

"I!" exclaimed Lawrence. "What an idea!" He laughed quite as naturally as Fanny herself. "Do you think that a man in love would propose such a game as we are talking about?" he asked.

"I 'm sure I don't know what to think," answered the young girl. "Perhaps I shall know in a day or two."

She looked down, quite grave again, and pulled a bit of fern from the bank, and crushed it in her hand, and then smelled it.

"Don't you like sweet fern?" she asked, holding it out to him. "I love it!"

"That 's why you crush it, I suppose," said Lawrence.

"It does n't smell sweet unless you do. Oh—I see you are beginning to play the game. Very well. Why should we lose time about it? But I wish it were a little better defined. What is it we 're going to do? Won't you explain? I 'm so stupid about these things. Are we going to flirt for a bet?"

"What a speech!"

"Because it 's a plain one? Is that why you object to it? After all, that 's what we said."

"We only said we 'd play," answered Lawrence. "Whichever ends by caring must agree to marry the winner, if required. But I 'm afraid the time 's too short," he added more gravely. "I 've only a week more."

"Only a week!" exclaimed Fanny in a tone

of disappointment. "Why, I thought there was ever so much more. That is n't nearly time enough."

"We must play faster, and hope for 'situations,' as they call them on the stage."

"Oh, the situation is bad enough as it is," answered the young girl, with a change of manner that surprised her companion. "If you only knew!"

"Was that what you were going to tell me about?" asked Lawrence, quickly, and with renewed interest. "I thought you were making game of me."

"That 's the trouble! You 'll never believe that I 'm in earnest, now. That 's the worst of practical jokes. Come along! We must be going home. The sun 's behind the hill, and ever so low, I 'm sure. We sha'n't get home before dusk. How sweet that fern smells! Give it back to me, won't you?"

They rose, and began to walk homeward in the warm shadow of the woods. As before, Fanny went first along the narrow path, and Lawrence, following close behind her, and watching her supple grace as she moved, breathed in the intoxicating perfume of the aromatic fern which she still carried in her hand.

IX.

THE following afternoon Fanny Trehearne announced her intention of riding with Mr. Brinsley.

"I 'd take you, too," she said to Lawrence, with a singularly cold stare, "only, as you can't ride much, you would n't enjoy it, you know."

"Certainly not," answered Lawrence, returning her glance with all coolness. "I should n't enjoy it at all."

"You might take my cousins out in the boat, instead."

"Are they tired of life?" inquired the young man, smiling. "No. I want to make a sketch in the woods. I 'll go out by myself, thank you."

"Do you mean to sketch the place where we stopped yesterday?"

"Oh, no; I 'm going in quite another direction. I can't exactly explain where it is, because I 've such a bad memory for names of roads, and all that. But I can find it."

Miss Cordelia Miner looked up from the magazine she was reading.

"You 're not going to ride alone with Mr. Brinsley, are you?" she asked suddenly.

"Why not?" asked Fanny. "I don't see any reason why I should n't. It 's safer than riding alone, is n't it?"

"I confess I don't like the idea," said Miss Cordelia. "It looks as though there were something."

"Something of what kind?" Fanny watched Lawrence's face.

"Something—well—not really an engagement—but—"

"Well—why should n't I be engaged to Mr. Brinsley, if I like?" inquired the young girl, arching her brows.

"Why, Fanny! I 'm surprised!" And, indeed, Miss Miner seemed so, for she almost sprang out of her chair.

"I don't know why you need be horrified, though," retorted Fanny, calmly. "Should you be shocked if any one said that you were engaged to Mr. Brinsley? What 's the matter with him, anyway?" she demanded, dropping into her favorite slang. "You 'd be proud to be engaged to him—so would Elizabeth—so would Augusta! Then why should n't I be proud if I can get him? I 'm sure he 's awfully good-looking, and he rides—like an angel."

"An angel jockey," suggested Lawrence, without a smile.

"Not at all!" exclaimed Fanny. "He rides like a gentleman, and not in the least like a jockey."

Miss Cordelia had risen from her chair, and turned her back on the young people.

"You 've no right to say such things to me, Fanny," she said, going slowly toward the window. Her voice shook.

The young girl saw that she was deeply hurt, and followed her quickly.

"I did n't mean to be horrid," said Fanny, penitently. "I was only laughing, you know, and of course I shall take Stebbins. And I 'm not engaged to Mr. Brinsley at all."

"Why did n't you say so at once?" asked Cordelia, half choking, and turning away her face.

Fanny, unseen by her cousin, glanced at Lawrence, and then at the door, and the young man departed immediately, leaving the two cousins to make peace.

He did not remain long in the house. Thrusting a sketch-book and a pencil into his pocket, with his pipe and pouch, he went out without seeing Fanny again, taking her at her word with regard to her plans for the afternoon. An hour later he was seated under a tree high upon the side of the hill, and almost out of sight of the Otter Cliff Road. There was nothing particular in the way of a view from that point, but there were endless trees, and Lawrence amused himself in making a rough study of a mixed group of white pines, firs, and hackmatacks.

He did not draw very carefully, nor even industriously, and more than once he stopped working altogether for a quarter of an hour at a time. His principal object in coming had been to get out of the way just a little more

promptly and completely than Fanny could have expected. His thoughts were much more concerned with her than with what he was doing.

Naturally enough, he was trying to understand the real bent of the girl's feelings. Setting aside the absurd chaff which had formed a good deal of the conversation on the previous afternoon, he tried to extract from it enough of truth to guide him, aiding himself by recalling little circumstances as well as words, for the one had often belied the other.

He saw clearly that Fanny Trehearne might have said to him, "I like you, but I do not love you — win me if you can!" But it was like her to propose to "flirt for a bet," being at heart perhaps less of a flirt than she laughingly admitted herself to be. But that was not the point which chiefly interested him. What he wished to know was just how far that undefined liking for him extended. To speak in the common phrase, he did not "know where he was" with her, and it seemed that he had no means of finding out. On the other hand, he knew very well indeed that he himself was badly in love. The symptoms were not to be mistaken, nor had he been in love so often already as to make him skeptical as to what he felt. He was more distrustful of the result than of the impulse.

In his opinion Fanny was much too frank to be a flirt. Her directness was one of her principal charms, though he could not help suspecting that it must be one of her chief weapons. A little hesitation is often less deceptive than clear-eyed, outspoken truth. But Lawrence was no more able than most men of his age — or, indeed, of any age — to follow out a continuous train of thought where a woman was concerned. It is more often the woman's personality that concerns us unreasoning men than the probable direction of her own reasoning about us. We do not make love to an argument, so to speak, nor to a set of ideas, nor to a preconceived opinion of our merits or demerits. We make love to our own idea of what the woman is — and the depth of our disillusionment is the measure of our sincerity, when love is gasping between the death-blow and the death.

Moreover, what is called nowadays analysis of human nature belongs in reality to transcendental thought. "Transcendent" is defined as designating that which lies beyond the bounds of all possible experience. So far as we know, it is beyond those bounds to enter into the intelligence of our neighbor, subjectively, to identify ourselves with him, and to see and understand the world with his eyes and mind. It follows that we are never sure of what we are doing when we attempt to set down exactly another man's train of thought, and it follows

also that few are willing to recognize the result as at all resembling the process of which they are conscious within themselves. On certain bases, all men can appeal subjectively to all men, and all women to all women. But, as between the sexes, all observation is objective and tentative, whether it be that of the author, condemned to analyze a woman's character, or that of the man in love, and attempting to understand the woman he loves.

And further, if we could see — as it is pretended by some that we can see on paper — precisely what is taking place in the intelligence of those we meet in the world, our friends would be as unrecognizable to us as a dissected man is unrecognizable for a human being except in the eyes of a doctor. The soul laid bare, dissected, and turned inside out, with real success, would not be recognized by its dearest friend, were it ever so truthful a soul. We are all fundamentally and totally incapable of expressing exactly what we feel, and, as we have no means of conveying truth without some sort of expression, we are helpless, and are all more or less hopelessly misunderstood — a fact to which, if we please, we may ascribe that variety which is proverbially said to be the charm of life. Doubtless, this is a literary heresy; but it is a human truth a little above literature.

Lawrence had never attempted to write a book, but as he sat on the slope above the Otter Cliff Road, drawing trees, it did not occur to him to draw a picture of what he thought about the inside of each tree, instead of a representation of what he saw. But he made the usual fruitless attempt to understand the woman he loved, and to reason about her; and failed to do either, which is also usual. The conclusion he reached was that he loved her, of which he had been aware before he had set himself to think it out.

What he saw was a strong girl's face, with cool, inscrutable gray eyes that never took fire and gleamed, nor ever turned dull and vacant. Their unchanging steadiness contradicted the wayward speech, the sudden, capricious confidence, even the gay laugh, sometimes. Lawrence had a lively impression that whatever Fanny said or did, she never meant but one thing, whatever that might be. And with this impression he was obliged to content himself.

From the place where he sat he had a glimpse between the trees of the road below. On the side toward him there was a little open bit of meadow where the gorge widened, and a low fence with a little ditch separated it from the highway. On the hillside above this stretch of grass the trees grew here and there, wide apart at first, and then by degrees more close together. He himself was seated just within the thick wood, at the edge of the first underbrush.

Now and then people passed along the road —

a light buckboard drawn by a pair of bays and containing a smart-looking couple, with no groom behind; a farmer's wagon, long, hooded, and dusty, dragged at a disjointed trot by a broken-down gray horse; a solitary rider, whose varnished shoes reflected the sunlight even to where Lawrence was sitting; a couple of pedestrians; a lad driving a cow; and then another buckboard; and so on.

Lawrence was thinking of shutting up his book and climbing higher up the steep side of Newport Mountain—as the hill is called—in search of another study, when, glancing down through the trees, he saw three riders coming slowly along the road,—two in front, and one at some distance behind,—a lady and gentleman, and then a groom. His eyes were good, and he would have known Fanny Trehearne's figure and bearing even at a greater distance—she sat so straight, hands down, elbows in, head high, square in her saddle, yet flexible, and all moving with every movement of her Kentucky thoroughbred. They came nearer, and Lawrence saw them distinctly, now. Brinsley was beside her. Lawrence laughed to himself at the idea that the man could ever have been in the marines. He sat the horse he rode much more like a Mexican or an Indian than like a sailor or a marine. Even at that distance Lawrence could not help admiring his really magnificent figure, for Brinsley's perfections were showy, and massed well afar off.

The riders reached the point where the little meadow spread out on their left, and to Lawrence's surprise they halted and seemed to be consulting about something. They had turned toward him, and as they talked, he could see that Fanny looked across the meadow, and up at the woods where he was sitting. It was of course utterly impossible that she should have known where he was, and it was almost incredible that she should see him, seated low upon the ground in the deep shade, when she was only visible to him between the stems of the trees. Nevertheless, not caring to be discovered, he crouched down among the ferns and grasses, still keeping his eye on the couple in the road far below.

Presently he saw Fanny turn her horse's head, walk her to the other side of the road, and turn again, facing the meadow. She looked up and down the road once, saw that no one was coming, and put her mare at the fence. It was a low one, and the ditch on the outer side was neither broad nor deep. The thoroughbred cleared it with a contemptuously insignificant effort, and cantered a few strides forward into the grass, shaking her bony head almost between her knees as Fanny brought her to a stand and turned again. Brinsley followed her on the big Hungarian horse he rode,—Mr.

Trehearne's horse,—jumping the fence and ditch, and taking them again almost immediately, to wait for Fanny on the other side in the road. She followed again, and pulled up by his side. But they did not ride on at once. They seemed to be discussing some point connected with the place, for they pointed here and there as they spoke. Fanny reined in her mare and backed a little, as though she were going to jump again. The animal seemed nervous, stamping and pawing, and laying back her small ears.

A hundred yards or more in the direction from which they had come the road made a short bend round the foot of the spur of the hill known as Pickett's. Just as Fanny put the mare at the fence a third time, a coach and four turned the corner of the road at a smart pace, leaders cantering and wheelers at a long trot.

Seeing three horses apparently halting in the way, some one in the coach sent a terrific and discordant blast from a post-horn ringing along the road as a warning. At that moment Fanny's mare was rising at the bars. She cleared them as easily as ever, but on reaching the ground instantly bolted across the grass, head down, ears back, heels flying. It all happened in a moment. The two men, Brinsley and groom, knew too much to scare the thoroughbred by a pursuit, and, confident in Fanny's good riding, sat motionless on their horses in the road, after drawing away enough to let the coach pass.

The idiot with the horn continued to blow fiercely, and the big vehicle came swinging along at a great rate, with clattering of hoofs, for the road was hard and dry, baked after a recent rain—and with jingling of harness and sound of voices. The mare grew more and more frightened, and tore up the hillside like a flash, directly away from the noise. The young girl was a first-rate rider, and knew the fearful danger if she should be carried at such a pace among the trees. But her strength, great as it was for a woman, was not able to produce the slightest impression upon the terrified creature she rode.

Lawrence knew nothing of riding, but the imminent peril of the woman he loved was clear to him in a moment. He had a horrible vision of the wild-eyed mare tearing straight toward him through the trees, wide apart at first, and then dangerously near together.

On they came, the thoroughbred swerving violently at one stem after another, the young girl's strong figure swaying to her balance at each headlong movement. He could see her set face, pale under the tan, and he could see the desperate exertion of her strength. He sprang forward, and ran down between the trees at the top of his speed.

x.

THERE is nothing equal to the absolute fearlessness of a naturally brave man who has no experience of the risk he runs, and is bent on saving the life of the woman he loves. Louis Lawrence remembered afterward what he had done, and how he had done it, but he was unconscious of what he was doing at the time.

He rushed down the hill between the closer trees, and with utter recklessness sprang at the bridle as the infuriated mare dashed past him. Grasping snaffle and curb — tight drawn as they were — in both hands, he threw all his light weight upon them, and allowed himself to be dragged along the ground between the trees at the imminent risk of his life — a risk so terrible that Fanny Trehearne turned paler for him than for her own danger. In half a dozen more strides they might both have been killed. But the mare stopped, quivering, tried to rear, but could not lift Lawrence far from the ground, or shake off his desperate hold, plunged once and again, and then stood quite still, trembling violently. Lawrence scrambled to his feet, still holding the bridle, and promptly placed himself in front of the mare.

For one breathless instant Lawrence looked into Fanny's face, and neither spoke nor moved. Both were still very pale. Then the young girl slipped off, the reins in her hand.

"That was uncommonly well done," she said, with great calm. "You've saved my life."

She no longer looked at him while she spoke, but patted and stroked the thoroughbred, looking her over with a critical eye.

"Oh, that's all right," answered Lawrence. "Don't mention it!"

He laughed nervously, still panting from his violent exertion. Fanny herself was not out of breath, but the color did not come back to her sunburnt cheeks at once, and her hand was hardly steady yet. She did not laugh with Lawrence, nor even smile, but she looked long into his eyes.

"I may not mention it, but I sha'n't forget it," she said slowly.

"It's one to me, is n't it?" asked Lawrence, who, in reality, was by far the cooler and more collected of the two.

"How do you mean?" inquired Fanny, knitting her brows half-angrily.

"One to me, in our game, you know," said the young fellow — "the game we agreed to play yesterday."

"Yes — it's one to you. By the by, you're not hurt anywhere, are you?"

She looked him over, as she had looked over her mare, with the same critical glance. His clothes were a little torn here and there, being but light summer things, and his hat had

disappeared, but it was tolerably clear that he was in no way injured.

"Oh, I'm all right," he answered cheerfully. "I should think you'd feel badly shaken, though," he added, with sudden anxiety.

"Not at all," said Fanny, determined to show no more emotion or excitement than he. "It was a case of sitting still — neck or nothing. It's nothing, as it happens."

At that moment Brinsley appeared, riding slowly through the trees, for fear of frightening the mare again.

"Are you hurt?" he shouted.

Fanny looked round, saw him, and shook her head, with a smile. Brinsley trotted up, and sprang from his horse.

"Are you sure you're not hurt?" he asked again.

"Not in the least!"

"Thank God!" ejaculated Brinsley, with emphasis.

"You'd better thank Mr. Lawrence, too," observed Fanny, quietly. "He caught her going at a gallop, and hung on, and was dragged. I don't remember ever seeing anything quite so plucky."

Brinsley looked coldly at his rival, and his beady eyes seemed nearer together than usual when he spoke to him.

"I think you're quite as much to be congratulated as Miss Trehearne," he said.

"Thanks!"

"We'd better be getting down to the road again," said Fanny. "You can lead the mare and your own horse, too, Mr. Brinsley. She's quiet enough, now, and I've all I can do to walk in these things."

Brinsley took the mare's bridle over her head, and led the way with the two horses.

"Are n't you coming?" asked Fanny, seeing that Lawrence did not follow.

"Thanks — no," he answered. "I must find my hat, in the first place."

Brinsley looked over his shoulder, and saw the two hanging back. He stopped a moment, turning, and laying one hand on the mare's nose.

"You must be shaken, Mr. Lawrence," he said. "Why don't you take the groom's horse and ride home with us?"

"I can't ride," answered the younger man, loud enough for Brinsley to hear him. "And you know it perfectly well," he added under his breath.

Fanny frowned, but took no further notice of the remark,

"Good-by," she said, holding out her hand to Lawrence. "Come home as soon as you can, won't you?"

"Oh, yes — that is, I think I'll just see you take that fence again, and then I want to get

a little higher up the hill and do another bit of a sketch. Then I'll come home. There's no hurry, is there?"

"Don't show off," said Fanny, severely. "It is n't pretty. Good-by."

She walked fast, and overtook Brinsley in a few moments. At the foot of the hill he prepared to mount her, leaving his own horse to the groom. Then a thing happened which he was never able to explain, though he was an expert in the field, and no one of all Fanny's acquaintances could mount a lady better than he. He bent his knee, and held out his hand, and stiffened his back, and made the necessary effort just at the right moment, as he very well knew. But for some inexplicable reason Fanny did not reach the saddle, or anywhere near it, and she slipped, and would certainly have fallen if he had not caught her with his other hand and held her on her feet.

"How awkward you are!" she exclaimed viciously, with a little stamp. "Let me get on alone!"

And thereupon, to his astonishment and mortification, she pushed him aside, set her foot in the stirrup,—for she was very tall, and could do it easily,—and was up in a flash. Lawrence, looking down at them from the edge of the woods, saw what happened, and so did Stebbins, the groom, who grinned in silence. He hated Brinsley, and it is a bad sign when a good servant hates his master's guest. Lawrence felt that, in addition to scoring one in the game, he was avenged on his enemy for the latter's taunting invitation to ride.

"I think I may count that, and mark two. I'm sure she did it on purpose," he said audibly to himself.

Before Brinsley was mounted, Fanny was over the fence with her mare, and waiting for him in the road.

"Oh, come along!" she cried. "Don't be all day getting on!"

"You need n't be so tremendously rough on a fellow," said Brinsley, as his horse landed in the road. "It was n't my fault that I was n't waiting for a runaway under the trees up there."

"Yes it was! Everything's your fault," answered Fanny, emphatically. "No—you need not play Orlando Furioso, and make papa's old rocking-horse waltz like that. My mare's got to walk a mile, at least, for her nerves."

It did n't require Brinsley's great natural penetration to tell him that Miss Fanny Trehearne was in the very worst of tempers—even to the point of unfairly calling her papa's sturdy Hungarian bad names. But he could not at all see why she should be so angry. It had certainly been her fault if he had failed to put her neatly in the saddle. But her ill-hu-

mor did not frighten him in the least, though he was very quiet for several minutes after she had last spoken.

"It's not wildly gay to ride with people who don't talk," observed Fanny.

"I was trying to think of something appropriate to say," answered Brinsley. "But you are in such an awful rage—"

"Am I? I did n't know it. What makes you think so?"

"What nerves you've got!" exclaimed Brinsley, in a tone of admiration.

"I have n't any nerves at all."

"I mean good nerves."

"I tell you I have n't any nerves. Why do you talk about nerves? They're not amusing things to have, are they?"

"Well,—in point of humor,—I did n't say they were."

"I asked you to say something amusing, and you began talking about nerves," said Fanny in explanation.

"I'm not in luck to-day," said Brinsley, after a pause.

"No; you're not," was the answer; but she did not vouchsafe him a glance.

"I wish you'd like me," he said boldly.

"I do—at a certain distance. You look well in the landscape—and you know it."

"Upon my word!" Brinsley laughed roughly, and looked between his horse's ears.

"Upon your word—what?"

"I never had anything said to me quite equal to that, Miss Trehearne."

"No? I'm surprised. Perhaps you have n't known the right sort of people. You must find the truth refreshing."

Brinsley waited a few moments before speaking, and then, turning his head, looked at her with great earnestness.

"I wish you'd tell me why you've taken such a sudden dislike to me," he said in a low voice.

"Why are you so anxious to know, Mr. Brinsley?" asked Fanny, meeting his eyes quietly.

"Because I believe that somebody has been saying disagreeable things about me to you," he answered. "If that's the case, it would be fair to give me a chance, you know."

"Nobody's been talking about you. You've talked against yourself. Besides," she added, her face suddenly clearing, "it's quite absurd to make such a fuss about nothing. I'm only angry about nothing at all. It's my way, you know. You must n't mind. I'll get over it before we're at home, and then I'll go off, and my cousins will give you lots of weak tea and flattery."

Brinsley, who was clever at most things, was not good at talking or at understanding a woman's moods, and he felt himself at so great a

disadvantage that he slipped into an inane conversation about people and parties, without succeeding in finding out what he wished to know. If he had ever conceived any mad hope of winning Fanny's affections, he abandoned it then and there. He was still further handicapped, had Fanny known it, by the desperate state of his own affairs at that moment; and if she had known something of his reflections, she might have pitied him a little — what she might have thought, if she had guessed the remainder, is hard to guess, for he had a very curious scheme in his mind for improving his finances. He had been playing high for some time, had lost steadily, and was at the end of his present resources, which, with him, meant that he was at the end of all he had in the world.

He was not by any means inclined to give up the pleasant intimacy he had formed and fostered with the three Miss Miners, nor the attendant luxuries which he had gained with it, and the introduction to Bar Harbor society, which meant good society elsewhere. But he felt that he had no choice, since the cards went against him. He was not a sharper. He played fair, for the sake of the enjoyment of the thing. It was his one great passion. When he was in luck he won enough for his extravagant needs, for he always played high, on principle. But when fortune foiled him, he had other talents of a more curious description, by the exercise of which to replenish his purse — talents, too, which he had exercised in America for a long time. His happy hunting-ground was really London, which accounted for his evident and almost extraordinary familiarity with its ways. There are indeed few places in the world where a man may follow a doubtful occupation more freely and more successfully.

Before they reached the Trehearnes's house Brinsley had made up his mind that he must drink his last cup of tea with the three Miss Miners on that day or very soon afterward, unless he were to be even more fortunate in his undertaking than he dared to expect. The immediate consequence was an affectation of a sad and stately manner toward Fanny as he helped her off her mare at the door.

"I'm afraid this has been our last ride," he said in a subdued voice.

"What? Oh — 'The Last Ride' — Browning — I remember," answered Fanny.

"No; I was n't alluding to Browning. I'm going away very soon."

Fanny stared at him in some surprise.

"Oh, are you? I am very sorry." She spoke cheerfully, and led the way into the house, Brinsley following her with a dejected air. "You'll probably find my cousins in the library," she added. "I'm going to take off my hat — it's so hot."

VOL. XLVIII.—99.

The three Miss Miners were assembled, as usual at that hour, and greeted Brinsley effusively. Not wishing to be anticipated by Fanny in telling a story altogether to Lawrence's credit, he began to tell the three ladies of what had happened during the ride. He was very careful to explain that he had of course not dared to follow the runaway, lest he should have made matters much worse.

"It's quite dreadful," cried Miss Cordelia, on hearing of Fanny's narrow escape. "You should never have let her jump the fence at all. What do people do such mad things for!"

"If anything happened to the child, we might as well kill ourselves," said Elizabeth. "It's too dreadful to think of!"

"Well," answered Brinsley, "nothing has happened, you see. I've brought Miss Trehearne safe home, though I had n't the good fortune to be the man who stopped her horse. You see," he added, smiling, "I want all the credit you can spare from Mr. Lawrence. I'm afraid there's not much to be got, though. He's had the lion's share."

"And where is he?" asked Augusta, who felt more sympathy for the artist than the others.

"Oh, he'll come back. He can't ride, you know, so he had to walk, poor fellow! He'd been pretty badly shaken, too, and he's not strong, I'm sure."

"You would n't have called him weak if you had seen him hanging on while the mare dragged him," said Fanny, who had entered unnoticed.

"Oh, that's only strength in the hands," said Brinsley, in a depreciative tone, and conscious of his own splendid proportions.

"Well, then, he's strong in the hands, that's all," retorted Fanny. "Please, some tea, Elizabeth dear; I'm half dead."

The three Miss Miners did their best to console Brinsley for Fanny's continued ill-treatment of him, but they did not succeed in lifting the cloud from his brow. At last he confessed that he was expecting to leave Bar Harbor at any moment.

XI.

THERE were to be fireworks that evening at the Canoe Club on the farther side of Bar Island — magnificent fireworks, it was said, which it would be well worth while to see. The night was calm and clear, and the moon, being near the last quarter, would not rise until everything was over.

"We'll go in skiffs," said Fanny. "When we're tired of each other, we can change about, you know. Mr. Lawrence can take one of us and Mr. Brinsley another, and the other two must take one of the men from the landing. I ordered the boats this morning when I was out."

The three Miss Miners looked consciously at one another, mutely wondering how they were to divide Mr. Brinsley among them, and wishing that they had consulted together in private before the moment for decision had come. But no one suggested that, as there were only four ladies, each of the men could very easily take two in a boat.

"We might toss up to see who shall take whom," suggested Brinsley, who had been unusually silent during the greater part of dinner.

"In how many ways can you arrange six people in couples?" asked Fanny.

Nobody succeeded in solving the question, of course. Even Elizabeth Miner, who was considered the clever member, gave it up in despair.

"Never mind," said Fanny; "we 'll see how it turns out when we get down to the landing-stage. These things always arrange themselves."

To the surprise of every one except Fanny herself, the arrangement turned out to be such that she and Miss Cordelia went together in the skiff pulled by the sailor, while Brinsley and Lawrence each took one of the other Miss Miners.

"We 'll change by and by," said Fanny, as her boat shoved off first to show the way. "Keep close to us in the crowd when we get over."

The distance from the landing, across the harbor, through the channel between Bar Island and Sheep Porcupine to the Canoe Club, is little over half a mile; but at night, amid a crowd of steamers, large and small, row-boats, canoes, and sail-boats,—the latter all outside the channel,—it took twenty minutes to reach the place where the fireworks were to be.

Fanny leaned back beside her cousin, and watched the lights in silence. Yellow, green, and red, they streamed across the brilliant black water in every direction, the yellow rays fixed or moving but slowly, the others gliding along swiftly above their own reflection, as the paddle-steamers thrashed their way through the still sea. To left and right the shadowy islands loomed darkly against the black sky, outlined by the stars. The warm, damp air lifted the coolness from the water in little puffs, as the skiff slipped along. Now and then, in the gloom, a boat showed dimly alongside, and the laughing voices of girls and boys told how near it passed, a mere floating dimness upon blackness. The stroke of light sculls swished and tinkled with the laughter. The soft, mysterious charm of the summer dark was breathed upon land and water, the distant lights were love-dreaming eyes, and each time, as the oars dipped, swept, and rose, the gentle sound was like a stolen kiss.

Then suddenly, with a wild, screaming rush,

a rocket shot up into the night, splitting the sky with a scar of fire. The burning point of it lingered a moment overhead, then cracked into little stars that shed a soft glow through the gloom, and fell in a swift shower of sparks. Then all was hushed again, and the red and green lights moved quickly over the water, hither and thither.

Close to the shore of the island the skiff ran round the point into the shallow water along the beach, and all at once in the distance the festooned lanterns of the Canoe Club came into view, so bright that one could distinguish the branches of the spruces in the red and yellow glare, and the moving crowd of people on the little landing-stage and below, before the clubhouse. And some two hundred yards out the lights began again, gleaming from hundreds of boats and little vessels of all rigs and builds. Between these seaward lights and those on land a deep black void stretched away up Frenchman's Bay.

Miss Cordelia started nervously at the rockets, but said nothing. Fanny sat beside her in silence. The sailor, only visible distinctly when the lights were behind him, pulled softly and steadily, glancing over his shoulder every now and then to see that the way was clear. The other skiffs kept near, both Brinsley and Lawrence being keenly on the lookout for a change. Now and then Fanny could hear them talking.

"I wonder why one voice should attract one, and another should be disagreeable," she said at last, in a meditative tone.

"I was thinking of the same thing," answered Cordelia, thoughtfully.

"Yes," said Fanny, absently. "Of course you were," she added, a moment later. "I mean—" she paused. "Poor dear!" she exclaimed at last, stroking her cousin's elderly hand in the dark—"I 'm so sorry!"

"Thank you, dear," answered Miss Miner, simply and gratefully.

It was little enough, but little as it was it made them both more silent than ever. With the boatman close before them, it was impossible to talk of what was in their thoughts. Fanny, for her part, was glad of it. She had understood her old-maid cousin since the night when Cordelia had broken down and laughed and cried in the garden, and she knew how little there could be to say. But Cordelia did not understand Fanny in the least. It was a marvel to her that any one should prefer Lawrence to Brinsley—almost as great a marvel as that she herself, in her sober middle age, should have felt what she knew was love and believed to be passion.

And now Brinsley was going, and it was over. He would never come back, and she should never see him again—she was sure of

that. She was only an old maid, a middle-aged gentlewoman who had never possessed any great attraction for anybody; who had always been more or less poor and unhappy, though of the best and living among the best; whose few pleasures had come to her unexpectedly, like rare gleams of pale sunshine on a very long rainy day; who had looked for little, and had got next to nothing, out of life, save the crumbs of enjoyment from the feast of rich relatives, like the Trehearnes; a woman who had known something more grievous than sorrow and worse than violent grief, trudging through life in the leaden cowl of many limitations — the leaden cowl of that most innocent of all hypocrites, of her, or of him, who knows the daily burden of keeping up appearances on next to nothing, and of doctoring poor little illusions through a feeble existence, worth having because they represent all that there is to have.

She had been wounded by one of those arrows shot in the dark which hit hearts unawares and unaimed; and now that the shaft was suddenly drawn out, the heart's blood followed it, and the nerves quivered where it had been. It was only one of the little tragedies which no one sees, few guess at, and nothing can hinder. But Fanny Trehearne felt that it was beside her, there in the little boat, while she watched the pretty fireworks, and she was sorry, and did what she could to soothe the pain.

"Let's change now," she said at last, just as the glow of a multitude of colored fires died away on the water. "You take Mr. Brinsley, and I'll take Mr. Lawrence."

As she spoke, she gave her cousin's hand a little squeeze of sympathy, and heard the small sigh of satisfaction that answered the proposal. The rearrangement was effected in a few moments, the men holding the boats together by the gunwales while the ladies stepped from one into the other.

"Pull away," said Fanny, authoritatively, as soon as Lawrence had shoved off. "Let's get out of this! I'll steer, so you need n't bother about running into things."

Fairly seated in a boat, with the scull shipped, and some one at the tiller-lines, Lawrence could get along tolerably well, for he knew just enough not to catch a crab in smooth water, so long as he was not obliged to turn his head. But if he had to look over his shoulder, something was certain to happen, which was natural, considering that when he attempted to feather at all, he did it the wrong way.

"You're stronger than anybody would think," observed Fanny, as she saw how quickly the skiff moved. "You might do things quite decently if you'd only take the trouble to learn."

"Oh, no! I'm a born duffer," laughed Law-

rence. "Besides, I could n't row long like this. I could n't keep it up."

They were just in front of the clubhouse now, and a score of rockets went up together, with a rushing and a crackling and a gleaming, as they soared and burst, and at last fell sputtering in the water all around the skiff. Lawrence had rested on his sculls to watch the sight.

"Pull away," said Fanny. "We'll get under the foot-bridge by the landing. There's water enough there, and we can see everything."

Lawrence obeyed, and pulled as hard as he could.

"So your friend Mr. Brinsley is going away," observed the young girl, suddenly.

"My friend! I like that! As though I had brought him in my pocket."

"I'm very glad that he's going, at all events," said Fanny, without heeding his remark. "I'm not fond of him any more."

"I hope you never were — fond of him."

"Oh, yes, I was; but I'm thankful to say that it's over. Of all the ineffable cads! I could have killed him to-day."

"By the by," said Lawrence, "when he was mounting you — did n't you do that on purpose?"

"Of course. And then I called him awkward. It was so nice! It did me good."

"Pure spite, I suppose. You could n't have had any particular reason for doing it, could you?"

"Oh, dear, no! What reason could I have? It was n't his fault that the mare ran away, though I told him it was."

"That's interesting," observed Lawrence.

"Do you often do things out of pure spite?"

"Constantly — without any reason at all!"

Fanny laughed.

"Perhaps you'll marry out of spite, some day," said Lawrence, calmly. "Women often do, they say, though I never could understand why."

"I dare say I shall. I'm quite capable of it. And should n't I be just horrid afterward!"

"I like you when you're horrid, as you call it. I did n't at first. You've given my sense of humor a chance to grow since I've been here. I say, Miss Trehearne —" He stopped.

"What do you say? It is n't particularly polite to begin in that way, is it? I suppose it's English."

"Oh, bother the English! And I apologize for being slangy. It's so dark that I can't see you frown. I meant to say, if ever you marry out of spite, and want to be particularly horrid afterward, it would n't be a bad idea to marry me; for I don't mind that sort of thing a bit, you know."

"That's a singular offer!" laughed Fanny,

leaning far back, and playing with the tiller-lights in the glow of the Bengal lights.

"It's genuine of its kind," answered the young man. "Of course it is n't a sure thing, exactly," he added reflectively, "because it depends on your happening to be in the spiteful humor. But as you say that often happens—"

"Well, go on!"

"I thought you might feel spiteful enough to accept this evening," concluded Lawrence.

"Take care! I might, you know—you're in danger!" She was still laughing.

"Don't mind me, you know! I could stand it, I believe."

"You're awfully amusing—sometimes, Mr. Lawrence."

"Meaning now?" inquired the artist, resting on his sculls, for they were under the shadow of the bridge.

"I can't see your face distinctly," answered Fanny. "So much depends on the expression. But I think—"

"What do you think? That it's awfully amusing of me to offer to be married as a sacrifice to your spite?"

"It's amusing anyway."

"A formal proposal would be, you mean?" asked Lawrence. Then he laughed oddly.

"I hate formality," answered Fanny. "That is, in earnest, you know. It's so disgusting when a man comes with his gloves buttoned, and sits on the edge of a chair, and says—"

"And says what?"

"Oh—you know the sort of thing. You must have done it scores of times."

"What? Proposed and been refused? You are complimentary, at all events. I've a great mind to let you be the first, just—well—how shall I say? Just to associate you with a novel sensation."

"I might disappoint you," said Fanny, demurely. "I told you so before. Just think: if I were to say 'Yes,' you'd be most dreadfully caught. You'd have to eat humble pie, and beg off, and say that you had n't meant it."

"Oh, no!" laughed the young man. "You'd break it off in a week, and then it would be all right."

"Are you going to be rude? Or are you already? I'm not quite sure."

"Neither. Of course you'd break it off, if we had an agreement to that effect."

"You don't make any allowance for my spitefulness. It would be just like me to hold you to your engagement. Of course you would n't live long. We should be sure to fight."

"Oh—sure," assented Lawrence. "That is, if you call this fighting."

"It would be worse than this. But why don't you try? I'm dying to refuse you. I'm just in the humor."

"Why, I thought you said there was danger. If I'd known there was n't—by the by, this counts in the game, does n't it?"

"There is n't anything to count, yet," said Fanny. "Look at those fiery fish—are n't they pretty? See how they squirm about, and fizzle, and behave like mad things. Oh, I never saw anything so pretty as that!"

"Yes; if one must have an interruption, they do as well as anything."

"You were n't talking very coherently, I believe," said the young girl, turning her head to watch the fireworks. "And you've made me miss lots of pretty things, I'm sure. Oh, they've gone out already! How dark it seems all at once! What were you asking? Whether this counted in the game? Of course it counts. Everything does. But I don't exactly see how—"

She stopped, and looked toward him in the dim gloom of the shadow under the bridge.

But Lawrence did not speak. He looked over the side of the boat, softly slapping the black water with the blade of his scull.

"Why don't you go on?" asked Fanny, tapping the boards under her foot to attract his attention.

"I was thinking over the proper words," answered Lawrence. "How does one make a formal proposal of marriage? I never did such a thing in my life."

"An informal one would do for fun."

"I never did that, either."

"Never?"

"Never."

"Really? Swear it, as they say on the stage." Fanny laughed softly.

"Oh, by Jove, yes!" answered Lawrence, promptly. "I'll swear to that by anything you please."

"Well, you'll have to do it some day, so you'd better practise at once," suggested Fanny.

Lawrence did not notice that there was a sort of little relief in her tone.

"I suppose one says, 'My angel, will you be mine?'" he said. "That sounds like some book or other."

"It might do," answered Fanny, meditatively. "You ought to throw a little more expression into the tone. Besides, I'm not an angel, whatever the girl in the book may have been. On the whole—no—it's a little too effusive—angel, you know. It's such nonsense! Try something else; but put lots of expression into it."

"Does one get down on one's knees?" inquired Lawrence.

"Oh, no; I don't believe it's necessary. Besides, you'd upset the boat."

"All right—here goes! My dear Miss Trehearne, will you—"

"Yes; that's it. Go on. The quaver in the voice is rather well done. 'Will you — What?'"

"Will you marry me?"

"Yes, Mr. Lawrence; I will."

There was a short pause, during which a number of fiery fish were sent off again, and squirmed, and wriggled, and fizzled their burning little lives away in the water. But neither of the young people looked at them.

"You rather took my breath away," said Lawrence, with a change of tone. "Did I do it all right?"

"Oh — quite right," answered Fanny, thoughtfully.

Immediately after the words Lawrence heard a little sigh. Then Fanny heard one, too.

"You did n't happen to be in earnest, did you?" she asked suddenly in a low, soft voice.

"Well — I did n't mean — that I meant — you know we agreed to play a game —"

"I know we did — but — were you in earnest?"

"Yes — but, of course — Oh, this is n't fair, Miss Trehearne!"

"Yes, it is. I said 'Yes,' did n't I?"

"Certainly, but —"

"There's no 'but.' I happened to be in earnest, too — that's all. I've lost the game."

THE END.

F. Marion Crawford.

TOPICS OF THE TIME.

The Senate.

A RECENT writer in *THE CENTURY* deprecated the phrase, a "rich man's club," as applied to the Senate, and showed that there are fewer very rich men there than is popularly supposed. Since this was printed another conspicuous instance of a rich man's election to a seat in that body has taken place. The general opinion is that no matter how few rich men there may be in the Senate, there are too many men there who would not for a moment have been thought of for that great place, had it not been for their money. No one would have cared how many millions Mr. Webster, or Mr. Clay, or Mr. Seward might have possessed; no one cares how wealthy a senator may be, if he is a statesman, if he is eminently fit for the place, but there is a natural and growing sensitiveness at the capture of these places by ambitious millionaires who are very far from being statesmen. Sometimes, in the past, it is believed the latter have paid State legislators directly for their votes; sometimes they have paid them indirectly by paying their campaign expenses; but the public is very often perfectly sure that, in one way or another, the millionaire's money is the chief occasion of the election.

When the senatorial millionaire is once in his place, of course there is constant suspicion of his official action, when it is supposed to affect values in which he is himself directly or indirectly interested, or in which his business associates are interested. But this is not the only danger; he is apt, at times, to rival in his speeches and proposed measures the professional demagogue, in order to appease the sentiment which takes exception to his senatorial position. So there are two distinct reasons for the fact that the presence in Congress of millionaires unskilled in statesmanship is a constant menace to good government.

There is another class of senators who have helped to injure the repute of that body — namely the "boss" of inferior character and reputation, whether he be wealthy or not, who has managed to log-roll himself

into that high office by means of the spoils system. Such men used to do a certain amount of the "dirty work" in politics, in the old times; but they did not themselves aspire to places of such dignity, and the fact that they do successfully thus aspire nowadays speaks ill for the condition of public affairs in America.

Such senatorships bring the highest branch of our legislative system into contempt; constitute an ever-present legislative danger, and are both the occasion and sign of a general corruption — the inordinate use of money in elections, and the perpetuation of political oligarchies and corrupt machines in the various States. When the highest chamber of legislature in our system is thus tainted, it is time for good citizens to inquire what is their part or responsibility in the premises.

Various devices are being discussed for the cure of this immediate evil. These devices may or may not be advisable; but even if adopted they will not suffice, nor shall we secure and maintain other needful political reforms, unless Americans make up their minds that they must, from this time on, assume a new and closer relation to civil government. If we leave our politics to "the boys," they to take their rewards in cash or in public office, they will gladly accept the job, run the machine — and the government along with it.

There are plenty of much needed reforms, like the reform of the Senate, the reform of the State legislatures, the reform of city government, and at the foundation of all, the abolition of the spoils system — but none of these will be thoroughly accomplished, and stay accomplished, unless the individual citizen himself "goes into politics," and stays there.

By the way, has the reader of this joined the Good Government Club, or the City Club, or the Civil Service Reform Association in his neighborhood? Has he joined the Anti-Spoils League? Or is he too busy, or ashamed, or cowardly to join? Or, if there is no such association in his neighborhood, is he consulting with wise and disinterested fellow-citizens on the subject of starting one?

Home Rule for Cities.

THERE are, at the time this article is penned, several propositions before the New York Constitutional Convention for an amendment providing for the home rule, or local self-government, of the cities of that State. It is not necessary to our present purpose to go into the particulars of these various propositions. They all have the same end in view, namely, to give to the cities the power to regulate purely municipal affairs without interference from the legislature. At present the legislature, under its power to provide charters for cities, can make the cities its creatures by interfering with every detail of their administration. It is proposed to take away this power, and to direct the legislature to pass general laws under which the cities can organize their own system of government, leaving to the State control over such matters as concern the governmental functions of the State, as taxation, excise, courts, elections, health, education.

It is proposed as a basis of home rule that the cities be permitted under general laws to organize a system of government by means of a common council, with power to legislate for municipal purposes, whose members shall be chosen on a general ticket from the whole city, and in such manner that there shall be minority or proportional representation in such council. It is argued that election in this manner will secure a common council of higher character than is possible under the old district system, and on this point there can be no difference of opinion. Under the district system, the majority of the voters in certain districts may be of such low moral character that an objectionable candidate can be nominated and elected without difficulty. It has happened, therefore, that in many districts in large cities liquor-dealers are chosen to the common council. If all candidates were to be placed on a general ticket, and were to be voted for by all the voters of a city, no party would venture to take the responsibility of nominating men whose occupations or reputations were such as to constitute evidence of their unfitness for the position.

While there would be, therefore, an undoubted improvement in a common council elected by the whole city, as compared with one elected by districts, it is an open question whether the improvement would be sufficiently great to insure intelligent and honest municipal government. It would all depend upon the interest which the people of the city should show in the nomination and election of councilmen. In times of great public interest, like those which follow the revelations of public scandals in cities, the common council chosen would be pretty certain to be a body competent and willing to rule the city wisely and well. In ordinary times, the chances would be that quite a different body, one selected mainly by the professional politicians, would be chosen.

The great point gained, however, would be the placing of entire responsibility for the character of the municipal government upon the people of the city. If the government were dishonest and bad, the people would have to admit that it was so through their own fault. They could not escape the charge that it was bad simply and only because they were too indifferent and negligent of their public duty to make it better. So long as cities are ruled in part by the legislature, in-

different voters can say that they are not to blame if the government is bad, since they have not the power to make it better if they would. If the whole shame of ignorant, extravagant, and often brutal municipal rule were to be laid upon the people of the city, there is good reason to believe that the respectable elements of the population would be aroused to the necessity and duty of ridding themselves of it. They would have to secure better government, or admit that they were not, as a community, fit to govern themselves.

Although there are times when the country member comes valiantly to the rescue of cities from crying evils, still municipal government through a State legislature is not responsible government. A majority of the members whose votes decide upon matters relating to the great cities in New York State live outside those cities. Their constituents know nothing about those matters, and care nothing about the attitude of their representatives toward them. The members are never called to account for their doings in these respects, and they are perfectly safe in taking any course which is hostile to the interests of the cities. The consequence is that much of the legislation for cities is ignorant, much of it is inspired by unworthy motives, and not a little of it by corrupt desires. Citizens of the large cities are in constant need, while the legislature is in session, of appearing before committees to argue with members from remote quarters of the State as to the merits of measures which affect interests entirely foreign to those who sit in judgment upon them. Salaries which city taxpayers must pay are raised by the votes of members living hundreds of miles outside city limits. One bill passed at the last session of the legislature, in spite of the protests of the New York city government and the entire New York press, raised the salaries in one branch of the municipal service no less than \$400,000 a year.

The experience of other cities of the country in regard to legislative interference is in favor of the change proposed in New York. Chicago has never suffered from such interference, as its charter is a general law, and the legislature cannot change it without changing the charters of all the other cities of the State. In speaking of the results of this system, Mr. Franklin MacVeagh, in the interesting address which he made before the Municipal Reform Conference in Philadelphia, in January last, said:

So far as the State has touched us at all, it has touched us through its Constitution; and there it has acted beneficently by limiting our power of borrowing money until our city debt is ridiculously low,—only about thirteen millions,—and by limiting our power of taxation, so that our taxes are moderate. We have in this way that greatest political good—absolute home-rule, uninterfered with, untouched by any exterior force or power or influence.

Philadelphia is governed through its councils, under charter from the legislature. The Constitution of the State forbids the creation of municipal commissions, prohibits all special legislation, and limits the powers of municipalities to contract debts. Both Philadelphia and Chicago choose the members of their local legislative bodies by districts, and the consequence is that there is a large representation of objectionable men in them, with the natural result of much bad government in the city. Boston has just begun the experiment of electing its board of aldermen, who with a common

council constitute the legislative department of the city, on a general ticket, under the minority-representation provision that no voter shall vote for more than seven of the twelve aldermen to be elected. Only one trial has been made of this plan, and the results of that were not especially encouraging.

In fact the trouble everywhere, under all systems, is the same. Mr. MacVeagh, in the address from which we have quoted, defined it accurately when he said :

Our trouble is your trouble—the indifference and the neglect of the so-called good citizens. Such men defeat good city government. I want to say that it is not the bad citizen that needs to be reformed, but the "good citizen." The bad citizens are a hopeless minority. The good citizens are a hopeless majority.

Mr. Moorfield Storey, speaking also at the Philadelphia Conference, said of the situation in Boston :

If honest citizens without regard to their differences on national questions would combine to secure good men in the board of aldermen, this new law might be of great assistance, but employed merely to divide the board between Republicans and Democrats it is useless.

The remedy for municipal misgovernment lies in the awakening of the respectable citizens to a proper sense of civic duty. Home rule, by placing the responsibility for misgovernment squarely and fully upon the inhabitants of the cities, must tend inevitably to hasten this awakening, and for this reason it would seem to be desirable that it should be granted.

The Memory of Curtis.

WHILE good citizenship and nobility of character are honored in America, the memory of George William Curtis will remain green and fragrant, but it is altogether fitting that those who were of his own day and generation should honor themselves in making a permanent memorial to his memory. The shape of this memorial, as decided upon, is twofold: first, an artistic monument; second, an endowed course of lectures upon the duties of American citizenship, and kindred subjects, to be called the "Curtis Lectureship." It will then be seen that the memorial is of such sort as not only to be a record of his personality, but to carry on forever the true work of his life by an insistence upon the cause to which his life was devoted—the elevation of the standard of American citizenship. This was the

thought that dominated his career; the motive which grew and strengthened with his years.

Curtis possessed personal traits which gave him distinction; he had exceptional literary and oratorical ability; his was a life of singular purity and nobility. But above all Curtis was a most exemplary type of American citizenship. His fame as a public man did not come from office. His great services to his country were performed as a private citizen, without expectation of political reward. In fact, his only relation to any prominent position (except the chairmanship of the Civil Service Commission) was the refusal of high place under a friendly administration.

The committee of several hundred having the matter in charge is certainly one of the most significant and representative that has ever been made in this country. It is desirable that the sum (\$25,000) shall be subscribed for in every part of the Union by all who appreciate the man, and who sympathize with the patriotic form which the memorial is to take. Mr. William Potts of Farmington, Connecticut, is the secretary, and Mr. William L. Trenholm, 160 Broadway, New York, the treasurer.

A Good Minister and a Good Citizen.

THERE was a time in the recent career of a prominent minister of New York when good men questioned not his motives, but certain of his methods. It was soon found that any fault of method, if fault there was, counted as nothing to the rectitude of motive, energy, and persistence of action, and, as now appears, to the enormous value of results in the unveiling of official iniquity.

The legislative inquiry would not have taken place had it not been for a popular uprising which placed the legislative branch of the State government in hands unfriendly to Tammany Hall. But the labors of Dr. Parkhurst have been the principal means in making that inquiry successful; and the people rightly regard him as the chief hero of the preparatory struggle with Tammany Hall—a struggle soon to be followed by another, which all friends of good government throughout the world are hoping will be a fatal and final defeat of that ignoble and irredeemable organization.

All honor to the true minister and true citizen, Charles H. Parkhurst. Would that every community in America possessed a patriot as earnest, unselfish, and heroic!

OPEN LETTERS.

Abandoned Farms Again.

MR. WILLIAM HENRY BISHOP seems to have emerged from a search after an abandoned farm in upper New England, which he has described in an entertaining manner in *THE CENTURY*, with doubts as to the existence of the deserted homestead. Years before the abandoned farm had got itself into print, I spent some summers in Vermont, and deserted land was then abundant enough in that region. The landlord of the tavern of the quaint little village of Grafton cut the hay on a half-dozen of such places, which I have myself

visited. Oftentimes the houses were on pleasant, breezy sites with delightful outlooks. Years subsequently spent in the northeastern part of New York State within sight of the distant Green Mountains have, however, made me far more familiar with local changes there. No abandoned farms were to be found in the neighborhood of Lake George eighteen, fifteen, even ten years ago. At the time of a great exodus of a portion of the original New England stock westward, Irish and Scotch families had moved in and filled up the vacant lands. Within ten years, however, the abandoned farm has made its appearance, and has gradually spread like

some novel weed, the seeds of which had come over the Green Mountains on the east wind, or lain long dormant among the belongings of the New England folk who first settled this land, to spring up at last and bring forth fruit. In a drive of five miles I can now show the beholder as many farms where the meadow-grass waves untrodden in the dooryard, and cinnamon roses struggle with weeds in the neglected garden-plots.

There is nothing romantically melancholy about the story of these abandonments. One man on the shores of Lake George, whose acres are few and untamable, though beautiful with rocks and pines, has moved to a neighboring village, where he pursues the business of boat-building. Another lives on an adjacent farm, and pastures cows on the more abundant but scarcely less rocky land of his abandoned farm. A third place with rich soil, fine fruit, a small house, and a delightful outlook, has fallen into the hands of a man who cuts the hay, and holds the farm for sale until such time as he may find a purchaser for his land. The fourth, a fine old homestead, in good preservation, with French Mountain as a background, is owned by a man who has deserted the place in search of better farming land. This farm will no doubt be sold at a low price when he dies, and his children desire to realize on their inheritance. The possessor of the fifth, which is crossed by a fine, brawling brook, prefers to abandon his place and rent a better farm, at a distance, which is in turn deserted by its owner. There are other abandoned homesteads near at hand. One man has gone into the meat business at Caldwell; another has moved to Glens Falls; a third farm, with a beautiful stretch of lake shore and a ruinous house, is deserted also, but will hardly be sold until the death of the widow of the former owner extinguishes her dower-right. Half-a-dozen abandoned mountain-side farms have been bought by a "townman," and countrymen sometimes engross land which they find on the market at prices which seem to them so low as to offer a chance for speculation.

I make no doubt that this region is far from being an exceptional one in this respect, but that corresponding evidences of a decay in the value of Eastern farm-lands may be found far and wide. The reason is patent. Rich and level Western prairies, with their farm machinery and cheap transportation, have cut out these stony, hilly farmsteads which once furnished wheat and corn for an Eastern market, and grew their half-scores of sturdy girls and boys. The boys, if possessed of spirit, have mostly long since sought the wide prairies, or moved to neighboring towns where they have chosen other vocations. Those who have inherited land, and have been unable to sell it unless at a sacrifice which seems to them too great, tug at their chains and mourn that they had not long since "gone West." The children of the Irish people who once filled up the deserted homes here have also flown the nest. And all this not because of a love of change and a hatred of hard work, but for a simple economic reason: almost anything pays better than farming. The result of this exodus is that a considerable part of the present population is a sort of immovable sediment, a weedy sort of folk attached to the soil in a blind way, who have neither the spirit to seek new fields to conquer, nor to conquer those about them, but who seem to strive only to solve the problem of how to exist with the least possible amount of bodily exertion.

Old folk remember when modest fortunes were once made on farms in this region. Now one of our most intelligent farmers has been heard to declare that he would not take the best farm in his township for ten dollars an acre. He has abandoned his own inherited land in favor of a son. When asked what he meant to do, he made answer, "Put on a gold watch and hire out by the month." It is a common saying here that a farmer cannot make more than enough in actual cash to pay his "hired man." It does not, however, follow that farms may be bought for ten dollars an acre. Your farmer is of all men the last to submit to economic changes. He is conservative and cautious above everything. He may have discovered that farming does not pay; he may know that some of the best farms in the country go begging at a third of the asking price of twenty years ago; he may even desert his land; but sell he will not at less than what seems to him to be its real value. You must wait and tire him out, and perhaps tire out his heirs, before you may get his farm at a bargain, unless indeed a mortgage overtake him before that time. His habits of thought are not business-like. He never reflects that the interest on a smaller sum would grow in time to the larger amount on which his hopes are fixed.

In New England, to the cautious spirit of the countryman one may add the presence of the city man, as a factor in enhancing the price of farm property. The latter too frequently contrives to give his country neighbors the impression that he is a boundless mine of wealth. He brings to them a never-looked-for opportunity to sell and to do for ready cash. He freely hands out in one day more money than the farmer who raises his own necessities, and too often foregoes his luxuries, may see in months. To the farmer he seems a spendthrift who may not be deterred from sowing his means far and wide, and he shrewdly resolves that while "it rains porridge" his bowl shall not be found "bottom side up." What wonder that the price of land rises, and milk, vegetables, and carriage hire are no longer to be had for a song, when the city man is seen in the land? I myself only blame the country-folk that they too often overreach themselves in their shrewdness. If Mr. Bishop had suffered some years ago from the craze for old furniture, and had sought to buy a hall-clock from the original owner, he would have been apt to find that the price rose with the rumor of a demand even to two hundred dollars, as in one case that came to my knowledge.

Those farms which border on Lake George in this region are apt to be enhanced in price by that fact. Sales and rumors of sales have inflamed the imaginations of their owners, and no depression in the value of real estate elsewhere ever affects the ideas of these patient natives. Cases have been known where one inquiry has been enough to raise the price of a few acres to ten thousand dollars, the owner meanwhile making haste to denude his land of its timber that he might realize in two ways upon his property. The same spirit has no doubt much to do with the rise in the price of land in New England. As yet no one has selected our abandoned farms in this region for summer homes, and when they contain no lake sites they have no fancy value. Those really desiring to sell will no doubt sell at moderate prices to one whose appearance holds out no promise of miraculous showers of wealth, but is only

an earnest of a modest trickle of hard-won earnings. Perhaps, indeed, the fellow-farmer is the only man who can arrive at the lowest actual price at which farming land may be bought.

Elizabeth Eggleston Seelye.

LAKE GEORGE, N. Y.

An Instance of Organized Public Spirit.

FIVE years ago the city of Indianapolis suffered from an extreme public indifference to the evils of a form of municipal government lamentably lacking in intelligence and efficiency, and a general absence of home pride or public spirit on the part of citizens. Mr. William Fortune started a movement to overcome these disadvantages, and four years ago called together twenty-seven business and professional men who organized the Commercial Club, the membership of which increased within a month to nearly a thousand. Its name does not fully indicate the club's purpose, which is not commercial in the sense of devotion to trade interests, but is, broadly stated, to make the Indiana capital a better place to live in.

Attention was first directed to the need of a complete reorganization of the municipal government. The city was then under the control of a board of aldermen and common council, who had brought about a state of affairs similar to that in many other American cities and towns, where the legislative, executive, and judicial powers are intermingled in hopeless confusion, and where political advantage is the main consideration. A committee representing the club, the city government, and the board of trade prepared a charter embodying many of the best modern ideas of municipal government, and secured its enactment by the legislature, notwithstanding the bitter opposition of many influential people who were interested in the continuance of the old form.

The streets of Indianapolis, at the time of the club's organization, were little better than the worst—not a foot of asphalt or brick. Much educational work was done in enlightening the public as to the value and importance of street improvements. A paving exposition was held for the purpose of affording citizens an opportunity of obtaining information easily regarding the various street-paving methods. The project, an original one, was successful. Nearly all the leading paving companies in America made exhibits, and official delegates were sent to the exposition by a hundred or more cities and towns to gather information. The result was that remonstrances against proposed street-paving ceased, and the demand for it at once became greater than the city authorities could meet, and has so continued for four years.

In 1891 the city was without a system of sewerage. A committee of the club spent a year, under the direction of eminent experts, in an exhaustive investigation, with the result that a comprehensive sewerage system is now far on toward completion.

The club has represented the public in providing for the unemployed during this winter, having the coöperation of all organizations engaged in charitable work. It has devised and carried out a plan by which between 4000 and 5000 persons have been furnished regularly an ample supply of food, sold to them on credit, under an agreement requiring them to perform work in payment of their indebtedness, at the rate of 12½ cents an

hour. The public has been given the benefit of the labor without charge. The aim has been to avoid pauperizing the people who have been under the necessity of receiving relief. Dr. Albert Shaw, in a recent article, has characterized this plan as "the most perfect arrangement for relief that has been devised in any of our cities."

The character of the club's work will farther appear in a summary of some of the enterprises with which it has had to do partly or wholly: a hundred-and-fifty-thousand-dollar county jail in place of one which disgraced the community; a State Road Congress; equalization of the city's taxes; securing for Indianapolis the Twenty-seventh National Encampment of the Grand Army of the Republic; and a bill for a State Board of Arbitration and Conciliation.

In a word, the club's accomplishment is that no one's thought for the betterment of the community has had to be unrealized for lack of coöperation. With a view to permanence in this centralization of public spirit an eight-story stone front building—the handsomest business structure in the State—has been erected by the club as its home.

The articles of incorporation provide that "the club shall not be committed in any manner to the advocacy of any candidate for office." Each member has but one vote regardless of the amount of his subscription, which must be for at least five of the ten-dollar shares of non-dividend-paying stock. Only the income from the money realized by the sale of shares is available in furthering the club's undertakings.

"Booming" has been a very small part, and the offering of bonuses no part, of the work, which has been conducted on the theory that the improvement of the city is a desirable, if not an essential, precedent to its upbuilding from without.

While the large representative membership gives to the club the general support essential to the accomplishment of public undertakings, its work is done by a few men acting as committeemen or as officers. Occasional public meetings are held for the purpose of affording opportunity for suggestions as to what should be done, but all plans are quietly developed and carried out by representatives.

Evans Woollen.

One Cause of Apathy in Municipal Politics.

IT may be safely assumed that the more or less educated or cultivated man, whose abilities have made him successful in the management of his private business, or whose interest in real estate gives him a large share of taxes to pay, is rather conspicuous by his absence than prominent in the public politics of cities, or in the work of municipal legislation and administration. Let us see whether any light will be thrown on the relation of such men to the reforms which are demanded, by consideration of the significance of their "apathy"—that is, by an attempt to discover and explain their present unsatisfactory attitude toward municipal interests, commonly so characterized.

It is clear enough that in any city where a considerable number of the "representative men"—or, as some say, "the best men"—approximate to a sense of public duty, the solution of its municipal problem is probably in sight, since such men would not manifest

"apathy," but a most effective activity. But while there are cases of "apathy" which may fairly be said to be explained, if not excused, by honest discouragement, it will be evident on further consideration that "apathy" must now be, in an important percentage of cases, understood to cover at least one other constraining cause, not so innocent, and the contemplation of which is somewhat disquieting as to the probable effect of greater activity on the part of the "better element" in local politics. This is the habit of non-interference, growing out of investment in, or other relation to, business enterprises, particularly private corporations, which depend for existence on municipal franchises or patronage, or both. It is brought about, not as a result of a direct bargain, nor is it, perhaps, always or usually presented to the individual in such a way as to call for a definite and formal sacrifice of principle, but it has come to be an unwritten law that the managing officer of such a corporation is not to be embarrassed in his relations with the city by a "pernicious activity" on the part of the stock-holders or those whom they control. Sometimes, indeed, when a close vote is to be feared, and a purchasable official is needed, there has been seen the anomaly of an unblushing rascal supported by "our best men," who had, of course, been convinced by the manager of the water company, or the promoter of some other enterprise in which they were stock-holders, that the candidate was, after all, not a bad fellow, and would vote "our way" when the time came.

This is, of course, quite exceptional, and the most that is usually expected is that the stock-holder and his following shall not be active,—shall not oppose things, or be too much in favor of things, nor inquire too critically into municipal matters,—shall, in short, be "apathetic." When the number of private corporations dependent in various ways on municipal favor is considered, the ramification of this influence is seen to be enormous. When an abuse becomes intolerable, and an enthusiastic, but over-confiding, individual or party sets out upon an attempt to correct it, support is at once developed in the most unexpected quarters—not for the attempt, but for the abuse. Mr. A. will not take any active part, "although sympathizing with the movement," because his partner, Mr. B., is a director in the Something-or-Other Company. Mr. C. is deeply grieved that such a state of things should exist, but can do nothing *himself* because "you know our company does a large business with the School Board." Mr. D. is much pleased that something is to be attempted, but his relations to the City Hall, as the representative of large real estate interests, make it undesirable for him to do much; you have his sympathy, however—and so on, to the end of the alphabet.

Any of these men will discuss municipal reform,—in the abstract,—with interest; some of them with enthusiasm; many of them would resent the imputation that their relation to municipal politics is warped and biased by undue solicitude for their investments in banks, street railroads, electric, gas, or other companies; while others will say frankly, but confidentially, that they can make enough out of the city to more than make up for their share of the excessive taxation, and to pay them for submitting to defects in municipal government, some of which, in fact, they have caused, and by many of which they are known to profit. This is, of course, an unpleasant truth, but it *is* a truth; and, indeed, it may

fairly be said that the greatest barrier to-day in the way of such reforms in municipal politics as are agreed upon and urgently demanded is the absorption of able and successful representative men in private corporations, which stamp out the individual conscience and obscure the individual responsibility, until many of the men who would naturally be expected to take the lead in municipal reform are unavailable because "apathetic."

James G. Cutler.

What to Do with the Tramp.

I MUST first explain just what I mean by a tramp. Some people think that he is simply a man out of work, a man willing to labor if he has the chance; and others, although admitting that he is not so fond of toil as he might be, claim that he is more a victim of circumstances than of his own perversity. Neither of these opinions, seems to me to meet the case. According to my experience,—and I have studied the tramp carefully in over thirty States of the Union,—he is a man, and too often a boy, who prefers vagabondage to any other business, and in moments of enthusiasm actually brags about the wisdom of his choice. There are some exceptions, it is true, but by no means so many as is generally supposed. Not one tramp in fifty of those that I have met could say that he could find no work, and not over ten in a hundred could claim that they had never had a "fair chance in life." During my eight months of travel "on the road," hardly a week passed that I did not have an opportunity to labor, and although the work offered me was not always pleasant or very paying, it would easily have kept anybody from becoming a beggar. And these chances were not at all exceptional. Almost any day in the summer, at least, the tramp can "earn his keep" if he wants to, and even in winter there are numerous "jobs" that he could have if he cared for them. But the fact is he does not care for them. He hates work as most people hate poison, and in the great majority of instances, confesses that he is a voluntary idler. Even when he does not admit this, he explains confidently that "it 's drink that 's troublin' 'im." This is my understanding of the American tramp, and I think that any one who knows him well will agree that it is correct. If so, what is to be done with him?

This is a hard question to answer; in fact I know of none more puzzling; not so much, however, on account of the question itself as because of the public on whom the tramp lives. Until people agree to some definite and comprehensive plan and pledge themselves to be loyal to it, nothing can be accomplished. Exactly what this plan should be is still an open question. Some persons suggest one thing, and others favor quite the contrary. But that something ought to be done is no longer a matter of doubt. In order to suggest the possible character of this "something" I have endeavored to travel back in my experience to a point where I can imagine tramp life to begin. I have tried to picture myself standing at this outset of the whole matter, and viewing the conditions something after this fashion: Given myself, an idle fellow who hates the idea of work, and has determined to escape its drudgery and to live by other means, two courses are open—begging and stealing. If I steal, I commit an acknow-

ledged injury to society and justly deserve punishment. I have not the heart for that. If I beg and receive alms, it is a gift on which I live, and injures nobody; consequently punishment is out of the question. Assuming that this philosophy is correct, I ask: Are there enough charitable and kindly disposed people in the world to support me in an idle life provided I can keep up a good excuse for such a life? If yes, then here goes for the career of a tramp! It is an easy way of seeing the world, and has probably no more hardships than any other business in which men are accustomed to engage. Right here is the turning-point. It seems a simple matter to settle the whole business in theory. Society must agree to say to the prospective vagabond as he canvasses the situation: "No. There are not enough foolishly benevolent members of our body to feed and clothe and shelter you in a life of idleness." I do not offer this as anything that is startlingly original; I can only say had this been the order of things when I began my study of tramps, I should have found it impossible to travel "on the road," and live on the public, even for purposes of strict scientific investigation.

The public, as such, should have nothing to do with cases of charity, be they deserving or not. This is the first principle of any scientific treatment of vagabondage, and until it is put in practice any method will prove unsatisfactory. It is the public that supports the tramp—it is his source of supplies, and as long as it exists for him, he will continue to thrive. I would advise, therefore, that no charity be shown to any one who begs in the streets, or at private houses. Indeed I should be glad to have a law passed which would fine any one who gives alms to beggars. If this were done, the tramp evil would be by no means difficult to settle.

Second: Every town should have some institution to receive and care for penniless wanderers. In this country, with a little remodeling, the station-house, or "Cally," as it is known in tramp parlance, could serve for such purposes. And it should remain exclusively in the hands of the police, as one department of the police system. Some may ask: "But how are the police to know who the real tramp is?" The best method of discovering him is to compel every person who wanders at the expense of the community to give some evidence of his willingness and ability to work. In Germany, this is accomplished by means of *Arbeitsbücher* (workmen's books), which every man on the *Chaussee* is supposed to carry, and unless the man's book shows that he has worked within a reasonable amount of time, or gives some good reason for not having done so, he is put into the hands of the police. It is hardly possible, I suppose, to introduce this "pass system" into the United States, but there are other ways of finding out who the real tramp is, and whether he wants work or not. For instance, the station-house could also be a labor test house, and situation bureau. Each inmate should be given a task of work, and if he proves honest and anxious to secure a situation, the "bureau" can be made the means of supplying him with one. If he refuses to work, or shows any inclination to be disorderly, he ought to be immediately put in "durance vile." This plan would, of course, cost the taxpayer something, but not so much as under the present arrangement, or lack of arrangement, and it

would free every person in the community from the feeling that in refusing a beggar he is perhaps denying an honest man a chance to get on.

Third: Every professional beggar must be severely punished,—but not in the county jails,—until they are reformed. It is a perfect farce to put a tramp into such places. In winter he wants nothing better, for in them he is well taken care of, and is not compelled to work. This is precisely what should not be done. Every tramp should be sent to the workhouse, at least, and, in case he persists in his unwillingness to earn his living, to the penitentiary. I am well aware that a good many people will cry out at this last suggestion, but just so long as they fight shy of these necessary although severe measures, just so long will they be duped and tricked by beggars. There is no use in blinking this fact, for it is indisputable, and the sooner it is appreciated by everybody, the easier will it be to deal with the tramp question. The whole trouble, as I said above, comes from our unwillingness to give our time and painstaking assistance to some genuine and comprehensive plan. Even in Germany, where, so far as theory goes, the treatment of vagrancy is excellent, there is this same trouble; and every German sociologist admits that it is impossible to rid the country of *Chausseegrabentapesirer* so long as people feed them and are unwilling to have them severely punished.

In regard to the boys "on the road," and there are thousands of them, the question becomes serious even to dread and fear. They are the product of the criminal indifference of the good, and the bestiality of the bad. They are the new crop of tramps. If they can be snatched from the grip of the old men "on the road," where shall they be placed? They are too far demoralized to be relegated to decent companionship. What shelter and discipline is open to them? A good home is what they need, but where is one to find it? In view of these difficulties, and also because the majority of these lads are tramping because the older vagabonds persuaded them into this life, I think that the best way to keep them off "the road" is to make them dangerous companions. Let it be known, for instance, that any hobo caught in company with a "kid" will be sent to the penitentiary for two or three years, and I will guarantee that the latter will diminish in numbers very rapidly. This is putting punishment where it belongs, and at the same time tends strongly to prevention of the evil. It does not, however, provide for the boys when they are once out of the clutches of the tramp. There is a crying need for an institution which shall take the place of the reform school, a kind of industrial home and manual training-school, in which the least contaminated may be separated from the viciously trained and criminally inclined boy, and taught useful employment and obedience to authority.

I am no enemy of the reform school, but I believe that many a boy is sent there who belongs in a more gentle institution. Just what this latter should be is hard to settle; personally, I should like it to be a sort of home, in some respects like a university settlement, where the boys may be continually under the influence of cultivated and trained sociologists, and at the same time have the benefit of kindnesses not found in penal institutions. A brotherhood of young men bound together by philanthropic purpose, and charged with a mission of this sort, will, in my opinion, accomplish

more than any other existing agency in the reform of juvenile tramps.

The foregoing is but a suggestion as to the treatment of vagabondage. In the space at my command I have only been able to sketch a broken outline around what I consider the main points, which are as follows :

(1) All charity shown to beggars should be put into the hands of municipally employed specialists.

(2) Each town should have a police rendezvous for vagabonds, conducted on such principles that the seeker of work should be entirely distinguished from the professional tramp.

(3) The latter must fall under a system of graded punishment and enforced labor in institutions where he will be continually in contact with law and order.

(4) The juvenile tramp must be speedily eliminated from the problem by penalties imposed on his seducers.

These principles, as I have explained them, presuppose in municipal government a power over tramps which I am well aware does not always exist in this country; but if municipal government in the United States has come to the point where it is powerless to meet a growing evil in its own domain, or to where people are afraid to trust any more business in its hands, it is high time that a better government be begun. For until the treatment of vagabondage can be placed entirely in the hands of municipal authorities, it will not prove efficient.

Josiah Flynt.

The College Gymnasium.

In the minds of some people, even of some educators, there is danger of misunderstanding the college gymnasium. Before describing it, therefore, it may be well to clear away some false impressions about it. In other words, before telling what it is, it is necessary to declare what it is *not*.

It is not primarily a place of exploits; it is not a place designed for teaching young men dangerous feats of strength or skill. If such things are taught in it, they are incidents, and not the chief ends, of the teaching. Though its purposes are served by means of the training of the muscles, the making of men into "lumps of muscle" is not the aim of the training.

Its chief aim is educational. The term "body-building," largely employed by the best instructors, well describes its main purpose. By a great number of prominent educators, education is made synonymous with study of books. In this view of study, what constitutes education is the evolving of brain-power through conscious cerebration, using the eyes and ears as the avenues of materials for thought contained in books. But this is a narrow view. It would not be hard to show, too, that if it were possible to carry it out to its logical issue, it would defeat its own purpose by weakening the brain instead of strengthening it; for the brain is one organ of the body, and depends for its healthful activity upon the healthy condition of all members of the body. So that when we are building up the body in the best possible way, we are really helping to form a good brain. Indeed, the first development of the brain, like the development of all the nerve-centers of which it is the chief, is by movement, and principally by conscious movement. The first years of life are taken up with movement, not always conscious, but, as the years increase, the conscious movements become

more numerous. With these movements the brain develops, and if they are interfered with by an unwise system of conscious cerebration, only mischief results. Not only is the body injured, but the brain is enfeebled. A true system of education will aim not to repress movement in a growing child, boy or girl, but wisely to encourage and direct it. At first, physical education, pure and simple, is play. Action, varied yet continued, is the natural method of self-development in children. As they come toward maturity, less movement is necessary to their health, but some is still absolutely essential if they are to enter life fully equipped for the exacting demands of the modern world. So it comes about that, to the college, the gymnasium and the playground are still vitally important adjuncts. But how to use these adjuncts to the best advantage is the important question. Undoubtedly, exercise in the fresh air is superior to exercise in-doors. Athletic sports, for that reason, are to be preferred to the drill of the gymnasium. But in these sports, especially in competitive sports, the desire to excel often blinds the judgment with reference to their real value as a means of recreation and health. Some men enter them to their hurt. A thorough physical examination by an expert physician, followed by a preliminary training in a gymnasium under a competent instructor, would furnish a safeguard. For athletes, the gymnasium might stand as a gateway to the practice of athletics.

But there are, at the least estimate, three quarters of the students of every college who are either too lazy to exercise in the field, or too indifferent to the value of exercise to take the trouble to seek it anywhere. It must either be made a part of the prescribed curriculum, or it must be made so convenient and attractive that a majority of students will take it of their own choice and free will. The compulsory plan is the one adopted at Amherst. The optional plan is the one at present followed at the larger universities. To explain this latter system, I will take as a type of the modern gymnasium the one at Yale, the latest in methods and equipment, being moreover the one with which I am most familiar.

The gymnasium is large, well lighted, and well ventilated. The main exercise-hall has a floor-space of over ten thousand square feet. The height of this hall from the floor to the peak of the roof is fifty-six feet. The light comes from the roof, which is mainly of glass. So far as daylight is concerned, the student exercises in as much light as if he were out of doors. The hall is equipped with all the apparatus for exercise of the best and latest make. There are special accommodations for the athletes, such as rowing-tanks, etc. Bowling-alleys are in the basement. There are not only the ordinary facilities for bathing, but also a swimming-pool, and a system of Turkish baths.

The direction of the students in the matter of gymnastic exercise is in the charge of two regularly educated physicians, Drs. Jay W. Seaver and William G. Anderson. The first is an authority in anthropometry. He makes a thorough physical examination of every student who desires it. The result of this examination is indicated on a card, and is made the basis of the exercises prescribed by Dr. Anderson. Dr. Anderson and his brother, Mr. H. S. Anderson, have charge of the main floor.

The first anthropometrical lists were made by Dr. Edward Hitchcock, of Amherst. Successive investiga-

tors in the same line have added to them. Many charts of averages have been constructed from these various lists. At Yale an elaborate chart is furnished to every student at a slight extra charge. On this chart his measurements are graphically shown, in agreement or disagreement with the averages of the lists referred to. The results of measurements each successive year of his course can be represented on the same chart. He is thus able to see whether his exercise is followed by growth of body, symmetrical development, and improvement in strength.

Instruments are used for testing not only the strength of the muscles, but also of the lungs; for indicating the amount of abnormal development of one side of the body, or of members of any part of the body. In cases of spinal curvature the amount of such curvature is indicated, and the causes of it are investigated. Appropriate exercises are prescribed for all curable cases. Students requiring special exercises are given individual instruction by Dr. Anderson, by his brother, or by one of their assistants. Those whose cases are in no wise peculiar in abnormal or deficient development are put in classes meeting three times a week. For these classes the exercises are varied and progressive, and are designed to develop all parts of the body symmetrically. Most of these exercises are performed to the time of music, so that they may be done in unison. The instructor leads them in person.

The records of the measurements of students, and of the tests of various organs, and of special senses, give some interesting results. For the academic years of 1892-93 it was found that the number of those suffering from serious errors of refraction in sight without being aware of it was large, and several cases of recurrent headache and of similar troubles were relieved by the prescription of glasses by a specialist. The number of men examined in the Freshman classes of the academic and scientific departments was about 275, or slightly above 54 per cent. of these classes. Of these men 53 were found to be more or less near-sighted, and of these 34 were complicated cases of near-sightedness and astigmatism. There were 33 cases of far-sightedness, of which 10 were complicated with astigmatism. There were 34 cases of simple astigmatism. Of these cases 17 had already been examined, and the men wore glasses before coming to college. All required glasses, but having been notified of an error of refraction in sight, even those who did not immediately require the use of glasses were able to guard against undue eye-strain in the future. This seems to be a very simple statement of facts. But think of the amount of suffering saved to these students by the knowledge conveyed to them! The economy of suffering was not bodily suffering alone, but mental suffering as well. For eyesight is the main avenue of knowledge to a man. If that is defective, the facts acquired partake of the nature of the medium.

With regard to spinal deformities there were seventeen men with lateral curvature of the spine. In all these cases the curvatures could be traced to the mechanical condition caused by one leg being shorter than the other. The remedy was simple; namely, raising the heel and sole of the shoe on the foot of the shorter leg. Exercises were also prescribed to strengthen the muscles on the side required to draw the spine back into normal position. Simple and natural as were the

remedies, they were sufficient to avert serious spinal troubles.

With regard to lesions of the heart, nine cases of organic troubles were discovered. Closely allied with heart lesions are the errors of circulation found in varicose veins. Four cases of fully developed varicose veins were found, while in many incipient cases men have been cautioned against certain forms of exercise.

Three cases of rupture were found, which were unknown previous to the examination. In two of these cases there was complete recovery. The third had so far developed as to make recovery extremely doubtful.

The sense of hearing was also examined. Two men were relieved of foreign bodies in the ear that were causing permanent impairment of hearing. Six cases of deafness were relieved.

To sum up, in about one half of the two classes there were 120 cases of eye trouble. These were either entirely remedied, or were put in the way of being remedied. Eight cases of deafness were cured. Two cases of rupture were relieved, and started on the way to recovery. There were 17 cases of curvature of the spine either cured or greatly relieved. In 6 cases of heart difficulty, and a number of cases of varicose veins, valuable advice was given looking to the improvement of the patients.

In 1893-94, the number of cases examined in the two Freshman classes was 282, or about 52 per cent. of the members of those classes. Among these men there were 140 cases of eye trouble, and of these 25 only had been examined before, and fitted with glasses. Fourteen men had lateral curvature of the spine. Five cases of heart trouble, and 5 cases of rupture, have prospects of complete recovery. About the same percentage of ear troubles was found as in the previous year.

The only regret which comes to one considering these facts is that the whole of the two classes could not have been examined. The writer believes that it would be wise so far to combine the compulsory and optional systems as to oblige every student entering college to submit to a physical examination some time early in his college course. Numerous mistakes in exercise, and much suffering due to abnormal physical conditions, would thus be avoided.

From what has been said, it will be seen that the office of the gymnasium is twofold, educational and sanative. Its educational work is extended beyond the mere exercise-hall into the class-room. For since the erection of the new building, a course of study in physical culture has been opened to the students, which is useful to those who think of making a life-work of teaching. The work comes under two branches—physiology, and the practice and theory of gymnastics.

It is too soon to pronounce on the complete results of this new departure in education; but one thing is certain, that since the opening of the new building the college has never been more orderly nor the students had better health. It is the opinion of the writer that as the work is still more widely followed its benefits will be still more marked.

Eugene Lamb Richards.

"The Century's" American Artist Series.

CECILIA BEAUX. (See frontispiece.)

CECILIA BEAUX was born in Philadelphia, where she received her first lessons in drawing from Catharine A.

Drinker (now Mrs. T. A. Janvier), and Adolf van der Weilen, and where also she studied with William Sartain. In the years 1885, 1887, 1891, and 1892 she was awarded the Mary Smith prize of the Pennsylvania Academy of the Fine Arts. She went to Paris in the year 1888, and studied during two winters under Tony Robert Fleury, Bouguereau, and Constant at the Académie Julien; she received instructions also from Charles Lasar, Courtois, and others. In the year 1893 she was awarded the Dodge prize of the New York National Academy of Design, and the gold medal of the Philadelphia Art Club.

She was elected member of the Society of American Artists in the year 1893, and associate of the National Academy of Design in 1894.

Her work at the two New York exhibitions in 1894 was extremely interesting. A young girl called "Reverry" was especially noticeable for its grace and delicacy, the folded hands being very daintily brushed (see frontispiece). The child portrait at the exhibition of the Society of American Artists was also very much admired. Few artists have the fresh touch which the child needs, and the firm and rapid execution which allows the painter to catch the fleeting expression and the half-forms which make child portraits at once the longing and the despair of portrait-painters. This pretty child, held in tow by a big nurse, of whom one is only allowed to see the firm hand and arm and the big white apron, is as living as one could wish, and

looks ready to move off the moment its curiosity has been satisfied.

A more conventional, but not less successful, portrait the year before was that of a lady of fifty, whose gentle face, aging, yet not old, was most happily and sympathetically rendered.

Miss Beaux's technique is altogether French, sometimes reminding one a little of Carolus Duran, and of Sargent—but her individuality has triumphed over all suggestions of her foreign masters, and the combination of refinement and strength is altogether her own.
H.

"The Helping Hand" of Chicago.

IN an article on "The City Tramp," in *THE CENTURY* for March, the writer, speaking of "The Helping Hand" of Chicago, says: "This place is not a charitable institution, although its name signifies that. It is run on business principles, in quite the same way that other lodging-houses are." Mr. W. H. Rice, secretary, writes to us that "the truth is that 'The Helping Hand' (now no longer in existence) was a charitable institution, and although it was run on business principles, it was not run as other lodging-houses are, for it furnished relief only to such needy men as were able and willing to work. During the course of its existence it found employment for hundreds of men, and it went out of existence in the spring of 1893, simply because there were no applicants for its aid."

IN LIGHTER VEIN.

Aphorisms.

THE maternal instinct is so strong in the mass of women that their most romantic and passionate attachments to the other sex are molded and mellowed by it.

LOVE is an insanity of the heart, and inspires a divine faith in the impossible.

A WOMAN may be disappointed again and again in her lover; but she always retains her faith in love.

THE woman (says *Marcia* in Addison's "Cato") who deliberates is lost. But the woman who deliberates not is lost also.

MANY a woman is so uniformly good and self-sacrificing that those to whom she is good, and for whom she makes sacrifices, come to regard all her generosity as a mere duty.

IT is very hard to obey the Scriptural injunction, and love our enemies, when many of us fail to like wholly even our best friends.

ORDINARY love may be selfish. But the highest and purest love always enjoys far more from what it gives than from what it receives.

THERE could hardly be a Heaven without women—and certainly no Hell.

THE best way for a man or woman to be somebody is to do something earnestly and persistently.

A MAN can generally laugh over a love-affair, however grave, when it is really past. Not so a woman. To her the subject remains sacred; it is dedicated to solemn silence. She regards it as a tender poem unfinished, as a pure romance profaned. Is this because she has less humor or more heart?

A MAN often seems to think that, when he has won a woman's love, he is absolved from all obligation to attempt to keep it by any of the means by which he originally gained it.

MANY a woman thinks, though she may not express her thought, that one of the greatest charms of love is that, with her lover, she can lay aside shams and conventionalities, and dare to be herself.

Junius Henri Brown.

Washington's Account of his Table Supplies.

THIS interesting example of General Washington's love for detail, is contained in a book of eight folio pages measuring 17 inches in length by 7½ inches in breadth, on paper containing his water-mark and all his own handwriting. It contains entries of the amount of food and liquors used each day, and also the cost of each item, and by it we know to a certainty just what Washington ate and drank during April and May, 1794, the period covered by this book. Each page consists of sixty-four lines all evidently ruled by Washington him-

FACSIMILE OF A PART OF WASHINGTON'S DOMESTIC ACCOUNTS.

self, and on each line is written the name of one of the many articles of food, or kinds of wine, which would most likely be partaken of in those days. There are sixty-one items in all, and as Washington often bought some things not specified on the list, he has been compelled to note them where the cost should be; for example, under the 22d and 23d of April, he purchased "sausages and ham" and put them on the line dedicated to bacon; "pidgeons" and "chickens" went under the title of birds. Porter appeared to have been the steady drink

of the family, for we see that from three to six bottles were consumed daily, and that every other day a half barrel of beer costing 7s. 6d. was added; but the latter, probably, went to the servants' table. "Cyder" was down for twice a week only. It appears from this list that Thursday must have been the day for dining the Senators, the Representatives, or the Diplomatic Corps, for it must be remembered that Congress was in session in the city of Philadelphia, and Washington had social duties to perform, as on that day (and only

in one instance on Friday) the wine list becomes important. I quote :

Thursday, April 17th :

9 bottles of Madeira
2 " " Claret
6 " " Champaign
6 " " Porter
6 " " Cyder

Thursday, April 24th :

9 bottles of Madeira
2 " " Claret
6 " " Champaign
2 " " Burgundy
1 " " Sauterne
6 " " Porter

And so on all the way through. The number of bottles of Madeira and claret consumed never varied. About the same number of people were invited each time, and they could be counted on to drink just so much.

It seems astounding that Washington could have wasted so much of his valuable time over such a trifling matter. One would think he had nothing to do about this time, and that he had elaborated this system of accounts of his daily table expenses as a means of amusing his idle hours. Such was not the case. In a letter to Tobias Lear, who was then in London, dated Philadelphia, May 4, 1794, he speaks of the discontent prevailing at the action of England, of the various measures pending in Congress for fortifications, for raising an army, and for training the militia; of the appointment of John Jay as minister; of the dissensions in the Cabinet; of the resignation of Jefferson, etc., etc. And yet, with all these varied complications, which would have dazed any other man, he sits in his room and figures out that for the week ending May 4, 1794, the day the above letter was written, which was on Sunday, his bread bill amounted to £3 16s. 10d.

William F. Havemeyer.

The Humming-Bird's Nest.

WHAT a frail house to trust with family cares,
Hair, string, and moss in cunning complex twisted
Upon a branch exposed to windy airs,
As though for nestlings danger ne'er existed!

But there the humming-bird, with brave courage,
Lays, and broods on her tinted eggs so slight
Within the woven cup, and for her forage
Trusts thoughtless nature to give food aright.

The winds may blow till like a leaf the nest
Dances and whips upon the frolic breeze,
Yet will the fledglings thrive and take their rest
Rocked to small sleep amid the airy seas.

The sharp-nosed fox about the wood may prowl,
The sharp-eyed hawk peer down in search of prey,
And 'neath the stars may hunt the sharp-billed owl,
But still the jeweled wee ones hide away.

A wonder 't is, such tiny creatures dare
Perils so fearsome in the unsheltered wild!
But wonder greater that small son and heir
Survives such perils safe as eagle's child!

Starr Hoyt Nichols.

Two Songs.

UP AND AWAY IN THE MORNING.

TIDE 's at full; the wave breaks white
(Oh, up and away in the morning);
Blue is the blown grass, red is the height;
Washed with the sun the sail shines white
(Oh, up and away in the morning).

Wide is the world in the laughing sun
(Oh, up and away in the morning).
Work 's to be done and wealth 's to be won
Ere a man turns home with the homing sun
(Oh, up and away in the morning).

Long is the heart's hope, long as the day
(Oh, up and away in the morning).
Heart hath its will and hand hath its way
Till the world rolls over and ends the day
(Oh, up and away in the morning).

It 's home that we toil for all day long
(Oh, up and away in the morning).
Hand on the line and heart in the song,
The labor of love will not seem long
(Oh, up and away in the morning).

HOME, HOME IN THE EVENING.

WHEN the crows fly in from sea
(Oh, home, home in the evening),
My love in his boat comes back to me,
Over the tumbling leagues of sea
(Oh, home, home in the evening).

And when the sun drops over the hill
(Oh, home, home in the evening),
My happy eyes they take their fill
Of watching my love as he climbs the hill
(Oh, home, home in the evening).

And when the dew falls over the land
(Oh, home, home in the evening),
I hold in my hand his dearest hand,
The happiest woman in all the land
(Oh, home, home in the evening).

All day she sang by the cottage door
(Oh, home, home in the evening);
At sundown came his boat to the shore —
But he to the hearthside comes no more,
Home, home in the evening.

Charles G. D. Roberts.

Quatrains.

A BOY'S WAY.

A WEEK'S attendance at a clinic,
Turns him into a rabid Cynic.
Next day a pretty girl gets kissed,
And lo — behold an Optimist!

AT THE AUTHORS' CONGRESS.

"WHAT have you writ, my pretty maid?"
A famous poet kindly prayed.
Full haughtily she tossed her head —
"Two quatrains and a skit," she said.

THE REAL EDWIN BOOTH.

LETTERS OF EDWIN BOOTH,
WITH INTRODUCTION BY HIS DAUGHTER.¹

My father's earlier letters to me, covering a period of some seven years, were written chiefly during my absence at a convent school. Written, as they were, during his long professional tours throughout the country, these letters helped to lift me out of my narrow sphere, and took me into a new and broader field, where my father was for me always the chief actor, whether they breathed of his professional life, of his domestic or social experiences, or of loving advice, paternal care, and solicitude. No matter how weary, how irritated by conditions then unknown to me, he was sure to send me weekly missives. Though frequently expressed in a humorous vein, in order to entertain and divert me, I can now read between the lines, and appreciate the noble effort he made to throw off the burdens which during those years must have bowed him down. Under the weight of financial difficulties, the result of misplaced confidence and childlike trust in others, he rallied when his paternal duty and love reminded him of me.

I have abstained from publishing more than a small fraction of his entire correspondence, and offer only such as will prove of special interest and value in the public eye. It appears to me, on re-reading many of these let-

ters after a lapse of years, that they present a side of my father's temperament and disposition hitherto concealed from his friends, as well as from the general public. They reveal a depth of soul, a firmness of purpose, a high resolve to battle against life's struggles, which make it incumbent upon me to publish them. They constitute, indeed, a better and more complete autobiography than that which I have in the past so often urged upon him to write. I fear his innate modesty and reluctance to speak of his own triumphs and misfortunes would have severely handicapped him in such an undertaking. But his letters to me, and to his many friends, speak of him as he was, without reserve or fear of harsh criticism.

To these same valued friends I am greatly indebted for a large part of this correspondence, which is published not only for the benefit of the many who have known and revered him as the artist and interpreter of Shaksperian drama, but as a tribute of filial respect and love.

MY MOTHER.

As a necessary accompaniment to these few reminiscences of my father, I will quote some extracts from letters written by my mother (Mary Devlin) prior to their marriage. They prove an essential chapter in the life of a man then stepping into fame and greatness, and make more clearly manifest the spiritual union of two sympathetic souls so soon to be parted by death.

My father has confided to me the gentle yet

¹ The following forms part of the preface written by the daughter of Edwin Booth to precede a collection of his letters from which those appended are selected.
—EDITOR.

powerful influence exerted over his artistic career by my young mother, herself an actress of no mean capacity. Her whole being became so centered in her lover and husband, her "Hamlet," as she so often called him, that my father felt the reflex of her refined intellectuality, both in his art, and in his attitude toward her in whom he found his purest and highest ideals sweetly embodied. Though it is my misfortune never to have known my mother, her letters, and the recollections of her many friends, place her before me in the sanctified light of noble womanhood—a faithful wife, a blessed mother.

In the year 1860 she writes:

We must ever dwell "above the thunder," treading beneath our feet the black clouds of dissension. You are too great ever to descend to discord; I have too high an appreciation of the divine spark God has gifted you with, and which you intrust to my care, ever to cause you to seek another sphere than your natural one.

The above extract is from a letter written during my mother's betrothal to my father, and while she herself was yet upon the stage. I find in another letter, dated the same year, the following:

Last night I sat by the window thinking of you, and disturbed only by the mournful sighing of the wind. I wondered in "this stillness of the world without, and of the soul within," what our lives in the future would be; and I looked to see if upon the clouds I could trace any semblance of it. This led me into an odd train of thought, in which I recalled a susceptibility of yours you once told me of. You remember, 't was that a passing wind sometimes suggested to you the past, and, carrying you years back, set you dreaming. It is not wonderful that *you* should have such emotions—sensitive natures are prone to them; then why, I ask myself, should my eyes have filled with tears, and trembled lest *you* should experience them again? Ah, dear Edwin, 't was a fear that they would lead you from my side and leave me once more alone. I am very wrong, doubtless, to have allowed so simple a fact to impress me, and am still more to blame to repeat it here; for have you not "died into life," as Keats says—and I should wean you from all remembrance of the tomb; and so I promise to do.

These letters were written by my mother when scarcely twenty years of age. Her death

RICHLY JEWELLED SWORD
WORN IN "RICHARD III."

occurred three years afterward. She constantly refers, as in the following passage, to the sacred mission she is about to fulfil as fiancée and wife:

This morning, in my walk, I was thinking of the being God had given me to influence and cherish. For *you* have ever seemed to me like what Shelley says of himself—"a phantom among men"—"companionless as the last fading storm," and yet my spirit ever seems lighter and more joyous when with you. This I can account for only by believing that a mission has been given me to fulfil, and that I shall be rewarded by seeing you rise to be great and happy.

Ah! the angels surely will rejoice in heaven when that is achieved. Edwin, I have never told you yet, have I, of all the odd thoughts I have had, and do have, about you? Well, on some of the days to come, when I am influenced by your loved presence, and after the singing of some pretty song, perhaps I will tell you.

My mother's love of music, and her naturally beautiful voice, ever proved a delight to my father, and he continued in later years to love the old melodies she used to sing to him in the early days of their courtship and marriage.

The purely unselfish love which my mother bore for my father is manifested in her earliest letters to him. His art was ever the absorbing theme, and although so young herself, she was capable of giving him wise counsel in all things. She says again:

If my love is selfish, you will never be great: part of you belongs to the world. I *must* remember this, and assist in its "blossoming," if I would taste of the ripe fruit. That will prove a rich reward.

LETTER TO CAPTAIN RICHARD
F. CARY.¹

430 FRANKLIN ST., June 30, 1860.

FRIEND RICHARD: I pray your highness to pardon my long delay in replying to your last kind letter; but the fact is, my head is turned. I am like the chap of old who wrote to his father, ending with this line: "I am, my dearest charmer, ever thine." In short, my head is full of "Marry Mary—marry"—marriage. Those are the three important degrees at present. The second, which implies fear, hope, regret, bliss, love, etc., being a sufficient excuse for anything except suicide; so bear with me, Richard, and don't "impute my

¹ Brother-in-law of Louis Agassiz.

silence to light love" of your delightful company, but rather to the tumultuous heavings of that sea through which you have already passed to a joyful haven. Phew! It takes me so long to reach a period that I almost lose the thread of my "yarn" on the journey. This day week—July 7, "young Edwin" is no more! A sober, steady, *paterfamilias* will then—excuse me a moment, there's a hand-organ playing "Love not" under my win-

found my mother, sister, and Joe. He gives a glowing account of the fight. Says no one was killed. Ten times the number of rebels could not have taken the fort by any means, had Anderson been provisioned. We all start at 7 A. M. for Bethel, Maine, where I hope to have a quiet time for a few weeks, at the end of which I sincerely hope to be summoned to England. I've already received a request to visit the Haymarket, and

EDWIN BOOTH AND HIS FATHER, 1850.

dow, and I must defer this till a more appropriate air strikes up. Half an hour has elapsed, and "A te O Cara" swells on the air—a more inspiring melody than the former, but still not sufficiently so to stimulate me to the performance of a task (to me almost impossible), that of writing a sensible letter. . . . Yours distractedly, BOOTH.

TO CAPTAIN RICHARD F. CARY.

SUNDAY, 30, 1861.

MY DEAR DICK: I cannot tell you how sad I feel at your going away without bidding you good-by. After several ineffectual attempts to find the camp I yesterday succeeded. Covered with dust, headached, and broiled, my wife and I reached the ground just in time to see the parade dismissed, when I learned that you were absent.

I had to visit New York last week, where I

about the middle of July I shall know definitely. But enough of myself. I manage, somehow, to appear very egotistical in my letters; I write of nothing else, it seems.

My dear Dick, you will not, I hope, omit any opportunity to "post" me as to your whereabouts, etc. I shall read with anxiety and interest every bulletin from the seat of war, and pray ever for your safety and distinction—of that I am sure if you only get a chance. My wife sends her blessings and heartfelt good-by, and her sincere regret at not seeing you. There is no need of protestation, I trust, on my part, to assure you of the regret, the anxiety, the hope, the fear, I feel for you, but I will say, God in heaven bless and protect you! That you may return unscathed and glorious shall be the constant, fervent prayer of

NED.

TO ADAM BADEAU.

NEW YORK, 107 East 17th st.
May 18, 1863.

DEAR AD: I got your letter before I left Boston some weeks ago. You see I am now located in New York. I have taken Putnam's house (the publisher) furnished for six months, during which time I shall busy myself looking for a permanent home

— God is. And as surely as you and I are flesh and bones and blood, so are we also spirits eternal. I believe it beyond a doubt, and I believe, too, that she who sat beside me only a few weeks ago is living, and is near me now. This should make me happy, should it not? But it does not. . . . Ad, I never knew how much I loved her. I do not perhaps fully realize it yet; if I did the loss of my Aidenn might kill me. God is wise and just and

PHOTOGRAPHED BY CASE AND GETCHELL.
MRS. MARY DEVLIN BOOTH.

while on earth; something I can leave my child in case of my departing, which God grant may not occur until I have become worthy of being united with her. . . . While Mary was here I was shut up in her devotion. I never dreamed that she could be taken from me — as I ever have lived, so live I now within; you would not think I suffer were you here with me; nor would I have you think that I do suffer constantly; it is only at times, as now. When I wrote you last it seems I was hopeful and patient; now I am torn with all sorts of hateful fancies; yet but an hour ago I might have written you a far different letter. Believe in one great truth, Ad

good in this, as in all things. I tell you, Ad, it is not well to forget God in our prosperity; we do not when we are sinking. . . .

TO MISS EMMA F. CARY.

November 11.

MY DEAR FRIEND: . . . I have been quite ill, as I told you in my last, nor am I yet in a condition for work; but I must soon get at it for a long winter campaign. On Friday, the 25th, without fail, the long-talked-of benefit "to Shakspeare" will take place at the Winter Garden with the

CROWN WORN IN "MACBETH."

"Brothers Booth"—à la Hanlon—at the main-springs, and on the night following, *Hamlet* in a new dress (I wish Mr. W—— were here to see it) will fret his brief hour every night until further notice.

. . . I voted (for Lincoln) t' other day—the first vote I ever cast, and, I suppose, I am now an American citizen all over, as I have been in heart. . . .

Saint Valentine's Day.

MISS CARY,

MY DEAR FRIEND: A little lull in the whirl of excitement in which my brain has nearly lost its balance affords me an opportunity to write to you. It would be difficult to explain the many little annoyances I have been subjected to in the production of "*Richelieu*," but when I tell you that it far surpasses "*Hamlet*," and exceeds all my expectations, you may suppose that I have not been very idle all this while. I wish you could see it.

Professor Peirce¹ has been here, and he will tell you of it. It really seems that the dreams of my past life—so far as my profession is concerned—are being realized. What Mary and I used to plan for my future, what Richard and I used laughingly to promise ourselves in "our model theater," seems to be realized—in these two plays, at least. As history says of the great cardinal, I am "too fortunate a man not be superstitious," and as I find my hopes being fulfilled, I cannot help but believe that there is a sufficient importance in my art to interest them still; that to a higher influence than the world believes I am moved by I owe the success I have achieved. Assured that all I do in this advance carries, even beyond the range of my little world (the theater), an elevating and refining influence, while in it the effect is good, I begin to feel really happy in my once uneasy sphere of action. I dare say I shall soon be contented with my lot. I will tell you this much: I have been offered the means to a speedy and an ample fortune, from all parts of the country, but prefer the limit I have set, wherein I have the power to carry out my wishes, though "on half pay," as it were. . . .

Ever your friend,
EDWIN BOOTH.

RING WORN IN "HAMLET" DURING A PERIOD OF THIRTY YEARS.

TO MRS. RICHARD F. CARY.

June 3, '64.

MY DEAR, DEAR FRIENDS: You know my heart, I cannot speak to you of comfort.

One after another the blows have fallen so heavily that souls unaided by God's unfaltering love, and faith stronger than death, would have sunk in despair beneath their crushing weight.

But in your hearts as in hers,—dear, dear mother, for so she always seemed to me, Mary's mother,—as in my own, there is a light which sorrow cannot quench; which guides us through the darkness of the grave; which reveals to us the secret of His mysterious works—the secret love! Oh, that I could give you the full companionship of that love as I have felt it since Mary's death, the peace that has filled my soul, and the strength that has flowed steadily into it since that terrible day! Could I give you this you would rejoice for her as I do, although my heart aches for you while I write. Oh, be assured, dear, dear ones, that they are together; that their knowledge now is so great that even our grief for their departure causes them no pain, so well they know how good it is for us to suffer.

That I was in the hearts of my noble Richard and his dear sister, while they were on the very threshold of Home, is a joy to me past all that earth can give me. I know I shall be welcomed there by them; they never forget us, never cease to love and care for us. When we meet, I know that I shall wonder how I could ever miss them, so brief will the separation then seem. If I feel this, dear friends, I who am so much lower in the grade of worthiness, how joyous must your hearts be when you reflect how near we all are to our unseen but real home—when you know that all that comes from Him is for our good.

Oh, I feel such an intense love for God when sorrow touches me that I could almost wish my heart would always ache—I feel so near to Him, I realize His love so thoroughly, so intensely, at such times.

I did not mean to write so much, but this (my love I speak of) has carried me away. Several times I have stopped to brush the tears away that came for you, and to give vent to that long sigh which is a yearning of the spirit to follow its loved ones home; but I could not cease to write until I had given utterance to all that choked my heart.

Let this be for the dear good mother and sisters of our dear ones as for you.

Good-by. God bless and comfort you!

Your friend,

EDWIN BOOTH.

DAGGER USED IN "MACBETH."

¹ The late Professor Peirce, professor of mathematics in Harvard University, father of Professor James Mills Peirce.

TO MISS EMMA F. CARY, CAMBRIDGE, MASS.

Saturday, May 6, 1865.

MY DEAR FRIEND: I've just received your letter. I have been in one sense unable to write, but you know, of course, what my condition is, and need no excuses.

I have been, by the advice of my friends, "cooped up" since I arrived here, going out only occasionally in the evening. My health is good, but I suffer from the want of fresh air and exercise.

ferred, and died in doing. My baby, too, is there. Now that the greatest excitement is over, and a lull is in the storm, I feel the need of that dear angel; but during the heat of it I was glad she was not here.

When Junius and Mr. Clarke are at liberty, mother will come here and bring Edwina to me. I wish I could see with others' eyes; all my friends assure me that my name shall be free, and that in a little while I may be where I was and what I was; but, alas! it looks dark to me.

God bless you all for your great assistance in

EDWIN BOOTH'S DRESSING-TABLE, 1889.

Poor mother is in Philadelphia, about crushed by her sorrows, and my sister, Mrs. Clarke, is ill, and without the least knowledge of her husband, who was taken from her several days ago, with Junius.

My position is such a delicate one that I am obliged to use the utmost caution. Hosts of friends are stanch and true to me. Here and in Boston I feel safe. What I am in Phila. and elsewhere I know not. All I do [know] of the above-named city is that there is one great heart firm and faster-bound to me than ever. Sent in answer to dear Mary's prayers—I faithfully believe it. She will do what Mary struggled, suf-

fered, and died in doing. My baby, too, is there. Now that the greatest excitement is over, and a lull is in the storm, I feel the need of that dear angel; but during the heat of it I was glad she was not here.

Give my love to all, and kisses to Georgie. . . . I do not think the feeling is so strong in my favor in Phila. as it is here and in Boston. I am not known there. . . .

Ever yours, EDWIN BOOTH.

TO MISS EMMA F. CARY, CAMBRIDGE, MASS.

NEW YORK, Nov. 24, 1865.

MY DEAR FRIEND: Pray forgive my neglect. I've been a little bothered of late, and could not bring my mind to a calm.

EDWIN BOOTH AS "MACBETH."

My affairs are quite unsettled. I don't know yet when I shall act, or what I shall do next. . . .

It seems a long time since I visited Auburn¹ last. I have lost the level run of time and events, and am living in a mist. But I am told my health is better than it ever was. I do not realize it, but am bored by people saying I am getting fat. I am a little Byronic in my dislike of such compliments, because I don't feel as I look.

Mother is very much broken, I think, poor soul! . . . She seems to have still a lingering hope in her heart that all this will prove to be a dream.

Y'r faithful friend, EDWIN BOOTH.

TO MRS. R. F. CARY, BOSTON.

NEW YORK, Dec. 20, 1865.

MY DEAR FRIEND: . . . Let it pass; life is a great big spelling-book, and on every page we turn the words grow harder to understand the meaning of. But there is a meaning, and when the last leaf flops over, we 'll know the whole lesson by heart.

¹ Mount Auburn Cemetery, where my mother was buried.

You have also, doubtless, heard that I will soon appear on the stage. Sincerely, were it not for *means*, I would not do so, public sympathy notwithstanding; but I have huge debts to pay, a family to care for, a love for the grand and beautiful in art, to boot, to gratify, and hence my sudden resolve to abandon the heavy, aching gloom of my little red room, where I have sat so long chewing my heart in solitude, for the excitement of the only trade for which God has fitted me. . . .

I shall begin January 3 (Wednesday), with *Hamlet*. . . . Ever truly y'r friend,

EDWIN BOOTH.

TO MISS EMMA F. CARY.

TOLEDO (in the West), Sept. 27, 1868.

MY DEAR FRIEND: . . . I've heard of Dettmar. What you say of his scene with the *Ghost* I have often done; but the play (and especially that first act) is so long that I have often omitted it. Many do not like it; others (and I among them) consider it absolutely necessary to that magnificent scene. Omitting the burial and the rest of that scene is after the Garrick style of cur-

tailment. He slashed unmercifully; altered and changed scenes by wholesale to suit his ideas of stage effect. Now *I* (egotist!) intend to go even beyond Chas. Kean in my devotion to the sacred text of the late W. S. I intend restoring to the stage (to mine, at least) the unadulterated plays of Shakspeare; his "Romeo and Juliet," not so performed since the days of Betterton, I fancy, unless Barry, in opposition to Garrick, revived it; "Richard III.," which Chas. Kean feared to attempt, and offered a weak apology for retaining the Cibber version. My respect for Kean runs high up to that point; there I turn back, and pity his feeble correction of Shakspeare's geographical blunders in "Winter's Tale." He should have ascertained the name of the town in which the wise man lived who jumped into a brier-bush.

My affairs are greatly mixed. The theater will be completely roofed next week, and, I hope, opened in December early (about the 14th) with as good a company as it is possible to obtain in this country. The enterprise swelled gigantically on my hands, and has attained such proportions as would frighten any one whose bump of "don't-care-a-tive-ness" was less than mine. I'm in a very big puddle; if I can wade it, well; if not, why, as Bunsby would say, "well, too." I trust to fate, chance, or whoever that "sweet little cherub" be that looks out for me. Certain it is, I have had enough vexation regarding this same theater to drive me mad, and yet I am as calm and as careless as though the ultimate success was a fixed fact. It will entail a world of work and anxiety, but would n't life be long and dreary without these little worries and bothers?

I traveled West and South last season from Sept. 5 until June 9, made lots of money, and paid it out as fast as I could count it; have just begun my second tour, which will last until my theater opens. When I began the work, I expected to be acting in the theater by this time, but the usual obstacles—weather, rock strikes, etc., delayed it, and we are only just covering the "roof-tree."

I shall be in Boston week after next. When do you expect to be there? Apropos of Dettmar and the *King's* "picture in little," I think the allusion to the courtier's wearing it is correct. Barry Sullivan did the same thing.

TO HIS DAUGHTER.

BOOTH'S THEATER, NEW YORK.

November 15, 1871.

MY OWN DEAR DAUGHTER: I arrived here last night, and found your pretty gift awaiting me.

HAUBLE PRESENTED TO BOOTH, AND USED IN THE "FOOL'S REVENGE." "O NOBLE FOOL, O WORTHY FOOL, MOTLEY'S THE ONLY WEAR," IS ENGRAVED ON THE HANDLE.

Your letter pleased me very, very much in every respect, and your little souvenir gave me far more delight than if it were of real gold. When you are older you will understand how precious little things, seemingly of no value in themselves, can be loved and prized above all price when they convey the love and thoughtfulness of a good heart. This little token of your desire to please me, my darling, is therefore very dear to me, and I will cherish it as long as I live. If God grants me so many years, I will show it you when you are a woman, and *then* you will appreciate my preference for so little a thing, made by you, to anything money might have bought. God bless you, my darling! . . .

God bless you again and again!

Your loving father.

TO DAVID C. ANDERSON.

DUBLIN, July 15, 1880.

DEAR DAVY: Arrah Galoo! Hooroo! mabokalush faleen sockdalerger-whack, me bye!

I'm on the sod, wid a dudeen o' the rale ould bog-wood in me jaw, acushla! One week ago to-night I left the ship at Quanestown, and have been to Cork and Killarney in a fog; then spent a fine day in the cars, and reached here in the same old fog and rain, bad luck to 't!

Did yez iver come here? Don't! I did, but I won't again, mavourneen. Saving the antiquities and the foul weather, we can bate 'em in Yankeeedom. Lakes and hills and all the beautiful scenery and sights they boast of are 'way behind us, so they are.

Anent ancientiquities, I am writin' wid a pen that 's mightier than the sword, videlicet a quill, from an old goose, or a hin, or else a fowl of some kind. A plume o' the weather, maybe; that 's fowl enough.

Three days here, and to-morrow we are off for Belfast, stopping *en route* at several points of interest. Shall not reach London till latter part of August. Have had two offers from there, but not being what I want, I shall wait. Find friends and acquaintances everywhere; no trouble or inconvenience

yet. Had a sort of a canal-like voyage—no sea whatever. So far the trip has done us all good. Don't want to think of theater: won't, till my cash runs low. After a day or two at Belfast shall go to Glasgow, and see a little of Scotland before going to England and Wales. After a week or so in London, go to the continent. This day one month ago I was breakfasted in New York. It seems but day before yesterday. Poor mother is very sad and lonely now, I know that she misses

me very much. God bless her! Wish you were here with me. Had a jaunt in a jolting car to-day, from a place called Kingstown. Not any more in mine, I thank you. I like a trotter when I sit astride him, but a sidewise bump up and down for an hour ain't handsome, not at all, sir. How doth your *bonne dame* (no, that's not Irish), how 's de ould 'ooman? An' how 's yersel', me darlint? I 'll write ye Scotch next toime, maybe. All our loves to yees, all of yees.

McCullough has secured the spring months at Drury Lane; got ahead of me there. Irving keeps his place, and the only other tragedy-shop has lost caste of late; so I 'm in the cold, as before. Clarke would let me in at the Haymarket, but I 've been there onct before, ye know.

Good night, Davy. May the good God bless you and yours! Write me soon. Ever yours,

TED.

TO THE REV. DR. EWER.

LONDON, December 19, 1880.

MY DEAR EWER: So dazed have I been of late that I really forgot to whom I have and have not written. At all events, I remember that you were among the first on my long list of friends with whom I intended to shake hands after my *début*. I 'll take it for granted that I did so after "Hamlet"; if not, forgive my negligence. Had that play been kept on, it would doubtless have pulled through the fog, which *Richelieu* dispelled with his first breath, although many of the so-called critics still see me through a glass darkly, and sniff their learned noses knowingly. All goes well, but slowly. I did not expect a sunburst, as my friends predicted, nor did I expect such kindness from the public, nor from private sources, as I have received.

Your water-cure, hay-fever letter is not where I can put my hand on it just now ('t is after midnight), and therefore, without reference to it, I may be repeating what I said in reply to it. I hope you have entirely got rid of that vexation, funny as it appears to be at a distance, and that good health will attend your Christmas, with other blessings, a hundred-fold. For the first time since childhood my sister and I will (D. V.) pass that day together. I wish our dear old mother could be with us. What a miserable existence is the actor's, especially if he is domestically inclined! Home is something denied to him. I 've tried to fix myself, to settle down a dozen times, yet always comes some stern necessity to break camp and travel. I 'd rather be at home, somewhere in America, quiet and secure from the publicity my profession brings, than be here fêted and applauded, and tired with what 's called fame. Bosh! it 's my liver, I dare say;

the doctors tell me so. I suppose I 'd be dissatisfied with any other lot. I 'm a chronic growler, I fear. You may judge by this that I 'm not over-elated by my success here. If I had a "pitful of kings" to act for, I should not be so. Royalty (unless I except the Duke of Connaught) has not yet deigned to notice my efforts; but titled nobles, and several citizens of high standing, have shown me great kindness. To-day we met at dinner the poet Robert Browning, and at the same house, on a former occasion, Huxley. The Dowager Marchioness of Ely, Her Majesty's lady-in-waiting, and several lesser lights near the throne, have shone serenely on my Yankee ship. Now is n't this enough to turn one's head? Yet, you see, I 've been so accustomed to the purple; with kings and cardinals have I hobnobbed so familiarly since my boyhood, that I 'm accustomed to these honors. . . . I 'm inclined to think the "Passion Play" will not be given at Ammergau again; it has degenerated into a mere show.

I 'm glad I saw it, although at the time I was disappointed. Would not look at it again, though it were presented within easy reach; but the scene of its performance — Ammergau — is worth a dozen visits, though so out of the way and uncomfortable. . . .

Ever yours,

TED.

TO MR. STEDMAN.

PICCADILLY, LONDON,

December 24, 1880.

. . . I know how "run to earth" you are, and therefore do not expect you to write me very often. I know what you feel for me, and shall be more than satisfied if I get but a line of greeting only when you wish to try a new pen. It was very good of you, my dear boy, to write me, tired and busy as you are, and I cordially appreciate it. Yes, "*Richelieu*" has warmed them up, but I believe the houses would have been quite as full if I had kept "*Hamlet*" on the bills. There is little chance in that respect. The enthusiasm is greater, of course, for the theatrical situations of the former play compel it. . . . Ever yours,

EDWIN BOOTH.

"WINDSOR HOTEL," July 28, 1881.

DEAR SIR: I can give you very little information regarding my brother John. I seldom saw him since his early boyhood in Baltimore. He was a rattle-pated fellow, filled with quixotic notions. While at the farm in Maryland he would charge on horseback through the woods, "spouting" heroic speeches with a lance in his hand — a relic of the Mexican war — given to father by some soldier who had served under Taylor. We regarded him as a good-hearted, harmless, though wild-brained, boy, and used

CANE CARRIED IN
"THE TAMING OF
THE SHREW."

WOODEN PIPE USED IN "HAMLET."

to laugh at his patriotic froth whenever secession was discussed. That he was insane on that one point no one who knew him well can doubt. When I told him that I had voted for Lincoln's reelection he expressed deep regret, and declared his belief that Lincoln would be made King of America; and this, I believe, drove him beyond the limits of reason. I asked him once why he did not join the Confederate army. To which he replied, "I promised mother I would keep out of the quarrel, if possible, and I am sorry that I said so." Knowing my sentiments, he avoided me, rarely visiting my house, except to see his mother, when political topics were not touched upon—at least in my presence. He was of a gentle, loving disposition, very boyish and full of fun,—his mother's darling,—and his deed and death crushed her spirit. He possessed rare dramatic talent, and would have made a brilliant mark in the theatrical world. This is positively all that I know about him, having left him a mere school-boy, when I went with my father to California in 1852. On my return in 1856 we were separated by professional engagements, which kept him mostly in the South, while I was employed in the Eastern and Northern States.

I do not believe any of the wild, romantic stories published in the papers concerning him; but of course he may have been engaged in political matters of which I know nothing. All his theatrical friends speak of him as a poor crazy boy, and such his family think of him. I am sorry I can afford you no further light on the subject.

Very truly yours, EDWIN BOOTH.

TO HORACE H. FURNESS.

29 CHESTNUT STREET, BOSTON,

May 12, 1885.

MY DEAR FURNESS: Ever since I left you I have been pacing the "Rialto," my gaberdine wrapped about me,¹ but with my eyes fixed on the "Sagittary." In other words, I have been thinking more of *Iago* than of *Shylock*. In Act III I made some remark regarding *Desdemona's* boldness, which, I'm sure, does not express my opinion of her. I was *Iago* when I wrote it, not my cold-blooded self; his opinion of the "guineahen" influenced me when I said "she was bolder than her father supposed." My own notion is that in the very extravagance of innocence she exclaimed impulsively, I wish "that Heaven had made me such a man," not appreciating the dan-

¹ At Mr. H. H. Furness's desire, my father had aided him in compiling his *Variorum* on Shakspeare's plays by explaining many points in his own interpretation of Shaksperian characters.

gerous nature of her words, and even when she said "if I had a friend that loved her," etc., it was in courtesy, not inconsistent with the paddling of palms, which was a common custom of the time, and thought innocent—except by *Iago*. I think that *Othello*, as guileless and impulsive as *Desdemona*, mistook her meaning for his "cue," or "hint," to speak. I am sure, too, that she burned with shame when she realized what she had unconsciously done in the way of wooing, and maybe cried herself to sleep that night; but for all that she did not refuse the suit of him whose mental beauty was affined to her own. She saw *Othello's* visage in his mind; had she not been similarly endowed she might have been fascinated as school-girls are by actors, preachers, and the like, asked his autograph, giggled, and said, "Yes," to repent at leisure. She never repented her love and marriage, not though it killed her father; even in her own death she was firm in her devotion to him, to whose "honors and valiant parts" she had consecrated her very soul. (I might say something here anent the "marriage of true minds," but I forget the passage.) She was not the darling "daisy" we see upon the stage, in white satin of the latest cut, and wax pearls, gabbling the precious text by rote; but a true woman, with a mind of her own, a deathly devotion to the man of her choice, and as pure and artless as a baby. 'T is absurd for me to say this to you, who know more of Shakspeare in a moment than I've learned in thirty years, but that note of mine (or rather *Iago's* comment on it) distresses me, and I want you to understand me rightly. I am slow at expression, and get awfully mixed at times, frequently conveying the very opposite idea to what I intend, and often forget the very gist of my subject. But this you will understand and believe of me: if my notions concerning the two characters of Shakspeare that I have given any thought to "have any power to move you" to the pursuit of your great object, I am happily rewarded, and ask "no do it of usance" for my twaddle in the form of commendation other than your own, privately given, proud as I would be if merely glanced at in the progress of your work. Now 't is daylight, and I am going to bed—with my gaberdine about me, and will cuddle up with *Shylock* till I lose him in sleep. I wish I could describe to you the white-lipped, icy smile, the piercing glance at *Othello's* half-averted face, and the eager utterance with which my father spoke the lines "Ay, there 's the point: as to be bold with you," etc., but I cannot; and if I could at any time, I would not attempt to do so now—I'm too sleepy. . . .

Thine own,

EDWIN BOOTH.

TO HORACE H. FURNESS.

NEWPORT, June 30, 1885.

MY DEAR FURNESS: . . . I fear that I can be of no service to you in dealing with the "Merchant." Somehow I can feel no sort of inspiration or spirituality in the atmosphere of that play. *Shylock* seems so earthy that the little gleams of light that I have perceived while acting some other parts are absent, and I can see no more than what is clear to the "naked eye." However, I will tug at him during the summer; in the mean time let me be assured that you are bravely and cheerfully "pegging away" at "Othello." . . .

Affectionately yours,

EDWIN BOOTH.

TO HIS DAUGHTER.

NEW YORK, January 5, 1888.

. . . I have seen Rose several times, and shall say good-by to-morrow. I do all I can for her, but nothing on earth can render her lonely life less weary, poor soul! As for God's reward for what I have done, I can hardly appreciate it; 't is more like punishment for misdeeds (of which I've done many) than grace for good ones (if I've done any). Homelessness is the actor's fate; physical incapacity to attain what is most required and desired by such a spirit as I am slave to. If there be rewards, I certainly am well paid, but hard schooling in life's thankless lessons has made me somewhat of a philosopher, and I've learned to take the buffets and rewards of fortune with equal thanks, and in suffering all to suffer — I won't say *nothing*, but comparatively *little*. Dick Stoddard wrote a poem called "The King's Bell," which fits my case exactly (you may have read it). He dedicated it to Lorimer Graham, who never knew an unhappy day in his brief life, instead of to me, who never knew a really happy one. You must n't suppose from this that I'm ill in mind or body: on the contrary, I am well enough in both; nor am I a pessimist. I merely wanted you to know that the sugar of my life is bitter-sweet; perhaps not more so than every man's whose experience has been above and below the surface. . . . Business has continued large, and increases a little every night; the play will run two weeks longer. Sunday, at four o'clock, I start for Baltimore, arriving there at ten o'clock. . . .

To-morrow, a meeting of actors, managers, and artists at breakfast, to discuss and organize, if possible, a theatrical club¹ like the *Garrick* of London. . . .

TO THE SAME.

NEW YORK, November 14, 1888.

. . . I could not write yesterday, as I intended, for the whole day was a whirl until long after midnight. Your most welcome portrait came to greet

me first,—the previous day, in fact,—and that pleased me very much. It does not do you justice, but 't is a fine piece of work. Flowers and fruits from many quarters, a little gold pencil from D—, and some silk handkerchiefs from Barrett. I must have had a hundred dozen silk handkerchiefs given me at various times by different persons. . . .

I've had an irreparable loss in the midst of all this fun; the dear little knife your mother gave me twenty-seven years ago, and which I've always carried about with me, is gone! I think I dropped it at supper Saturday night . . . at Delmonico's; they have searched in vain for it. I never missed anything so much. The pictures of babies amuse and delight every one that calls, and to all of whom I exhibit them. . . .

TO OLIVER J. LAY.

HOFFMAN HOUSE, Dec. 26, 1888.

MY DEAR MR. LAY: I have heard that some of my friends among the "Players" desire to compliment me by placing a portrait of myself (in character) on the wall of the club reading-room, as a surprise for me on the opening night, and that your *Hamlet* has been suggested for that purpose.

On some other occasion I could not decline such a manifestation of good feeling; but under present circumstances — while the house is yet my own, to be presented by me to others — I shrink from the indelicacy I should be guilty of were I to permit any conspicuous portrait of myself to be exhibited. Therefore I request your non-compliance with the wishes of my over-zealous friends, who, no doubt, will consider me morbidly sensitive on the subject. I may be so, but 't is my nature, and no effort of mine can overcome my aversion of anything suggestive of self-glorification, which a prominent portrait of myself on such an occasion would evince.

Since the secret has "leaked out," and I am no longer a stranger to their diabolical (?) plot, I shall request the gentlemen who are interested in the well-meant compliment to spare my blushes till some future time, when the property will be theirs to decorate as it may please them best. I have written to acquaint you with my feelings on this subject, which I am sure you will respect. Very truly yours, EDWIN BOOTH.

TO HIS DAUGHTER.

THE PLAYERS, 16 GRAMERCY PARK,
NEW YORK, Jan. 1, 1889.

Happie Newe Ycare! God bless you, darling, and all of you! The thought of your not being

¹ This resulted in my father's founding The Players' Club, which was ready and inaugurated at the close of that same year.

ANTIQUE ROMAN BRASS
LAMP USED IN "RICHELIEU."

well alone marred my full enjoyment of last night's delightful success — the culmination of my professional hopes. I cannot describe the universal joy that pervaded all hearts present, the sympathy expressed, and the entire success of everything — except my speech. I broke down toward the close of it, but it passed off with éclat. Everything else was *perfect* — the clock, with deep cathedral tones tolled twelve in the midst of Barrett's reading of your blessed letter — just in time, as though it had been prearranged. White, the architect, went into ecstasies at the success of everything, and exclaimed, "Even the log burned without smoking," which we feared it would do in the new chimney.

I suspected that Barrett had a poem to read, but the dear letter was a happy surprise, and the wreath and your apt quotation on the card were delightful.¹ You got as much applause as I did. I wired Dr. Parsons of his success. Several were here from Boston. Harry Burnett and Mr. Wendell, Fairchild, and others, were prevented from coming; so was Furness, so was Jefferson, but all sent messages. Barrett and I got to bed about 5 o'clock this A. M., but got little sleep; we both feel wretched in consequence. The papers are full of it, but I've not had a chance yet to read them. Since I rose at 1 o'clock I have been busy packing my things at the hotel to bring here, as we both concluded to pass the balance of the week "at home." When we get *well set*, we will have a "lady's" day for you. My head is now in a whirl, of course. Old Mr. Connor and Murdock, with other old actors, were present. Judge Daly just interrupted me; sends his love, and has ordered his lunch. Several of the best men of New York are here, and it will, no doubt, be the rendezvous of the choicest. Some are in the library reading, and it really seems as if we had been going for years instead of one day. All the exclusive neighbors in this most conservative quarter are pleased instead of offended by the innovation of a club-house in the midst of their respective mansions, as they were at first. All believe, as I do, that this will be of more real benefit to the actor than anything ever done in the world. . . . Only old distinguished actors are "on the free list." . . . The list is overfull, and we must go slowly now, lest we exclude the actors we want. Our list of membership is too small in its limits at present. The walls are filled with pictures, mostly mine,² and my books just filled one section of the cases, which soon will be entirely filled; every day some gift comes. An anonymous lady sent a fine crayon copy of a Shakspeare, and other things come from strangers. The affair has aroused the greatest sympathy for the cause, to my great surprise and delight. This is all I can tell you now, and I am too hurried and nervous to review my letter, so you must guess at what my mistakes mean.

God bless you all a thousand times!

¹ I had sent a wreath of laurel, asking Mr. Barrett to place it upon my father's brow on this great occasion. I attached to the wreath on a card the words, "Hamlet, King, Father."

² Portraits of celebrated actors, and many valuable

I hope you are well again and very happy. I go to Pittsburg from here,—one of the Baltimore weeks, as per printed tour,—then to Baltimore, then Boston. God bless you! Papa.

DETROIT, April 14, 1890.

. . . Yes; it is indeed most gratifying to feel that age has not rendered my work stale and tiresome, as is usually the case with actors (especially tragedians) at my time. Your dear mother's fear was that I would culminate too early, and I seemed then to be advancing so rapidly. Somehow I can't rid myself of the belief that both she and my father helped me. But as for the compensation? Nothing of fame or fortune can compensate for the spiritual suffering that one possessing such qualities has to endure. To pass life in a sort of dream, where "nothing is but what is not," — a loneliness in the very midst of a constant crowd, as it were,—is not a desirable condition of existence, especially when the body also has to share the "penalty of greatness," as it is termed. Bosh! I'd sooner be an obscure farmer, a hayseed from Wayback, or a cabinet-maker,³ as my father advised, than the most distinguished man on earth. But Nature cast me for the part she found me best fitted for, and I have had to play it, and must play it till the curtain falls. But you must not think me sad about it. No; I am used to it, and am contented.

I continue well, and act with a vigor which sometimes surprises myself, and all the company notice it, and comment upon it. I'm glad the babes had a jolly birthday. Bless 'em! Love for all. Papa.

"THE PLAYERS," March 22, 1891.

DEAR DAUGHTER: I'm in no mood for letter-writing to-day. The shock,⁴ so sudden and so distressing, and the gloomy, depressing weather, entirely unfit me for the least exertion — even to think. Hosts of friends, all eager to assist poor Mrs. Barrett, seem helpless in confusion, and all the details of the sad business seem to be huddled on her. . . .

General Sherman's son, "Father Tom," as he is affectionately called by all the family and the friends of the dear old general, will attend. He was summoned from Europe recently to his father's deathbed, and he happens to be in time to perform services for his father's friend, poor Lawrence. After the services to-morrow at 10 A. M., the remains and a few friends will go direct to Cohasset for burial Tuesday, where Barrett had only two weeks ago placed his mother; removed from her New York grave to a family lot, which he had recently purchased at Cohasset. He had also enlarged his house there, where he intended to pass his old age in privacy. . . . I have not seen Lawrence since death; when I saw him Thursday he was in a burning fever, and asked me to

paintings owned and presented by my father to the club.

³ My father has often related that his father was opposed to his being an actor, and desired him to learn a trade, like cabinet-making.

⁴ Mr. Lawrence Barrett's death.

sleep away for fear his breath might affect me, and it pained him to talk. He pulled through three acts of "De Mauprat" the night before, and sent for his wife that night. His death was very peaceful, with no sign of pain. A couple of weeks ago he and I were to meet General Sherman at dinner: death came instead. To-night Barrett had invited about twenty distinguished men to meet me at Delmonico's, and again the grim guest attends. . . .

My room is like an office of some state official; letters, telegrams, and callers come every moment, some on business, many in sympathy. Three hours have elapsed since I finished the last sentence, and I expect a call from Bromley before I retire. A world of business matters have been disturbed by this sudden break of contracts with actors and managers, and everything pertaining to next season, as well as much concerning the balance of the present one, must be rearranged or canceled. I, of course, am free; but for the sake of the company I shall fulfil my time, to pay their salaries, this week here; and next week in Brooklyn, as they were engaged by Barrett for my engagement. After which they will be out of employment for the balance of the season. . . .
Papa.

TO THE SAME.

NEW YORK, March 15, 1893.

. . . It seems a most difficult task for me to write a simple letter, even to spell. I don't know what is the cause; I certainly am much better than I was, in all respects, until I attempt to write, when all my wits seem to go astray, and my nerves get beyond control. Several days have gone without my having had energy to write more than a telegram to you, which I did also yesterday. If I could take exercise, I believe I should gradually grow stronger. My 'lectric doctors are now reduced to two; I formerly had four a day. After breakfast I take a paper and lie on my sofa in the back room, where I get most sunlight, till about 3:30 or 4 o'clock, when I dine a little, and after go to Carryl's or Bispham's, or to the play, in order to get a vain hope for an interest in the theater. My deafness is so much increased that I don't hear a word that is spoken on the stage. . . . I won't promise any more, but I'll try to finish this badly begun letter in the morning. 'T is quite late now, eight and a half, at least; just my bedtime, and dear old Harry stays with me, to tuck me up, and say

good night, till the last, every night. I miss you all very much, but am glad you escaped this bad weather.

March 16. Good morning, my little ones! Only 't is nearly evening again; the way I let time slip away is a caution to babies. I left this letter to mama last night, meaning to finish it for her this morning: but 't is now nearly to-morrow evening ahead, and I'm just about awake, and have only just scratched a few lines addressed to my good little "Babes in the Woods" way down South, where 't is nice and warm, amongst the birds and flowers. Here 't is just as cold as winter still. I'm really cold and shivering while I try to write. . . . I hope you are still all well. If you are always as good as you are now, and have been this summer, I'm sure the good angels will take good guard of you, and bring you all to our happy home in New York, to see grandpa, who is anxious to see his old babies again. Now, you see, I've managed to write two letters for you (you and mama in one, you see). That's for waiting so long. . . .

TO THE SAME.

"THE PLAYERS," NEW YORK,
Tuesday, 4:30 P. M., April 17, 1893.

DEAR DAUGHTER: I rose very late this morning, and brought with me an all-night and permanent headache, which still sways me after a long nap on the sofa till just now; I hope to get rid of it, and be soon with you for a while this evening. Will send for coupé; am sorry that I did not send word earlier. Very sorry your cold is worse, but am glad that you take care of it, and have stayed in-doors, for it seems quite cold here.

If I should not get out, don't worry; I am quite well, except my stupid headache, that will perhaps keep me in the house. Nothing worse. I hope 't is better with you, and nothing worse with you all.

God bless you!

Papa.

The above is my father's last letter to me; on the following morning he was taken ill (Wednesday, April 18).

On the previous evening he came to my house, as usual, to dinner, and although very feeble, he seemed bright, and spoke of his pleasure in still being able to come to us.

BROOKES: A STORY OF THE CIVIL SERVICE.

By the Author of "Tiger Lily," "The Major's Appointment," etc.

WITH PICTURES BY ALBERT E. STERNER.

IN one of those bright benignant days that frequently interrupt the brief rigor of the Washington winter, Forrest Lyddane was sauntering along the northern pavement of Pennsylvania Avenue toward the Treasury Building.

It was eighteen years since he had left the city on the mustering out of his regiment at the close of the war, and the twenty-four hours since his return had been full of interest.

Lyddane had heard Americans at home and abroad declare that Washington had become the most beautiful city on earth. As he drove about the handsome streets and avenues that morning, while admitting to himself that wonderful changes had been wrought, he was hardly prepared to echo the boast of his traveling compatriots. That process of natural selection by which, in older cities, poverty and degradation draw gradually to a head, to fret and fester in localities remote from the ordinary line of public observation, had not yet reached an advanced stage in Washington. In more than one instance, palace and shanty, church and saloon, elbowed each other in startling proximity. It seemed to Lyddane that in her haste to put on sumptuous raiment, the bedraggled beauty of ante-bellum days had left some shreds and patches of her former squalor in unpleasant evidence.

Nevertheless, he had found Washington charming in its own peculiar way, and there was very evident delight in the look which this afternoon wandered from one end to the other of the avenue, taking in the splendid vista terminating at the east in the marble terraces and noble dome of the capitol, at the west in the southern façade of the Treasury Building, standing out in classical beauty from the background of interlacing branches formed by the trees in the White House grounds beyond.

Amid all changes this view had remained almost unchanged. It might have been yesterday that he had marched with his regiment through the clinging mud of the then unpaved avenue, his boyish heart heavy with homesickness and the nameless dread he would have died rather than own, and he remembered with

a thrill how the sight of that white dome, lifting itself above the din, and dirt, and brutality that surrounded him, had kindled his soul and vitalized his fainting patriotism.

Lost in these reminiscences, Lyddane was walking on in a sort of dream, when he became suddenly aware that the crowd of passers was increasing, and looking up, saw that the Treasury Department was discharging its multitude of employees.

From every exit the crowd poured steadily, separating, as it reached the pavement, into diverging streams, these being augmented by others issuing from the State, War, and Navy departments, and the Bureau of Engraving and Printing.

This great army of government workers, men and women, was a wonderful sight, and Lyddane, at once interested, stepped aside into a convenient doorway, the better to pursue his observations.

All at once a man among the passers stopped, and with an exclamation seized Lyddane by the hand.

"Forrest!" he cried. "Lyddane! What! You do not know me — Brookes — your old comrade!"

"Know you!" Lyddane exclaimed after a moment of bewilderment. "Of course I know you! Why, Chris," laughing cordially, and drawing the other into the doorway, "I was thinking of you and the old times only a moment ago!"

For some minutes there was a rapid cross-fire of questions, reminiscences, and congratulations; then they paused and took a survey of each other.

What Lyddane saw was a ruddy, middle-aged man, with that indefinable something about him which suggests the soldier — a suggestion further borne out by the dragging leg, the artificial character of which was obvious to the most careless observer. There was something of the military, too, in the big slouch hat, under which was one of those faces that fall into sad, even severe, lines in repose, but become singularly attractive when animated, as now, by pleasant emotions.

Brookes saw something very different — a handsome man of the world, carrying himself with the dignified ease which, though not per-

haps the invariable accompaniment of success, never coexists with failure — and though quick to feel this difference, Lyddane's genuine response to his own delighted recognition deprived the feeling of all possible sting.

"By Jove, Forrest!" he cried, with a boyish laugh, "you don't look just as you did when I saw you last, hanging from the rear end of a freight-car full of mustered-out soldier-boys, waving adieu with a smoked herring from a corner grocery! But you were a handsome fellow even then, in spite of the herring! And you are not married?"

Lyddane shook his head. "But you are, Chris?"

"Oh, yes; married these fifteen years. Married to an angel, Forrest, and father of five boys and girls. Oh, you need n't make such an evident effort to congratulate me!" he added, gleefully. "Wait, sir, until you have seen my Dora, and the babies! Come! You must go right along to dinner with me!"

Lyddane demurred. He had all a sensitive man's aversion to the rôle of unexpected guest, and all a prosperous bachelor's mistrust of family dinners; but Brookes would not accept a refusal.

"I confess," he went on in his whimsical way, "that I might hesitate ordinarily to ask a swell like you to share a poor man's pot-luck, but this happens to be a special occasion. It is my natal day, you see, and my little wife never fails to celebrate that auspicious event with all pomp and festivity. There will not be any '*Pusteten und Lampreten*,' as our German colonel used to say, but there will be a little dinner no man need scorn, and they will all be glad to see you. Why, your name is a household word, Forrest! You have figured as hero in all my war yarns, and we never miss anything of yours that is published, if we can help it. No, you cannot refuse! It is only a little way from here."

Unable to resist, Lyddane allowed himself to be led away.

"So you have remained in office ever since the close of the war?" he asked, as they walked along.

"Yes; ever since," Brookes answered. "I have advanced, however. I am Chief of Division now."

"Ah, that is good!" said Lyddane. "At least it sounds good."

"Yes," responded Brookes, dryly, "it sounds considerably better than it is. It means in reality a slight increase in importance and in salary, offset by a vast increase in risk of decapitation. You seem puzzled," he continued, with a dry smile. "How should you, denationalized American that you are, know anything of the practical workings of our glorious civil

service system? Well, we won't spoil our appetites by discussing the subject before dinner at all events."

The conversation was made to take another turn, and Brookes's house, being within easy walking distance of the Treasury, was soon reached.

It was a pretty little box of a house, simply furnished, with a look as if things had grown gradually out of the tastes and needs of the occupants, instead of being the result of any deliberate scheme. There were plenty of easy chairs, and cushions, and rugs, and books, and musical instruments, a few etchings and water-colors, an open fire, and flowers — flowers everywhere; and on the whole Lyddane began at last to feel some curiosity as to the woman Brookes had referred to as an angel, and as she finally came in, a little flushed and awed at this unexpected meeting with so distinguished an author and traveler, Lyddane was at once captivated. Mrs. Brookes was fair, small, graceful, and more than pretty, with that almost infantile serenity of expression only seen in the faces of women who have led unruffled, protected lives; a look which appeals strongly to most men, but especially so to men of tender, chivalrous natures, like Christopher Brookes.

"You do not seem like a stranger," she said with unaffected sweetness. "My husband has talked of you until you seem like an old friend."

"An undeserved honor, then," protested Lyddane, uncomfortably aware of his long forgetfulness of his boyhood's friend and army comrade.

"Oh, but you have been doing things to make it impossible to forget you!" said Brookes, guessing his thoughts. "We ordinary mortals must expect to be forgotten."

"I hope, Lyddane," he continued, as dinner was announced, "that you are prepared for a family dinner. We are not swells, you know; we don't exile our children from the table when we have guests."

Lyddane expressed himself delighted to meet the small folk, and indeed, if he cherished misgivings, they proved to be needless. The children, like the dinner, were agreeably surprising. There were four of them at table, two pretty girls, and two manly-looking boys, all very wide-awake, yet well-mannered and unobtrusive.

The dinner was simple but enjoyable, and served with great daintiness. Lyddane showed himself a charming guest, and, the natural anxiety of a hostess once conquered, Mrs. Brookes proved herself equal to the occasion.

"You have forgotten one thing, Dora," said her husband as, dinner over, they were sipping their coffee. Mrs. Brookes cast a disturbed look over the table.

"Oh, don't be alarmed, dear!" laughed Brookes. "It's only Jack. You see, Lyddane, we cannot have charlottes and ices every day in the week, but we can *always* have Jack. And when you have seen him you will admit that, as we boys used to say, Jack beats the other sweets 'all hollow.'"

Meantime Mrs. Brookes had touched the bell, and a small black maid now appeared, bearing in her arms a beautiful boy about a year old.

"Bring him here, Rosie!" shouted Brookes. "There!" turning the child about in his hands before Lyddane. "What do you say to that?"

The child gazed upon the stranger for a moment with gentle gravity, like one who, though he would fain be kind, was on his guard against imposition; then a broad smile overspread his lovely face, and, with a gurgle of satisfaction, he seized upon Lyddane's flowing beard, tugging at it valiantly. Brookes burst into laughter.

"You are all right, Forrest!" he shouted. "Your future is secure! Jack approves of you!"

"Oh, Chris!" laughed his wife, "see how you embarrass your friend!"

"Not at all!" declared Lyddane, rising to the occasion. "Jack is magnificent; and Chris is justified in being a proud man—for more reasons than Jack," he added, in a way that covered Mrs. Brookes with confusion, and produced another laugh from her husband.

Lyddane stole a covert glance at Brookes. That laugh, for some reason, had begun to grate upon his nerves.

Jack, meantime, having been passed around and his sweetness duly partaken of, was banished to upper regions, and Brookes led the way to the drawing-room. "I shall not ask you to smoke, Lyddane," he said. "We will perform that ceremony later, in the open air, if you don't mind; but you shall hear Dora sing after a while, as compensation."

And after a while, when the old days had been passed in review, and old stories retold, Dora did sing, very charmingly, in a small tender voice, that suited perfectly the little *chansons* and ballads selected. What interested Lyddane, however, more than the singing, was the adoring intentness of her husband during the performance. As soon after she was called from the room, he looked at Lyddane, exultantly, expectantly.

"Your wife is adorable!" responded Lyddane warmly. "It does me good to see you so happy, dear old boy."

Brookes's face darkened for an instant, then glowed again.

"Yes," he said in a deep, soft voice, "yes, Dora is a wonderful woman. You cannot have an idea of her goodness and cleverness. Do you know, Forrest, I have never gotten over

my astonishment at her caring for me—three quarters of a man that I am? Though as to that, the whole of me would n't amount to much.

"Oh, I know!" he went on hurriedly, his sensitive face flushing, as Lyddane would have protested—"I know very well what a nonentity I am. Maybe if I had gone back to my studies when the war ended, I might have come to something, but this thing"—kicking out awkwardly with the artificial limb—"seemed to paralyze my ambition. Honestly, I was young enough, and foolish enough, to dread the idea of hobbling around on a cork leg among the people who had known me for a sort of athlete. Vanity, of course, but even commonplace people have their vanity, you know! When a clerkship was offered me, I took it quickly enough. I never was very ambitious, and it was a relief to have my future career decided for me so easily, as I thought. Of course, I soon learned the fallacy of *that* idea, as I saw how men came and went, but I plodded along without much thought of the future, and might have gone on so to the end if I had not met Dora, and married her. After that I began to reflect, and would have been glad enough to escape and get into something else, but somehow I never could see the way clear. Experiments are costly, and I never am a hundred dollars ahead. Of course," with a contemptuous shrug, "by stripping life down to the barest necessities, one might save a little something, but with a wife and children like mine—my God, Lyddane! There are things a man cannot and should not bear, and to see a woman like my Dora a mere drudge—no, I could n't think of it! I tell you, Lyddane, this department life plays the very devil with a man. It is the old legend of the siren translated into plain American. A man is lured on by the seductive voice that sings of a respectable position, regular hours, moderate labor, and a fair income. Before he knows it he finds himself chained to his desk, the threatening ax suspended over his head by the slightest of cords. He soon finds out that neither fidelity nor capacity can stay its fall, and naturally he sinks into a sort of fatalism, and drifts along as I and thousands of others are doing, hoping and fearing to the bitter end!"

"But promotion—is that not an incentive—a stimulus?" asked Lyddane, deeply interested.

"If it were the result or the reward of faithfulness, or even if it rendered a man's tenure of office more secure, it might be, but that is not the case. It is all a matter of influence. For instance, I owe my promotion to the fact that up to a year ago I had a powerful friend—General Golding—our old commander. He died a few months ago, and with him I lost my only real hold upon my position."

"But the Civil Service Reform law," Lyddane again asked—"was that not devised expressly to remedy some of the defects and abuses of the system?"

"Certainly it was; but it does not reach the root of the evil. That terrible force, political expediency, overrules everything. It is true that since the passage of the bill the department clerks are comparatively safe. There is more caution and discrimination used in making changes. But the heads of divisions are never safe. With the next administration, particularly if the other party gets into power, my head goes into the basket as sure as fate."

Lyddane was more than interested now—he was disturbed. He knew now why that too-frequent laugh of Brookes had grated upon his nerves. He would have continued the conversation, but steps were heard, and Brookes gave him a sign which he understood. It was evident that Dora was not to read this dark page of her husband's inner life. When she came in Brookes was again in apparently jovial spirits.

When, soon after, Lyddane took his leave, Brookes walked with him to his hotel. They lighted cigars, and talked in a desultory way until the entrance to the Arlington was reached. Then, in parting, Brookes, with a sudden change of manner, said:

"I want to apologize, Forrest, for entertaining you with a history of my affairs. You must not think that I don't know what bad form it was! It was worse than that—it was brutal. I don't understand how I came to do it—but you see, this unexpected meeting, and going over the old days stirred me all up, and when you spoke of my happiness—why—I—"

His voice broke short off. Lyddane seized his hand warmly.

"I am glad you spoke. I only hope you exaggerate the danger of the situation," he said.

"I hope so, indeed!" Brookes responded with one of his whimsical smiles. "Good night, old friend!"

Lyddane stood listening until the halting footsteps of his friend died away in the distance, then turned thoughtfully, and entered the lighted vestibule.

In spite of many engagements, and the shortness of his stay in Washington, Lyddane managed to revisit some of their old haunts in Brookes's company, and to pass an hour at his house the evening before leaving the city.

On none of these occasions did Brookes give way to the morbid train of thought that had so disturbed Lyddane on that first evening, but a word that now and then fell from his lips showed that it had been no passing mood. The cloud hung ever in his horizon, and Lyddane, though inclined to optimism, as a man is apt to be with

whom things have gone well, could not be feeling the shadow of it drift at times across his own spirits.

Yet who, he asked himself, would disturb a faithful, plodding, non-partizan official like Brookes? It would be an act of injustice so flagrant as to cause the most unscrupulous politician to hesitate. Something like this he said: Brookes, as they parted for the last time.

The latter smiled moodily. "God grant that you may be right," he said. "Good-by; and don't quite forget me."

Lyddane did not mean to forget him, and for a time a fitful correspondence was kept up, but as time and distance increased it was in the nature of things that this should die out, and that events of travel and literary occupation should fill Lyddane's mind to the exclusion of everything else for the time being. And so the old silence set in, and Brookes was again practically forgotten.

FIVE years passed before Lyddane again set foot on American soil. Then business connected with the book he was about to publish brought him to Washington; and once there, his mind naturally reverted to his old friend, Brookes. As he reflected that since their separation not only a new administration, but a new party, had come into power, a feeling of apprehension took possession of him. What might not have happened to poor Brookes in all these silent years! He really meant to hunt him up without delay, but several days passed before he could free himself sufficiently from his engrossing affairs to carry out this resolve. Finally, as he was strolling about Lafayette Square, one morning after breakfast, as was his custom when the weather was fine, he suddenly decided to hunt up Brookes's address; and flinging his half-consumed cigar aside, he turned to leave the square.

At the same moment a woman dressed entirely in black rose from a bench near by, and stepped timidly toward him. As the sun struck across her fair hair and pale face, Lyddane was impressed by something familiar in her appearance, but not until she spoke his name did he recognize the speaker. It was Mrs. Brookes.

For a moment Lyddane was overwhelmed, and it was not strange.

There was little in the woman before him to recall the smiling, dainty matron he remembered. What did it mean—this startling change? What could it mean, except that Christopher Brookes was dead? This suggestion was like a knife-thrust in Lyddane's heart. For a time he was unable to utter a word, and Mrs. Brookes herself stood silent with averted eyes.

At last Lyddane forced himself to speak.

"What a curious thing," he said, painfully aware that his words might have an insincere ring under the circumstances, "that I should meet you here quite accidentally, just as I would have started to hunt you up!"

Mrs. Brookes looked at him, hesitatingly. A little color came into her face.

"It was not altogether an accident, Mr. Lyddane," she said. "The reporters have noticed your walking here every morning, and I took advantage of the fact. I wanted to see you — because —" the lips quivered and she stopped speaking.

"You could not believe I would leave Washington without seeing you, Mrs. Brookes!" Lyddane interposed — "without seeing my old friend —"

A look of anguish on her face checked his words.

"He is not —"

She hastened to answer his unspoken question.

"No, my husband is not dead, nor even ill. But — you did not receive his letters?"

"Not a word since I left San Francisco four months after I was in Washington," Lyddane answered, full of misgivings.

"Ah! Then you know nothing! Nothing!" She struggled with some great emotion, while Lyddane impatiently awaited her words.

"Things have changed very much with us since you were here," she said, after a moment. "The year following, my husband lost his position —"

"No!" interrupted Lyddane. "It is not possible! Then he was right, after all! Tell me," he continued, much distressed, "tell me how it happened."

"As those things always happen," Mrs. Brookes answered, quietly. "A new administration; the old officials pushed aside to make room for the new party's men. My husband was only one of many."

"Outrageous!" muttered Lyddane. "And of course this has broken Chris up terribly!"

"That — and losing little Jack — our baby!"

Again her voice broke, and she turned her face away. Lyddane's own eyes filled, and like a second knife-thrust in his heart came the thought of his own remissness. What might he not have been to his friend during these years of trial, if he had known — and he might have known, if he had possessed a tithe of Brookes's loyalty and affection! When he could command his voice he said:

"I will see Chris at once. Tell me, Mrs. Brookes, why has he not been to see me?"

She looked at him with a strange, sorrowful gaze.

"I cannot explain," she said; "you will understand when you see my husband. That is

why I wanted to see you first — to prepare you for the change in him. It will be easier for you — and for him — now that you know how things are with us; and he will be so glad, so glad, to see you!"

Lyddane would gladly have accompanied Mrs. Brookes home, but at her request left her at one of the gates after agreeing upon the hour when he might see her husband. The interview had left a deep impression upon his mind, and thoughts of his friend's unmerited misfortunes obtruded themselves many times in the midst of the day's affairs.

At the hour appointed he rang the bell of the house indicated by the card Mrs. Brookes had given him, one of a tiny row in an out-of-the-way street.

Brookes, haggard and hirsute, opened the door, and, too moved for speech, grasped Lyddane's hand an instant, then led the way to the room where Mrs. Brookes and the younger children were sitting. It was a small, common room, yet kept from absolute ugliness by the pretty furniture, the books and pictures, that had survived the wreck of the old home.

In the presence of her husband and children Mrs. Brookes seemed more like her old, bright, charming self, yet with that added strength and dignity that comes to natures like hers through struggle and endurance. There was something exceedingly touching in her manner toward her husband. Through all its tenderness it was so evident that her woman's pride suffered cruelly at his dejected, conquered air. Brookes took but little part in the conversation, and even after his wife and children had withdrawn, it was only after repeated efforts that Lyddane succeeded in breaking down his almost surly reticence. Then the story of the last five years poured from his lips in a torrent of passionate words.

"It is the old story of the superfluous man, Lyddane," he concluded. "Nobody wants me. My very honesty is against me. You doubt it? Then listen! I was on the point of getting a place as secretary to a big real-estate firm here — the former incumbent having obligingly died. The decision rested with one of the firm then absent, but there seemed no doubt that he would decide in my favor. As soon as he had returned, I presented myself. The man knew me well. 'Brookes,' said he, 'you are a good fellow, and I would like to see you well fixed, but I'll tell you the truth: you are not the man for our business; you are too d—d honest!'"

Ending with a discordant laugh, Brookes began pacing the floor.

Lyddane, whom deep emotion always reduced to silence, sat mutely watching him. He understood what Mrs. Brookes had meant by

preparing him for a change in his old friend. It was not so much a physical change, the deepening of some lines in his face, the whitening of the ruddy locks about the temples, nor even the absence of his old cordial manner. It was something subtler, more terrible, than these.

At some moments his eyes held a baleful glitter, his lips tightened into sinister curves, his voice grew harsh, as if the man's very nature, once brave, gentle, and frank, had suffered an essential change.

"Too d—d honest!" repeated Brookes in a strident voice. "Why not? What is 'honesty,' any way, but a respect for the rights of others! Now, when it comes to a question of the rights of those nearest to a man, in opposition to the rights, say, of corporations, whose claims should be paramount? And if it be heroic for a man to give his life for another, how much greater the heroism of him who gives up what are more precious than life, his consciousness of rectitude, his hope of heaven, perhaps, for those he loves! What do you say, Lyddane?"

He had planted himself before Lyddane in an attitude both reckless and imposing. The glaring eyes, the pallor of his face, the sinister curve of his lips, were awful to see.

Lyddane was shaken to his inmost soul. Speech was impossible; but better than speech was the gesture with which he rose and laid his arm about Brookes's shoulders, and looked in his face.

At his touch and look the man quivered from head to foot, and with a choking cry sank upon a chair, burying his face in his hands.

It was very late when Lyddane reluctantly left Brookes. The effect of this interview upon himself was an almost sleepless night, spent in revolving plans for the relief of his friend. Quite naturally, if not wisely, the first plan which took definite form was the endeavor to have Brookes reinstated in the position from which he had been ousted. That proving impracticable, some other position of a clerical nature — the only thing for which Brookes's long experience of routine work had fitted him — must be secured, and that speedily, for the man's condition filled Lyddane with grave apprehensions.

It must be owned that in forming this plan Lyddane was doing violence to his own convictions. Since his return to America, and particularly since his arrival in Washington, he had become deeply interested in the politics of his country, and though long residence under various existing forms of government had only intensified his patriotism, he found much in the workings of our complex system to astonish and repel. Only the day before he had had

occasion to condemn in **strong terms** one of the most flagrant abuses — the **spoils system** — before a group of his country's legislators in the library of Senator Fairweather, one of the most powerful and brilliant politicians of the day. And in running over his list of **influential friends** it was Senator Fairweather who seemed to be the man most likely to be able to assist him in the matter under consideration!

Altogether, it was a queer situation; but having once determined on his line of action, Lyddane lost no time, and, calling a cab, started at once for the Capitol.

As may be imagined, his reflections as the cab rolled along were of a peculiar nature, and as he mounted the steps of the Senate wing, he could not repress a laugh at his own expense.

"We know what we are," he quoted: "at least, we think we do; 'but we know not what we may be!' Preferably I would settle a couple of thousand a year on my friend Chris for life, if he could be prevailed upon to accept it; but as he undoubtedly could not be, here goes!" And entering the reception-room, he despatched a messenger to the Senate Chamber with his card.

Senator Fairweather soon appeared, his countenance wearing a civil smile. Lyddane realized at once that his urbane host of yesterday and the politician on his native heath were two distinct individuals, and decided to meet the senator on his own ground — Greek against Greek.

"Senator," he began, when they had seated themselves on two chairs that still retained the confidential angle acquired from the last occupants, "you will hardly find yourself prepared for what I am going to say, after my talk at your house yesterday."

The senator's face became slightly charged with interest. He smiled encouragingly.

"Senator Fairweather," went on Lyddane, a glimmer of a smile in his eyes, "yesterday I expressed my detestation of what is known in politics as the spoils system. To-day I retract those words. Under certain conditions I am heartily in favor of the system, and have come here, as an American citizen and a party man, to demand my share of the spoils!"

The senator laughed.

"So!" he exclaimed, "you have caught the infection, too? Well, well! And you want a place, Mr. Lyddane? Oh, in that case, of course, I am at your service. What is it you want, Mr. Lyddane? A consulate? An embassy, perhaps? That is what our famous literary men generally prefer. Have you any particular place in view? How about Berlin, or London, or Paris?"

The ironical glitter in the speaker's eyes did not escape Lyddane.

"Thank you, senator," he responded seriously, "but it is not for myself that I am asking your influence. It is for an old friend of mine, who has been the victim of cruel injustice."

Then, as briefly and effectively as possible, he presented the salient points in Brookes's case. The senator listened with an attentive air.

"Brookes, you say! Christopher Brookes? Hm! Yes! I know the case. He was put out to make room for one of Doubleday's men," he remarked. "He has been mentioned to me before. But you forget, Mr. Lyddane: Brookes belongs to the defeated party."

"So far as I know, Brookes is a strict non-partizan," Lyddane said.

The senator pushed out his under lip in an obstinate fashion.

"I don't take much stock in non-partizan men," he said dryly. "He who is not for us is against us, you know."

"Hardly that, since a District man has no vote to dispose of," retorted Lyddane. "But what is more to the point is that Brookes was a soldier, and left a leg on the field of Antietam. That ought to offset a mere difference of opinion, it strikes me."

"Yes, yes; certainly," assented Senator Fairweather, uneasily. "Er — how long did you say the man was in office?"

"About nineteen years," Lyddane answered.

The senator almost bounded from his chair; his eyes glared. "Nineteen years!" he ejaculated. "Great Heavens! Does the man want the earth?"

Scratch a Russian, and you find a Tatar. Lyddane had scratched his Russian, but it cannot be said that he was seriously alarmed at his Tatar. Whatever else was in the gaze he kept upon the honorable gentleman before him, it was certainly not fear. The senator met that gaze, and his manner instantly softened.

"Nineteen years!" he repeated, but in different tones. "Why the man ought to have laid by a competence by this time."

"Pardon me," responded Lyddane quietly, "but if you will consider the matter a moment, you will see how impossible that is. Department clerks and officials are mostly gentlemen, many of them refined, educated men. They are paid hardly more than good mechanics earn, yet they cannot be expected to live like bricklayers. How can such a man support wife and children as his position requires, on an income of from twelve hundred to two thousand dollars, and amass a competence — even in twenty years?"

"Well, he knows all that beforehand! Why does he marry?" demanded the senator, brutally. "It is an old story, Mr. Lyddane. I have heard it a thousand times. These depart-

ment men all know their tenure of place is uncertain, yet they go right on, most of them, marrying, living bang up to the last dollar of their salaries — their wives following the fashions and trying to get into society — children indulged, and filled with extravagant ideas; not a cent put by for a rainy day. Then suddenly the ax falls, and the devil is to pay generally, and they come to us to get them out of trouble! Great Heavens, sir! The United States Government is not an eleemosynary institution!"

Then, catching Lyddane's level gaze, he added, in a changed tone:

"Pardon me, Mr. Lyddane, but I cannot help thinking that your long absences from our country have disqualified you for looking at this subject in the proper light."

"It may be," responded Lyddane, who was no longer disposed to facetiousness; "I confess I comprehend no policy involving injustice and ingratitude. In no other career, so far as I know, is the sudden removal of a faithful official, without other ground than that of wanting his place for another man, sanctioned or defended."

"Yet is that not what you are now asking me to do, Mr. Lyddane?" retorted the senator, with a keen look.

"Not precisely," returned Lyddane, calmly. "I ask the restoration of a competent officer to a position from which he was unjustly removed."

"But his successor — how about the injustice of removing him?"

"His claims to the place, whatever they may be, amount to nothing beside those of Christopher Brookes."

"But failing to secure his reinstatement," the senator proceeded, his eyes showing again an angry sparkle, "you approve of the removal of some other man to make room for your friend? Do I understand you, Mr. Lyddane?"

"No, senator," answered Lyddane, after a moment of reflection; "it is evident that I have failed to make myself understood. If Mr. Brookes's reinstatement should prove impossible, I only ask that you will strongly recommend him for any vacancy that may come to your notice. Still, I cannot admit that even the removal of some unworthy or incompetent man to make a place for a man with Mr. Brookes's claims would offend any canon of right or justice."

The senator smiled. "As a matter of abstract justice, no. But the fact is that justice has very little to do with this matter of appointments. It has always been so, and you and I cannot change it. And, by Jove, sir, the people themselves do not want it changed! The Civil Service Reform law has never been looked

upon favorably by the masses. When it comes to public offices, every man wants a chance. I am sorry for your friend, Mr. Lyddane, but really, I am afraid he has had *his* chance."

"Then I understand," said Lyddane, rising, "that you can do nothing for Mr. Brookes? In that case I must lose no time. I must see what I can do elsewhere."

Senator Fairweather pulled his iron-gray mustache nervously. The truth was that he suddenly realized with whom he was speaking—the wielder of a famous pen whom it would not be well to antagonize. Another reason for keeping up friendly relations with Lyddane existed. Like the old king in the ballad, the senator had taken to himself not long before a young and charming wife with a strong *penchant* toward literary people in general and Mr. Lyddane, the lion of the hour, in particular. His beautiful Kate would never forgive him if he alienated the famous writer. So, to Lyddane's surprise, the senator with his most cordial smile responded:

"Oh, no! By no means! I will engage to make a note of your friend's case, and be on the watch for a vacancy. Let him send his papers to me,—he will know what I mean,—and though I cannot promise anything, I won't forget him. Be sure of that."

The senator had quite recovered his customary suavity by this time, and bowed Lyddane from his presence, after a few moments' talk on general subjects, with all possible courtesy.

At a reception that afternoon he met the senator's charming wife, who looked at him, he felt, with a new interest as he entered the crowded drawing-room, and soon achieved the apparent impossibility of a little talk in a quiet corner.

"My husband came in just as I was leaving home," she said at once. "He told me of your call. He tells me everything, of course! That is, everything he knows will interest me."

"I am glad to know that I come under the head of the topics your husband knows will interest you," said Lyddane. "Did he tell you the object of my call?"

"Not fully, but he gave me an idea of it."

"Then you know how low I have fallen," said Lyddane, with a deprecating air.

"I know how high you have risen," Mrs. Fairweather answered, smiling. "But I was not surprised. No—don't explain, or apologize! I know what one will do for a friend. You made only one mistake," she added, laughing.

"I am fortunate then! What was it?"

"You should have come to me!"

"Ah!" Lyddane exclaimed. "You see what a novice I am. But the mistake is not irretrievable, I hope. Suppose I come now!"

Mrs. Fairweather nodded. "Yes, come tomorrow, and tell me all about your friends. The wives of public men know a great deal of what is going on, Mr. Lyddane. We are not like the giddy butterflies the society reporters make us appear. I have known many sad cases—that of your friend, and I am with you fully, your sympathy for men made to suffer so unjustly; particularly our old soldiers. If I have any influence with Senator Fairweather something shall be done!"

"Then he is saved!" responded Lyddane gallantly.

The senator himself came in presently, and was cordiality itself. "Ah!" he exclaimed, "see that you and Mrs. Fairweather have been conspiring! Your looks betray you!" Then aside to Lyddane he added:

"I have been thinking over the case, and must warn you that it presents unusual difficulties; the man is known as belonging to the other party you see—and I shall have to manage very discreetly. This is the short session and I may not be able to do anything before next winter. Will that do?"

"No, senator!" promptly answered Lyddane. "Whatever is done should be done at once. It is a most pressing case. I beg, as a personal favor, that you will make a special point of it."

The senator laughed, not very gleefully. "Well—for a novice—you are coming on bravely, Mr. Lyddane," he said. "Mrs. Fairweather has reinforced you to some purpose. However, we will see. Rest assured I shall do my best, but do not be too sanguine. Even a United States senator cannot perform miracles!"

Lyddane did go the next day as requested to see Mrs. Fairweather, and left her, he was sure, a bold and invincible champion of his friend's cause. This conviction was strengthened by a note received from the lady the next morning, in which she said:

A vacancy has been discovered in one of the Departments, but it is not going to be smooth sailing. There must be a fight for the place. One of my husband's colleagues wants it for *his* man. I have vowed that if persistent audacity can win, our man shall have it, and my husband is pledged to the same vow. Still, do not be too sanguine—the ways of politicians are dark and devious. Buoy your friend up for a while, as best you can, until we are sure. By the way, my last scruple has been vanquished. I have learned that our opponent's man is a callow Western youth with no other encumbrances than his own folly. Nothing can shake my fell purpose now—he shall go back to his prairies.

Yours sincerely,

KATHERINE FAIRWEATHER.

THE RECEPTION AT THE SENATORS.

Lyddane was greatly encouraged by this very feminine epistle. Success seemed sure, and, in his last interview with Brookes before leaving for New York, though he was prudent as to details, he could not refrain from mentioning the names of those whose interest he had secured.

"And now, Chris, remember!" he urged affectionately. "No more indulgence in womanish paroxysms, or infernal sophisms. They are unworthy of you. As Reade's old soldier says, 'Courage, comrade! The devil is dead!'"

Brookes smiled a forced sort of smile at his friend's last words, but as it was the first of any sort Lyddane had been able to produce, he left Washington in a cheerful state of mind, hardly warranted, perhaps, by the circumstances.

Yet it was not strange. Since Mrs. Fairweather had taken up his friend's cause, Lyddane, knowing the senator's devotion to his beautiful wife, felt that no further question of that gentleman's intentions could arise, and as to his power, in common with the rest of the world Lyddane believed that to be limited, in a matter of this kind, only by his will.

But as two of the remaining three weeks of the congressional session passed without a sign, Lyddane became uneasy, and wrote an earnest letter to Senator Fairweather. The response was a marvel of smooth nothingness. There came also a bright hopeful letter from the senator's wife; but between the lines Lyddane was sure that he could discern disheartenment, and though he continued to write cheerfully to Brookes from time to time, his confidence steadily evaporated. When finally Congress adjourned, and apparently nothing had been achieved, he was more than disappointed,—he was indignant,—all the more that not a word of explanation was proffered. If it had been his own fate that hung in the balance he would have died and made no sign; but with Brookes on his mind he waived dignity, and despatched a telegram to Mrs. Fairweather, as follows:

"What does this mean? Defeat?"

Within an hour came the answer. "Yes. Will write."

And by the first mail came the following letter:

Alas, my dear Mr. Lyddane, our banners trail in the dust! The Western youth has the place! He was our enemy's own nephew, and, in vulgar parlance, had the inside track from the start, which I did not know, and which in politics means everything. When I tell you that I have quarreled with my husband (who is not one bit to blame), and resolved never, *never*, to forgive my ungallant opponent (who is otherwise a very charming man), you may know how I have taken the matter to heart. And yet, let me add, paradoxically, that I am not sorry that we lost the battle! Why? Because from all you have told me, it would be a pity to put your poor friend into a position where the

same fate might again overtake him! Did I think of that? And I am almost *sure* I have something better for him! Know you, *some* of my relatives are in the Land Claim business, and they want a man for a responsible position, where integrity will prove no objection! I believe your friend is the man for the place, and I have already a promise that he shall at least have a trial, which means that he will keep the place, of course. No word to him, but keep him up *some* way for a time, and the minute I get the answer I expect will carry the news to your friend in person. I owe that pleasure to myself, after all I have been through! Trust me a little longer!

This letter did not have the effect upon Lyddane that it was meant to have.

He threw it aside angrily, vexed that he had allowed himself to be misled, as he put it, by the vague promises of a politician and the shallow enthusiasm of a pretty woman—so unjust is the nature of man when his self-esteem suffers. Ignoring the good sense and sincerity that breathed from every line of the letter, he did not attempt to answer it, but forced himself to write hopefully to Brookes, promising to see him soon in person. He was tempted to proffer again the pecuniary aid which had already been brusquely repulsed by Brookes, but on reflection decided to wait until he was in Washington, when he would insist upon Brookes's acceptance until the knotty problem of his future should be solved.

Meantime that out-of-the-way little house in Washington was the scene of a soul-tragedy that was fast approaching a climax. Few men have within them greater capacity for heroism than Christopher Brookes possessed. He had faced death a hundred times without flinching, on the field of battle, on the deck of a sinking ship, in flood and fire; nor was he lacking in that rarer heroism that resists the slow continuous agony of years, the silent heroism of which the world knows nothing, yet which is the whole of many human lives; but the situation in which this man found himself was indeed enough to appal the stoutest heart.

To find himself, after almost half a century of faithful service and manly living, standing at bay with the whole world apparently arrayed against him, closing its ranks grimly upon every avenue to honest work that seemed about to open to him; to know himself steadily acquiring the ignominious stamp with which society brands the man who has failed; with every fiber of his being in agonized protest against his unmerited doom, to feel himself sinking under it, dragging with him those dear and innocent beings whose destinies were bound up with his own, this was a test before which the strongest nature, the firmest faith, might well give way.

Brookes was not a man of creeds. The very

depths of his nature, its broad and loving sympathy, had long ago brought him into revolt against the narrow religious teachings of his youth, as they had against the cold theorizing of a science that defines the origin of human love as the elective affinity of two cells, and sees in every manifestation of beauty only means used in the blind struggle for an existence that has no higher purpose than perpetuation. Both were equally hateful to him. Long since he had ceased the hopeless endeavor to reconcile the irreconcilable, and, like many another soul as true and tender, waited, dumb before the awful mysteries of life and death, for more light. Even now, when the earth seemed slipping from under his feet, and impenetrable darkness encompassed him, no scoffing word passed his lips. He even found himself flinging hopeless, incoherent prayers into that desolate void, and all the time sinking to lower depths of despair.

Of all this Dora knew nothing. Her husband's silence on religious subjects sometimes puzzled her, but like a wise woman she accepted the example of his blameless life, and asked no questions.

Dora's faith was of the simple unquestioning sort. God and heaven had become more real and precious since life had become sadder and harder, and Brookes would as soon have struck a dagger to her tender heart as utter one skeptical word in her presence.

Always ready to snatch at any straw that drifted toward them on the troubled waters, Lyddane's assurances of relief, and his genuine sympathy and kindness, had raised Dora's spirits wonderfully. She simply *could* not doubt. A man of Lyddane's resources could not fail.

Brookes, as he helped her in his clumsy, loving fashion with the heavier tasks that now fell to her lot, watched her bright face with misgiving. He, too, for a time had been influenced by Lyddane's enthusiasm, but as day after day passed without bringing the promised relief, the little flame of hope died away to a smoldering spark, and again the shadow of black care filled the little household.

Sinking into apathy, Brookes gave up even the perfunctory wandering in search of employment that had become the daily habit of his life, and sat wrapped in silence by the scanty fire; the children, their young faces reflecting the general gloom, came and went with unnatural noiselessness, and even the heart of the brave wife was at last near faltering; but with a woman's desperate courage she kept a calm face to the enemy, and only words of cheer and hope passed her lips.

Congress adjourned; the members scattered to their homes; Senator Fairweather's departure was announced—the finishing stroke, for

Brookes knew that his fate was in the hands of that great man, and that his last hope had accompanied the senator on his journey. It was a newspaper error; the Fairweathers had not left Washington, but this he could not know.

Then came Lyddane's letter, full of fresh assurances and warnings against despair. "The devil is not as dead as I thought," he wrote, "but he is far from being the invincible devil some people think he is. Right does conquer sometimes, even in politics, and your chance will come. Meantime," etc., etc.

Brookes was alone with this letter for some time. When Dora at last came in it was lying on the floor, and her husband was standing at the window, back toward her. She asked no questions; but without a word she went to his side, and laid her head against his shoulder, and without a word he put his arm out and drew her closer. For days they had avoided each other's eyes, and they did not look at each other now.

It was a bright day in early spring. Tree-buds were swelling, grass springing, and the hardy honeysuckle that draped the ugly railing of the small inclosure before the house was flinging green pennons to the breeze. Before the window some sparrows, with spring in their little hearts, were disputing with many a quirk and chirp the possession of material that should form a shelter for the offspring of their mated happiness. A particularly fierce combat was being waged over a snarl of string, which was finally borne away by the victor to a distant tree.

At this point Dora, who had unwittingly been watching the movements of the sparrows, as in the supremest moments of life one does watch the most trivial events, was startled by the harsh laugh from her husband.

"Have you seen it, dear?" he said, as he met her astonished eyes. "To the victor the spoils, even among the sparrows!"

"Yes," answered Dora, gently. "Yes, dear; but even among the sparrows, you know, not one falls to the ground without His notice!"

Brookes made no response in words. The momentary bitterness faded from his face. He took his wife in both arms, and held her away from him, looking into her eyes so solemnly, with such yearning love, such tender pity, that her heart stood still. It was so, she remembered, that her father had looked upon his dying bed as he took leave of wife and children.

On the afternoon of the day following, Mrs. Brookes sat alone in her little chamber. It was not an unusual thing for her to be left alone in the house. Tom—the eldest boy, and at present the bread-winner—was constantly employed, the children went to school, and, until

ENGRAVED BY A. E. ANDERSON.

"SHE WENT TO HIS SIDE."

he past few days, her husband had been absent hours at a time. But whether her nerves were at last playing her false, or whether it was the memory of that new strange look her husband's face had worn since the day before, and his going away that morning during her temporary absence without leaving the usual explanation—whatever may have been the cause, Dora was singularly restless and troubled. A sense of some new misfortune impending weighed upon her spirits, and would not be banished by any of the usual feminine resources.

At last the solitude of her room became unbearable, and, throwing aside her book, she went down-stairs and stood at the window where she had stood with her husband the day before. Here she might at least see the street, an occasional human form, something—anything—tangible that might divert her thoughts from the nameless dread that oppressed her. Would her husband *never* come?

A messenger-boy, in a uniform much too large for him, turned the corner at last, and came along after the leisurely manner of his kind—an unwonted spectacle in this quiet street, whose residents were in the habit of carrying their own messages. Upon this boy Dora's eyes fastened themselves with shuddering fascination, and it was without surprise that she saw him pause before the house, glance indifferently at the letter in his grimy hand, and turn into the walk that led to the door. A moment later he was standing transfixed, his mouth drawn into an abortive whistle, his hand empty, for, with the wind in her feet, Dora had come, had seized upon the letter, and fled into the house.

BALTIMORE AND POTOMAC STATION.

2 P. M.

MY DEAR WIFE: At last I am on the track of a situation which, if secured, will place my family above want. This business calls me out of town suddenly, but you will hear from me very soon. God bless you, until we meet again.

YOUR HUSBAND.

Standing erect in the middle of the room, Dora read this letter once, twice, and again. There was nothing on the face of it unusual or alarming; a number of times in his unflagging search for employment her husband had made such unexpected trips out of town, and never without some affectionate and thoughtful message.

Yet as she read the simple, straightforward words, the conviction that, at that instant even, some awful peril menaced him turned her brain to fire, her heart to ice. For a moment she stood with staring eyes and parted lips; then, with a cry that brought the startled messenger-boy to her side, she fell unconscious to the floor.

When Brookes had finished reading Lyddane's letter, it dropped from his nerveless hand, and for the time his mind was swept clean of all thought or sensation; all power of resistance left him. This was the devil's opportunity, and he used it.

In the early years of his married life Brookes had had his life insured for an amount large in proportion to his circumstances. It was characteristic of the man to do this, and to keep the knowledge of it from his wife, to whose simple loving heart it would have seemed almost like a sentence of death.

It was like him, too, through all the privations and vicissitudes of the past few years, to keep this provision for the possible widowhood of his wife intact and secure, at what personal sacrifice, by what ingenuity and thought, only he knew. Always a source of secret satisfaction and congratulation, through much dwelling upon this thought, in solitary wanderings, in sleepless nights, it had come to take a morbid prominence in his mind. He gloated over the possession of these papers which meant comfort and security to his family—when he should be no more—as a miser gloats over his secret hoard, but with what a difference!

Often, in his solitary musings, he found himself repeating with a fervent glow of satisfaction: "At least, when I am gone, it will be well with them!" Or, as the clouds lowered and the waters rose higher: "If only I might die!"

Then in a bitter hour one of those malignant demons that follow in the train of Despair whispered in his shrinking ear a terrible suggestion. At first repulsed with loathing, after each new rebuff, each fresh disappointment, it was repeated with fiendish persistence, until at last came that moment of utter hopelessness and helplessness, when Lyddane's letter fell from his grasp, and in that moment a legion of waiting demons trooped into the empty chambers of his mind, a legion of voices seemed hissing the words: "*When it comes to this, that a man is worth more to his family dead than living—what then?*"

Even now this man did not fall without a struggle. Far into the night, in solitude and darkness, he wrestled with the great horror which had challenged his soul, wrestled until drops of anguish started from his forehead, until all the blood in his veins seemed thundering in his ears, and he could hear his own heart beat, like the stroke of iron upon iron. This could not last. There came a moment when something in the divine mechanism of the man gave way, and the fight was lost.

FROM a heavy death-like sleep Brookes awoke to a strange half-life.

THE LETTER.

Though moving among the living he felt himself not of them. All sensations were muffled and deadened; all animate forms, even those of his wife and children, were invested with an air of vagueness and distance, as they are to the eyes of one sick unto death.

From this murky background one idea—that of his contemplated act—stood out in flaming outlines. Dulled as were his perceptions in other respects, he went about his preparations for its perpetration with the cunning and unscrupulousness of a madman.

The letter Mrs. Brookes had received, though sent from the railway station, in reality had been written at home the previous night. So far from having suffered in the writing, he had felt a keen satisfaction in its ingenious wording, a grim appreciation of the terrible *double entente* of the opening lines; and he had walked away from his home that morning without emotion, without once turning to look back. In that instant of defeat he had been cut off, forever as it seemed, from human affections and interests. Where his heart had been a stone rested. A deadly purpose usurped the place of reason and conscience.

It remained now to avert suspicion that might defeat the end for which he had planned, and with this in view he spent some hours in going about in public places among people who knew him, assuming a hopeful air, throwing out in a casual way hints as to his prospects and expectations, exhibiting to an old acquaintance a telegram summoning him to Baltimore—a telegram, it is almost needless to say, of his own writing.

Having so far accomplished his object, as he believed, he finally went to the station, despatched the note to his wife, and, to make the chain of evidence complete, bought a ticket for Baltimore. Then, there being still some time before the gates leading to the tracks would be opened, he seated himself in the waiting-room.

As he sat there, his eyes, wandering vaguely, fell upon the marble tablet that records the assassination of an honorable man on that spot. It entered his mind that he must be sitting near, perhaps upon, the seat from which the unhappy wretch who perpetrated that atrocious deed had watched for his victim. According to human judgment, he, too, was a criminal. It was a fitting place for him.

How slowly the hands moved across the face of that clock! Fifteen minutes—ten minutes—five minutes—before the gates would open. He mentally repeated those words, "The gates would open," again and again. They had for him almost a joyous significance, for while he suffered no more acutely, he was very weary. His own personality weighed upon his consciousness like a heavy armor, which, now that

the fight was over, he might lay aside, and he was impatient to be rid of it. Death had no sting for him, the grave no terrors. As for what lay beyond, whether annihilation or immortality, he feared nothing. If there *were* a God, an all-knowing, all-comprehending, all-loving being, he did not fear him. His judgment would not be man's judgment, his mercy not man's mercy.

All this time the crowd pressed about him—going, coming, yet no one bestowed upon him more than a passing glance. Judged by externals, a dozen men might have been selected from that same crowd as more likely to be on the brink of crime than this pale man in threadbare coat and slouch hat, sitting there alone and motionless. Thus unconsciously we elbow sin, and suffering, and despair, as we push our way along. As for him, all these people, jostling, talking, laughing, weeping, were no more than shadows projected from the life to which he had bidden farewell.

Something like a drifting flower-petal touched his cheek—he started and looked around. A baby in the arms of a woman sitting behind him—a baby with wide dark eyes and curling yellow hair—had reached over to touch his cheek. The benumbed heart of this man who had forsworn life thrilled faintly. Little Jack had had just such eyes and hair. The child put out its hand again, with a soft smile. Brookes drew a quick breath, and, rising hastily, mingled with the crowd which was now passing through the gates. With them he traversed the long platform, but he boarded no train.

Instead, he made his way out of the rear of the station, crossed to another platform, and standing apart, glanced at his watch. A New York train was due in five minutes. For that length of time he stood with folded arms, waiting. A distant rumble! Yes, it was coming! The engine was in sight. When it reached a certain point which he had mentally designated he would start as if to cross to the other platform, stumble, fall, and—all would be over. How quick, how easy, is the passage through death to peace! How strange, he reflected, that so few seek it!

The engine reached the point: one step forward, one last thought of wife and children—oh, sweet young faces of children he would render fatherless! oh, dear brave face of the wife who had never failed him—who was waiting for him at this moment—*praying* for him, perhaps—for *him*, the thief and suicide! Great God! How those faces rose before him out of the reek and muck of the hideous place! What tenderness, what pleading, what reproach in all those familiar, beloved eyes! Then, by God's grace, there came to the man a swift, sudden illumination of soul, stripping this deed he was about to do of all illusion, of all disguise,

revealing it in all its cruelty and baseness — stark, hideously naked. And he recoiled, shuddering. In that instant the engine thundered by, slowed up, and stopped. Lyddane, stepping from the train a moment later, was amazed to see Brookes among the throng. "Why, how did you know I was coming?" he cried, joyfully seizing his hand.

The contact made him start back, and look again into Brookes's face. It was more the face of a dead than of a living man.

"Take me home, Forrest!" he said, hoarsely, clinging to his hand. "I have been in hell, I believe! Do not question me, but take me home!"

ALL that need now be told of the story of Christopher Brookes may be told in a few words.

Lyddane saw Mrs. Fairweather for a few moments the evening of the day following his arrival in Washington. She came in — it was her own drawing-room — magnificently dressed for some great occasion, and radiant with beauty and high spirits.

"You have seen your friend?" she began, eagerly. "Then you know that I was successful? Oh," she went on with sudden gravity, "never, never shall I forget that scene! I reached the house just as the poor wife was coming out of a long swoon. The two little girls were working over her like little women. Then, while I was trying to make her understand who I was, her husband came, looking — no, I will not try to say how he looked — and I put my brother's letter in his hand and came away. My brother has seen Mr. Brookes, and likes him already. Is it not a delightful *dénouement*? I feel quite like the beneficent fairy in a spectacle. Only it seemed at one time as if I had missed my cue, and was going to arrive too late!"

"Thank God you did not," said Lyddane, fervently. "The spectacle was nearer being a tragedy than you suspect."

"Yes. Thank God I did not!" repeated

Mrs. Fairweather. Then, with tears in her brilliant dark eyes, she added, "Do not doubt me again! Ah, I know you did," she persisted. Lyddane would have expostulated. "But I forgive you, since you are so evidently penitent."

Then, with the old gay smile, "There is my carriage, and I must leave you. To be late to dinner is a graver crime than doubting a woman's sincerity. So, until later, good-by!"

It were as easy for a man raised from a forgotten grave, or for one grown old in a dungeon and suddenly restored to liberty, to adjust himself to the demands of every-day life, as for Christopher Brookes to shape himself to the life which now awaited him. The sensation of freedom, of security, was at first almost intolerably keen. He was like a man who having been disinherited, beaten, and cast out upon the highway to perish under trampling feet, suddenly finds himself lifted up, anointed, and restored to his own. He was no longer a trembling slave — he was a man among men.

He dared not look back into the past — he shrank shudderingly from the thought of that abyss upon whose brink his soul had hung, from which it had been snatched at the last moment, nor did he ever utter a word of the marvel of that moment to any human ear. His hair grew rapidly white; his eyes never lost a strange, introspective look which made strangers turn for a second glance, but though graver and more reticent, in time he came to bear himself like other men. In his new life, long-choked sources of energy, and capacities unguessed even by himself, were given free play, and won him recognition and friends. And though he might not now grow to his full stature, it was good to feel himself a man, free to think, and free to speak; and above all, it was good to know that no cloud charged with destruction lowered in his horizon, that so long as he could do a man's work in a manly way, no clamorous demagogue might snatch the bread from his children's lips to fling to a no less clamorous constituent.

Julia Schayer.

BEAUTY'S DOWER.

TO day the sun; the moon and stars to night;
And to sweet music syllables of song.
All lovely things to loveliness belong:
Beauty is beauty's by a sacred right.

Frank Dempster Sherman.

THE ETERNAL GULLIBLE.

WITH CONFESSIONS OF A PROFESSIONAL "HYPNOTIST."

HAT genial old skeptic, Montaigne, summed up his criticism of life in the terse aphorism, "L'homme se pipe." Man cheats himself even more than he is cheated. Gullibility springs eternal in the human

breast; in the evolution of the race other feelings and beliefs wither away like organs which have lost their use; this alone abides with us as an inalienable birthright. In the immortal words of Robert Macaire, "Tout passe; mais les balauds ne passeront jamais." In the "eternal gullible," which is a primary constituent in the nature of "this foolish-compounded clay, man," lies the whole secret of the success of quackery of all kinds. This chronic disease of the human mind is subject to periodical exacerbations under the influence of what appear to be pandemic waves of credulity. At the present moment we are passing through such a phase of occultation of common sense, and hypnotism, spiritualism, telepathy, "spookism" in its various manifestations, Mahatmism, Matteism, and intellectual fungi of a like kind, flourish in rankest luxuriance in the minds of men and women, some of whom in other respects give evidence of more than average intelligence.

To prevent misconception, it may be well for me to repeat here that I do not deny the physical facts of hypnotism and its heteronyms. It is the interpretation of them, put forth by some hierophants of the cult, that I consider erroneous. I fully admit that, under the influence of certain psychological stimuli, persons whose nervous system is ill-balanced, or at best in a condition of "unstable equilibrium," readily pass into a state which we may, if we choose, call "hypnotic sleep." In view of the doubtful connotation which, owing to unsavory associations, the word "hypnotism" has acquired, I prefer to designate the condition here referred to as "Braidism," after the name of its most philosophical exponent, the late Mr. Braid of Manchester. I think there can be no doubt that the condition is mental and purely subjective, but there must also be a pathological coefficient on which the susceptibility of the patient to the so-called "hypnotic influence" depends. As to the nature of this coefficient, or of the condition which it underlies, we are at present in the dark; there are unfortunately still some riddles in medicine of which the solution has yet to be discovered, and this which we call "Braidism," or "hypnotism," is to that

extent one of them. However, we are at least sure that there is nothing miraculous or preternatural about this condition, no "magnetism," no "efflux of will-power," no added function of the organism or new power of mind — unless it be the credulity of those who accept them as signs and wonders. The hypnotist counts for nothing in the matter, except as an object inanimate or animate affecting the imagination of the subject, who is always self-hypnotized.

A chief obstacle in the way of the scientific investigation of hypnotism is the difficulty of finding any solid footing in the quagmire of error, self-delusion, and downright imposture in which this *ignis fatuus* of the human intellect lives and moves and has its being. Even in the hands of medical men of high character the proportion of truth to mere error is as Falstaff's half-penny worth of bread to his intolerable deal of sack. As for the hypnotism and the crystal-gazing of the drawing-room and of the public platform it is, so far as the "subjects" are concerned, of imposture all compact. In a little book recently published, the first edition of which was exhausted in a few months, I showed how Dr. Luys's subjects, in their own words, "gulled" him, and how sadly he played the part of dupe and decoy. If such things be possible in the green wood of an intellect originally trained to scientific observation, what is likely to happen in the dry sticks and shavings of half-educated, wholly uncritical, and superstitious minds ready to take fire at the slightest spark of the mysterious? The fact is that without specially trained "subjects" hypnotism could not exist. Even Charcot had to put his chief subjects through a long course of training to fit them for his public displays at the Salpêtrière. In accordance with a fundamental law of political economy, the demand has created the supply; hence that curious product of our latter day *Aberglaube*, the professional "subject," has come to be. Of the nature and significance of this "sign of the times" something may be gathered from the tale I am about to unfold.

Some little time ago I was the recipient of the confessions of a professional subject, who had come to see the error of his ways, or, as I fear is more probable, finding his occupation gone (for your "subject" loses his commercial value by over-use), was not unwilling to unfold the story of his "professional" life for a consideration. He was sent to me by the editor of London "Truth," into whose sym-

pathetic ear he had first poured the story of his career as a *corpus vile* of pseudo-scientific experiment. The confessions of this ingenuous youth are amusing and instructive, though, as in most confidences of the kind, the light is thrown strongly on the sins and shortcomings of others, while the penitent's own peccadillos are left in shadow. They are, unfortunately, too long to give in full, but I may say that the original documents submitted to me prove that in the most noted hypnotic exhibitions given on public platforms at the Aquarium in London, and other places of amusement, the performers, both hypnotizers and hypnotized, are, almost without exception, conscious humbugs going through a prearranged "show," and, to quote the *vates sacer* of the Heathen Chinese, "the same with intent to deceive." In the inner circles of the music-halls, the "line" of the professional subject is, I find, as well recognized as that of the contortionist, or any other variety of mountebank. He is engaged in the usual way, and his earnings are proportionate to his professional skill, that is, to his power of gulling the groundlings. Nor, taking into account the disagreeable experiences which he has to go through, can it be said that his line of business is particularly remunerative. His muscles must be under extraordinary control; his palate must be disciplined to tolerate, and his stomach to retain, such delicacies as castor-oil, mustard, Cayenne pepper, paraffin, and ipecacuanha; and he must bear pain with the impassive stoicism of an Indian brave. It is clear that a professional subject must not only be born, but must be made, and to the making of him there must go an amount of trouble worthy of a better cause. His professional equipment must include some measure of histrionic ability, as, in his time, he has many parts to play. Above all, he must, like the Roman augurs, cultivate a command of countenance which shall prevent his laughing outright in the faces of his dupes.

My interesting penitent has allowed me the privilege of seeing his business correspondence, from which the story of his professional life, from year to year, can be extracted. According to these documents, his first introduction to mesmerism was at St. James's Hall; this important event is best described in his own words:

When I first went to the above show, I was sitting among the audience when a mesmerized subject rushed up to me, and said the place was on fire. He tried to pull me away from my seat, but I would not go, till at last Mr. —¹ came up and awakened him. As I was leaving the building, that subject came up to me, and apologized for the trouble he had occasioned me. He asked me whether I would have a ticket for the following evening; he gave me a ticket, and I came again

the following evening. When I saw him again, he asked me if I believed in it; I answered yes. He asked me if I thought I could do the same. I said no. He said he would teach me if I liked.

My penitent has been endowed by Nature with a countenance which resembles Pindar: verses in being "significant to the initiated." I am therefore not surprised that he was quickly recognized by the sympathetic intuition of a kindred spirit, as one born to hypnotic greatness. In his modest diffidence as to his capacity in that direction we may recognize the "unconsciousness" which, according to Carlyle, is a distinguishing attribute of the highest genius. An appointment was made for the following morning at an address in the class-room of Drury Lane, and there the neophyte received his first lesson in the mystery of his art.

When I came there I saw half a dozen other young fellows who went through all sorts of tricks. Mr. — was not present. Then he [presumably the amiable subject who had discerned the latent possibilities in our friend's expressive physiognomy] told me to sit down and close my eyes and pretend to fall asleep, and he stuck a needle in my arm and asked if it hurt much. I said no. After a few more tricks, like falling from my chair, I was asked to come up for one week for 15s. Being without employment, I accepted. When I came up for the first time on the stage, the mesmerist tried to put me to sleep, but I did not [sic], as I was afraid.

Some further tuition was necessary, and for a short time the candidate was not trusted to do anything on the stage beyond going to sleep, in the mean time learning different tricks at the seminary in Drury Lane. He was an apt pupil, and very soon he was able to do several things which he had been taught, such as "laugh, cry, smoking tallow candles, and being fireman." The rapid progress of our hero is proved by the fact that apparently within a couple of weeks of his being taken in hand by the principal of the Drury Lane Academy aforesaid, whom he calls his "agent and trainer," he, in his own words, "went through catelepsy [sic], oil-drinking, needle, and all other tricks."

In the course of time we find our now fully fledged "subject," whom I will call L., performing with a well-known professor of hypnotism at the Royal Aquarium and elsewhere. He seems to have been at first taken on trial, but having gone to sleep, been pierced with needles, and drunk a glass of "paraffin mixture" to the satisfaction of the mesmerist, he was engaged as a regular "subject" at £1 15s. a week. By this operator L. was, in his own words, "put in catelepsy" [sic], and had two fellows laid across him, with the master himself on top.

¹ I have all the names as they stand in the original documents, but omit them here.

In fact, so promising a subject was he considered that he was selected by the "professor" for private demonstrations. Having been seen talking to gentlemen in the Aquarium, he received a serious caution from his employer not to reveal the fact that he was pretending to be under mesmeric influence, and not "to go to anybody's private house," presumably on his own account. He speaks of having worked eighteen months with his employer at different places, such as the Agricultural Hall, Bow, Sanger's, and Shoreditch, besides the Royal Aquarium. During this engagement his stomach was put to some severe tests, as he had at various times to eat tallow candles, cigarettes, raw onions, etc., and to drink a variety of "vile concoctions."

L. next became connected with another "professor," with whom he performed at the Aquarium, giving "two shows a day," going through "the usual tricks." The "professor's" style seems to have been of the robust order; he is described as throwing "the subjects most unmercifully about, and especially the bad ones." At the request of a doctor a penknife was on one occasion stuck into L.'s arm. The following newspaper report of the "show" at the Aquarium is interesting in view of L.'s own statement as to his previous appearances on the same stage:

The subjects were very much of the same class of men that Mr. — operated upon, and in some instances they were challenged as to whether they had not appeared with —, *an assertion which they stoutly denied.*

At one time Succi, the fasting man, traveled with them, and he also appears to have been smitten with the noble ambition to become a mesmerist. He tried his prentice hand on L., who, being nothing if not accommodating, allowed him to succeed, to the great disgust of his employer, who feared that Succi might set up as a rival showman in the hypnotic line.

L. next appears as an instructor in the art and mystery of hypnotism. Under his tuition his pupil soon blossomed into a "professor," and gave some successful public exhibitions of his mesmeric influence, which led to an engagement at the Royal Aquarium. There he and his *fidus Achates* remained eight months, demonstrating the wonders of hypnotism to an admiring public. At these performances our poor fakir of a "subject" had to put six bonnet pins through his cheeks, drink any amount of paraffin mixture, go twice a day through "catalepsy, and imitate Samson the strong man."

With Dr. —, another member of the hypnotic fraternity, our hero became acquainted through an advertisement in the "Era." On calling upon the mesmerist he saw three country lads going through what may be called the goose-step of mesmerism and hypnotism. L.,

however, who had got more insight into the inwardness of hypnotism than most of his employers, advised his master to get London subjects, who might be supposed, in the classic words of Sam Weller, to be "up to snuff and a pinch or two over," and warned him against the danger of his show being wrecked by the stupidity of country subjects. His engagement with Dr. — does not seem to have been very brilliant in point of profit. The terms were, however, subsequently raised on L.'s giving assurance that he was used to the "needle business." But the interesting partnership was dissolved because although the subject had all the heavy work to do he could obtain no further increase of pay. The letters before me show the extremely businesslike way in which these public hypnotists arrange for a proper supply of subjects who travel with them as regular members of the "company," and have to give satisfactory assurance before being engaged as to the quality and extent of their powers.

L.'s advice to his employer was thoroughly sound; it would be to the last degree dangerous for a professor of hypnotism to trust to local talent for his public displays. A proof of this occurred while L. was at Birmingham. The "Dr." usually took the precaution of giving the oil-drinking and "all the heavy and difficult things" to L. to do. One night, however, he tried to make one of his country subjects take the oil, but the latter refused, and a scene was prevented only by L.'s ingeniously creating a diversion which changed a beginning hiss into applause.

Another "professor" he first met at the Middlesex Music Hall, where, with an eye to possible business, he gave the hypnotist his professional card. The result is seen in the following letter, dated October 16, 1891.

I have just dropped across your card. I am going to open at Greenwich on Boxing Day. I want two subjects.

I should like to know whether you are used to the oil and needle business and can do *catalepsy*. Please let me know by return.

Apparently L. was able to satisfy this eminent performer as to his exceptional talents as a subject to such an extent that he was eager to secure another subject equally gifted. This is shown by the following extract from a letter dated December 20.

Yours to hand. If the other fellow is also used to the needle and oil he can come as well. I will give you each thirty shillings for the seven days. Be at the Hall at 3 o'clock sharp. Do not disappoint me. Inclosed find two tickets.

P. S. Learn a good comic song if you can.

The postscript shows that in addition to his powers as a fakir, and to his general histrionic

capacity, the subject who wishes to reach the highest pinnacle in his profession must, as Goethe said, "develop his powers in every possible direction," and all for thirty shillings a week. This particular "professor" "made impressions without talking to the subjects," but as a man of forethought who left nothing to accident, he was careful to give instructions beforehand as to what was to be done every night. L.'s powers of endurance were somewhat severely tested by an inquiring doctor, who stuck a penknife into his leg, and tested him by lighting a match under his eye, and by "rubbing the eyeballs." Here our subject takes us into his confidence, and reveals one of the tricks of the trade, for he says, "having the eyes turned up, we cannot see anything." If this device succeeded in deceiving any member of the medical profession, it could have been only by the operation of faith, which not only moves mountains, but seems to deprive otherwise observant men of the use of their senses. Truly the hypnotic showman and his acolytes, finding people so willing to be deceived, may almost be forgiven for saying with Autolycus: "Ha! ha! What a fool Honesty is, and Trust, his sworn brother, a very simple gentleman!"

L.'s next employer was an "editor," who had become acquainted with him at the Royal Aquarium during one of his previous performances there. He is said to have been very skeptical at first, but L. convinced him — an interesting example of the faith born of the will to believe, of which theologians tell us. Behold now the able editor reincarnated as a professional hypnotist, giving exhibitions at Blackfriars Road, Brentwood, the Metropolitan Music Hall, and at private houses. This new avatar seems, however, to have been a failure. To quote the words of L., "He did not seem to succeed, so took on private pupils, which he is training now," a view of the place of the teacher of hypnotism which may be compared with Lord Beaconsfield's description of critics as men who have failed in literature and art.

L.'s next engagement was with a lady hypnotist, with whom, to use his own words, he "gave different shows at all sorts of clubs and music halls." They were also engaged for the Royal Aquarium, which seems to be the San Carlo of such exhibitions; but here the professional jealousy of a rival hypnotist interfered with the arrangement, and they had to seek fresh fields and pastures new. The fair mesmerist would seem to have been the object of considerable jealousy on the part of her male rivals. Miss —, we are assured, was at first a believer in her own possession of a mysterious mesmeric power, but L. opened her eyes on the subject, a useful part he was well qualified to play. The following extracts from the business

correspondence of this lady are interesting, showing the care that has to be taken in selecting for these exhibitions subjects that can be trusted to go through the usual rites without indecorous levity, and without mistaking the situation.

To-day my arrangements have been completed, and am now under the orders of — [a well-known theatrical agent], so that at any time I may be pleased I shall have to appear, so according to your promise I want you to procure about six easy subjects to begin with. I should be pleased if you could forward their addresses. (Only men who could be surely relied upon. I mean that would come upon the stage for sure, and temperate.) For each man I will allow you ten shillings; their wages will be settled by my agent to-morrow, which I shall see to being liberal.

Sorry I could not write as promised on Saturday, but nothing really definite was arranged concerning the men's wages. The latest desire of Mr. — being that on Wed. he would like to see just two of the *smartest* subjects obtainable — must be "gentlemanly" with a view to their further engagement — he has some idea of my getting up quite a novel show (with perhaps two men only). Now if you care to make one find the other (don't forget he must be smart and good-looking — that's the order), I should prefer a cataleptic subject if this is agreeable, please to be at —'s office — at 1:45 sharp on Wed. morning.

The lady's style is a little incoherent, and she shows an ultra-feminine contempt for punctuation; but she manages to make it clear that she wants a particular kind of goods delivered punctually and in sound condition. L. seems to have been successful in finding the class of subject required, for on August 7, 1891, Miss — writes:

Thanks for your prompt reply with addresses. I will allow you to judge them, as to subjects I suppose them to have been controlled before. I don't know how soon I may require them — of course with you.

From the stipulation as to the subjects having been controlled before, the lady seems to have been somewhat distrustful of her own powers, but her confidence in her leading subject, Mr. L., was evidently complete. In another letter we find her asking for subjects "not too well known," and especially bargaining for a supply of "decent young men" that she can depend upon. This difficulty in connection with professional subjects — that they may become too well known — recurs more than once in Miss —'s letters: thus she adds a postscript to one, to the following effect:

N. B. I hope they are not too easily recognizable at the Aquarium. I should like their names and addresses.

The following letter is an example of the careful way in which the arrangements for these performances are made beforehand.

The gentlemen would have to be at the hall at 30 sharp. For this occasion I will give them 4s. each — and this will in all probability lead to a permanent engagement at once, — for which the proprietor has already undertaken to pay 5s. a turn each and every occasion, being, as it is a music hall, one half hour only — it is a stage rather bigger than at Aquarium, and being rather a decent place, of course *I must this time be sure of their turning up*. Now could you get about eight men, one half cataleptic, for this occasion? *Write by return* as there is so little time — only if agreeable — they *must come*, and I will meet them that I may know them upon the stage just for the first time.

L. performed with many other hypnotists, professional and amateur. Among the latter were the author of a book on hypnotism which has been somewhat favorably noticed in the British press, and a well-known "faith-healing" divine. It is all the same story, *mutato nomine*.

Whether L. actually gulled the various "professors," "Drs." etc., to whose influence he submitted as completely as he states may be doubted, and in any case the matter is of no interest to any one but those who may have paid their shillings and half-crowns on the understanding that they were to see a thaumaturgic display of a genuine kind. The case is different, however, as regards members of the medical profession whom he professes to have deceived. That he actually has succeeded in imposing on certain doctors is beyond question, but the evidence before me in no way bears out the statement made in "Truth," that L. "had again and again solemnly been experimented on by eminent English doctors, and that he had simply made fools of them all." On the other hand, it is clear that he succeeded in humbugging the editor of "Truth" himself. After speaking of a "learned caucus" at St. Mary's Hospital, where "some medico performed the amazing feat of raising a blister upon him [L.] by mere 'suggestion' while he [the subject] was under hypnotic control in the next room," Mr. Labouchere goes on to say, "If that worthy medico could have heard the youth describe to me how he raised the blister, I think he would have taken down his brass plate forthwith, and have retired into private life for very shame. This 'promising subject' further bore on his body the marks of a serious surgical operation, which, by his own account, he had undergone in France for an enormous fee at the hands of two doctors. Both of these votaries of science seem to have been so anxious to test the possibility of performing the operation on a hypnotized patient that they quite omitted the preliminary formality of ascertaining whether the patient was not quite as wide awake as themselves." While admitting that he has only the patient's word for this edifying story, the editor of

"Truth" makes it clear that he fully believes, or at least sees nothing improbable in it, a suggestive circumstance which seems to show that after all there may be something in hypnotism.

There can be no doubt, however, that L. found some of his most confiding dupes among members of the medical profession. Speaking of one of these, a demonstrator of physiology at a London medical school, L. says:

This gentleman I first met at the Royal Aquarium after leaving the stage. He made an appointment with me at his house and tried to mesmerize me. The first time I did not let him succeed entirely, next time the same, but the third time he succeeded to get me under his entire control. He mesmerized me always with his *eye-glasses* on, and that made me sometimes laugh in his face. He asked me the reason and I replied he looked at me so stern, that made me laugh. He made any number of difficult experiments on me, viz., making me write my name at different ages like 7 years, 9, 12, 15, and 19 years of age. He used to put me to sleep and make an impression on my mind that as soon as he rapped on the table I have to wake. There were then always three gentlemen present, but I always succeeded. He also gave me ink to drink, and tested my pulse on a pulse-tester machine; while there he did the blister trick. Of course, Mr. — was a very firm believer in mesmerism. I have heard nothing of him lately. At his place I met Dr. — of — Hospital, where I gave a show. — did all sorts of tricks with me. He also experimented heavily with an electric battery. He made me fetch certain books from the book-case; also when he touched a flower to fall asleep. He made me a teetotalar [sic], and I promised to remain one. He also put an impression on me never to be mesmerized again by any one. Of course, all these things never come true.

Poor Mr. — would seem to have been fooled to the top of his bent, and from the correspondence which his tricky subject placed in my hands he would seem to have paid, one way or the other, a good deal of money for the imposition practised upon him. He may, I think, be taken as a type of the scientific man who is led astray when he touches hypnotism and cognate subjects, not so much by the want of knowledge or powers of observation, as by what I should call want of insight into character to control the merely scientific judgment.

Being curious to study the technic of so exceptionally gifted an artist as "L.," I accepted his offer, to use his own elegant language, "to give a show at my house." I invited several medical acquaintances interested in hypnotism, including Dr. J. Milne Bramwell, Dr. Hack Tukey, Dr. Outterson Wood, Surgeon-Colonel J. B. Hamilton, Mr. Wingfield, and others, to be present on the occasion. L. brought two other subjects with him; one of these was introduced

by him as his cousin, but there was so strong a family likeness between all the three, that they might easily have passed for brothers. There are few people, who, as Sydney Smith said of Francis Horner, "have the Ten Commandments written on their faces." It is, therefore, not the fault of these ingenuous youths that their physiognomy is not exactly, to put it delicately, such as would generally be accepted as a guarantee of good faith. They went through all their ordinary "platform" business, simulating the hypnotic sleep, performing various antics "under control," and in particular "going through catalepsy," to use my friend's own phrase. Not the least interesting part of the "show" was the preliminary hypnotization of L. by the demonstrator of physiology already referred to, whose eyes had not yet been opened to the fact that he had been imposed upon. When he commanded L. to "sleep" the latter obediently did so, with all the usual appearances of profound hypnotization, muscular relaxation, facial congestion, upturned eyeballs, not moving when touched, apparent insensibility, stertor, insensibility to sound, light, and external stimuli. The performance was splendid and complete, and Mr. ——— enjoyed a moment's triumph. But L. instantly woke up again with a leer as soon as the operator announced that he was "under influence." Mr. ——— made several further attempts to hypnotize his former subject, each time with the same result. The situation was comic, yet had in it an element of pathos; the operator was so earnest a believer that the shock of his awakening was almost painful to witness.

L.'s performance was not destitute of merit, but to the critical judgment it left a good deal to be desired. He overdid his part, the congestion of his face being exaggerated to a degree almost suggestive of impending apoplexy, while his snoring somewhat overstepped the modesty of nature. These points were dwelt on by more than one of the gentlemen present, but I am not altogether free from a suspicion that in some of the cases at least the observation was of an *ex post facto* nature. On the whole, it was a very clever, but somewhat overdone, imitation of the ordinary hypnotic sleep.

One of L.'s companions seemed to me to simulate the hypnotic sleep better than he did, but L. at once dispelled any illusion there might have been by unexpectedly gripping him behind the knee. Some exhibitions of "post-hypnotic suggestion" given by the two were well calculated to tickle the groundlings in a music-hall, but could hardly have deceived any serious observer. The "catalepsy business" had more artistic merit. So rigid did L. make his muscles that he could be lifted in one piece like an Egyptian mummy. He lay with his

head on the back of one chair, and his legs on another, and allowed a fairly heavy man to sit on his stomach; it seemed to me, however, that he was here within a "straw" or two of the limits of his endurance. The "blister trick" spoken of by "Truth" as having deceived some medical men was done by rapidly biting and sucking the skin of the wrist. L. did manage with some difficulty to raise a slight swelling but the marks of the teeth were plainly visible.

As to the wonderful operation on his throat L. made a great mystery of it, and required a good deal of pressing before he could be induced to allow the scar to be seen. The reason of this unexpected modesty was apparent as soon as the part was shown, for the wound had obviously been self-inflicted. How any one could have imagined that such a wound had been made by a surgeon's hand, it is difficult to understand. When challenged on the subject, L. took refuge in the supposed *subtilis* nature of the transaction, a sudden awakening of conscientious scruples which was in amusing contrast with the extreme freedom of his voluntary confidences on all other matters relating to his professional experiences. Though the appearance of the scar itself was conclusive, the true nature of the "operation" was abundantly proved by the evidence of the records of the Royal Free Hospital, Gray's Inn Road, which, by a kind of poetical justice, the much-beguiled Mr. ——— was the means of bringing to light.

One point in L.'s exhibition which was undoubtedly genuine was his remarkable and stoical endurance of pain. He stood before us smiling and open-eyed while he ran long needles into the fleshy parts of his arms and legs without flinching, and he allowed one of the gentlemen present to pinch his skin in different parts with strong crenated pincers in a manner which bruised it, and which to most people would have caused intense pain. L. allowed no sign of suffering or discomfort to appear; he did not set his teeth or wince; his pulse was not quickened, and the pupil of his eye did not dilate as physiologists tell us it does when pain passes a certain limit. It may be said that this merely shows that in L. the limit of endurance was beyond the normal standard, or, in other words, that his sensitiveness was less than that of the average man. At any rate, his performance in this respect was so remarkable that some of the gentlemen present were fain to explain it by a supposed "post-hypnotic suggestion," the theory apparently being that L. and his comrades hypnotized one another, and thus made themselves insensible to pain. Such a power would have been invaluable to the Jews whose grinders were extracted by our Plantagenet kings, and to the heretics who fell into the clutches

of the Inquisition. So far-fetched an explanation is, however, unnecessary. As surgeons have reason to know, persons vary widely in their sensitiveness to pain. I have seen a man chat quietly with the bystanders while his carotid artery was being tied without the use of chloroform. During the Russo-Turkish war, wounded Turks often astonished English doctors by undergoing the most formidable amputations with no other anesthetic than a cigarette. Hysterical women will inflict very severe pain on themselves — merely for wantonness or in order to excite sympathy. The fakirs who allow themselves to be hung up by hooks beneath their shoulder-blades seem to think little of it, and, as a matter of fact, I believe are not much inconvenienced by the process.

The impression left on my mind by L.'s performance was mainly a feeling of wonder that so vulgar and transparent a piece of trickery should ever have imposed on any one. Yet, though having no scientific interest in itself, the "show" has a *foolometric* value of a very distinct kind. That any medical man should have thought "phenomena" such as those obligingly displayed by these subjects worthy of serious study is, as Carlyle would have said, "significant of much." What weight can be attached to the judgment of persons so devoid of the critical faculty when dealing with these matters? If they allow themselves to be gulled by so sorry an impostor as L., are they not likely to be as wax in the hands of subjects of a higher order, in whom a natural genius for deception has been developed, and I may say educated, by the unconscious tuition of scientific enthusiasts? I am willing to believe that some subjects may, like *Hamlet*, be "indifferent honest," at least at first; but it must be as difficult for a person who is habitually made the subject of such experiments to remain truthful as for a publican to be a total abstainer. The wish to please the investigator leads in the first instance to a little over-coloring; then come a harmless experiment or two on the scientific pundit's credulity, and so on, the appetite for deception growing by that it feeds on, to systematic imposture. Men are easily induced to see what they are anxious to see, and even the dry light of science does not always keep its votaries out of this pitfall. "Suggestion" often acts more powerfully on the operator than on the subject.

It is not too much to say that the majority of observations of hypnotic phenomena which we are invited to accept on the authority of men of acknowledged scientific competence and indisputable personal integrity are vitiated by the fundamental assumption that the subjects are trustworthy — that is, neither deceiving nor self-deceived. This source of fallacy is one to which the scientific experimenter is

perhaps peculiarly exposed. He is rather apt to look upon his subjects as the pathologists look upon their rabbits and guinea-pigs, simply as the abstract quantities, x , y , or z , in a scientific theorem, without taking into account the possible disturbing influence of the "personal equation." In investigating the phenomena of hypnotism, scientific phenomena must always be controlled and directed by the practical insight of the man of the world, and a cardinal principle in all such inquiries must be to look upon all experiments on trained mediums or hysterical subjects as utterly worthless. How even the best trained scientific judgment may be misled by disregard of this fundamental truth was only too well illustrated by the example of Charcot, who finally abandoned his researches in this department of neurology in disgust.

The rules of scientific criticism which should guide us in estimating the value of such experiments cannot be better formulated than they have lately been by Professor Moriz Benedikt of Vienna, in the following sentences: "1. Hypnotic phenomena in general cannot be accepted as scientifically established facts *without objective proof*. Performances at the command, or at the supposed wish, of the experimenter take place under the pressure of his authority, even in the case of persons who are not deliberate deceivers, relatively few persons being capable of independent volition and independent thought. 2. Only experiments on unprepared individuals who have not been initiated into the mysteries of hypnotism have any value; experiments on 'mediums' are worthless. 3. As a rule, only very few individuals and very few conditions are suitable for hypnotic treatment."¹

Professor Benedikt adds — and the vast majority of the medical profession will agree with him — that the repetition of such experiments on neurotic subjects cannot be too strongly condemned. Systematic hypnotization is not only useless, but actively harmful, as it has "a demoralizing influence on the intellect, the will, and the physical independence of the subject."

While, however, admitting as I have already said, that hypnotism is a reality, I repeat that the great bulk of the "phenomena" described by observers reputed to be "scientific" is founded on imposture. What is true in hypnotism is not new, — for it is only old-fashioned mesmerism masquerading under a newly coined Greek name — nor is it of any practical use to mankind. The "cures" attributed to its agency are exactly similar to those wrought by "faith-healing," when they are not altogether imaginary.

OLD DUTCH MASTERS.

PAUL POTTER (1625-1654).

AUL POTTER'S career was of short duration, but the number of excellent works which he executed, and the zeal and untiring energy with which he labored, were extraordinary. He was born at Enkhuizen, a fishing-village on the Zuyder Zee, November 20, 1625, and studied art under his father, an obscure landscape-painter; yet such was the precocity of his talent that at the age of fourteen years he executed a charming etching, and from that time forth produced work upon work. He lived for some years with his father at Amsterdam; then, at the age of twenty-one, went to Delft, where during two years he painted many of his finest things, including his large and famous work, "The Young Bull." In 1649 he took up his residence at The Hague, where he joined the Painters' Guild, and rose to fame and princely patronage. In 1650 he married, and in 1652 returned once more to Amsterdam, at the instance of one of his chief patrons, the burgomaster Tulp. Here, his health rapidly failing, he died in 1654 of consumption, superinduced by over-work.

During this brief period of not more than fourteen working years, the latter part of which must have been hampered by disease, he produced an astonishing amount of work, not to be matched in its kind. His paintings amount to 103, besides 18 etchings, together with numerous drawings and studies, including landscapes, and masterly heads of oxen and sheep in varied positions with difficult foreshortenings; trees and tree-trunks well understood and energetically executed; carts and plows, and all kinds of farming implements, showing singular precision of design.

"The Young Bull," considered as a piece of portraiture, is doubtless a splendid work. It is one of the most celebrated things in Holland, and The Hague Museum owes to it a large part of the curiosity of which it is the object. Though it may not fill all the requirements of a perfect picture,—and in this respect it has been the subject of criticism,—it nevertheless satisfies as a complete and conclusive portrayal of a bull, and has been rightly termed "The Bull." The animal shows its temperament, length, height, joints, bones, muscles, its hair rough or smooth, tangled or curled, its loose or tight skin, all in perfection. The gesture is true, and the head admirably living.

Consider its setting upon the canvas: it is placed upon a rising of ground, opposed to the wide sky and against a white cloud, becoming by this artifice, of paramount importance, as filling the eye at a glance, so that the other animals, with the herdsman in his safe retreat behind the tree (not a bull-tamer by any means, and the pastures beneath him, are but accessories—the bull is lord of the fields and pastures.

In point of execution it is marvelously minute: the single hairs upon the brute's head are seemingly palpable to the touch, and flies are seen buzzing about. This closeness of observation extends to the bark and foliage of the tree, and the grass and pebbles on the ground where also a toad is seen; yet although the artist appears to ignore the art of sacrifices, and the fact that things must sometimes be suggested and but half expressed, he does not lose sight of breadth. This work measures 8 feet 6 inches in height, by 9 feet 10 inches in width, and was painted in 1647, when the artist was but twenty-two years of age.

But Paul Potter does not succeed so well in his large pictures as in those of more moderate size. In many of his small works he evinces fine poetic feeling and depth of sentiment, and these are rightly his *chefs d'œuvre*. In the Louvre, for instance, there is a charming little work of this description 9 by 10 inches, painted in the same year as "The Bull,"—1647,—and catalogued under the title of "Horses at the Door of a Cottage." It is an evening effect. Here are mystery and beauty of tone, and, to know Paul Potter in his fullness, one must not overlook such works as these.

The Hague Museum possesses a portrait of Paul Potter painted by Van der Helst in 1654, and as Potter died in January of that year, it follows that this portrait must have been completed but a few days before his death. It shows a sensitive and refined countenance, light hair and eyelashes, full, strong lips, and delicate mustache. He is clad in velvet, and sits by his easel with palette and brushes in hand, looking out at the spectator with a serious, determined expression. It seems very remarkable that this should be the likeness of a man wasted with consumption, and at death's door. But it is not more remarkable than his life, which was one of prodigious labor, and wonderful perseverance.

COMMERCIAL BOOKBINDING.

NOTES OF A BOOK-LOVER.

DESIGNED BY D. S. MACCOLL. PUBLISHED BY T. FISHER UNWIN, LONDON.

"GREEK VASE PAINTINGS,"
BY D. S. MACCOLL AND J. E. HARRISON.

I.

IN one of the annual volumes of "La Vie à Paris," stout tomes of cheerful gossip, intermitted now that the author is the director of the Théâtre Français, and a member of the French Academy, M. Jules Claretie tells a pleasant anecdote of a contemporary Parisian binder who was asked to cover one of the beautiful books which M. Conquet sends forth spasmodically from his little shop, and who drew back with scorn, declaring, "Sir, I will not dishonor myself by binding a modern book."

This craftsman's pride it was, no doubt, to clothe the stately Aldine and the pigmy Elzevir in fit robes of crushed morocco, decorating them with delicate gold traceries tooled bit by bit, and lingered over lovingly. To him it would have been a sad shock, had he been told suddenly that, in the eyes of the average reader, a book is bound when it is merely cased in a cloth-cover whereon a pattern has been imprinted by machinery. Yet so it is.

Not as ours the books of old —
Things that steam can stamp and fold ;
Not as ours the books of yore —
Rows of type, and nothing more.

Ours are not the books of old, but sometimes,
when they are the result of taking thought and

pains, they have a merit of their own ; and nothing that steam can stamp and fold may be lovely in its way as the poet's missal of the thirteenth century, around which the illuminator and brother monks sang "little choruses of praise." The beauty of the modern book is not that of the book of yore. There will always be between them the difference which separates machine-work from that done by hand — a difference wide enough, and deep enough, to admit of no denial. But the volumes stamped by steam may have their own charm and their own qualities—to say nothing of their superior fitness for the nineteenth century, when democracy is triumphant.

The books bound in thousands for publishers are mostly ill-bound from haste and greed, from ignorance and reckless disregard of art. But once in a way they attain a surprisingly high level. Just how excellent some modern commercial bindings are, scarcely any of us have taken time to discover ; for we are prone to overlook not a few of the best expressions of contemporary art, natural outgrowths of modern conditions, in our persistent seeking for some great manifestation which we fail to find. Great manifestations of art are hopelessly rare : and

"MANY INVENTIONS," BY RUDYARD KIPLING.

little things far more often attain perfection and reward our seeking. A chromolithographic placard does not seem to promise much — but in M. Cheret's hands the "poster" is never insipid, and has often a most engaging and masterly originality. Cast-iron is an unlovely material — but, by recognizing its limitations, Alfred Stevens was able to give dignity to the

ing is entirely an English invention." Just as the fine-art of bookbinding began in Italy during the Renaissance, and was most highly cultivated in France, so the art of cloth-binding, arising in Great Britain, has been carried to a higher level of mechanical perfection by machines invented or mightily improved in the United States; and I am inclined to think that

little lions on the outer rail at the British Museum. So a book-cover stamped by steam may be a thing of beauty if it is designed by Mrs. Whitman or by Mr. Stanford White. It is a fact that commercial bookbinding, often ignorantly looked down on, is now at a most interesting stage of its history; and it seems to me very well worth while to consider some of its recent successes.

In a paper on "Bookbinding considered as a Fine-Art, Mechanical Art and Manufacture," read before the Society of Arts in London, Mr. Henry B. Wheatley declared that "cloth-bind-

the principles which should govern the decoration of cloth-covers are better understood in New York than in London — in so far at least as one may judge from the results of their application.

While it is true enough that cloth-binding is an English invention, commercial binding, "edition work," as it is called, is almost as old as printing itself. The early printers, from Aldus in Venice to Caxton in London, were binders as they were also publishers; and very early in the history of the trade were there attempts to simplify the toil of the finisher who

decorated the leather sides and backs of the broad volumes. In the finest of the early books every touch of gold on the cover was made by a separate tool, which the skilled workman impressed on the leather at least twice, once without the gold and once to affix it, a slow, laborious and expensive process.

One of the first of the devices adopted as a short cut was the *roulette* or roll, a complete pattern engraved on the circumference of a wheel, and reproducing itself as the wheel was rolled across the leather. The roulette served for borders and frameworks; it was often most admirably engraved; and its employment was not altogether injurious if proper care was taken to match the corners with precision. In these days when omniscience is everybody's foible, it may seem like affectation for me frankly to confess ignorance as to the origin of the roll, but I think it was first seen in Italy.

In like manner I must avow that I do not know for certain the origin of the next labor-saving device, but I think it came from Germany; and beyond all question its use was most frequent there. This was the combination of engraved blocks into a pattern more or less appropriate to the book. The binder had in stock a variety of these blocks, of different sizes and independent in subject, or related in pairs, or even in sets of four; and he would rearrange these corners, center-pieces, and panels as best he could to suit every succeeding book, availing himself also of the roll, and falling

back on hand-work where the occasion seemed to demand it. Careless as this method often became, it was still a crude form of design, even though the toil of the hand was minimized to the utmost.

But one step needed to be taken to get rid altogether of hand-work on the cover; this was to engrave a design for the whole side of a book, and to stamp it on at a single stroke of a press. These plates — *plaques* is the French term — were probably first employed by the Italians; but the most noted of those who made early use of them was a Frenchman, Geoffroy Tory, the friend of Grolier, and the would-be reformer of the alphabet. All collectors know the plate he designed for the Book of Hours he printed, which was a staple of the book trade, and for which there was an unflinching demand. Tory's plate was original and complete in itself, but another plate contemporary with it, and also reproduced in the invaluable essay of M. Marius Michel on "La Reliure Française, Commerciale et Industrielle," is complete; it was intended to spare the time and trouble needed to adorn a book-cover with the elaborately interlacing arabesques of the Grolier type; but it left to the hand of the workman the task of adding the name of the owner of the book, the scattered gold dots which greatly enriched the appearance, and a few other details here and there. It is instructive to note how adroitly the means have been adjusted to the end.

These three devices, the roll, the combination of blocks, and the plate complete or incomplete, mark different stages of the development of wholesale binding; and they existed simultaneously for centuries. M. Marius Michel declares that out of every hundred of the smaller sized volumes sent forth by the printer-publishers of the sixteenth century, eighty have their sides stamped by a plate simulating hand-work. The original editions of Rabelais of

Montaigne, of Ronsard and of Clément Marot, were issued more often than not with plate-marked sides. There is in M. Marius Michel's essay a drawing of a block used to aid in the imitation of the brilliant *fanfares* of Le Gascon. There is in M. Gruel's "Manuel Historique" a most sumptuous binding by Derome, in which

never rival the personal hand — for art is indeed only individuality. M. Zola defines art as "nature seen through a temperament" — and even in the decorative arts personality is omnipotent. But by abandoning all thought of imitating hand-work, modern commercial book-binding has a fair chance of developing accord-

there was no hand-tooling at all, save perhaps a monogram or a coat-of-arms here and there; it is formed by combining corners and border-pieces, and it was stamped in a press.

The chief characteristic of the early German, Italian, and French commercial binding is that it was an imitation of artistic binding done wholly by hand. It was a humbug trying to pass itself off as something other than it really was, and failing of course as fraud always fails. It was forever forging the designs it found on the books of the best binders, and very often its thefts were stupid, although once in a while they were adroit. Now this copying was foolish, because in art the impersonal machine can

ing to its own conditions. The machine has tireless power of production and absolute regularity; and it is for those who set the machine going to supply that personal touch without which all art is as naught.

II.

THIS is the great merit of modern commercial bookbinding done by machinery — that it is independent, that it has freed itself from the trammels and the traditions of hand-work, that it is no longer a savorless sham copying blindly, that it lives its own life. It recognizes the fact, obvious enough nowadays, that we cannot all be as Heber, to whom Ferrier sang:

"THE BALLAD OF BEAU BROCADE," BY AUSTIN DOBSON.

The folio Aldus loads your happy shelves,
And dapper Elzevirs, like fairy elves,
Shew their light forms amidst the well-gilt
twelves.

In this change Great Britain and the United States have led the way, followed for once by France, and, after an interval, by Germany. It was in frugal Germany that "half-binding" had its origin. Half-binding is a money-saving contrivance, which lordly book-lovers have reprobated as equivalent to genteel poverty. The Jansenists used to keep the leather sides of their books free from ornament; and some sparing German carried this simplicity one step further, substituting paper for the plain surface of leather, and using morocco and calf only for the back and a narrow but needful hinge on each side. To push this economy a little further yet was easy, and so it came to pass in the last century that the English binders omitted altogether the leather, and covered both the sides and the back with paper. Strictly speaking, those books were not bound at all; they were merely cased — that is, sheathed in boards. A casing of this kind was the most temporary of makeshifts. Every librarian knows how fragile are the paper and pasteboard which envelop the books of the last century. The back is prone to crack and to peel off, and the sides are prompt to break away; the method was as slovenly and as inconvenient as possible.

Early in this century the disadvantage of paper-covered boards led to the use of plain

glazed calico in place of the paper. There was at first no thought of decoration: the plain calico was substituted for the plain paper because it was stronger and did not chip and tear quite so easily; the title was still printed on a label of white paper, and pasted on the back of the volume. The exact date of this improvement is in doubt. I have among my Sheridaniana the third edition of Dr. Watkins's "Memoirs of the Public and Private Life of the Right Honorable Richard Brinsley Sheridan," printed for Henry Colburn in 1818, and both volumes are clad in glazed calico, with a slightly ribbed surface and of a faded purple tint. The date of the biography is that of the binding. "Constable's Miscellany," the publication of which was begun in 1827, is said to have been the first collection regularly bound in cloth; the cases were covered in the simplest fashion with plain calico, and distinguished by a paper label. The edition of Byron's works in seventeen volumes published in 1833 is supposed to have been the first work issued without the paper label, and with the title printed in gold on the backs of the books.

Stamping was probably done by a hand-press, such as British binders kept ready to impress on the sides of leather-covered volumes the broad block with the owner's arms. From this "arming-press," as it was called, has been evolved by slow degrees the powerful and rapid machinery of the modern bindery. Murray's "Family Library" was probably the first series on which the title was printed with ordinary ink. Then came, in 1832, Charles

DESIGNED BY MRS. HENRY WHITMAN. PUBLISHED BY HOUGHTON, MIFFLIN & CO.

"AN ISLAND GARDEN," BY CELIA THAXTER.

Knight's "Penny Magazine," and, in 1833, his "Penny Cyclopædia," the successive volumes of which were bound by Archibald Leighton in stamped cloth. Mr. Wheatley says that at first the cloth was stamped before it was put on the boards, a proceeding which proved unsatisfactory from the beginning, so the boards were covered with the cloth, which was then stamped.

Thereafter the art speedily improved. The cloth was dyed to any desired color; and it was run through rollers to give it any desired grain or texture. The old-fashioned arming-press was modified and made stronger; and steam was swiftly substituted for foot-power. Subsequent improvements enabled the pattern to be

to invent ornament for the outside of cloth-bound books were free from the disadvantages under which their fellow-laborers in France were placed. In France there still lingered the dominating influence of the traditions of the great biblioepic artists of the past, and there was pressure on the designer to devise a decoration which should make his machine-made cloth cover look like the slowly tooled leather of a book bound by hand. In England where the solid cloth-casing was hailed as a manifest improvement on the flimsy paper-boards which had immediately preceded it, there existed no such pressure, for no one seemed to see any necessary connection between the new cloth-work

DESIGNED BY EDWIN A. ABBEY AND ALFRED PARSONS.

"THE QUIET LIFE."

imprinted on the side and back of the book in as many colors as an artist could use to advantage or the publisher was willing to pay for. And the work can be done with extraordinary speed; it is no unusual thing now for a bindery to turn out several thousand copies of a book in the course of twenty-four hours.

Here we come to the essential difference between bookbinding by hand and bookbinding by machinery. In artistic hand-work the book is bound in leather and then decorated. In edition work the cloth case is made and decorated apart from the book itself, which is afterward fastened in. The former is a slow process, and in its higher manifestations it is an art. The latter is a rapid process, and it is wholly mechanical, except in so far as the designer of the stamp is concerned. And therefore it is on the designer of the stamp that the duty lies of making beautiful the books demanded by our modern and democratic civilization.

In Great Britain those who were called upon

and the old artistic leather-work. So the designers were at liberty to develop a new form of decoration suitable to the new conditions. In this endeavor they have been unexpectedly successful; indeed, there is hardly any form of modern decorative art which has achieved its aim more satisfactorily. One might hazard the suggestion that there has been less copying and less conventionality, more inventiveness and greater appropriateness, in the commercial bindings of England and America during the past thirty years than in the avowedly artistic "extra" binding.

Of course there have been countless millions of tomes disfigured by hideous covers; and of course every one of us can recall cloth cases which were the epitome of everything they should not be. But a selection of machine-made covers most pleasing to the trained taste is equally easy. When Thoreau bought back the many unsold copies of his first book, "A Week on the Concord and Merrimac Rivers,"

remarking with characteristic humor that he had now a library of nearly nine hundred volumes, more than seven hundred of which he had written himself, he had added to his collection books probably quite as appropriately bound as those which he owned before. No doubt if he could see the neat attire his "Walden" wears now it is included in the trim and tasteful Riverside Aldine Series, Thoreau would acknowledge that he could ask no fitter garb for his offspring. Nor could there be anything more modestly satisfactory than the maidenly simplicity of the little tomes in this series, with their smooth blue cloth, with their chaste lettering, and with the golden anchor of Aldus — a hopeful emblem of good books yet to come.

more time and attention on the decoration of the books he offers for sale.

Consider, for example, the gaudy cover which the British publisher put on Mr. Du Chaillu's "Land of the Midnight Sun," and compare it with that prepared by Mr. E. A. Abbey for the American edition. A true book-lover would be in haste to get Mr. Du Chaillu's entertaining work out of the British cloth case; but he would feel it absurd to wish to rebind a copy adorned with Mr. Abbey's cover. He would be ready to echo Hawthorne's protest against those who "strip off the real skin of a book to put it into fine clothes."

Again, take Mr. Vedder's remarkable edition of Fitzgerald's "Rubaiyat of Omar Khayyám."

DESIGNED BY EDWIN A. ABBEY.

"SELECTIONS FROM ROBERT HERRICK."

PUBLISHED BY HARPER & BROS.

In comparing many modern books to select illustrations and examples for this paper, I have been led to the conclusion that there is more thought given to book-decoration in the United States than in Great Britain. There are not a few beautiful book-covers to be found in the shops of British booksellers, but not so many, I venture to think, as might be collected from American publishers. And the reason of this, I take it, is partly that the British are borrowers of new books rather than buyers, and partly that the British still desire to have the books worth owning bound finally in leather, and they therefore still look upon the cloth case as merely a temporary convenience. The American reader, for the most part, accepts the cloth binding as a permanency; and the American publisher is moved, therefore, to expend

for which the artist designed the cover-stamp. To rebind this folio, even in the most sumptuous crushed levant, is to deprive one's self of not the least interesting of the illustrations by which the American painter has interpreted the Persian poet. And what could be more ingenious or more characteristic than the Dutch tile which is seemingly set into the golden cover of the "Sketching Rambles in Holland" of Mr. George H. Boughton and Mr. E. A. Abbey?

Simplicity is an ingredient of dignity, and there are book-lovers who love simplicity above all things, having a Jansenist taste even in cloth bindings. There is nothing noisy or fussy in the cover of Mr. Harold Frederic's "In the Valley," due to the pencil of Mr. Harold Magonigle, or in the cover of Mr. Aldrich's "Sisters' Tragedy," with its severe and yet elegant

DESIGNED BY HAROLD S. SHERWIN. PUBLISHED BY THE CENTURY CO.
PANEL FROM BACK AND COVER OF "OLD ITALIAN MASTERS."

myrtle wreath designed by Mrs. Whitman. To Mrs. Whitman also is due the credit for the tealeaf border of Dr. Holmes's "Over the Teacups," with its vigorous lettering, and its subordinate teapot of a fashion now gone by. None of Mrs. Whitman's book-covers is frivolous or finicky; they have always reserve and purity.

Yet decorations of this chaste severity are not alone on our book-shelves; and there are not a few devised on other principles and compounded in another fashion. Some satisfaction there is in finding an old German woodcut border doing duty on the cover of Mr. Woodberry's "History of Wood Engraving," or in observing the apt use of the orange with its full fruit and its green leaves as they are wreathed in the arabesques of the medallions which adorn the back and side of Mr. Lafcadio Hearn's "Two Years in the French West Indies," and which were designed by Miss Alice E. Morse, with a full understanding of the value of color on a book-cover, and an apt appreciation of the technical means whereby it is best to be attained. It is essential to good decorative design, whatever its kind, whether it be a book-cover or a wall-paper, a carpet or a tapestry, a carved panel or an inlaid floor, that the artist shall recognize technical limitations, shall perceive technical possibilities, and shall be in sympathy with the material employed. The decorative artist must be swift to seize that one of the processes presenting themselves which will best suit his immediate object. "One reason for our modern failures lies in the multitude of our facilities," suggests Mr. Lewis F. Day in his little book on the "Application of Ornament," and he adds that "the secret of the ancient triumphs is often in the simplicity of the workman's resources." Where a man has but a single tool, he must perforce devise ornament which that single tool can accomplish, or else

go without ornament altogether. Out of the struggle comes strength.

When we see the rather violently polychromatic cover which that most accomplished artist Jules Jacquemart placed on the book on "La Céramique" illustrated by him, we cannot but wonder whether he would not have given us something quieter and more beautiful, if the resources of modern color-printing had not been ready to his hand. And yet, nothing venture, nothing have: the decorative artist, if he wishes to get outside the little circle of every-day banality, must try the hazard of new fortunes as often and as boldly as the explorer or the soldier. Often he will discover strange countries fair to see, which he will annex forthwith.

Sometimes the search for novelty is rewarded only by a chance fantasticality. A volume of ghost-stories by Mrs. Molesworth had a plain cloth cover, from the side of which, as one gazed at it, there seemed suddenly to start a shadowy figure — due to a stamp which did no more than remove the glaze of the calico, not changing its color. Colonel Norton's glossary of "Political Americanisms" was covered with a dark-blue cloth turned inside out, and exposing a blue-gray grain, on which there was printed, in the original dark blue, the title, set off by the figure of the fearsome gerrymander. But these are trifles — the casual freaks of commercial bibliopeggy.

III.

MORE fertile is the effort to find special cloths for special books, to enlarge the number of fab-

rics from which the binder may choose. The very step in advance which M. Octave Uzanne urged upon the artistic bookbinders of France has been taken by the commercial bookbinders of America; and we are constantly seeing new stuffs impressed into the service. M. Uzanne claims the invention of the *cartonnage à la Pompadour*, the clothing of a light and lively tale of

some woven material such as is used in the nursery for the pinafores of childhood; and the same publisher covered Mr. Riis's stimulating account of "How the Other Half Lives," with a stuff very like that from which the laborer's overalls are made, a most appropriate garment for a book like Mr. Riis's. Messrs. Houghton, Mifflin & Co. have made experiment of a more

"RUBAIYAT OF OMAR KHAYYAM."

the eighteenth century in a brocade or a damask of the period. This is almost exactly what a publisher in Boston did when he sent forth Mrs. Higginson's "Princess of Java," clad in the cotton which the Javanese wear. It was what a publisher in New York did when he sent forth Mr. Lascadio Hearn's "Youma," the story of a slave, covered with the simple fabric that slaves dress in. It was what a London publisher did when he sent forth a tiny little tome of old-time fashions, "Our Grandmothers' Gowns," bound with the chintzes and calicoes of bygone days.

The American edition of Charles Lamb's "Poetry for Children" was issued by Messrs. Charles Scribner's Sons in a half-binding of

esthetic fabric, Persian silk; they used it for the back of Miss Jewett's "Strangers and Wayfarers," on which it contrasted boldly with the white side bearing Mrs. Whitman's decorative lettering imprinted in the color of the silk; and they employed it again for Browning's latest volume of poems, "Asolando," in this case covering the whole book, one side of which was further decorated by a dignified panel and border of Mrs. Whitman's designing. I know of no recent commercial binding more satisfactory than this, or more adequate to its purpose, the appropriate sheathing of a poet's last words.

This same house published the "Book of the Tile Club," a portly folio bound in sturdy canvas—a material already used by Mr. Marvin

A COPY OF THE SAMPLER WORKED BY THE "GIRL," LETTERED BY A. HILGENREINER, DIE-CUTTER. PUBLISHED BY CHARLES SCRIBNER'S SONS.

"A GIRL'S LIFE 80 YEARS AGO," BY ELIZA SOUTHGATE BOWNE.

(for Messrs. Charles Scribner's Sons) in the cover of "A Girl's Life 80 Years Ago" (whereon the title was printed in imitation of a child's sampler, a pleasant fantasy). The "Book of the Tile Club" was altogether a more imposing tome, with its delightfully decorative side-stamp by Mr. Stanford White, with its prominent (not to call them aggressive) nerves across the back, with its brass-bound corners, with every page separately and securely mounted on a linen guard, and with its personal and peculiar end-papers wherein we can trace the portraits or insignia of the Tilers, every one with his *nom de guerre*. "The Book of the Tile Club" was aimed high; and it hit its mark fairly and squarely in the bull's eye.

End-papers of special design are among the refinements of book-making, which might be seen oftener than they are when publishers are giving time and thought to the preparation of an exceptional volume. Those in the Grolier Club edition of the "Philobiblon" were admirably in keeping with the text. They may even be made useful, as they were in Dr. Eggleston's histories of the United States, where they are maps. But supplementary delicacies of this sort can be expected only when, in the phrase of the Chicago art-critic, "the book is illustrated by the celebrated French artist De Luxe." Still rarer is another ancillary adornment to be found in certain proof copies of Mr. W. J. Lofstie's "Kensington: Picturesque and Historical." These, it was announced by the publisher, would "have painted in water-colors on the front, under the gilt edges of the leaves, a couple of Kensington views, which, until the leaves are

bent back at an angle, will be invisible." In Mr. S. P. Avery's copy of the Grolier Club edition of Irving's "Knickerbocker," the water-colors under the gilt of the fore-edge are the work of Mr. G. H. Boughton. But this is an excursion. There are so many byways of booklore that the book-lover can hardly help digressing occasionally.

IV.

FROM the beginning commercial binding has concerned itself chiefly with cloth, with but an occasional venture with other fabrics, linen, or dimity, or silk. The few copies of certain single books, and of full sets of certain authors, which publishers now and again advertise as ready in half-calf, in tree-calf, or in crushed levant-morocco are not really commercial bindings; they are more or less artistic bindings done chiefly by hand, but done wholesale. Generally they are to be avoided by all who hope to see their books really well bound, for they lack the loving care with which a conscientious craftsman treats the single volume intrusted to him to bind as best he can; and they are also without the merits of another sort which we find in the best cloth coverings. Sometimes, of course, the sets which publishers offer in leather are honestly forwarded and thoroughly finished; but for the most part they are hasty and soulless.

To the true book-lover's eye no crushed levant can be too fine or too magnificent for the books he truly loves:

DESIGNED BY J. A. SCHWEINFURTH.

PUBLISHED BY LITTLE, BROWN & CO.

"THE OREGON TRAIL," BY FRANCIS PARKMAN.

In red morocco drest he loves to boast,
The bloody murder, or the yelling ghost;
Or dismal ballads, sung to crowds of old,
Now cheaply bought for thrice their weight in gold.

Knowing this, some American publishers have issued the whole edition of certain books bound

tooled side, and not an original design of a nature appropriate to the individual book. It is the quality of modern commercial bookbinding that it has separated itself wholly from the traditions of hand-tooling, and that it stands on its own merits. Consider the massive and substantial solidity of the side-stamp Mr. Stanford

DESIGNED BY HOWARD PYLE.

PUBLISHED BY CHARLES SCRIBNER'S SONS.

"THE MERRY ADVENTURES OF ROBIN HOOD," BY HOWARD PYLE.

in full leather, and with the covers stamped in appropriate designs. Here we have the methods of the best cloth-binding applied to the best material, leather. These books are as carefully forwarded and finished as though they were hand-work; indeed, almost the only objection the purist might make against them would be the saw-cuts in the back; and this objection is minimized by the fact that the volume is now permanently clothed, and that there will therefore be no need to rebind it.

Although plates were engraved even in the fifteenth century to stamp the sides of leather-bound books, the practice had long ceased except so far as dictionaries, prayer-books, and bibles were concerned; and even in its palmiest days the plate was an imitation of a hand-

White designed for the "Century Dictionary," and note how different it is in its vigorous firmness from even the most elaborate hand-tooling. Technically, this dictionary cover is most interesting, for the design is impressed on damp sheepskin by a heated plate, which changes the tone of the leather, thus imparting to the decoration color as well as relief.

Although I recall the stamped leather cover of the photolithographic facsimile of the first folio of Shakspeare,—blind-tooled in accordance with Teutonic tradition,—I think that it is only within the past decad, and here in the United States, that publishers have made a practice of issuing the whole edition of certain beautiful books bound in leather stamped by machinery as though it were cloth. Mr. Howard Pyle's

resetting of "Robin Hood" was issued by Messrs. Charles Scribner's Sons in 1883 with a leather cover embossed with a Düreresque design by the artist-author. Then came the lovely volumes illustrated by Mr. E. A. Abbey with the collaboration of Mr. Alfred Parsons, and published by Messrs. Harper & Brothers. For Goldsmith's "She Stoops to Conquer," an ample folio, Mr. Stanford White devised a cover decoration, modern, tasteful, and graceful; a border surrounded the two sides and the back, here treated as if they were a single plane surface (although outlined straps crossed the back), and a cartouche on the side held the title of the work and the name of the artist who had made the sprightly and refined drawings that illustrated it. The gold of the lettering was of a different tone from the gold of the decorative design; and by another mechanical device the filleted border was filled by a ribbed surface.

Quite as effective as this, although simpler, was the cover of "The Quiet Life" of Messrs. Abbey and Parsons, with its "powder" of flowers, also due to the ingenuity of Mr. White. From the same publishers have since come the "Old Songs" by the same illustrators, the "Sonnets by William Wordsworth," with drawings by Mr. Parsons alone, and "The Boyhood of Christ," of General Lew Wallace, the covers of which were all conceived in the same spirit as the two earlier books, although they lacked something of the distinction Mr. White gave to his handiwork. For the edition of Longfellow's "Hiawatha," to the illustrating of which Mr. Frederic Remington brought his extraordinary knowledge of Indian manners and modes of thought, the publishers, Messrs. Houghton, Mifflin & Co., prepared a most appropriate cover of buckskin, and on the rough, brown-red surface of this Mrs. Whitman's side-stamp stood out brilliantly. So far as I know, buckskin had not before been used in bookbinding in America, although it seems to be a fit material to clothe the many books of frontier life: the late Édouard Fournier records that many of the old monkish bindings were of deerskin — so, as usual, the novelty turns out to be an antiquity.

Vellum, which was once a favorite skin with the old bookbinders, has gone out of use al-

"EVENING TALES," BY JOEL CHANDLER HARRIS.

most everywhere except in Italy. It was employed in covering the "Autobiography of Joseph Jefferson," for which Mr. George Wharton Edwards designed a rich and ingenious Renaissance side-stamp to be embossed on the yielding leather. Vellum was also utilized by the Grolier Club to clothe its unequalled edition of the "Philobiblon," but in this case the only decoration was the seal of the good Bishop of Bury.

V.

HERE I come to the end of my notes on the art of commercial bookbinding, an art which, in this mechanized age, is perhaps most flourishing in this country of inventive mechanics. It is one of the most important forms of household art — of decorative art. Properly understood, and intelligently practised, it is capable of educating the taste even of the thoughtless, and of giving keen enjoyment to those who love books for their own sake. There needs no argument to prove that it is not an art to despise which has called forth the energy of M. Giacomelli and Jules Jacquemart, of Mr. William Morris and Mr. Walter Crane, of Mr. E. A. Abbey, Mr. Elihu Vedder, and Mr. Howard Pyle, of Mr. Stanford White and Mrs. Whitman.

Brander Matthews.

FROM A DAGUERRETYPE OWNED BY MR. ROBERT LEE TRAYLOR.
EDGAR ALLAN POE.¹

POE IN NEW YORK.

SELECTIONS FROM THE CORRESPONDENCE OF EDGAR ALLAN POE.

EDITED BY GEORGE E. WOODBERRY.

POE removed to New York from Philadelphia in the early spring of 1844. He had no regular employment until the fall, when he was taken on the staff of the "Evening Mirror," edited by Willis. In February, 1845, Lowell's life of Poe was published in "Graham's," and the same month saw the publication of "The Raven." In March Poe became co-editor, with C. F. Briggs, of "The Broadway Journal"; in July he became sole editor, and in October proprietor, of this periodical, which expired in January, 1846. He never again held an editorial position, but strove to

live by contributing to as many magazines and papers as would publish his writings. In June, 1846, he was attacked by Thomas Dunn English in the "Evening Mirror," and brought a suit for libel, which he won in February, 1847. He was very poor during that winter, and aid for him was publicly solicited in the press. On January 30, 1847, his wife died. During his life in New York a prominent feature in his career was his friendship with several women, and after his wife's death these friendships took the form of proposals for marriage in two cases, those of Mrs. Whitman of Providence, and Mrs. Shelton of Richmond. These facts sufficiently explain the remaining correspondence in its general aspect.

¹ This daguerreotype, made by Pratt of Richmond, was presented by Poe, a short time before his death, to Mrs. Sarah Elmira (Royster) Shelton, whom he had engaged to marry. It is believed to be his last portrait. The portrait of Poe in the September number, from the daguerreotype made by Chilton and owned by Mr. Thomas J. McKee, so closely resembles that printed

with Hirst's Biography in the "Philadelphia Saturday Museum," March 4, 1843, as to suggest that the latter, though very rude in execution, was copied from it, and to place its authenticity beyond doubt. Both portraits, as well as Mr. Sterner's picture on p. 856, will appear in the forthcoming complete edition of Poe to be published by Stone & Kimball.

The first letter of importance is an appeal for aid to his old correspondent, Dr. Charles Anthon of Columbia College.

POE TO ANTHON.

June, 1844.

MY DEAR SIR: Many years have elapsed since my last communication with you, and perhaps you will be surprised at receiving a letter from me now—if not positively vexed at receiving one of so great a length and of such a character. But I trust to your goodness of heart for a patient hearing at the least.

You will have already seen that, as usual, I have a favor to solicit. You have, indeed, been to me in many respects a good genius and a friend, but the request I have to make now is one of vital interest to myself—so much so that upon your granting it, or refusing it, depends, I feel, much if not all of the prosperity, and even comfort, of my future life.

I cannot flatter myself that you have felt sufficient interest in me to have followed in any respect my literary career since the period at which you first did me the honor to address me a note while editor of the "Southern Messenger." A few words of explanation on this point will therefore be necessary here.

As I am well aware that your course of reading lies entirely out of the track of our lighter literature, and as I take it for granted, therefore, that none of the papers in question have met your eye, I have thought it advisable to send you with this letter a single tale as a specimen. This will no doubt put you in mind of the trick of the Skolastikos—but I could not think of troubling you with more than one. I do not think it my best tale, but it is perhaps the best in its particular vein. Variety has been one of my chief aims.

In lieu of the rest, I venture to place in your hands the published opinions of many of my contemporaries [appended to Hirst's "Life of Poe"]. I will not deny that I have been careful to collect and preserve them. They include, as you will see, the warm commendations of a great number of very eminent men, and of these commendations I should be at a loss to understand why I have not a right to be proud.

Before quitting the "Messenger" I saw, or fancied I saw, through a long and dim vista, the brilliant field for ambition which a Magazine of bold and noble aims presented to him who should successfully establish it in America. I perceived that the country, from its very constitution, could not fail of affording in a few years a larger proportionate amount of readers than any upon the earth. I perceived that the whole energetic, busy spirit of the age tended wholly to Magazine literature—to the curt, the terse, the well-timed, and the readily diffused, in preference to the old forms of the verbose and ponderous and the inaccessible. I knew from personal experience that lying *perdu* among the innumerable plantations in our vast Southern and Western countries were a host of well-educated men peculiarly devoid of prejudice, who would gladly lend their influence to a really vigorous journal, provided

the right means were taken of bringing it fairly within the very limited scope of their observation.

Now, I knew, it is true, that some scores of journals had failed (for, indeed, I looked upon the best success of the best of them as failure), but then I easily traced the causes of their failure in the impotency of their conductors, who made no scruple of basing their rules of action altogether upon what had been customarily done instead of what was now before them to do, in the greatly changed and constantly changing condition of things.

In short, I could see no real reason why a Magazine, if worthy the name, could not be made to circulate among 20,000 subscribers, embracing the best intellect and education of the land. This was a thought which stimulated my fancy and my ambition. The influence of such a journal would be vast indeed, and I dreamed of honestly employing that influence in the sacred cause of the beautiful, the just, and the true.

Even in a pecuniary view, the object was a magnificent one. The journal I proposed would be a large octavo of 128 pages, printed with bold type, single column, on the finest paper; and disdaining everything of what is termed "embellishment" with the exception of an occasional portrait of a literary man, or some well-engraved wood-design in obvious illustration of the text. Of such a journal I had cautiously estimated the expenses. Could I circulate 20,000 copies at \$5, the cost would be about \$30,000, estimating all contingencies at the highest rate. There would be a balance of \$70,000 per annum.

But not to trust too implicitly to *a priori* reasonings, and at the same time to make myself thoroughly master of all details which might avail me concerning the mere business of publication, I entered a few steps into the field of experiment. I joined the "Messenger," as you know, which was then in its second year with 700 subscribers, and the general outcry was that because a Magazine had never succeeded south of the Potomac, therefore a Magazine never could succeed. Yet, in spite of this, and in despite of the wretched taste of its proprietor, which hampered and controlled me at all points, I increased the circulation in fifteen months to 5500 subscribers paying an annual profit of \$10,000 when I left it. This number was never exceeded by the journal, which rapidly went down, and may now be said to be extinct. Of "Graham's Magazine" you have no doubt heard. It had been in existence under the name of the "Casket" for eight years when I became its editor, with a subscription list of about 5000. In about eighteen months afterward, its circulation amounted to no less than 50,000—astonishing as this may appear. At this period I left it. It is now two years since, and the number of subscribers is now *not more* than 25,000—but possibly very much less. In three years it will be extinct. The nature of this journal, however, was such that even its 50,000 subscribers could not make it very profitable to its proprietor. Its price was \$3, but not only were its expenses immense, owing to the employment of absurd steel plates and other extravagances, which tell not at all, but recourse was had to innumerable agents,

DRAWN BY ALBERT E. STERNER.

ELEANORA.

who received it at a discount of no less than fifty per cent., and whose frequent dishonesty occasioned enormous loss. But if 50,000 *can* be obtained for a \$3 Magazine among a class of readers who really read little, why may not 50,000 be procured for a \$5 journal among the true and permanent readers of the land?

Holding steadily in view my ultimate purpose, — to found a Magazine of my own, or in which at least I might have a proprietary right, — it has been my constant endeavour in the mean time, not so much to establish a reputation great in itself as one of that particular character which should best further my special objects, and draw attention to my exertions as Editor of a Magazine. Thus I have written no books, and have been so far essentially a Magazinish [illegible] bearing, not only willingly but cheerfully, sad poverty and the thousand consequent contumelies and other ills which the condition of the mere Magazinish entails upon him in America, where, more than in any other region upon the face of the globe, to be poor is to be despised.

The one great difficulty resulting from this course is unless the journalist collects his various articles he is liable to be grossly misconceived and misjudged by men of whose good opinion he would be proud, but who see, perhaps, only a paper here and there, by accident — often only one of his mere extravaganzas, written to supply a particular demand. He loses, too, whatever merit may be his due on the score of *versatility* — a point which can only be estimated by collection of his various articles in volume form and all together. This is indeed a serious difficulty — to seek a remedy for which is my object in writing you this letter.

Setting aside, for the present, my criticisms, poems, and miscellanies (sufficiently numerous), my tales, a great number of which might be termed fantasy pieces, are in number sixty-six. They would make, perhaps, five of the ordinary novel-volumes. I have them prepared in every respect for the press; but, alas, I have no money, nor that influence which would enable me to get a publisher — although I seek *no* pecuniary remuneration. My sole immediate object is the furtherance of my ultimate one. I believe that if I could get my tales fairly before the public, and thus have an opportunity of eliciting foreign as well as native opinion respecting them, I should by their means be in a far more advantageous position than at present in regard to the establishment of a Magazine. In a word, I believe that the publication of the work would lead forthwith either directly through my own exertion, or indirectly with the aid of a publisher, to the establishment of the journal I hold in view.

It is very true that I have no claims upon your attention, not even that of personal acquaintance. But I have reached a crisis of my life in which I sadly stand in need of aid, and without being able to say why, — unless it is that I so earnestly desire your friendship, — I have always felt a half-hope that, if I appealed to you, you would prove my friend. I know that you have unbounded influence with the Harpers, and I know that if you would exert it in my behalf you could procure me the publication I desire.

ANTHON TO POE.

NEW YORK, November 2, 1844.

DEAR SIR: I have called upon the Harpers, as you requested, and have cheerfully exerted with them what influence I possess, but without accomplishing anything of importance. They have *complaints* against you, grounded on certain movements of yours, when they acted as your publishers some years ago; and appear very little inclined at present to enter upon the matter which you have so much at heart. However, they have retained, for a second and more careful perusal, the letter which you sent to me, and have promised that, if they should see fit to come to terms with you, they will address a note to you forthwith. Of course, if you should not hear from them, their silence must be construed into a declining of your proposal. My *own advice* to you is to call in person at their store, and talk over the matter with them. I am *very sure* that such a step on your part will remove many of the difficulties which at present obstruct your way.

You do me injustice by supposing that I am a stranger to your productions. I subscribed to the "Messenger" solely because you were connected with it, and I have since that period read and, as a matter of course, admired very many of your other pieces. The Harpers also entertain, as I heard from their own lips, the highest opinion of your talents, but — I remain very sincerely, Your friend and well-wisher,

CHARLES ANTHON.

P. S. The MSS. which you were kind enough to send can be obtained by you at any time on calling at my residence. C. A.

The letters of Richard Hengist Horne, whose poem "Orion" had been enthusiastically noticed by Poe, are of interest in themselves, and also because they furnished the means of communication with Mrs. Browning, then Miss Barrett, to whom Poe dedicated his collected poems in 1845. The first was written when Poe had just come to New York, and concerns a tale, "The Spectacles," which Poe had sent Horne to have published in London. Horne's account of the matter is printed in the "Poe Memorial" volume.

LONDON, April 16, 1844.

MY DEAR SIR: I have received your letter this morning, and shall feel now and at all times happy in forwarding your views here so far as I am able, in these matters of literary engagement. Just at this time, however, and probably for some months to come, I shall not be *likely* to have the power. If you have seen the "New Spirit of the Age," you will readily understand that a great many critics here and some authors are far from pleased with me. The attacks and jeers in magazines and newspapers (though several have treated me very fairly) are nearly all written by friends of the angry parties or influenced by them. Perhaps I may say a word on this point in the Second Edition now preparing. I mention this to show you *why*

I can do so little at present. I need not say to an American that when the storm has blown over, those trees that are not blown down nor injured look all the fresher among the wrecks. I dare say I shall be able to do what you wish before long. I should prefer to do this so that you are fairly remunerated; but if the parties are *not* in a "paying condition," then I will put you in direct communication with them to arrange the matter yourself.

I could most probably obtain the insertion of the article you have sent in "Jerrold's Illuminated Magazine." Jerrold has always spoken and written very handsomely and eloquently about me, and there would be no difficulty. But—I fear this magazine is not doing at all well. I tell you this *in confidence*. They have a large but inadequate circulation. The remuneration would be scarcely worth having—ten guineas a sheet is poor pay for such a page! And now, perhaps, they do not even give that. I will see. My impression, however, is that for the reasons stated previously, I shall not at *present* be able to assist you in the way I could best wish.

Your name is well known to me in the critical literature of America, although I have not seen any American magazine for some months. I have ordered the last two numbers of "Graham's Magazine," but have not received them from my booksellers. I am very grateful for the noble and generous terms in which you speak of my works.

I have written you a business-like, and not a very "spiritual," letter, you will think. Still, as you are kind enough to give me credit for some things of the latter kind, it seemed best at this distance to reply to your wishes practically. I am, dear sir, Yours truly,

R. H. HORNE.

HORNE TO POE.

LONDON, April 27, 1844.

MY DEAR SIR: When I replied to your letter (which I did by the next post of the day on which I received it) I had not seen the number of "Graham's" for March, containing the review of "Orion." Mr. C. Matthews, of New York, had been so good as to inform me there would be a review; and he, at the same time, mentioned that he had sent me a copy of the magazine in question. My friend Miss E. B. Barrett also sent me a note to the same effect. But owing, no doubt, to some forgetfulness on the part of the booksellers who were to forward it, the magazine never reached me, nor was it at Wiley and Putnam's when I called the other day. Your MS. of "The Spectacles" is safely lodged in my iron chest with my own MSS. till I find a favorable opportunity for its use.

I have carefully read and considered the review of "Orion" in the magazine. It would be uncandid in me to appear to agree to all the objections; and, amidst such high praise, so independently and courageously awarded, it would be ungrateful in me to offer any self-justificatory remark on any such objections. I shall, therefore, only observe that there are *some* objections from which I can *derive advantage* in the way of

revision—which is more than I can say of any of the critiques written on this side of the water. One passage, in particular, I will mention. It is that which occurs at p. 103. "Star-rays the first"—needlessly obscure, as you truly say. For, in fact, I *did* allude to Sleep, as the antecedent—and it should have been printed with a capital letter. What I meant by the passage, rendered in prose, would be something like this: "The God Sleep, lying in his cave by the old cypress sea, feebleth the star-rays upon his eyelids at times; and then his sleep is not perfect, and he dreams, or for a brief interval awakes. Without which awaking he would never have known surprise, nor hope, nor useful action. Because (your poet herein bewitched by a theory he fancies original) we are never surprised at anything, however wonderful, in a dream; neither do we *hope*; nor do we perform any action with an idea of its being at all useful." A pretty condition. you see, my imagination had got into while writing this passage. The explanation, if it does not make you angry, will, I think, greatly amuse you.

Are there any of my works which you do not possess, and would like to have? I shall be very happy to request your acceptance of any, if you will let me know how to send them. It strikes me (from some remarks of yours on versification and rhythm) that you do not know my introduction to "Chaucer Modernized." Do you? Would any American bookseller like to reprint "Orion," do you think? If so, I would willingly superintend the sheets, by a slight revision in some half dozen places, and would write a brief Introduction or Preface addressed to the American Public; and certainly I should at the same time be too happy to express my obligations to the boldness and handsomeness of American criticism. I am, dear sir, Your obliged,

R. H. HORNE.

P. S. In the remark I have made at the close of my letter, as to a reprint of "Orion" by an American bookseller, I forgot to say that I was not particular as to terms; and if they would give me nothing, I was still ready to give them the thing I proposed.

HORNE TO POE.

LONDON, May 17, 1845.

MY DEAR SIR: After so long a delay of my last letter to you, I am at all events glad to hear that it reached you—or rather that you, in diving among the shoals at the Post-Office, had contrived to fish it up. But matters do not seem to mend in this respect; for your present letter of the date of January 25, 1845, only reached my house at the latter end of April. In short, we might as well correspond from Calcutta, as far as time is concerned. However, I am glad that the letters reach their destination at all, and so that none are lost we must be patient.

I have only just returned from a nine months' absence in Germany. I principally resided, during this time, in the Rhine Provinces. I take the earliest opportunity of thanking you for all attentions.

As I thought your letter to me contained more of the bright side of criticism than the "Broadway

Journal," I sent it to my friend Miss Barrett. She returned it with a note — half of which I tear off, and send you (*confidentially*) that you may see in what a good and noble spirit she receives the critique — in which, as you say, the shadows do certainly predominate. Well, for my own part, I think a work should be judged of [by] its merits *chiefly* — since faults and imperfections are certain to be found in all works, but the highest merits only in a few. Therefore the highest merits seem to me to be naturally the first and main points to be considered. Miss Barrett has read the "Raven," and says she thinks there is a fine lyrical melody in it. When I tell you that this lady "says" you will be so good as understand that I mean "writes" — for although I have corresponded with Miss Barrett these five or six years, I have never seen her to this day. Nor have I been *nearer* to doing so than talking with her father and sisters.

I am of the same opinion as Miss Barrett about the "Raven"; and it also seems to me that the poet intends to represent a very painful condition [of] mind, as of an imagination that was liable to topple over into some delirium, or an abyss of melancholy, from the continuity of one unvaried emotion.

Tennyson I have not seen nor heard from yet, since my return. It is curious that you should ask me for the opinions of the only two poets with whom I am especially intimate. Most of the others I am acquainted with, but am not upon such terms of intellectual sympathy and friendship, as with Miss Barrett and Tennyson. But I do not at this moment know where Tennyson is.

You mention that an American publisher would probably like to reprint "Orion," and I therefore send a copy for that purpose, or probability. I also send a copy in which I have written your name, together with a copy of "Gregory VII," and two copies of "Introductory Comments" (to the second edition of the "New Spirit of the Age") of which I beg your acceptance. Of "Chaucer Modernized" I do not possess any other copy than the one in my own library, and I believe it is out of print; but if you would like to have a copy of Schlegel's lectures on "Dramatic Literature" (to which I wrote an introduction to the second edition), I shall be happy to forward you the volume, and any others of my own you would like to have — that is, if I have copies of them. "Cosmo de' Medici," for instance, I could send you. I have made no revision of "Orion" for the proposed new edition. The fact is, I have not time, and *moreover* am hardly disposed to do much to it, after so many editions. I had rather write (almost) another long poem. I shall be happy to send you a short poem or two for your magazine, directly it is established, or for the first number, if there be time for you to let me know. I am, dear sir, Yours truly,

R. H. HORNE.

MRS. BROWNING TO HORNE.¹

58 WIMPOLE ST., May 12, 1845.

You will certainly think me mad, dear Mr.

¹ Permission to use these letters has been granted by Mr. R. B. Browning.—EDITOR.

Horne for treading upon my own heels (room for the [illegible], in another letter. But I am uncomfortable about my message to Mr. Poe, lest it should not be grateful enough in the sound of it. Will you tell him what is quite the truth, that in my own opinion he has dealt with me most generously, and that I thank him for his candour as for a part of his kindness. Will you tell him also that he has given my father pleasure, which is giving it to *me* more than twice. Also the review is very ably written — and the reviewer has so obviously and thoroughly *read* my poems, as to be a wonder among critics. Will you tell Mr. Poe this, or to this effect, dear Mr. Horne, all but part of the last sentence, which peradventure may be somewhat superfluous. I heard from dear Miss Mitford this morning, and she talks delightfully of taking lodgings in London soon; of coming not for a day only, nor for a week only [end of sheet].

MRS. BROWNING TO POE.

5 WIMPOLE ST., April, 1846.

DEAR SIR: Receiving a book from you seems to authorize or at least encourage me to try to express what I have felt long before — my sense of the high honor you have done me in [illegible] your country and of mine, of the dedication of your poems. It is too great a distinction, conferred by a hand of too liberal a generosity. I wish for my own sake I were worthy of it. But I may endeavour, by future work, to justify a little what I cannot deserve anywise, now. For it, meanwhile, I may be grateful — because gratitude is the virtue of the humblest.

After which imperfect acknowledgment of my personal obligation may I thank you as another reader would thank you for this vivid writing, this power which is felt! Your "Raven" has produced a sensation, a "fit horror," here in England. Some of my friends are taken by the fear of it and some by the music. I hear of persons haunted by the "Nevermore," and one acquaintance of mine who has the misfortune of possessing a "bust of Pallas" never can bear to look at it in the twilight. I think you will like to be told that our great poet, Mr. Browning, the author of "Paracelsus," and the "Bells and Pomegranates," was struck much by the rhythm of that poem.

Then there is a tale of yours ["The Case of M. Valdemar"] which I do not find in this volume, but which is going the round of the newspapers, about mesmerism, throwing us all into "most admired disorder," and dreadful doubts as to whether "it can be true," as the children say of ghost stories. The certain thing in the tale in question is the power of the writer, and the faculty he has of making horrible improbabilities seem near and familiar.

And now will you permit me, dear Mr. Poe, as one who though a stranger is grateful to you, and has the right of esteeming you though unseen by your eyes — will you permit me to remain very truly yours always,

ELIZABETH BARRETT BARRETT.

HAWTHORNE TO POE.

SALEM, June 17, 1846.

MY DEAR SIR: I presume the publishers will have sent you a copy of "Mosses from an Old Manse" — the latest (and probably the last) collection of my tales and sketches. I have read your occasional notices of my productions with great interest — not so much because your judgment was, upon the whole, favorable, as because it seemed to be given in earnest. I care for nothing but the truth; and shall always much more readily accept a harsh truth, in regard to my writings, than a sugared falsehood.

I confess, however, that I admire you rather as a writer of tales than as a critic upon them. I might often — and often do — dissent from your opinions in the latter capacity, but could never fail to recognize your force and originality in the former. Yours very truly,

NATH. HAWTHORNE.

At this time Poe was contributing his papers, "The Literati," to "Godey's Lady's Book," and he sent to the editor his reply to Thomas Dunn English's attack, which had been drawn out by Poe's criticism on the latter in that magazine. Godey refused to print the reply in the "Lady's Book," but published it in the Philadelphia "Times." The following letter was partly printed by Griswold, but is here given entire.

POE TO GODEY.

NEW YORK, July 16, 1846.

MY DEAR SIR: I regret that you published my "Reply" in "The Times." I should have found no difficulty in getting it printed here in a *respectable* paper and gratis. However, as I have the game in my own hands, I shall not stop to complain about trifles.

I am rather ashamed that, knowing me to be as poor as I am, you should have thought it advisable to make the demand *on me* of the \$10. I confess that I thought better of you — but let it go — it is the way of the world.

The man or men who told you that there was anything wrong in *the tone* of my "Reply" were either my enemies, or your enemies, or asses. When you see them, tell them so from me. I have never written an article upon which I more confidently depend for *literary* reputation than that "Reply." Its merit lay in being *precisely* adapted to its purpose. In this city I have had upon it the favorable judgments of the best men. All the error about it was yours. You should have done as I requested — published it in the "Book." It is of no use to conceive a plan if you have to depend upon another for its execution.

Please distribute twenty or thirty copies of the "Reply" in Philadelphia, and send me the balance through Harnden.

What paper, or papers, have copied E.'s attack?

I have put this matter in the hands of a com-

petent attorney, and you shall see the result. Your charge, \$10, will of course be brought before the court as an item when I speak of damages.

In perfect good feeling, Yours truly,

POE.

It would be as well to address your letters to West Farms. Please put "Miss Lynch" in the next number. I enclose the "Reveill " article. I presume that, ere this, you have seen the highly flattering notices of the "Picayune," and the "Charleston Courier."

The following, from W. G. Simms, the novelist, and P. P. Cooke, his old correspondent, illustrate again the appreciation of Poe by Southern writers of distinction.

SIMMS TO POE.

NEW YORK, July 30, 1846.

DEAR SIR: I received your note a week ago, and proceeded at once to answer it, but being in daily expectation of a newspaper from the South, to which, in a letter, I had communicated a paragraph concerning the matter which you had suggested in a previous letter, I determined to wait until I could enclose it to you. It has been delayed somewhat longer than I had anticipated, and has in part caused my delay to answer you. I now send it you, and trust that it will answer the desired purpose; though I must frankly say that I scarcely see the necessity of noticing the sort of scandal to which you refer. I note with regret the very desponding character of your last letter. I surely need not tell you how deeply and sincerely I deplore the misfortunes which attend you — the more so as I see no process for your relief and extrication, but such as must result from your own decision and resolve. No friend can well help you in the struggle which is before you. Money, no doubt, can be procured; but this is not altogether what you require. Sympathy may soothe the hurts of self-esteem, and make a man temporarily forgetful of his assailants; but in what degree will this avail, and for how long, in the protracted warfare of twenty or thirty years? You are still a very young man, and one too largely and too variously endowed not to entertain the conviction as your friends entertain it — of a long and manful struggle with, and a final victory over, fortune. But this warfare the world requires you to carry on with your own unassisted powers. It is only in your manly resolution to use these powers after a legitimate fashion, that it will countenance your claims to its regards and sympathy; and I need not tell you how rigid and exacting it has ever been in the case of the poetical genius, or, indeed, the genius of any order. Suffer me to tell you frankly, taking the privileges of a true friend, that you are now perhaps in the most perilous period of your career — just in that position — just at that time of life — when a false step becomes a capital error — when a single leading mistake is fatal in its consequences. You are no longer a boy. "At thirty wise or never." You

must subdue your impulses; and in particular, let me exhort you to discard all associations with men, whatever their talents, whom you cannot esteem as men. Pardon me for presuming thus to counsel one whose great natural and acquired resources should make him rather the teacher of others. But I obey a law of my own nature, and it is because of my sympathies that I speak. Do not suppose yourself abandoned by the worthy and honorable among your friends. They will be glad to give you welcome *if you will suffer them*. They will rejoice — I know their feelings and hear their language — to countenance your return to that community — that moral province in society — of which, let me say to you respectfully and regretfully, you have been, according to all reports, but too heedlessly, and perhaps too scornfully, indifferent. Remain in obscurity for a while. You have a young wife, — I am told a suffering and an interesting one, — let me entreat you to cherish her, and to cast away those pleasures which are not worthy of your mind, and to trample those temptations under foot which degrade your person, and make it familiar to the mouth of vulgar jest. You may [do] all this by a little circumspection. It is still within your power. Your resources from literature are probably much greater than mine. I am sure they are quite as great. You can increase them so that they shall be ample for all your legitimate desires; but you must learn the worldling's lesson of prudence — a lesson, let me add, which the literary world has but too frequently and unwisely disparaged. It may seem to you very impertinent, — in most cases it is impertinent — that he who gives nothing else should presume to give counsel. But one gives that which he can most spare, and you must not esteem me indifferent to a condition which I can in no other way assist. I have never been regardless of your genius, even when I knew nothing of your person. It is some years since I counseled Mr. Godey to obtain the contributions of your pen. He will tell you this. I hear that you reproach him. But how can you expect a Magazine proprietor to encourage contributions which embroil him with all his neighbors? These broils do you no good — vex your temper, destroy your peace of mind, and hurt your reputation. You have abundant resources upon which to draw, even were there no Grub Street in Gotham. Change your tactics, and begin a new series of papers with your publisher. The printed matter which I send you might be quoted by Godey, and might be ascribed to me. But, surely, I need not say to you that, to a Southern man, the annoyance of being mixed up in a squabble with persons whom he does not know, and does not care to know, — and from whom no Alexandrine process of cutting loose would be permitted by society, — would be an intolerable grievance. I submit to frequent injuries and misrepresentations, content — though annoyed by the [illegible] — that the viper should amuse himself upon the file, at the expense of his own teeth. As a man, as a writer, I shall always be solicitous of your reputation and success. You have but to resolve on taking and asserting your position, equally in the social and the literary world, and your way is clear, your path is easy, and you will

find true friends enough to sympathize in your triumphs. Very sincerely though sorrowfully,

Your friend and ser'vt,

W. GILMORE SIMMS.

P. S. If I could I should have been to see you. But I have been, and am still, drudging in the hands of the printers, kept busily employed night and day. Besides, my arrangements are to hurry back to the South where I have a sick family. A very few days will turn my feet in that direction.

COOKE TO POE.

August 4, 1846.

MY DEAR SIR: . . . You propose that I shall take up your memoir where Lowell drops it, and carry it on to the present date of your publications. I will do so, if my long delay has not thrown the work into the hands of some other friend, with entire pleasure. I, however, have not "Graham's Magazine" for February, 1845, and if you still wish me to continue the memoir you must send that number to me. Some months ago I procured your Tales and Poems, and have read them collectively with great pleasure. That is a wonderful poem ending —

Hell rising from a thousand thrones
Shall do it reverence.

"Lenore," too, is a great poem. The closing stanza of "To One in Paradise" (I remember it as published in "The Visionary") is the perfection of melody. "The Raven" is your *best* poem.

John Kennedy, talking with me about your stories, old and recent, said, "The man's imagination is as truth-like and minutely accurate as De Foe's —" and went on to talk of your "Descent into the Maelstrom," "MS. Found in a Bottle," "Gold Bug," etc. I think this last the most ingenious thing I ever read. Those stories of criminal detection, "Murders of the Rue Morgue," etc., a prosecuting attorney in the neighborhood here declares are miraculous. I think your French friend, for the most part, fine in his deductions from over-laid and unnoticed small facts, but sometimes too minute and hair-splitting. The stories are certainly as interesting as any ever written. The "Valdemar Case" I read in a number of your "Broadway Journal" last winter — as I lay in a turkey-blind, muffled to the eyes in overcoats, etc., and pronounce it without hesitation the most damnable, *vraisemblable*, horrible, hair-lifting, shocking, ingenious chapter of fiction that any brain ever conceived, or hand traced. That gelatinous, viscous sound of the man's voice! There never was such an idea before. That story scared me in broad day, armed with a double-barrel Tryon turkey-gun. What would it have done at midnight in some old ghostly country-house?

I have always found some one remarkable thing in your stories to haunt me long after reading them. The teeth in "Berenice"; the changing eyes of Morella; that red and glaring crack in the "House of Usher"; the pores of the deck in the "MS. Found in a Bottle"; the visible drops falling into the goblet in "Ligeia," etc.,

etc.,—there is always something of this sort to stick by the mind — by mine at least.

My wife is about to enter the carriage, and as I wish to send this to the P. O. by her I must wind up rapidly. I am *now* after an interval of months again at work in the preparation of my poems for publication. I am *dragging*, but perhaps the mood will presently come. I bespeak a review of my Book at your hands when I get it out. I have not time now to copy "Rosalie Lee." It is in Griswold's last edition. I am grateful to you for the literary prop you afford me, and trust to do something to justify your commendations. I talked recently with a little lady who had heard a lecture of yours in which you praised my poetry — in New York. She had taken up the notion that I was a great poetic roaring "Lion."

Do with my MS. as you choose. What do you design as to the "Stylus"? Write to me without delay, if you can rob yourself of so much time.

A paragraph of the following letter was partly printed by Griswold.

POE TO COOKE.

NEW YORK, August 9, 1846.

MY DEAR SIR: Never think of excusing yourself (to me) for dilatoriness in answering letters — I know too well the unconquerable procrastination which besets the poet. I will place it all to the accounts of the turkeys. Were I to be seized by a rambling fit, one of my customary *passions* (nothing less) for vagabondizing through the woods for a week or a month together, I would not — in fact I *could* not — be put out my mood, were it even to answer a letter from the Grand Mogul informing me that I had fallen heir to his possessions.

Thank you for the compliments. Were I in a serious humor just now, I would tell you frankly how your words of appreciation make my nerves thrill — not because you praise me (for others have praised me more lavishly) but because I feel that you comprehend and discriminate. You are right about the hair-splitting of my French friend — that is all done for effect. These tales of ratiocination owe most of their popularity to being something in a new key — I do not mean to say that they are not ingenious — but people think them more ingenious than they are — on account of their method, and *air* of method. In the "Murders in the Rue Morgue," for instance, where is the ingenuity of unravelling a web which you yourself (the author) have woven for the express purpose of unravelling? The reader is made to confound the ingenuity of the supposititious Dupin with that of the writer of the story.

Not for the world would I have had any one else to continue Lowell's memoir until I had heard from you. I wish *you* to do it (if you will be so kind) and nobody else. By the time the book appears you will be famous (or all my prophecy goes for nothing), and I shall have the *éclat* of your name to aid my sales. But, seriously, I do not think that any one so well enters into the poetical portion of my mind as yourself — and I deduce this

idea from my intense appreciation of *those* points of your own poetry which seem lost upon others.

Should you undertake the work for me, there is one topic — there is one particular in which I have had wrong done me, and it may not be indecorous in me to call your attention to it. The last selection of my Tales was made from about seventy, by Wiley and Putnam's reader, Duyckinck. He has what he thinks a taste for ratiocination, and has accordingly made up the book mostly of analytic stories. But this is not *representing* my mind in its various phases — it is not giving me fair play. In writing these Tales one by one, at long intervals, I have kept the book-unity always in mind — that is, each has been composed with reference to its effect as part of *a whole*. In this view, one of my chief aims has been the widest diversity of subject, thought, and especially *tone* and manner of handling. Were all my Tales now before me in a large volume, and as the composition of another, the merit which would principally arrest my attention would be the wide *diversity and variety*. You will be surprised to hear me say that (omitting one or two of my first efforts) I do not consider any one of my stories *better* than another. There is a vast variety of kinds, and, in degree of value, these kinds vary — but each tale is equally good *of its kind*. The loftiest kind is that of the highest imagination — and for this reason only "Ligeia" may be called my *best* tale. I have much improved this last since you saw it, and I mail you a copy, as well as a copy of my best specimen of analysis — "The Philosophy of Composition."

Do you ever see the British papers? Martin F. Tupper, author of "Proverbial Philosophy," has been paying me some high compliments — and indeed I have been treated more than well. There is one "British opinion," however, which I value highly — Miss Barrett's. She says [the letter has been printed above] . . . Would it be in bad taste to quote these words of Miss B. in your notice? Forgive these egotisms (which are rendered in some measure necessary by the topic), and believe me that I will let slip *no* opportunity of reciprocating your kindness.

Griswold's new edition I have not yet seen (is it out?), but I will manage to find "Rosalie Lee." Do not forget to send me a few personal details of yourself — such as I give in "The New York Literati." When your book appears I propose to review it fully in Colton's "American Review." If you ever write to him, please suggest to him that I wish to do so. I hope to get your volume before mine goes to press — so that I may speak more fully.

I will forward the papers to which I refer *in a day or two* — not by to-day's mail.

Touching "The Stylus": this is [the] one great purpose of my literary life. Undoubtedly (unless I die) I will accomplish it — but I can afford to lose nothing by precipitancy. I cannot yet say when or how I shall get to work — but when the time comes, I will write to you. I wish to establish a journal in which the men of genius may fight their battles upon some terms of equality with those dunces, the men of talent. But, apart from this, I have *magnificent* objects in

view. May I but live to accomplish them ! Most cordially your friend,

EDGAR A. POE.

The correspondence with F. W. Thomas, which continued with some laxity on Poe's part, is self-explanatory :

POE TO THOMAS.

NEW YORK, September 8, 1844.

MY DEAR THOMAS : I received yours with sincere pleasure, and nearly as sincere surprise ; for while you were wondering that I did not write to *you*, I was making up my mind that you had forgotten *me* altogether.

I have left Philadelphia, and am living, at present, about five miles out of New York. For the last seven or eight months I have been playing hermit in earnest, nor have I seen a living soul out of my family — who are well and desire to be kindly remembered. When I say "well," I only mean (as regards Virginia) as well as usual. Her health remains excessively precarious.

Touching the "Beechen Tree" [a poem by Thomas], I remember it well and pleasantly. I have not yet seen a published copy, but will get one forthwith and notice it as it deserves — and it deserves much of high praise — at the very first opportunity I get. At present I am so much out of the world that I may not be able to do anything *immediately*.

Thank God ! Richard (whom you know) is himself again. Tell Dow so : but he won't believe it. I am working at a variety of things (all of which you shall behold in the end) — and with an ardor of which I did not believe myself capable.

You said to me hurriedly, when we last met on the wharf in Philadelphia, that you believed Robert Tyler really wished to give me the post in the Custom-House. This I also really think ; and I am confirmed in the opinion that he could not, at all times, do as he wished in such matters, by seeing — at the head of the "Aurora" — a bullet-headed and malicious villain who has brought more odium upon the Administration than any fellow (of equal littleness) in its ranks, and who has been more indefatigably busy in both open and secret vilification of Robert Tyler than any individual, little or big, in America.

Let me hear from you again very soon, my dear Thomas, and believe me *ever*

Your friend, POE.

POE TO THOMAS.

May 4, 1845.

MY DEAR THOMAS : In the hope that you have not yet *quite* given me up as gone to Texas, or elsewhere, I sit down to write you a few words. I have been intending to do the same thing ever since I received your letter before the last — but for my life and soul I could not find, or make, an opportunity. The fact is, that being seized of late with a fit of industry, I put so many irons in the fire all at once that I have been quite unable to get them out. For the last three or four months

I have been working fourteen or fifteen hours a day, — hard at it all the time, — and so, whenever I took pen in hand to write, I found that I was neglecting something that *would* be attended to. I never knew what it was to be a slave before.

And yet, Thomas, I have made no money. I am as poor now as ever I was in my life — except in hope, which is by no means bankable. I have taken a third pecuniary interest in the "Broadway Journal," and for everything I have written for it have been, of course, so much out of pocket. In the end, however, it will pay me well — at least the prospects are good. Say to Dow for me that there never has been a chance for my repaying him, without putting myself to greater inconvenience than he himself would have wished to subject me to, had he known the state of the case. Nor am I able to pay him now. The Devil himself was never so poor. Say to Dow, also, that I am sorry he has taken to dunning in his old age — it is a diabolical practice, altogether unworthy "a gentleman and a scholar" — to say nothing of the Editor of the "Madisonian." I wonder how he would like me to write him a series of letters, — say one a week, — giving him the literary gossip of New York, or something of more general character. I would furnish him such a series for whatever he could afford to give me. If he agrees to this arrangement, ask him to state the length and character of the letters — how often — and how much he can give me. Remember me kindly to him, and tell him I believe that dunning is his one sin — although at the same time, I do think it is the unpardonable sin against the Holy Ghost spoken of in the Scriptures. I am going to mail him the "Broadway Journal" regularly, and hope he will honor me with an exchange.

My dear Thomas, I hope you will never imagine, from any seeming neglect of mine, that I have forgotten our old friendship. There is no one in the world I would rather see at this moment than yourself ; and many are the long talks we have about you and yours. Virginia and Mrs. Clemm beg to be remembered to you in the kindest terms. Do write me fully when you get this, and let me know particularly what you are about.

I send you an early number of the "B. Journal" containing my "Raven." It was copied by Briggs, my associate, before I joined the paper. The "Raven" has had a great "run," Thomas — but I wrote it for the express purpose of running — just as I did the "Gold Bug," you know. The bird beat the bug, though, all hollow.

Do not forget to write immediately, and believe me, Most sincerely your friend,

POE.

The following is the last letter to F. W. Thomas.

POE TO THOMAS.

FORDHAM, February 14, 1849.

MY DEAR FRIEND THOMAS : Your letter, dated November 27, has reached me at a little village of the Empire State, after having taken, at its leisure, a very considerable tour among the Post-Offices —

occasioned, I presume, by your indorsement "to forward" wherever I might be — and the fact is, where I might *not* have been, for the last three months, is the legitimate question. At all events, now that I have your well-known M.S. before me, it is most cordially welcome. Indeed, it seems an age since I heard from you, and a decade of ages since I shook you by the hand — although I hear of you now and then. Right glad am I to find you once more in a true position — in the field of Letters. Depend upon it, after all, Thomas, Literature is the most noble of professions. In fact, it is about the only one fit for a man. For my own part, there is no seducing me from the path. I shall be a *Littérateur* at least all my life; nor would I abandon the hopes which still lead me on for all the gold in California. Talking of gold, and of the temptations at present held out to "poor-devil authors," did it ever strike you that all which is really valuable to a man of letters — to a poet in especial — is absolutely unpurchasable? Love, fame, the dominion of intellect, the consciousness of power, the thrilling sense of beauty, the free air of Heaven, exercise of body and mind, with the physical and moral health which result — these and such as these are really all that a poet cares for: then answer me this — *why* should he go to California? Like Brutus, "I pause for a reply" — which, like F. W. Thomas, I take it for granted you have no intention of giving me. I have read the Prospectus of the "Chronicle," and like it much, especially the part where you talk about letting go the finger of that conceited booby, the East, which is by no means the East out of which came the wise men mentioned in Scripture. I wish you would come down on the Frogpondians. They are getting worse and worse, and pretend not to be aware that there *are* any literary people out of Boston. The worst and most disgusting part of the matter is that the Bostonians are really, as a race, far inferior in point of *anything beyond mere talent* to any other *set* upon the continent of North America. They are decidedly the most servile imitators of the English it is possible to conceive. I always get into a passion when I think about [it.] It would be the easiest thing in the world to use them up *en masse*. One really well-written satire would accomplish the business: but it must not be such a dish of skimmed-milk-and-water as Lowell's. I suppose you have seen that affair — the "Fable for Critics," I mean. Miss Fuller, that detestable old maid, told him once that he was "so wretched a poet as to be disgusting even to his best friends." This set him off at a tangent and he has never been quite right since — so he took to writing satire against mankind in general, with Margaret Fuller and her *protégé*, Cornelius Matthews, in particular. It is miserably weak upon the whole, but has one or two good but by no means *original* things, — oh, there is "nothing new under the sun," and Solomon is right — for once. I sent a review of the "Fable" to the "S. L. Messenger," a day or two ago, and I only hope Thompson will print it. Lowell is a ranting abolitionist, and *deserves* a good using up. It is a pity that he is a poet. I have not seen your paper yet, and hope you will mail me one — reg-

ularly if you can spare it. I will send you something whenever I get a chance. With your coeditor, Mr. [name crossed out] I am not acquainted personally, but he is well known to me by repetition. Eames, I think, was talking to me about him in Washington once, and spoke very highly of him in many respects, so upon the whole you are in luck. The rock on which most new enterprises in the paper way split is namby-pambyism. It never did do and never will. No yea-nay journal *ever* succeeded. But I know there is little danger of your making the "Chronicle" a yea-nay one. I have been quite out of the literary world for the last three years, and have *said* little or nothing, but, like the owl, I have "taken it out in thinking." By and by I mean to come out of the bush, and then I *have* some old scores to settle. I fancy I see some of my *friends* already stepping up to the Captain's office. The fact is, Thomas, living buried in the country makes a man savage — wolfish. I am just in the humor for a fight. You will be pleased to hear that I am in better health than I ever knew myself to be — full of energy, and bent upon success. You shall hear of me again shortly — and it is not improbable that I may soon pay you a visit in Louisville. If I can do anything for you in New York, let me know. Mrs. Clemm sends her best respects, and begs to be remembered to your mother's family if they are with you. You would oblige me very especially if you could squeeze in what follows, editorially. The lady [Mrs. Lewis] spoken of is a most particular friend of mine, and deserves *all* I have said of her. I will reciprocate the favor I ask, whenever you say the word, and show me how. Address me at New York City as usual, and if you insert the following, please cut it out and enclose it in your letter.

Truly your friend,
EDGAR A. POE.

A notice of Mrs. Lewis, "Estelle," is appended. Poe recurs to the same subject in the next.

POE TO GRISWOLD.

NEW YORK, June 28, 1849.

DEAR GRISWOLD: Since I have more critically examined your "Female Poets," it occurs to me that you have not *quite* done justice to our common friend, Mrs. Lewis; and if you could oblige me so far as to substitute, for your no doubt hurried notice, a somewhat longer one prepared by myself (subject, of course, to your emendations) I would reciprocate the favor when, where, and *as* you please. If you *could* agree to this, give me a hint to that effect, and the M.S. is ready. I will leave it sealed with Mrs. Lewis, who is unaware of my design — for I would rather she should consider herself as indebted to *you* for the favor, at all points. By calling on Mrs. Lewis, and asking for a package to your address, you can at any moment get it. I would not, of course, put you to any *expense* in this matter. All cost shall be promptly defrayed.

Truly yours,
EDGAR A. POE.

MRS. CLEMM TO GRISWOLD.

NEW YORK, September 4, 1849.

DEAR MR. GRISWOLD: I have tried so long to see you without success, that I have taken the liberty of addressing this note to you. I understand from Mrs. Lewis you received the package Mr. Poe left at her house for you. I wish you to publish it exactly as he has written it. If you will do so I will promise you a favorable review of your books as they appear — you know the influence I have with Mr. Poe. Not that I think he will need any urging to advance your interest. I have just heard from him; he writes in fine spirits and says his prospects are excellent. Will you be so kind as to let me know if you receive this? Please direct to me at New York, care of E. A. Poe.

Respectfully,

MARIA CLEMM.

I will call on Saturday at ten o'clock at your room if you will please meet me there.

Mrs. Lewis's comment on this interest in her verse is contained in the following:

MRS. LEWIS TO GRISWOLD.

125 DEAN STREET, September 20, 1850.

DEAR DOCTOR: . . . Nothing has ever given me so much insight into Mr. Poe's real character as his letters to you, which are published in this third volume [of Poe's collected works]. They will not fail to convince the public of the injustice of Graham's and Neal's articles. I was astonished at the part of P.'s Note, where he says — "But I have promised Mrs. Lewis this." I will explain. Mrs. Clemm said to me on one of her visits: "Dr. G. has been to Fordham — he came to see Eddie about you — something about the new edition of 'The Female Poets.' But you are not to know anything about it." Mr. P. never mentioned the subject to me, or I to him. He only sent to me for my latest poems, saying that you were going to increase or re-write the sketch for a new Edition of "The Female Poets."

I have ceased to correspond with Mrs. C[lemm] on account of her finding so much fault, and those articles of G's and N's. I cannot endure ingratitude. I have felt and do feel that you have performed a noble and disinterested part toward Mr. Poe in the editing of his works. . . .

Yours ever sincerely,

ESTELLE.

A second letter from Mrs. Clemm to Griswold illustrates the relations of the family with him at the time he was designated by Poe as his literary executor. It should be said, too, that several of the letters published by Griswold, as from Poe to him, are among these papers, and a few other unimportant notes.

NEW YORK, August 27, 1849.

DEAR MR. GRISWOLD: I feel you will pardon the liberty I take in addressing you, but the extreme urgency of my situation compels me to do so. Mr. Poe has been absent from home for some

weeks; he is now in Richmond and has been very ill, and unable to send me any money since he left, and is much distressed for fear of my suffering. Indeed I *have suffered*. I have been very sick, and entirely unable to make the least exertion. I have been without the necessities of life for many days, and would not apply to any one, in hopes that I would soon receive some aid from my poor Eddy. He writes me that he is getting better, and hopes he will be soon able to attend to business. I confide in you, dear sir, and beg you to loan me a small sum until I can receive some from him. I have not the means to go to the city, but a note addressed to Mrs. Maria Clemm, care of E. A. Poe, New York, will reach me. A gentleman in the neighborhood asks every day for me at the post-office. You have no idea how distressing it is to my feelings to make this request, but I think you will feel for my situation. Respectfully,

MARIA CLEMM.

Poe's relations with literary women are further illustrated, and some details are elucidated by letters belonging to his own correspondence, and by other letters that passed between these ladies or between them and Griswold. The subject, however, is an involved one, and would require, for proper understanding, a more detailed explanation of minor incidents than is here possible. All the papers bearing upon this matter are therefore omitted.

The last letter we shall print is from Poe to Mrs. Clemm, written at Richmond, whither he had gone to lecture and to visit old friends, especially Mrs. Shelton, to whom he became engaged. The "Annie" to whom he refers is the lady of Lowell whose friendship seems to have been uppermost in his mind during the later period of his much-tangled affections.

POE TO MRS. CLEMM.

RICHMOND, September, 1849.

[First sheet missing.] . . . possible. Everybody says that if I lecture again and put the tickets at fifty cents, I will clear \$100. I *never* was received with so much enthusiasm. The papers have done nothing but praise me before the lecture and since. I inclose one of the notices, the only one in which the slightest word of disparagement appears. It is written by Daniel, the man whom I challenged when I was here last year. I have been invited out a great deal, but could seldom go, on account of not having a dress-coat. To-night Rose [his sister] and I are to spend the evening at Elmira's [Mrs. Shelton]. Last night I was at Poitiaux's; the night before at Strobias, where I saw my dear friend Eliza Lambert, Gen. Lambert's sister. She was ill in her bed-room, but insisted upon our coming up, and we stayed until nearly one o'clock. In a word, I have received nothing but kindness since I have been here, and could have been quite happy but for my dreadful anxiety about you. Since the report of my intended marriage the McKenzies have overwhelmed me with

attentions. Their house is so crowded that they *could* not ask me to stay. And now, my own precious Muddy, the very moment I get a definite answer about everything I will write again and tell you what to do. Elmira talks about visiting Fordham, but I do not know whether that would do. I think, perhaps, it would be best for you to give up everything there and come on here in the Packet. Write immediately and give me your advice about it, for you know best. Could we be happier in Richmond or Lowell? for I suppose we could never be happy at Fordham, and, Muddy, I *must* be somewhere where I can see Annie. Did Mrs. L[ewis] get the "Western Quarterly Review"? Thompson is constantly urging me to write for the "Messenger," but I am so anxious that I cannot. Mr. Loud, the husband of Mrs. St. Leon Loud, the poetess of Philadelphia, called on me the other day and offered me \$100 to edit his wife's poems. Of course I accepted the offer. The whole labor will not occupy me three days. I am to have them ready by Christmas. I have seen Bernard often. Eliza is expected, but has not come. When I repeat my lecture here, I will then go to Petersburg and Norfolk. A Mr. Taverner lectured here on Shakespeare, a few nights after me, and had eight persons, including myself and the doorkeeper. I think upon the whole, dear Muddy, it will be better for you to say that I am ill or something of that kind, and break up at Fordham, so that you may come on here. Let me know immediately what you think best. You know we could easily pay off what we owe at Fordham, and the place is a beautiful one, but I want to live *near Annie*. And now, dear Muddy, there is one thing I wish you to pay particular attention to. I told Elmira when I first came here, that I had one of the pencil-sketches of her, that I took a long while ago in Richmond; and I told her that I would write to you about it. So when you write, just copy the following words in your letter:

"I have looked again for the pencil-sketch of Mrs. S. but cannot find it anywhere. I took down

all the books and shook them one by one, and, unless Eliza White has it, I do not [know] what has become of it. She was looking at it the last time I saw it. The one you spoilt with Indian Ink ought to be somewhere about the house. I will do my best to find it."

I got a sneaking letter to-day from ——. Do not tell me anything about Annie — I cannot bear to hear it now — unless you can tell me that Mr. — [her husband] is dead. I have got the wedding ring, and shall have no difficulty, I think, in getting a dress-coat.

WEDNESDAY NIGHT.

. . . [torn out] also the letter. *Return the letter when you write.*

The letters selected in these articles include the more important portion of the Poe papers in Griswold's hands. Whatever one may think of the temper or prudence of Griswold, they abundantly sustain the substance of his memoir. They are now furnished for publication by his son, in defense of that memoir, and the present writer's responsibility is merely an editorial one. It is a gratification to find that American men of letters who were contemporary with Poe are so fully freed from the charge, brought against them by English admirers of the poet, of lack of aid and appreciation toward him. Few men have received such cordial encouragement, praise, and welcome, material and moral, as Poe received from nearly all who were brought into relations with him, and the number of these was many — Irving, Kennedy, Paulding, Hawthorne, Willis, Anthon, Lowell, Simms, and others less distinguished, but then of note. Yet Mr. Andrew Lang says that Poe was "a gentleman among *canaille*."

G. E. Woodberry.

AN OPAL.

A ROSE of fire shut in a veil of snow;
An April gleam athwart a misted sky;
A jewel — a soul! Gaze deep if thou would'st know
The flame-wrought spell of its pale witchery.
And now each tremulous beauty lies revealed;
And now the drifted snow doth beauty shield.

So my shy love, aneath her kerchief white,
Holdeth the glamour of the East in fee;
Warm Puritan! — who fears her own delight,
Who trembleth over that she yieldeth me.
And now her lips her heart's rich flame have told;
And now they pale that they have been so bold.

Ednah Proctor Clarke.

FOLK-SPEECH IN AMERICA.

VELYN, recounting his visit to Beverly in 1654, says, "Here a very old woman shew'd us the monuments, and being above one hundred years old, spake y^e language of Queen Marie's daies, in whose time she was born." The change in speech was probably even greater than in written English, in the century preceding the Commonwealth — the century in which the mother colonies of Virginia and Massachusetts received most of the stock from which their widely scattered children sprang. The "language of Queen Marie's daies" was perhaps more antique than the English spoken by Queen Elizabeth, which, if we may judge from her letters, was less modern than Shakspere's. Elizabeth called her eyes "yees" — that is, "i-ees," as Chaucer pronounced it. She says "hit" for it, the old neuter of *he* in Anglo-Saxon days. This pronoun is yet heard among the Virginia negroes, who got their English no doubt from the white bondservants, who outnumbered them in the tobacco-fields until near the close of the seventeenth century. (The negro preterit with "done" for an auxiliary is perhaps Anglo-Saxon old clothes. I have seen a citation from a translation of Luke made in the fourteenth century where one reads: "And it was done that the beggar died." The negro would clip it to, "The beggar done died.")

From the days of Evelyn's entry above cited — that is, from the middle of the period of primary American settlement to the present time — the language has changed more slowly than in the hundred years between Mary the Catholic and Cromwell the Puritan. The English of book-reading Americans differs from that of educated English people only in those superficial traits that are the unavoidable result of a different environment and the fluctuations of fashion. But along the shore of a stream the current moves more slowly, and suffers eddies and backsets. Much old English of the days of Cromwell, some that goes back farther even than to "Queen Marie's daies," will be found in the dialect speech of rustic neighborhoods in America. There are facts in the history of English words that will never be known until some of the younger American philologists go afield in search of the living forms that grow in the soil about them, and that are not less instructive than the dialects of England assiduously gathered by a multitude of observers, or the *patois* of the French country

to which Littré was not above paying his respects. Disavowing any pretension to be a philological expert, I propose to write here as an observer of American folk-speech. On that portion of the history of the English language which has to do with its conditions and changes in this country, and on that alone, I may claim to speak with some authority, if the life-long habit of studying the people's speech, exceptional opportunities for observing it in many widely separated districts, and an extensive acquaintance with writings of all sorts, printed and manuscript, of the colonial period, can give authority.

English travelers very early mention the differences between colonial speech and that of the mother country. This arose partly from the great number of new objects and processes that must have names, and partly from English provincial words adopted into general speech in America. For example, "swamp," with a far-reaching Scandinavian ancestry, and no doubt a long provincial use in England, had to be explained to English readers, though its use appears to have been general in the American colonies. By 1676 it had passed into a verb in common use in Massachusetts: thus Njingret, the Indian chief, is said to have "swamped himself" when he had hidden in a wooded morass. In 1730 "swamp" formed part of a compound word; "swamp-law," in Maine, stood for certain extra-judicial methods of attaining justice known to all rude and pioneer lands. The word "swamp," like many other provincials of the time, bettered its fortunes by emigration, and was received into good English society when it went back. There are many other words in orthodox use to-day that were apparently not so universally understood in the seventeenth century. Josselyn, the traveler, thinks it needful to make a curious explanation about 1675. "At last we lost our dogs," he says, "it being (as the Lancashire people phrase it) twi-light, that is almost dark." But twilight was in occasional literary use long before this time. I find "sky-setting" used for a time of day in an item of news from Edinburgh printed in Bradford's "New York Gazette" in January, 1731. I suppose the disappearance of twilight to be intended.

There are indigenous words in our folk-speech, but our local rustic dialects are composed almost entirely of words in their older forms or older senses, of English words now quite obsolete, and of words from provincial

English dialects. When first I heard farmers in the Lake George region call a "cow-slop" a "cow-slop," I smiled to think how modern the corruption was, and how easy to imagine that the name had something to do with the feeding of a cow. But rash guesses in etymology are ever unsafe; "cusloppe" is given as a form of the Anglo-Saxon word nine centuries ago. The etymologists miss the history of this word, and of the word "slop," by not knowing that, both as noun and verb, "slop" refers to any liquid or semi-liquid food for cattle, and this over so wide a region of America as to make its antiquity certain.

Take another expression that seems strictly American. "She is in a perfect *gale*," one says of a little girl or a young woman in a state of effervescent mirth. It is easy and natural to suppose this to be modern, and to derive it from a seafarer's figure of speech. But the "Danes" who settled in England spoke a tongue very much like the Icelandic, and there is in this speech the word *gðll*,—with a long vowel,—meaning "a fit of gaiety," so that Anglo-Danish ladies in the court of Knut probably "got into a perfect gale" as our American women and girls do now. In New England they have the verb to "train" for to romp. For this I can find no remote ancestry; it may have come from the New England "trainin'," with its rum, cider, and ginger-bread, but I do not think it so recent as that.

Whenever a "half-cut" — but "half-cut" is a folk-word heard in New York city, and must not pass without explanation. The phrase is sometimes, "half-cut quality" — people whose social position is the irksome one of looking down on nearly everybody, except those who look down on them. The phrase is probably tautological, cut being used in its original sense of docked; "half-cut quality" is only "bob-tailed quality." To begin again my remark — when an English traveler of the class designated in New York as "half-cut" comes to this country, and goes home to write a book, — for the half-cut traveler, English or American, is prone to embalm his impressions of foreign lands in a book, — he is pretty sure to express great amusement at the "niggers." Especially does a "nigger regiment" marching down the street give him no end of diversion.

Now, an American feels something vulgar in the word "nigger." A "half-cut" American, though he might use it in speech, would hardly print it. It repels us even in Thackeray. The black man has taken to calling himself *negro* nowadays, and he puts no little race assertion into the word; but he is mortally averse to "nigger," which on this side of the sea has the tang of overseer's lingo. "Don't you call me niggah; de debbil is a niggah," is the way

a South Carolina black woman uttered her objection a while ago. But there is nothing dialectical — indeed, there is nothing essential, vulgar — in the pedigree of the offensive word. The first blacks brought to Jamestown are not called in Captain Smith's history "negro," the Spanish word for "black," but "negar," from the French word for a black man. They were similarly called in Boston — in the records it is spelled "neger," but a will of 1653 made it "negar." This pronunciation "negar," or "neger," was the commonest one on the Ohio River in my childhood, and is an older word in English than negro.

In the first anti-slavery tract printed in New England, in the year 1700, Judge Sewall writes not only "negro," but in one place "niger," which I take to be "nigger" in sound. Perhaps the sound of the old French word is most nearly kept in the Irishman's "naygur."

Our Lake George people say *fairce*, and the word seems merely a broad sound of fierce. In Chaucer's "Knight's Tale" we read:

Whan he him knew and had his tale herd,
As *fiers* as a leon, pulled out his swerd.

"Fers" here is a literal transcript of the old French *fers*, which would be sounded very like our "fairce." Lowell also notes "ferce" in New England. The word "fierce" is used by our country people as a different word from "fairce." "Fierce" is a word descriptive of character — a *fierce* dog is dangerous. But "fairce" only means eager; a dog may be *fairce* to catch a rabbit, or *fairce* to get indoors on a cold night, and yet not be fierce, and so a man is said to be *fairce* to hear the news. *Fers* and *fiers* were two forms of the word in old French.

Alongside "swamp," which signifies a wooded morass, the country people in many places have another word for boggy ground covered with grass. This word, "mash," occurs in many of the colonial writers of the seventeenth century. In the eighteenth century it was sometimes confused with "marsh" — that is, "marsh" was written and "mash" pronounced. Among the Du Cimitière papers I find a humorous "Reply to the Assessors," in which is this couplet:

I have no banks, I have no Marsh,
Delaware's tide ne'er does me dash.

But it could hardly have been a recent corruption of marsh. The elision of the liquid is easy, but the flat vowel probably points to a closer kinship with the old form "marish," which occurs in a Virginia document of 1679. The corruption, whenever it first occurred, is a variant from attraction. The notion of a yielding substance is consciously present with a countryman when he uses it. The rustic likes to twist

a word about so as to make it descriptive. The word "tarantula" is corrupted by Mississippi wood-choppers into "tareantelope," and the peasants of the Pays de Vaud call "laudanum," *lait d'anon* — young ass's milk.

A good example of the attraction of one word for another is to be found in our American word "riffle," which gets the go-by from all the dictionaries and vocabularies, so far as I know, though it is present in the excellent proverbial phrase, "He cannot make theriffle," i. e., he cannot achieve his purpose against opposing circumstances. The notion is that of a boatman or canoe-man struggling up-stream over a riffle, or ripple. The word "riffle" is common enough in this sense, and seems at first a corruption of "ripple." But this latter word is by the etymologists considered a modern form of "rimple," while riffle comes doubtless from "rift," which is the form given to the word in the letter-press to Evans's analysis of his famous "Map of the Middle British Colonies." Now "rift," as applied to a slight fall, or a "shoaly place," as the first English explorer of the Delaware has it, is but another form of "reef." Mr. Skeat cites from Hexham's "Dutch-English Dictionary" of 1658, "rif" or "riffe," defined by "a foard or shallow place," and of this the colonial "rift" was but another form. By attraction of "ripple," or mere effort to produce representative sound, we get "riffle." "Riff," "rift," and the more modern "riffle" are wholly omitted from the dictionaries, and the word "ripple," in the sense of a *slight fall in a stream*, is not known to lexicographers. I believe its use to be all but universal in the United States. I very much doubt the derivation of "ripple" from "rimple."

Much like "ripple" and "riffle" are "whipple-tree" and "whiffle-tree," both in common use, yet each susceptible of a derivation of its own. It is worth while remarking here that the "double-whiffle-tree" or "double-tree" is known in some Northern regions by an excellent descriptive name, the "evenner." By analogy with "whipple-tree," the ghastly wit of "The Sotweed Factor" calls a gallows a "tripple-tree," which was probably colonial slang.

The change of "rif" to "rift," pointed out above, reminds us of "clift" for "cliff," which I find in Josselyn. "Clift" is the folk-word in many parts of the United States, as it is also in England. Two picturesque streams in Indiana claim the adjective "clifty" for proper name. It is not for a student of folk-speech to go above his last, and meddle with the difference among philologists, as to whether cliff did or did not come from the verb "cleave," to split open. The wide prevalence of the form "clift" creates a prejudice in favor of this etymology so strongly re-

jected by some authorities. A fissure in the rocks is called a "rock-cleft" in an old Connecticut writing.

But the *t* in "clift" may easily be an excrescence, as it is in many other folk-words. Unlettered people love uniformity. I heard of a company of mountaineer soldiers who persisted in changing their captain's name, Lambkin, to Lambkins, in order to make it dress the line with Tomkins, Watkins, Jenkins, Haskins, and Simpkins. There is a strong tendency to put an *s* on every proper name that will bear it, from the prevalence of the old possessive or patronymic termination. Given soft, raft, aft, daft, rift, drift, shift, and other words like them, and skiff straightway becomes skift; whiff, whift; and cliff, clift. "Once" may get a *t* because it is so often used to mark time past that it seems to deserve a preterit ending; "twice-t" may have caught the *t* from proximity to "once-t," for final sounds are highly contagious. Many a terminal *t* appears to have come from the frequency of its sound in the past tenses of verbs. Thus "across" becomes "acrost," perhaps from "crossed," or maybe from association with *past* used as a preposition of place. This latter in turn pays itself back by filching an augment, though Chaucer uses "apass" as a verb. Thus a man from the bottom of the Indiana "Pocket" — let us say from the hill country of "Posey Kyounty, Injeanny" — might have said thirty years ago: "I come straight acrost the crick, an' kep' a-goin' right ahead, and clim plum' to the top of yan hill over yander, an' wuz a-comin' down on t' other side of that air branch, apast the woods paster," and so on. No types can express, however, the long-drawn flatness of the accented vowel in apast, yander, and paster, or for that matter, in "pasnips" for parsnips, in "passell" for parcel, in "sassers" for saucers, and in "sassingers" for sausages. I give "sassers" for extreme Hoosier, but I find "sasers" in a Connecticut inventory before 1650, in the time of American phonetic spelling. "Passell" I give as equivalent to parcel, but it has in the dialect the sense of a portion or quantity, as "he spilt a whole passell of eggs in the road." It is also applied to people in contempt, as "a passell of nateral born fools," and especially "a passell of thieves."

To begin again with words like "acrost" and "apast," the Pennsylvania laws in colony times speak of "wears [weirs] cross creeks and rivers." Judge Sewall of Massachusetts says "aclock" before 1700, as most of our country people do to-day. Indeed, the "New York Gazette" has no other form, I believe, until 1733. I suspect that this is the most ancient location. Folk-speech uses the prepositional prefix *a* much oftener than modern literate language does, especially before present participles. Oliver the Protector says, "What is the Lord adoining?"

¹ This was written before "The Century Dictionary" was issued.

precisely as a Western exhorter says it. I have never heard the plural of "ado" as King James uses it when he thanks Queen Elizabeth for "her motherlie caire" of all his "adoes." But I know a woman of the upper Hudson country who "puts the tea adoin'" when she sets it to draw.

When I was a little boy my playmates at a country school in southeastern Indiana wore "skeets" and went "skeeting," though the village boys said *skates*. I counted "skeet" a curious corruption. Fancy my surprise at meeting an old acquaintance in a far-off land, and in strange company, when long years afterward I read the passage in Evelyn's "Diary" for the year 1662, in which he speaks of "having seene the strange and wonderful dexterity of the sliders on the new Canal in St. James's Park, perform'd before their Majesties by divers gentlemen and others with Scheets after the manner of the Hollanders, with what swiftness they passe, how suddenly they stop in full carriere upon the ice," and so forth. The *ch* in "scheets" is Dutch, and therefore sounded like *k*. Pepys tells of being at St. James's Park on the same day: "Where I first in my life, it being a great frost, did see people sliding with their skatees, which is a very pretty art." I here discovered that the country boys in the hills of Craig Township, when they said "skeet," were only one or two centuries behind the fashion, and were using the word as pronounced by Charles and his courtiers when they brought the "very pretty art" to England. A New York journal of 1784 complains of the time wasted in "skeating" on Collect Pond. Nowhere is it truer that "all which is partakes of that which was" than in language.

I have often heard on the Ohio River a curious phrase, "Hump your stumps"—that is, "Hurry along." Skeats notes the kinship of the verb "stamp" with the Sanskrit "stambha, a post, pillar, stem," without remarking that a near kinsman of this word, applied to those "pillars" of the human body with which men *stamp*, has come down to us through the by-ways of English. Do you smile at this and say that "Stir your stumps" is used by all the world that knows English, and is only modern slang and a manifest figure of speech? Perhaps "Stir your stumps" is another form of "Hump your stumps," the alliteration in the one phrase supplanting the rhyme of the first and last words in the other, but Halliwell cites "Stirre your stumps" from a writing of 1640. That "stumps" was used for "legs" at least three hundred years ago is proved by a passage that I find in Philip Stubbes, who, in pouring out the lava of Puritan indignation upon the gross festivities of the English Christmas-tide in 1583, gives us this lively picture:

Then marche these heathen companie towards the churche and churche-yarde, their pipers piping, their drommers thonderyng, their *stumpes* dancynge, their belles ringlyng.

"Stump and Rump" is given in Halliwell in the sense of "completely." Literally it means "leg and thigh." "Stumps" is equivalent to "legs" in several English dialects, and a direct connection is found with stamp in the English provincial word "stump," to walk heavily—*i. e.*, to "stomp," as our American country people give the vowel. I have taken pains to follow this word so far as a sort of test, showing that humorous and slang-sounding phrases may have long lines of descent and a widely scattered kindred. I find the phrase, "On a sudden," in the English Public Record Office. It is in a report on Bacon's Virginia Rebellion of 1676. In a despatch from The Hague in Bradford's "New York Gazette" of December 11, 1727, it is said: "The Council of Desmesnes of the Succession of Orange are *struck all of a heap* by a vigorous resolution enjoining them to give an account," etc. The familiar "Take care of yourself," uttered at a parting with a friend, I found used in the Pays de Vaud, where one peasant says to another, "Conservez-vous." The phrase may go back to the original Aryans. "Good-by, Jake, take keer of yerself," was the farewell caution a poor-whitey gave to his brother, who was about to be hanged in Columbia, South Carolina.

But let us look at the other end of the phrase, "Hump your stumps," the assonance of which hangs like a pair of saddle-bags across the middle word. "Hump" is not, as the dictionary people imagine, from the noun. It is clearly a derivative of the root of "hop." "I must hump along if I would get home to-night," the people say. Mr. Lowell gives us another word from the same stem in the phrase, "I must hyper round and get tea." So the vocabularies give us an archaic word, "huppe," to hop. In parts of Pennsylvania, in the eighteenth century, there were wild frolics of dancing and drinking called "hup-se-saws," which name analyzed gives us "hop" and "see-saw." The verb to "hump" is probably a nasalized form of "hup" or "huppe." "Hyper," which I fancy borrowed its *r* from the next word in "hyper round" (hype round), is identical in meaning with hump. A Hoosier house-mother would hump around and get supper, while a Yankee matron was hypering round and getting tea.

I cannot suggest any explanation of an Indiana mother's injunction by which she seeks to quicken the pace of the boy "creeping like snail unwillingly to school." She says, "Marvel, now!" I have heard it "Marble, now!" "Mosey" is another imperative used in the same

way, and this I have heard in Brooklyn as well as in the old West. Bartlett, with his usual felicity in going wrong, gets "mosey" from a runaway postmaster in Ohio named Moses, and "the Spanish *vamosé*." In colony times a ship's yawl was sometimes called its "Moses," in allusion perhaps to the ark of bulrushes. The play known to boys as "mumble-the-peg" is called by an old writer, "moselle-the-peg," but this does not help us out with "mosey." Nor can I suggest any original for "torshent," a Cape Cod word for the youngest child in a family. Those who have read "The Chezzles" will remember how delightful is the use Mrs. Morse makes of a deaf mute "torshent" and of the word. I believe it is not confined to Cape Cod.

The word "gent" nowadays seems to wear its hat cocked on one side of the head, and to walk with a caddish swagger of vulgar self-importance. But I know a worthy old lady in the country who calls her husband the "old gent," using it as a title of respect, and such it was in her childhood and long before. In 1754 the Reverend Samuel Davies, afterward president of Princeton College, traveling in England, describes the Reverend Dr. Lardner as "a little pert old gent," epithets that would not be flattering to a minister to-day, nor even dignified for a minister to use. "Pert" here has the sense of "lively"—much as a Kentuckian might use "peart," or a New Englander "perk." Indeed, I suspect that Davies gave the word the sound of "peart." That Davies used "gent" as a term of respect is shown by his characterization of another reverend doctor as "a venerable, humble, and affectionate old gent." It will not do, therefore, to account a word recent because of its slanginess. When a smoker professes fondness for "the weed" he does not dream that he is using an epithet applied to tobacco by King James I. in 1620, and that nearly two hundred years earlier than James, in the reign of Edward VI., the hop-plant just coming into England was called "the wicked weed." What plant had worn this title of contempt before the hop I do not know.

Our very mispronunciations and distortions of words are ancient. Seeing an old quarto of 1623, entitled "*Le Negoce d'Amsterdam*," lying on the table in an auction room, I left a little nibble of a bid for it, and got it for a dime. One has a good chance of finding something of value in an old tome, even if it should finally go to the junkman to save shelf-room. This one, redolent, as I deemed it, of the dingy counting-house of some ancient Dutch grossburger to whom it had served as a sort of trade-bible, stood on my shelves for a long time without being opened. In moving the books awhile ago I tried it to see if it could pay shelf-rent.

There was not much in it; explanations of obsolete weights and measures, lists of the fees of convoy-loopers, and tables of exchange in the outlandish moneys of those times. But I presently found that this book hugged another between its back cover and fly-leaf, and had held it for a century perhaps, and held it so close that even the expert maker of auction catalogues had not found out that he was selling two books for one. The inclosed pamphlet of forty-two pages was in English, and entitled "*The Captain's Directory, etc.*," by T. M., English Ships Broker at Rotterdam." This sea-captain's hand-book, preserved by good fortune from the destruction which befell its mates, enables us to overhear the pronunciation of a ship-broker of a hundred-and-sixty years ago, for these pages have not known the hand of the literary reviser. T. M. must have spoken English much as a man of his class in South street, New York, would to-day. He said "marchandise," which is out of date, but he also said "pruens," "liquorish," "salpeter," "Ierland," "celtificate," and "lamb-black." Apropos of this last word, Mr. Wright defines it by "to black shoes," and cites from Wycherly "lamb-blackening the judge's shoes." But any one who has seen lamp-black and tal-low put on shoes, as it sometimes is in country places, will readily perceive that Wycherly merely spelled "lamp-black" as many of our people pronounce it. And, indeed, all of the corruptions cited above in this paragraph are in the interest of euphony, and would perhaps have been sanctioned by usage among a people like the Greeks, who had what our English stock so wofully lacks—the artist spirit. But I cannot say much in favor of the word "peter," which is used for saltpeter by some of the Massachusetts colonists; it even gets into some official documents, in the time of the Indian wars, perhaps because saltpeter was then regarded as a very proper apostle to send to the Gentiles.

The Earl of Surrey, in one of his best poems, says:

Laid in my quiet bed,
In study as I were,
I saw within my troubled head
A heap of thoughts appear.

He here uses "heap" in precisely the sense given it by people in southern Indiana, in Georgia, in Texas, and generally over a large part of the United States. This sense of the word is very primitive. I believe "*The Century Dictionary*" gives the sense of a crowd or throng as the earliest meaning of the word. It was good when the first colonists came out of England. It seems a little monstrous nowadays to hear a man speak of his cow's giving "a heap of milk," or to hear that "there was a heap of people at the basket meetin'."

"Sight" is also used for a great quantity, or a great number, and an example of it is given from a writing of 1540, "Where is so huge a syght of mony?" But this is not quite the same; it shows the phrase in transition. The Hoosier duplicates the sense: he has raised "more corn by a heap-sight" than his neighbor. Sight is intensified by becoming plural, as "There 's goin' to be sights and sights of people at the barbecue." The poor-white's phrase for a great quantity is sometimes "gobs," sometimes "lots and gobs," or rather "lots and *gaubs*," with a long hold on the last note. He also says "the whole gob" for all of anything. To "sell by the gob," in the dialects of parts of England, means to sell the whole lot. Our "job-lot" is only a sprucer form of "gob-lot." On the western slope of the Green Mountains each cluster of charcoal kilns with the shanties of the workmen is called a "job." In ascending the road which crosses the wooded summits of Mount Tabor, I was told to go on "to the third job," and there turn to the right. In the village of East Dorset, Vermont, the marble factories, which make monuments and tombstones by machinery, are severally called "marble-jobs," and in the same region a lumbering-camp with its saw-mill is a "lumber-job."

The low-down man not only says "gobs," but he also expresses quantity by a still ranker word, as: "He 's rich; he 's got gaums of money," as though his Dives were all besmeared with riches—"gaum" being the old English and French *gomme*, that is, "gum."

Since this article was written, "The Century Dictionary" has made my examples of the American "guess" antique, by showing that Gower, Chaucer, Shakspeare, Sheridan, and Wordsworth use this Americanism. I therefore omit them, only remarking that I find the word so used in the Paston letters in the fourteenth century, and that there is evidence of its existence in our colonial period. It is by no means confined to New England. It is common in Pennsylvania, and in southern Indiana, where there is practically no population of New England origin. But "calc'late," or "cal'late," is exclusively Yankee, and is limited to the substratum of folk-speech. So, on the north side of the Ohio River, "guess" is genteel enough for colloquial use, but "low" is lower class. Bartlett's "Dictionary of Americanisms" gives this word as "allow," which it rarely is except when pressed and laid away in an herbarium. Bartlett wholly misses its sense. He has mislaid Lowell and all the dictionaries in this as in many other definitions. Professor A. S. Hill of Harvard is the latest writer I have met who gives "allow" as a dialect word meaning "to assert, to affirm," which it never does except by way of irony—just as "guess" and "calc'late"

and the Southern "reckon" are used ironically to express assertion. "I allow," or rather "I 'low," in its commonest sense is equivalent to "I guess," "I calculate," "I reckon," and the Englishman's "I fancy." By way of irony, an Appalachian mountaineer will say, it is true. "I 'low that 's a mighty nice hoss, Squire." He means to affirm by innuendo, as a Yankee, in the same case, might "calc'late." The word has another very common signification. "I 'low to go to town to-morrow" is an expression of purpose. A New England up-country man would say, "I 'lot on goin' to taown."

"Guess" appears rarely, "low and "calc'late" almost never, in writings of the past. Our forefathers regarded writing as a solemn business, and certain colloquialisms were never put down on paper except by inadvertence. My father was a Virginian, and, like Virginians in all generations, spoke of his father as "pa." But one would never suspect it from his most intimate family letters. He always sends his love and other messages to "my father." I remember how surprised I was when a boy, visiting in Virginia, to find that "mama" in a letter was pronounced "ma." I was regarded as outlandish because I did not know that "ma" was always spelled but never pronounced "mama." Who knows how much of the speech of the past we have lost by such conventions? In the Dillwyn manuscripts in Philadelphia, young Susan Dillwyn's form of address is "father." But once in telling what she said to him in a dream she calls him "daddy"—no doubt the common colloquial form in Pennsylvania. Once again she slips into calling her grandfather "grandady." In another Philadelphia journal of the last century, the sprightly Sally Wister writes "dada and mama," and as she elsewhere says "daddy," she no doubt pronounced "mama" "mammy" as it seems to have been generally spoken in country places in the early years of this century.

The first-comers to Connecticut must have pronounced many words exactly as my neighbors, the lake-dwellers of northern New York, utter them to-day. The old Hartford inventories have "tacklin'" for harness, "exepinn" for linchpin, and "grin'ston" and winch." The real sound of grindstone here is "grin'st'n." We also anchor our rowboats with an "anchor-st'n'." To "get shut of," in the sense of "to get rid of," is given in Halliwell's provincial vocabulary; the phrase is used in, though not confined to, what I have called the Hoosier—the speech of illiterate people within the Ohio River watersheds, and in the whole southern Appalachian region. But the Hoosier sometimes "gits *shet* of," or "*shed* of" what he does n't like.

Halliwell gives "duborous" for "dubious"

in several English dialects. The Hoosier makes it "juberous," and gives it both a subjective and an objective sense. He feels "mighty juberous" about crossing an unsafe bridge, and he also regards the bridge as "juberous." But two words have been well mixed here, for "juberd" is a form of "jeopard," and "juberous" in the same sense may be "juberdous"—that is, "jeopardous." But folk-speech often applies a subjective word to the object. The peasants on Lake Geneva speak of *une chose envieuse*, when they mean *une chose envide*.

Our country lads say "galluses" for what we call suspenders, as the Yorkshire dialect has "gallaces" for what the Englishman calls braces. Ashton gives from a London newspaper of 1712 an advertisement of a house for sale. It is interesting, from an architectural as well as from a linguistic point of view, to know that this unquestionably "Queen Anne" house had a "cupalo" on it. By a similar transposition "gundalow" was the name given to a large, rough flat-boat on the Potomac; it was to the lively imagination of the earliest boatmen a gondola, or, as they said it, a "gundalo." The word is now applied to a box-car for coal.

I find "daythe" for dearth in early colonial letters, and "haythe" for height in Vaughan's journal of 1684, but I nowhere find the Hoosier "hath" for hearth. One not only hears "haith" but also "hait" for height in the Adirondacks. "Fur" for far, and "further" for further, were common enough on the Ohio a quarter of a century ago, and may no doubt be found there yet, in spite of hostile schoolmasters. In the Hutchinson papers I find "farder." Edward Winslow, a Mayflower pilgrim, says "admired to see" in a letter to Winthrop; the phrase is still green in Massachusetts, though the word admired has shifted its sense. "Overhalls" appears in the secret record of Sir Henry Clinton, which Dr. Thomas Addis Emmet contributed to the "Magazine of American History," and as a woman who wears overalls ever called them anything but "overhauls," I am inclined to think it the original word. Major Vaughan, the New Hampshire colonial magistrate, who says "haith," also writes "menester," "heither" for hither, "becase," "scurse," "haifer," "rauth" for wrath, "caitch" for catch, and "dafter" for daughter. Nearly all of these are yet to be heard in one or another down-east folk-speech. Vaughan uses some quaint terms and phrases that I have never met with elsewhere. "Hand-apase" is his expression for with haste. He says "rutted at" for scolded or threatened; literally roared at, akin to the Latin *rugitum*. There is an English dialect word, "raut," to bellow, and the same root is found in "rother beasts," a name in use in this country two hundred years ago for horned

cattle. Vaughan writes "at ditto time" for at the same time,—literally at *said* time,—"ditto" being a form of the Italian *detto*, "said." He also says that Mason "had *refin'd* up to the Kinge all fines and forfeitures." "Fine" has in several of the writers of this period the sense of a composition in one payment for future instalments on contingent dues. It will be seen that Vaughan's language is antique and well-preserved, many of his words are in even an earlier stage of development than those in common use in his time. Edward Randolph, the most gifted liar of all the royal agents in the colonies, said "hursh't" for hushed, and "forgit," and "bene," now coming into favor again. The latter two were common in that day. Randolph, though professing a great attachment to the English Church and its rites, unluckily calls the liturgy "the lethardge of the church."

One John Wright, living near the site of the city of Trenton, wrote a letter to Andros in 1680. He speaks of persons "concernid in the satlin of a toun." He is an emigrant from Martha's or, as he calls it, after the manner of the time, "Martine's," Vineyard. He seems to have had trouble there: "A sentence of death" had been "given upon all my Concernes." Andros had interposed in his behalf and given him what he calls "a Resericktion"; otherwise "I had now been but the prodikt of a sifer." He writes "curis" and "concaiveing"; he makes three syllables of "afayars" and "desiar," but he gives rather short "mesar" for measure. He says "destover" for discover, writes "reule," and calls the "Deucke" of York "Riall Hiness." He has "holle" for whole, by which he seems to intend the unspellable pronunciation prevailing throughout New England to this day. He says "acenn" for akin, "case" [caze] for cause, and he writes "implyment." I suppose "mesar" is the only one of the pronunciations indicated by his spelling that could not easily be found to-day among illiterate people.

I have given enough examples to show that the most ancient and least mutable part of a language is the residuum—the folk-speech. Fashions may change, but the countryman is slow to give up the ways and words of his forefathers. If the world's changes knock the sense out of a word he will put another meaning into it with as little alteration as possible. Some of the provincial English people say "hallow-day" for holiday or holy day. But New England hallowed no holidays, and kept holy no holy days but the Sabbath. So from *holiday*, or the broad sound of *hallow-day*, some of our Northern farmers get "hollow-day"—that is, a day with no work in it. They attach quite another sense to "hollow" when they note the condition of the atmosphere in which sound

is easily carried. "The air is so *hollow* that I can hear a train ten miles off," one will say.

There are *patois* much more outlandish than our well-known rustic dialects; such as are to be heard in out-of-the-way places — in North Carolina byways, in the Jersey mountains, in some parts of the "Eastern shore," and in some remote nooks of the Appalachian range. Nowhere in print can I find any parallel for the most atrocious features of the dialect of the "tar-heels" and "crackers," the Carolina dregs. A Confederate officer told me that during the long siege of Petersburg, whenever the battery to which he belonged fired upon the entrenchments over against it, the return fire was very disturbing to the North Carolina infantry alongside. At length one of the infantry soldiers came over to remonstrate with the commander of the battery against this reckless provocation of an enemy's dangerous fire. He said: "Leftenant, ef you uns could shell the uns 'thout the uns shellin' we uns, ur hurtin' you uns, we uns would n' keer ef you uns wuz to shell the uns all the time." "What the deuce *is* he saying, anyhow?" cried the South Carolina lieutenant, in despair, turning to his orderly for explanation. In such out-of-the-way *patois* there are preserved perhaps distorted fragments of now this and now that English dialect, with bits of argot perchance brought from the slums by ancestors who emigrated involuntarily, and new distortions or contortions of speech developed by the sheer intellectual depravity of clay-eaters and moonshiners.

If all the monstrosities of such dialects had come from England we should not be able to find evidence of it — such people do not record their speech. Now and then, however, an early immigrant who could write has set down some of these distortions, and we are led to suspect that most of them came from Britain; some of them came with the Saxons from Frisia, no doubt.

One of the most curious documents that I have met is a petition of one Barnard Hodges of Delaware. It gives us what is to be found to-day, though rarely, the excrescent "y" at the beginning of a word, a sound that might easily have begun from a drawing use of the definite article before a vowel, and from a habit common with illiterate people of using *a* for *an*. Thus if I say "a understanding," it helps the euphony to let it slip into "a yunderstanding." This Hodges, albeit he shows some education, is partly phonetic, as will be seen by "maapeyer" for "may appear." But his letter *u* is often silent and superfluous. He styles the governor, "Your Younneur," and he says, "yunless," "yeunder," "yunderstanding," and "yeundertake." He even takes pains to write "yeouffeis" for office. His dialect must have

been strangely antique; that he pronounced the past tenses of regular verbs as a separate syllable is shown by his frequent spelling of them with *a*, without eliding the feminine *e*. For example, "returnead" for returned, "seattlead" for settled, and "obtainead." He wrote "bestoued" for bestowed; his was is "wous," his what "wout" — but in these the *u* is probably superfluous. What gives consistency to his speech is that he twice writes "wertue." It is a general rule that the man who says "yundertake" and drinks "yarb" tea when he is sick, usually spells wertue "with a we." The author of this letter, which is evidently written with considerable elaboration, and no little perspiration, had probably received more "schooling" in England than his neighbors. He complains that his cause had been tried by a jury of "un-ettercat men."

In nothing is the student of American folk-speech so liable to error as in assigning geographical limits to a word or phrase. The English local dialects were pretty thoroughly mixed. One gained a little more dominance in one place, another in another, but a stray provincial term is prone to turn up in places the most unexpected. "Tote" has long been regarded as a word of African origin, confined to certain regions where negroes abound. A few years ago Mr. C. A. Stephens, in a story, mentioned an "old tote road" in Maine. I wrote to inquire, and he told me that certain old portage roads, now abandoned, bore that name. I find the word used in a "Remonstrance" from the people of Gloucester County, Virginia, preserved in the Public Record Office in London. This paper bears date 1677, when there were four times as many white bond servants as negroes in Virginia. "Tote" appears to have been a well-understood English word in the seventeenth century. It meant then, as now, to bear. Burlesque writers who represent a negro as "toting a horse to water" betray their ignorance. In Virginia English, the negro "carries" the horse to water by making the horse "tote" him.

"Quoit" is pronounced "quait" in most rural districts in America, I believe. There are other words showing a like interchange between the vowel sound represented by our "oi" and the long "a." It is precisely the characteristic most easily remarked by a foreigner in Canadian French, that such words as *bois* are sounded "bway," while a reverse process takes place in words with the sound of our long *a*. An amusing instance of this is found in early New England history. Elizabeth Hanson was carried away captive to Canada by the Indians in 1724. She fell at length into the hands of a kind French family, who insisted on baptizing her infant in order to make it French. Mrs. Hanson relates

that the name given to her baby at its French baptism was "Mary Ann Frossways." I make no doubt the last of these names was a riddle to all New England. But the poor woman's English tongue could not come any nearer to the Canadian pronunciation of *Françoise*. What the little Yankee child was called at its Canadian christening was equivalent to "Mary Ann French."

The relations between Protestantism and the Roman Catholic church have now and then changed a familiar word. Governor Winthrop was so Protestant that he changed the name of a fording place in a stream from "Hue's Cross" to "Hue's Folly." So I find that what we nowadays call scare-crow is called in an American document of about 1680, preserved in the Egerton manuscripts, "a scare +," that is a scare-cross. Did our reforming ancestors change cross to crow?

Franklin noted in the pages of "Poor Richard" the differences of speech in the several provinces; he laughed at the Marylander and the Connecticut man for beginning and ending their sentences with "sir"; at the Dutch New Yorker for saying "diss" for this; at the Pennsylvanian's "painter" for panther; and at the residents of New England and Cape May because they called a cow a "keow," "by a certain involuntary twist at the root of the tongue." The striking difference between the speech in two adjacent towns on Long Island was noted very early, and is significant. Sally Wister, in

the Revolutionary times, thought it royal good fun to return the gallantries of the Virginia officers by chaffing them about their broad speech and their lost final *r*. It was, perhaps, a peculiarity of the accepted English speech when Virginia was settled. Queen Elizabeth writes "moe" for more, as a Virginian utters it yet. Our Southern dialect writers succeed in misleading all but Southern readers by using an *r* where none is sounded. All my friends say "Brer Rabbit," as Mr. Harris writes it, but as neither he nor any other Georgian, white or black, says it. It is "Bruh Rabbit," if one gives the common sound to the letters, but the Virginian and the Georgian regard a final *r* only as a modifier of the vowel.

While I was yet a young man living in the West, I received a letter from Lowell in reply to one of mine, in which he gave me somewhat full suggestions regarding methods of collecting dialect. Some sentences I transcribe here for the sake of their Lowell-ish flavor.

I hope you will persevere and give us a collection. Remember that it will soon be too late. Railways are mixing and the school-master rooting out. . . . Archaisms of speech survive only among people who are so lucky as not to be able to get at your new-fangled phrases. When the lumberer comes out of the woods he buys him a suit of store-clothes and flings his picturesque red shirt into the bush. Alas! we shall soon have nothing but store-clothes to dress our thoughts in, if we don't look sharp.

Edward Eggleston.

PAIN.

THOU drear companion of the slow night-hours,
 Thou sharpener of the soul! Long, long had I
 Waged weary combat with thee, though my cry
 Of anguish only cheered thy mocking powers,
 As through the years we strove; no respite ours,
 Till, lo! one day each breathed victorious sigh,
 The master, thou, of my mortality,
 But master who beneath my spirit cowers
 Its slave forever. Now fast friends are we,
 My vanquished victor Pain, and much I owe
 To thy stern fellowship: through thee I see
 With quickened sense all things both high and low,
 For knowing all that I can never be,
 Tutored by thee, all wider life I know.

Elizabeth West.

A BACHELOR MAID.

By MRS. BURTON HARRISON,

Author of "The Anglomaniacs," "Sweet Bells Out of Tune," "Belhaven Tales," etc.

WITH PICTURES BY IRVING R. WILES.

VII.

EXT morning, Marion, in her turn, awoke out of a dull and troubled sleep, to cogitate her new situation in the chill gray of early daylight, so depressing to resolutions of the night before.

To Miss Effie, who had offered to remain with her, she had said no — that it was better at once to attempt the solitude henceforth her portion in life. And Miss Effie, tender, if a trifle gruff of voice, had patted her on the shoulder, told her that on the whole she was right, and, declining to have a cab or servant, had trotted off alone in the darkness, intending to catch a street-car going west.

Marion, as she dwelt on the old maid's sterling goodness, her clear common sense, her happiness in her own beliefs, yet had a little shiver of distaste at a grotesque dread thrusting itself upon her, that she, Marion, might one day come to be of the same type. Whilst combing her hair, the girl surveyed in her mirror her stately shape and clear soft coloring, and wondered if she ought to wish they would never know transformation into the squared dimensions, drab tints, and tanned surfaces with which Miss Effie faced the realities of life. And yet even Miss Effie, provided by nature with a shield against contact with the wicked world, had the walls of a home behind which to intrench herself — an unimpeachable background in those faded pastels, the sisters; while Marion, having none of these, must go on her lonely way, and look not back or around her.

It would have been superhuman indeed, if, in the first moment of reaction after great excitement and stern resolve, Marion's thoughts had not dwelt upon Alec Gordon. As she lay waiting for sounds of awakening life about the house, for the soft noise of the housemaid's brushes in the hall outside her door, for the glimmering casement to be defined upon the full light of outer day, her soul seemed to be floating afar in a world void of substance, instinctively seeking a mate with which it could blend and be at rest. This was no doubt a capital weakness, but Marion, in that hour betwixt sleep and waking, was not fully responsible. As she turned on her weary pillow, trying to ban-

ish these thoughts in sleep, again and again the image of Gordon putting aside his pride in the tender burst of pleading that she should bring all her troubles to him, with him share the odium that had been thrust upon her, returned with haunting persistence. How simple a process, how natural and right it then appeared to her, to throw aside her dream of independence. put her hand in that of this true and manly fellow, and say to him: "Where thou goest, I go. Thine is mine, the world before us is ours to meet for good or ill, to live together according to God's holy ordinance as man and wife."

God's holy ordinance! What did that mean — the words she had so often heard over the heads of couples standing at the altar? If there were anything in religion, was it not the first injunction of the Creator to created man and woman, to blend their interests in one? If there were anything in law and order of human society, was it not the first requisite that the joint life of man and woman should be lived as ordained, that their mutual love might remain immortal in a perishable world?

Somehow or other, this was a sweet and sustaining thought. All her other ideas of living for championship of the unaccorded rights of her own sex faded away in the light of its steady radiance. The fond fancies of girlhood about wifehood, hitherto dormant in Marion, trooped up to surround the image of the lover she had cast away.

When the maid came in, and Marion, starting, saw upon the woman's face the ill-concealed curiosity of her order about her young lady's changed prospects, she was disagreeably surprised. The hard reality of her actual lot had been, during this last hour of reverie, so happily remote! She had had such lovely things to think of!

Dismissing the woman, whose eagerness for items to discuss among her fellows below-stairs disgusted Marion, she went through the various stages of her toilet, still strangely under the influence of the rebound in favor of Gordon. She recalled his trying position under her interrogatory, his self-control, his open statement that unless she could trust him he must go away without her trust, and stand by the consequences of his inability to make due explanation. Her fleeting suspicion that he had been engaged in

Some affair of the heart with Sara now seemed to her to have been a monstrous injustice. Whatever the understanding between them, Marion would never believe but that Gordon's attitude in the matter was one of fidelity to herself, although many evidences of Sara's fancy for the handsome young man now arose to convict Madame Stauffer of double treachery in her hasty marriage with the judge.

On Sara's side all was dark, shifty, perfidious. On Gordon's Marion saw only his native endowment of manly virtue, strengthened by a great love for her, a love she now knew she never had deserved. The fine balance of sense and judgment in his character, his refusal ever to be moved to the right or left against their dictates, were admirable in her sight. Nothing like them was observable in her retrospect of the brilliant inconsistencies of her later friend and guide, who had ended by inflicting on her that most cruel wound.

In this mood, she went down into her morning-room to find on the table a note from Gordon, running as follows:

I cannot but hope, my dear Marion, that your after-thought of our conversation will confirm you in your generous promise to believe me without specific explanation of my share in the crushing blow that God knows I never dreamed would fall on you. If I bungled, it was hoping to be of use to you. But consideration of the affair, and above all of your present attitude to me, proves that I am wiser in not again offering to approach you personally. In whatever I can serve you as a friend, as a brother, as one who has received every kindness from your father and yourself, command me always. A letter from your father, which I found on returning home last night, makes such explanation of his act as he thinks needful. He asks me to convey it to you, and I do so. While I cannot, in conscience, advise you to reconsider your intention not to remain under their roof, I am still gravely anxious as to what other course you will pursue. I beg of you to be guided in all things by my aunt, who will counsel you as I could not do. If I do not again take occasion to say so, believe always in my interest and solicitude for your welfare; count upon me not as the lover who has failed to win you and accepts his fate,—and to whom wisdom suggests absence from you as the only means of enabling his judgment to act in your behalf,—but as, in the full sense, your friend and servant,

ALEXANDER GORDON.

Marion dropped this letter in her lap.

It was as if a needle-bath had played upon her warm feelings.

Mechanically she took up the sheet of note-paper it had inclosed, in which the bridegroom of the day before had penciled a few lines of palliation of his sudden action. Few they were, and, naturally, inefficient in producing the de-

sired result; the plea of a vain, pompous, self-sufficient man under the spell of a folly old as creation — determined to indulge himself, and to leave others to bear the consequence.

Her father's letter had upon Marion the salutary effect of arousing anew her old resentment of injustice. Otherwise had she been in great peril of shedding mere womanly tears because her lover had at last gratified her by definitely leaving her to herself. In a trice, the soft visions of the early hours of day fled away from her — now, indeed, had she attained the summit of her old ambitions; now was she free and able to be a law unto herself! And Marion, for the first time in all her trials, broke down, and cried until she could cry no more.

Miss Effie, engaged with some of her charities in the forenoon, had promised to be with her in the afternoon.

Marion, after regaining her self-possession, was employed in putting beneath the grate and burning to a crisp a newspaper containing an animated version of the surprising marriage at such a church, by such a rector, of the well-known Mr. Justice Irving, with his daughter's "governess," when Hilary, coming into the room fresh from a bout with a reporter who had called to inquire particulars of the judge's family, brought Marion a card.

It was Mrs. Romaine's, and above the name was penciled an urgent request to be received, if for a few minutes only.

"That hard, cold, cynical woman!" said Marion, inwardly. "How she will grate on me! But still — what does it matter? I have got to face this wretched business, and I may as well begin. Yes, I *will* begin. If she is hard, I will be hard. *No one* shall pity me!"

She went into the drawing-room, to find quite another Mrs. Romaine than the one to whom she and society had been used. This woman's face was not hard, and there was genuine sympathy in her eyes, as she arose and took Marion's hand.

"My dear, as soon as I read it in my morning's paper, I ordered the carriage, to come to you," she said. "I felt as if I, better than some others, could understand what has been going on, because I mistrusted that person from the day she was at my house at luncheon. But, Marion, I thought it was Gordon she aimed for,—and I still think so,—if she could have got him. Don't think me impertinent,—I don't mean to be,—or prying, or anything. Don't answer me unless you like, but give me leave to talk out what's in my mind, or heart, rather—if I can persuade you I have such a commodity behind my hooks and eyes. You are dreadfully alone in the world, you poor girl, and I came to say that if you would like to — if you can't think of anything

better for the present — I have plenty of room in my house for you — or, better still, if you want to go away, I will take you anywhere — Florida, Bermuda, Spain, Italy — all places are the same to me, and I am always glad to move on. I don't know what your resources are, independent of your father, but don't speak of expense. I have more money than I can spend, and it is n't because I want a new sensation that I ask you, though you probably will think so —"

She stopped to draw breath, and Marion saw something like tears come into her eyes, and escape upon her cheeks.

"Mrs. Romaine—" the girl began, gratefully, her heart kindling with a sudden pleasant warmth.

"Don't answer me yet. You 'll say no, of course, and I hate to be refused anything. Think it over. You won't care to stay on here — a girl of your cut of mind and temper, I 'm sure; and, on the whole, the best thing would be to travel. So pray come away with me; and if I 'm trying, you may be trying, too. But I 'm really better than I seem. And if you want to know one reason why I 'm sorry for you — it 's because I had a baby once, named Marion — my only girl, whom I loved passionately. She was a wee delicate thing, that died in my arms in her sleep. I sometimes think my husband has forgotten she was ever born; he never speaks of her. I believe he thinks it was a relief to have her taken. But I don't forget. I see her, in company, among the other girls, and think that if I were ever ill (which fortunately I 'm not) she would sit by my bedside, and stroke my hand, and kiss my brow, and call me 'mother.' Now, my dear, I 'm not given to gushing, any more than you are; but if you want me, take me, and you 'll not regret it."

"If you knew how empty the world seemed to me, half an hour since, of people likely to make such an offer," said Marion, "you 'd know how truly I thank you for it. When I sat there reading those wretched notices with the head-lines in the newspapers, about my father's marriage, I felt utterly alone."

"Gordon?" said the lady, eager interest perched upon her brows.

"You know, of course, that our engagement has been for some time at an end? He came last night, and so did dear Miss Effie Gordon; but I can hardly take more than sympathy in words from them."

"I thought so," said Mrs. Romaine, triumphantly. "I considered all that, before I came. Otherwise, I should perhaps not have ventured to offer myself."

"How good you are!" cried Marion, struck with this evidence of, it must be confessed, an

unsuspected delicacy. "But, indeed, you must not tempt me to be a coward and run away from my duties and obligations in New York. Nor must I trust myself in your home. You, who are all for the ability of woman to meet crises in life as bravely as any man would meet the same, must not unnerve me at the start."

"Oh, but, my dear, a man under your circumstances would whistle and say a few bad words, and probably take a room at his club or a hotel till he had made up his mind where to move to — and that would be an end of it. He would not feel it as you do; his nerves would not be on edge at the prospect of staying here to welcome the happy couple home."

Marion shivered.

"As usual, my tongue goes too fast. No, my dear girl, what I should have advised would have been for you to make up with Alec Gordon, who, even if he does not hit it off with me, is a rare fine fellow —"

"You counsel me to marry?" interposed Marion, surprised.

This time it was Mrs. Romaine's turn to wince.

"Did nobody ever tell you that in some far prehistoric time I was in love with my husband?" she said carelessly. "Well, I was. I used to go to afternoon services in Lent and pray for that love to last, because the sensation was so much to my taste. I used to have ecstatic feelings when his foot was on the stair, and I sat sewing little baby-clothes. We lived in a plainish way, then; three dollars spent in two theater-tickets was a tremendous outlay; and we walked out to dinners — I tucking up the train of my best gown under a long cloak, and laughing if the wind snatched it away from me at the corners and whipped it around my feet. Then he grew richer, and we broadened the borders of our phylactery, and then — how — when — dear knows if I can remember, we grew farther and farther away from each other. Now, when he is at home, I am aware of it because he is there behind a newspaper, but that is all! When our lips meet, it is like two pieces of dry pith coming together. I have a perfectly unsurpassed power of annoying him by my presence. I know nothing of his affairs, nor he of mine. Our interests are his, not mine. Our house is mine, not his. All my tastes are 'fads'; but so long as I don't disgrace him, he does not interfere. I have money in abundance. Money — money — who cares for money when a man's heart and soul and brain have gone into it? How long is it since he has thought I could want anything from him but a check? But ah! if I were you, and Gordon were my suitor — if, knowing what was to come, I had it all to live over again — I think I would take

the bitter present for one taste of the old sweet that never can come back!"

"Nevertheless you make me feel that I was wiser than I knew," said Marion, with a wan smile.

"Yes, I suppose you were wise. Now, please forget my maunderings, and think over my desire to be of use to you. If you don't wish to travel, then just come to my house, and stay with me. It is too wretchedly lonely for you here. Have you an idea when they will be at home?"

"A week hence, my father said in his note."

"A week of this? An eternity of moping. Come, my dear, I have a brand new notion. Leave the house to run itself; you have old servants who know their business. Return home with me, or come this afternoon. My husband is away, we shall be quite to ourselves; I won't let my stupid sheep-dog, Loulie Kemp, darken the doors while you are there, or Herr Hofman, or that idiotic Reggy Poole. Then, if you are still bent on living to yourself, we will find out a home for you, and amuse ourselves with fitting it up, and you will add an important 'one more' to the fast-growing ranks of the 'Bachelor Girls.' Oh!" and she clapped her hands, "we will make yours an ideal bachelor establishment. You shall test the question whether it is possible to do the thing properly, thoroughly, in a perfectly well-bred, unbohemian way. No divans and cigarettes like that goose Kate Collingwood, who makes such strenuous efforts to be an original, and succeeds only in being a bouncer! I am almost sorry you have three thousand a year, it would be so nice to find you a vocation. But three thousand won't go far, after what you have been used to. It will really be quite paltry, after you pay the rent of a little flat, even if I furnish it—and I have rooms full of furniture I don't use. You could not trim bonnets, could you? No, that's not your sort, at all. Perhaps you would like to be the agent to sell the violets from our country-place. The gardener tells me he has thousands in the new frames, and begs me to let him dispose of 'em."

Marion again recognized the Mrs. Romaine of her former acquaintance, alert, animated to enthusiasm in carrying out a new idea.

"There is Clara Van Shuter, who has started a mushroom 'plant' in her father's cellar, and has orders from all the clubs. She has her own floor, where she receives her own visitors independently; and is making a very tidy little income, on which she travels where she likes. Mr. Van Shuter, who is a lazy kind of a man, fond of his own ease, and not as rich as other members of his illustrious family, says he does not mind, if it keeps Clara out of other mischief. Then Louise Alston runs a shop, where

girls under her direction make the loveliest evening shirts for men, with white lawn ties, better than any you can get in the shops, and they drive a thriving trade. Louise takes orders at the Assemblies, and 'Howling Swells,' and the like; and she supports a lot of poor women, and gives herself a nice little margin of profit. The thing is, to think of something taking; and, with a little capital, the thing is done. Oh, we *must* find a trade for you. I shall give a luncheon altogether for self-supporting bachelor girls, and afterward each will say a little something about her experience of the blessed estate of living to herself, and whether she can think of anything nicer."

Marion laughed outright. Mrs. Romaine had at last succeeded in putting to flight the haunting shadow of her grief.

"I can think of many things nicer," she said; "but as circumstances have driven me to making the experiment, I must try to be equal to the occasion."

"Well said, Marion! I, for one, have faith in you. And, whatever you do, you may count on me to help you."

"Then I think I shall begin by living here until my father returns; and going out of his house quietly, to avoid the talk my leaving now would create."

"I suppose you are right," said Mrs. Romaine, a trifle disappointed. "But I shall be robbed of my visitor."

"You have a much better friend than I was before," cried Marion, warmly.

"I hope so, my dear. I need all I can get. And there is one thing certain. Your mother's provision for an independent income for you will at once determine your entity as one meriting consideration from all outsiders. If I had had any funds of my own that did not come in a stream running from my husband's pocket into mine, I should have been a happier and a better woman. If to-day I could go to work and earn an income, however small, that I might jingle in my own pocket, I should walk through life with my head higher. As it is, I spend money like water because my husband likes to have me do it; but he pays all bills, or gives me checks to pay them. I don't know what we spend, or where it comes from. I don't value it. I am a wretched do-nothing in a society of busy workers. And I've an idea I should have made an immense success in business. Just see how I make the wheels of social enterprise go round. Ah, there was a famous wage-earner lost in John Romaine's wife!"

"I don't think I should object to owing my independence to the man I love," said Marion, wondering as she said it, what strange influence was at work inside of her—and, blushing, she stopped short.

"Perhaps not. Unmarried girls have literally every kind of fantastic notion before they meet the touchstone of the financial question with a husband, face to face. But take my word, and be thankful for your little purse. That is the key that will unlock the chief difficulty of your present position, and a lot of others through life, I can tell you."

VIII.

It was over, and Marion breathed more freely! She had nerved herself to stay and receive Sara upon her return as the mistress of the house into which she had come in her meek poverty and insignificance, a stranger, so few months before. Needless to say, Mrs. Irving's manner upon this crucial occasion had been all that the most fastidious could have demanded. To Marion she was deprecating yet tender—not offering, but awaiting, overture; to the servants, banded together in tacit opposition, gracious, tactful, yet leaving no loophole by which any one of them might escape into open rebellion against her rule; and to her husband she held herself as to the source and fountain of all earthly beneficence and wisdom. It was long since—indeed, it had never been in Marion's experience, or in that of his present household staff—that the judge had worn such an air of complacent satisfaction with the events of every day.

Upon Marion, this new aspect of her father acted as an instant quietus of any emotional demonstration she might, in spite of her proud resolve, have been led into betraying upon his return. For the first time she saw fully the childish side of him,—his vanity, strutting cockerel-wise through all his actions,—and realized that her whole life had been a sacrifice to it. The film of filial reverence fell from her eyes. She knew now that, had he been different, her nature had not been warped into dissatisfaction with the common lot of woman. Something within her even asked the question whether, in the happy natural estate of girlhood and wifedom, where the relations with father and husband, or other so-called "governing" power of home, are as they should be, this modern unrest and impatience of woman are to be found.

But this was not the time, upon the eve of putting into reality her most cherished dreams of freedom, to turn and look back at what might have been. To Sara she said nothing of her new plans. Between those two, henceforth, there was to be a barren place, charred as by fire, in which no shoot of verdure would ever grow again. And Sara, who perfectly understood this fact, secretly rejoiced that matters had turned out no worse. The circumstance

that Marion had met them, greeted them in conventional fashion, ordered tea to be ready for the bride on her arrival, and had sat down to dinner with them on their first evening at home,—quietly gliding out of her own place for Sara to sit in it (which Sara did with the most bewitching gesture of grace and deprecation),—was an enormous gain to the new Mrs. Irving. It had given her the *pas* with the servants, and would do so with the outer world; and it had put the judge into such bountiful good humor with Marion that he was absolutely playful with her, in an elephantine way.

Sara, pleading fatigue, had contrived to leave Marion alone with her father while he was still in this happy frame of mind, enjoying what seemed to him the reward of a deed that had brought good to all concerned. And Marion, profiting by it unconsciously, for she was in the exalted state of one ready to move mountains, if called upon to do so, had gone at once to the point by telling her father that she intended directly to leave his house.

Spite of his serene selfishness, the judge was startled into an expression of some natural regret. He went further; he even lost his temper, quite in the old natural way, ill befitting a joyous bridegroom. Marion was told that she was unfeminine, ungrateful; was threatened with every variety of paternal displeasure if she so much as proposed the scheme again; and, in the end, was ordered out of his presence contemptuously, like a child who has been caught stealing jam.

"This makes it easier for me," said Marion, as with a swelling heart she locked herself into her own room. A little later, she heard outside her door a footstep, and the sweep of feminine garments. There was a soft knock, and Sara's voice pleaded with her for admission.

Marion, opening her door, stood within it holding to the knob.

"You will excuse me," she said, frigidly. "It is as well to tell you, now, that what I did in staying here to receive you was done for him. And, since he has spoken as he allowed himself to speak to me just now, there is no longer any reason to affect for you a tolerance I do not feel."

"As you like. But, indeed, peace is so much less complicated than war between us two," said Sara, with a shrug. "I could really be of the utmost service to you."

"I will owe nothing to you," said Marion, inflexibly.

"My dear child, you are always so very positive," returned her step-mother, entirely at her ease. "But I am afraid you will be forced into accepting from me your father's consent, given since I have remonstrated with him, for you to shape your life from this time according to

your own desires. I don't say that I approve of it. I think that, together, you and I would have got on better than the majority of mixed families. I have always liked you, and meant well by you; and, of course, I recognize that, by living on here, and accepting me before the world, you 'd have been a tremendous help to me. But when I contrast what I was when I first came here—when you were so much more hospitable with that door of yours than you are now, by the way—with my present position and possibilities, I really can't bring myself to lament over spilt milk. Therefore, since you are bent on not forgiving me, I 'll just agree with you to carry on this thing as we've begun it—decently, before observers. Your father bids me tell you, you are to do exactly as you choose—come, go, remove yourself and your belongings, where and when you please. This house, when you like to come here, will be open to you as before; and we shall always receive you most kindly."

"I thank you," said Marion, with haughty emphasis.

"You should really thank me, though you do not mean it," went on Sara. "And if, as I suppose you mean to try to do, you succeed in whistling back your old lover—"

"That I will *not* hear!" cried Marion, shutting herself in her own room—to hear Sara's soft, unconcerned laugh, as she withdrew rustling down the corridor.

"What did she mean?" Marion asked herself. "It was as if she had kept that arrow for the last; and had shot it against her better judgment."

And, for the remainder of the night, the arrow, as its sender had intended it to do, rankled in the bull's-eye of the target at which it was let fly. Marion's nature, too large for petty jealousy, was just then in an abnormal and not especially healthy state of readiness to doubt every one in whom she had formerly believed. The fact that she and Gordon had so elaborately given each other up, and that she was about to embark upon the career of a "victim of arrested development" emerged into the "arena of perfect independence," did not entirely console her.

AND so, through the series of events detailed, the wrench had been made; the parting was complete between Marion Irving, her home, and her domestic duties of the past.

To Miss Effie Gordon, as the representative of Alec, she could not bring herself further to appeal for the advice and assistance offered. To Mrs. Romaine, rather, who, although she failed again to exhibit the womanly tenderness of their first interview after Marion's blow, was unceasingly kind and active in her behalf,

Marion listened exclusively, thereby wounding Miss Effie, and keeping her at a distance.

"It is only to start you, my dear," said her animated mentor, who actually put off two of Herr Hofman's talks on socialism, in her energy to find a habitat suitable for her new *protégée*, "that I interfere at all in your affairs. And I have come this morning—you won't mind that I have left no cards for Mrs. Irving, but my time is really *so* taken up—to say that Providence has sent us Mignon Cox, whose silly mother has just started off upon another one of those long wandering journeys to kill time abroad—just the kind I proposed to you, and you refused! Mignon, who is tired to death of dawdling in foreign countries and being a cipher, so she says, positively declined to go. So Mrs. Cox left her with an ex-governess in a flat hired for her—since Mignon could not be expected to keep up the big Cox establishment alone, and that is let at a huge sum per annum, all of which Mrs. Cox is warranted to spend, and more, on this expedition. I believe she and her maid mean to go around the world, this time. Where was I?—oh! the flat and the ex-governess! It seems Mignon and Miss Slater have fallen out, and the governess is about to leave. Mignon, who says she always admired you awfully, but is rather afraid of you, wants to know if you won't share the flat and the expenses, have your own sitting-room, bedroom, latch-key, and maid—only sitting at table with her. And as she is a nice little girl (a cousin of mine, did I tell you?—though I can't stand that mother of hers), I think it is just your affair."

"Mignon Cox? Why she looks like a mere child!"

"She is two-and-twenty, has a separate income from her father's estate, and yearns to be in the swim of modern thought."

"But I thought she was going to be married to Lowndes Carleton."

"So she was, but it's off. Carleton is terribly old-fashioned, you know; and when she told him she was determined not to be, according to Mrs. Browning, 'kept in long clothes long past the time for walking,' he asked her if she was going to take up the divided skirt—and that was enough. The real truth was that he scoffed at the 'woman's movement' on all occasions. Anyhow, their engagement came to a sudden crash. Of course you think she was right to rid herself of such an obstacle to progress."

"Of course," echoed Marion, but without warmth.

"This arrangement with Mignon need not last longer than the summer. It is to be an experiment, for both of you; but I know she is refined and amiable, and very affectionate; so

I'd strongly advise you to consider it. Come with me now, and call on her, and you can judge how you would like the idea; and then I will take both of you home to lunch, and we can talk it over on all sides."

There was no resisting the breezy impulse of Mrs. Romaine when in pursuance of a novelty, and Marion, shortly after, found herself with that lady invading the maiden stronghold of Miss Mignon Cox.

This was a seventh floor in one of the tall new buildings of cream-colored brick—possessing florid portals of iron scroll-work, and buttoned elevator-men—that embody every known idea of modern architects for condensing conveniences. There were a drawing-room and a library of equal dimensions, opening out of a hall into which visitors, caught upon entering, were forced to move back or forward in single file. In one of these rooms, decorated to extremity with a colonial mantelpiece and frieze, and filled with the usual litter of choice nothings that strew the path of favored young womanhood, Miss Cox was discovered behind an Empire desk covered with brass filigree, whence she arose with cordial alacrity to receive her visitors.

That this bachelor was a pretty creature, with a complexion of cream and roses, hair purely golden unmingled with brown or red, and a physique suggesting extreme fragility, Marion already knew. They had met often in society, but in a casual way. Mignon was now attired in a so-called "morning" frock of white crêpon, with floating ruffles, and a sash of white satin belted around the prettiest little waist in the world. Her hair, twisted in a small knot, was arranged with care and neatness. Her feet, shod with nicety, were matched by a pair of snowy, pink-tipped hands, soft as down, and adorned with rings of turquoise and diamonds. She had just laid down a formidable rubber penholder, of the "office" variety, which had been coursing its way unchecked over a pad of undefended paper.

"Perhaps we ought not to disturb you, dear," Mrs. Romaine said, sinking upon a "three-decker" of silken cushions, near the wood fire sparkling upon brass dragon andirons; "are you too busy to be interrupted?"

"Not at all. I was just finishing my paper upon Municipal Reform, to be read before our Twentieth Century Symposium, to-morrow. And I am glad it is finished, for it leaves me comparatively free. This week I had rather more than usual. In addition to my visits to the tenement-house regions, my lecture on Political Economy to a class of working-girls, whom I am really bringing over in the most gratifying manner to accept Free Trade, occurs this afternoon; and yesterday I had to lead

the discussion in our literary club that takes up weekly some book of the hour."

"And what did you take up yesterday, if I may ask?" said Mrs. Romaine.

"They gave out ———, but it was voted down as really a little too advanced—then we took ———, which was unanimously accepted. I wish I knew your opinion, Miss Irving, of that deliciously sad story. Somehow or other, it seemed an echo of so much I have felt and dreamed of."

"You?" said Marion, in some surprise.

"Yes, though I am not sure I should have found voice for it, had not the talented author done so for me. It makes one feel there is, after all, so little in our healthy, every-day lives of interest comparable to those of our brothers and sisters whom God has set aside for affliction and infirmity."

"When I was a girl, people used to read Molière's 'Malade Imaginaire,'" said Mrs. Romaine, with apparent irrelevancy. "And in that we were told about the learned Thomas Diafoirus, who, when he wooed his fair Angélique, drew from his pocket a medical thesis and presented it to her, at the same time inviting her, with her father's permission, to attend, as a *divertissement*, the dissection of a woman upon whom he was to lecture. That's what modern authors are doing to you fair Angéliques, only they don't ask the fathers' permission."

"I thought you are saturated with the modern thought-waves, Cousin Adela," said Miss Cox, like a reproving cherub.

"Dear me, so I am," said the lady. "But I'm on the down-grade in life, and I can't afford to enjoy melancholy as you can. For instance, I like to go to 'Charley's Aunt'; but you, I make no doubt, prefer Maeterlinck's 'Aveugles'."

"That marvelous soul-drama! Oh! I have no words for it," cried Mignon.

"I thought not. Neither have I. But all the same, my dear, you are a delightful little person; and I have every confidence in your ability to make just the chum Marion Irving wants. She is n't as advanced as you, and she will be a good brake upon your wheels. You'll give her something to interest her, and to work with. And I shall have an eye on both of you."

"I wish you would come to me," said Mignon to Marion, blushing in true girlish fashion. "I should consider it such a privilege. And I am so constantly engaged, I don't think I should interfere with you. You can have no idea how often I've wanted to make friends with you, and how I could hardly believe my good fortune when my cousin proposed this arrangement."

"I am a very disappointing person," said

Marion, genuinely pleased. "Could you take me soon?"

"Indeed, yes," cried Mignon. "Miss Slater is just stopping on till I can get somebody; and, to tell you the truth, Cousin Adela, she is too cross for anything. She's one of those old things that always take offense at suspected affronts, and now she sits at table without opening her lips. Oh! Marion (I may, may n't I?)—if you really will come at once, what fun we shall have!"

"Not fun. A chastened resignation to hilarious circumstance," suggested Mrs. Romaine, mischievously.

The conversation, at this point, was interrupted by the entrance of Mignon's married half-sister, a handsome young woman a year or two older than Marion, dressed with the fastidious elegance of her class.

Mrs. "Johnnie" Clyde, as she was usually called, was full of excitement, and lost no time in communicating it.

"I want you all to come to a woman's suffrage meeting at my house on Thursday," she exclaimed. "I told Johnnie at breakfast, to-day, that he need n't say a word,—that I am bound to have my turn,—and I have got several leaders of public opinion on both sides to promise to be present and address us. There'll be no trouble about getting people to come, for the thing is a 'go' in society, if it never was before."

"And what did Johnnie say?" asked Mrs. Romaine.

"Oh! he was trying to be witty, as usual. He said that, if, in addition to striking out the word 'male' as a qualification for voters, they require voters to be thirty-one, instead of twenty-one, years of age, it will settle the whole affair—that no woman will ever confess to the qualification."

"How ridiculously trifling men are about the great issues of our age," said Mignon, putting back into duress a truant of a curl, and elevating her little patent-leather toes upon the low fender. "But it does n't matter, in the least. Our day is coming, swiftly, surely. What if we don't master at once all the intricacies of political knowledge involved in the assertion of our rights. When we have the right to cast a ballot, we shall have wider views, see further, see all things as they are."

"Good gracious, I hope not," said Mrs. Romaine.

"Indeed we shall," chimed in Mrs. Clyde. "Mignon is quite right. It is time to have done with accepting what is handed down to us by tradition as the limit of woman's horizon. And we must work, work always. There must be no rest, no shameful peace, till we have asserted ourselves."

"Then, my dear, there will be a larger army of nervous prostrates than ever, in the field," remarked Mrs. Romaine; "for goodness knows how we American women are going to take on any more than we are doing now. That is, I confess, what is always bothering me."

"With our allotted work will come strength," said Mrs. Clyde, piously. "You must let me give you one or two 'Woman's Suffrage Leaflets' I carry about with me, Cousin Adela; and don't fail to be at my house, Thursday at 3. You are to be one of our champions in the column now forming for the march, although you do amuse yourself by jesting a little on the way. Here is the leaflet entitled 'Wyoming Speaks for Herself.' It is a conclusive answer, I think, to that exceedingly mischievous paragraph read aloud at a recent meeting by a prominent editor purporting to come from an observer of the results of women's vote in that State. And here is Mr. Higginson's 'Short Answers to Common Objections against Woman Suffrage.' I wonder which of the enemy is clever enough to dispose of *these*. And look how beautifully Mr. Cordaire spoke for us the other day! There was n't a right-minded woman present who did n't just *love* that man when he had finished speaking! Why, I tell you, there are *lots* of our very best, soundest, most conservative men ready to be won over to our cause if we take hold of it the right way. As for the best women, we think we have them already!"

"Bravo, Adelaide! I hope the husbands will all be as amiable as yours, and then we shall have fewer obstacles. We must get them to illustrate what they say in that play of Oscar Wilde's that 'all men are married women's property'—in fact, that is the true meaning of married women's property.' As for me, I have now no more claim to that sort of property than I have to any other. John Romaine does n't even do me the honor to listen, when I talk about such things."

"But you could have us in your ball-room, dear?" asked Mrs. Clyde, eagerly.

"Oh, yes, as often as you please. I don't think John Romaine has been inside of that room, any more than he has of our pew at church, or of my carriage, in the last twelve months."

"Never mind, Cousin Adela," said Mrs. Clyde, with conviction. "The best part of all this is that we are proving to ourselves as well as to the men, that we can do without them."

"So we are!" cried Mrs. Romaine, looking from one to the other of the three—"except you, Adelaide, who are a high priestess. I am afraid you and Johnnie are still in love with each other."

"Of course we are," said Adelaide, bridling.

"It is only that I have just come to a realizing sense of the unnecessary and unjust limitations of our sex. Miss Irving, you have kept so quiet, I wish I knew exactly your view of this matter."

"My view seems, by yours, to be a rather humdrum kind of one," said Marion. "I think if we have the right to hold property, we are entitled to the right to vote; but it does not seem to me we are yet, as a class, well enough informed in political matters to wisely handle that right. And if all this stir should fit us for what we are seeking, then it will not be thrown away."

"Oh, I see. You are one of the moderates," said Mrs. Clyde, in a rather dissatisfied tone. "But come to our meetings, and you will get on. And now let me tell you how pleased Mr. Clyde and I are — I mean how pleased I am — that you are thinking of putting up here with Mignon. Mrs. Romaine told us yesterday she was going to beg you to do so."

"She won't be allowed to say no," said Mignon, taking Marion's hand.

"I can think of nothing pleasanter," answered Marion, looking with admiration into the beautiful eyes, appealing as a child's.

"Then it's done! You are mine! My pal, shall we say? The firm is Irving and Cox, for weal or woe — or till either of us has any valid reason to back out," exclaimed the girl, joyously.

"What is a valid reason? — marriage?" asked Mrs. Romaine; and immediately the countenances of the new firm were overspread with gloom, tintured with some resentment.

"There is no danger of that for either of us," said Mignon, firmly. "Now come, Marion, let me show you the flat. It's, of its kind, a perfect dear, I know you will admit. You shall have the yellow bedroom — it's larger and has the sweetest glimpse of the river over the chimneys and roofs; and it is n't as becoming to me as the blue. And there's a porcelain tub and tiled floor in the bath-room, and electricity everywhere. The cook and housemaid have to turn in unison when they are in the kitchen, it is so tiny. But you'll see; and I'm quite sure you'll fall in love with our bachelor establishment."

IX.

AMONG the political advocates of Alexander Gordon during these busy days when his prospect of high place in the service of his country occupied our hero to the exclusion of minor considerations, none was more ardent than Lowndes Carleton. Although both at the bar, the two men had never been intimate until latterly, when, during the public discussion of Gordon's aspiration to be United States Attorney, Carleton had sent to one of the newspapers a letter, since widely quoted in Gordon's favor.

This circumstance bringing them together, they had met frequently, and become friends. Gordon found in his new advocate an enthusiastic, manly fellow, as good-looking as Greek regularity of feature joined to Spanish richness of coloring could make him, and, while of a pleasant temper, possessed of that pugnacity of opinion apt to be agreeable only when it chimes with one's own way of thinking.

Gordon, as he looked at Carleton one evening over the edge of a claret glass, while they were dining together in Carleton's rooms, felt himself wondering at the heroism of Miss Mignon Cox, in having deliberately put out of her range of vision such an attractive object for daily survey, and was further possessed with a secret wish that something would lead Carleton to embark upon the subject of this sentimental side of experience in life, which their intimacy seemed now to warrant. Needless to say that Gordon, to all intents the same man as before his final break with the lady of his own love, was still eagerly interested in all that concerned her. He knew, as everybody knew, of her removal to live with Miss Cox; and yet, by a strange fatality, he had met no one who could give him details of their arrangement, of its success or failure, of Marion's welfare, spirits, occupations. Had he, at this epoch, gone into general society, there would have been no lack of petty dribblings of information on the subject. But, partly from a natural distaste for its functions of the ordinary banal kind, partly because he preferred to keep out of range of discussion of the Irvings' household calamity, Gordon had eschewed society, and treated the houses of his friends as if they displayed yellow flags over their doors.

Moved to especial activity of speculation and annoyance by a column in an evening paper including Marion and her chum in a jocularly described list of the girl bachelors of the new era, he had arrived to break bread with Carleton in a very truculent frame of mind. Carleton, also, was perturbed. His handsome face was clouded, his speech upon all subjects was biting, uncompromising. And now, after dinner, both men had subsided into a sort of sulky silence.

"Hang it all, Gordon," said Carleton, finally emerging from a reverie during which he had been unconsciously gritting his teeth. "This is slow work for you. Let me make a clean breast of it, and say I want to murder somebody."

"Spare me till we have heard the result of the President's cogitations upon my case," said Gordon, smiling. "Then, I don't know but that you'll be welcome to make a beginning with me."

"I want to know if you saw that infernal

thing in the 'Evening ——,' said his host, who declined to smile. "It has broken me all up, and you — I beg your pardon, if I take a liberty — but you must have something of the same sort of disgust and rage in you."

"Quite the same sort," said Gordon, grimly.

"If these girls were our wives — I mean if such good, straight, honest girls, who have no earthly intention to invite comment like that, would give men the right to punch heads for them, there might be a way of relieving the situation.

"As it is, we are helpless. Walter Bagehot says the Earl of Buchan once had a copy of the 'Edinburgh Review,' containing an article that offended him, put in the lobby of his house, and kicked it solemnly into the street. Perhaps you and I might insure a pleasanter evening if, between us, we disposed of the offender in that sort.

"What does it matter? The whole country will have it to-morrow, anyway. Gordon, now the ice is broken, do you mind if I talk to you about those girls? What's the matter with 'em — with all the women, nowadays? I would not care if it was n't the nice ones — the kind a fellow wants in his home, you know; but they're as prickly as hedgehogs, and they're forever trumping up 'intense' arguments you are not prepared for. After I've been in court, and down-town in that bustling throng of workers all day, I don't want to spend my evenings in a debating society where women expect you to give them the lead *because* they are women, in order to prove to you they are *not* women!"

Gordon made an attempt to answer, but his friend, having begun his tirade, was not prepared to relinquish it.

"Do you believe they are really, as they affect to be, ashamed of being loved by us in the old-fashioned way? Do you know they declare a true woman ought to teach her husband to love her ethically, not physically. Now, what do you suppose they mean by that? I don't understand; I can't understand; I am all at sea; and I confess this unrest, this hysteria they call the advent of release from their slavery of sex, is the most unpleasant feature of the not enticing age we live in."

"It is not all unrest and hysteria," said Gordon. "My own idea is that it is a serious movement that will lead to results from which many of these offensive features will be absent. But our American women have got to solve the problem whether they can accomplish all they have laid out for themselves to do. They are not, as a rule, good housekeepers; and I fear they will become worse ones. They are devoted mothers; but in a high-strung, emotional way, not always best for their children. Is the present training going to improve them

in that respect? Too many of them are but fairly good wives, inclined to regard husbands merely as channels for golden bounty, whose cheerful compliance and continuing admiration of them are only their just due. I am not sure a wider liberty will change this condition for the better."

"See here, Gordon, as you're in the same box with me, I'd like to tell you how cut up I feel about my affair. And the worst of it is they tell me *she* goes about as pink and white and jaunty and smiling as ever, perfectly absorbed in her duties to humanity at large, evidently ignoring my existence. I could n't have believed it of her. A perfect little angel, she used to be. And, the worst of it is, I can't go there to see for myself how she is getting on. I said some things when she threw me overboard that she can't forgive, and I have n't shown myself to her since. The fact is, I don't know whether they receive men visitors, do you?"

Gordon, who had read in his friend's countenance a gradual leading-up to the question put, and was conscious of an equal desire for information of an exactly similar kind, burst into a laugh.

"I don't know, and it's just what I want to know," he said frankly, and was interrupted by the arrival of Strémof and Clarkson, who had been asked to the dinner, but had excused themselves on different grounds.

"I did not join you, my dear fellow," said Clarkson, beamingly, "because, in my new *régime*, it is really more than human nature can endure, to sit through a good dinner and not touch a morsel of it."

"What's your present lay-out, Clarkson?" said the host. "Still on that liquid food that rhymes, I believe, to hats off?"

"Matzoff? The same," said Clarkson. "And my digestion is wonderfully improved already, I assure you. The only trouble is, it is revolutionizing my habits. Hardly worth while to put on a clean shirt and a white tie and evening clothes to sit down before a bottle of milky, fizzy stuff that you have been keeping outside on your window ledge, is it? Confounded thing went off in my office the other day, and the cork hit a respectable elderly client in the eye, and scared him out of his wits. Thought it was a dynamite explosion, don't you see?"

"You have n't the excuse of a solitary banquet, Strémof," said Carleton, offering cigars, and a little silver lamp alight with alcohol.

"No, but I have, of all excuses, the one a man most readily accepts — the ladies," said the gallant Russian, who, having just returned from his first visit to Washington, had not seen Gordon for some time. "And in what shape my temptation came, you will never guess. I

was bidden this afternoon at five to Mrs. Clyde's, to a discussion of—"

"Holy smoke! not 'women's rights'?" interrupted Clarkson, with a groan.

"Yes; and what is better, I was told to stop afterward to a 'high tea' of bachelor girls, to which the master of the house was the only other male invited. As far as I could see, the 'high tea' was a short dinner, lacking variety in wines. But the damsels—I kiss my hand to them—were lovely, most *spirituelles*; they argued, they spoke, they demolished us poor men with a skill, a suavity, that made it rapture to suffer in their cause."

"What were their special topics this time?" asked Clarkson.

"The first chapter of the discourse was in insistence upon the right of women who are property-holders and taxpayers to vote upon any and all questions affecting the expenditure of moneys collected from taxes."

"Yes; but that includes all questions of every kind which concern the administration of government. And property as a qualification for the suffrage is no longer satisfactory anywhere. Even in England it will very soon come to pass that whether one shall be a voter or not will depend not at all upon ownership of property, of any kind, or in any amount. If property is to vote, it is only logical that, wherever one's property is situated,—if in each of many different towns, counties, States, where taxes are applied to local expenditures,—there the taxpayer must be allowed to cast that vote; and in England, to-day, the loudest chorus of the radicals is 'one man, one vote'—to put an end to such a privilege of the owner of property."

"And next," said Strémof, "they were very animated in their demand that, if married women are to be refused the ballot, on the theory that husbands represent them at the polls, unmarried women, maidens and widows, shall not be put off on such a pretext."

"But," exclaimed Clarkson, "the law cannot discriminate among women, in favor of the unmarried, when a demand for the privilege of voting is in question; to do so would be to offer a bounty to tempt women not to marry, or to get rid of their husbands. There are women who would murder their husbands to secure the right for which so many of them are now hysterically clamoring. And there are too many young girls already who, distracted by the agitation for 'women's rights,' refuse to exchange what they call 'single blessedness' for matrimony."

"And who were there?" continued Clarkson, after a pause, neither he nor Strémof observing that the other men had dropped out of the conversation.

"If I could remember their names! First,

Gordon, there was your beautiful friend, the young lady who, before any other, claimed my homage to her kind—Miss Irving. I am grieved, but not surprised, at the way things turned out in her paternal mansion, by the way. And I hear that *ces dames* of high society have not yet extended to the bride the welcome due to her husband's place among them; but who knows if this be so? *Enfin*, there was, with Miss Irving, a young person of the rose and snow and gold type of beauty one sees in our Swedish neighbors,—a ravishing young person, made for smiles and laughter, but serious as a little nun,—how she lectured us! *Ma foi!*—what am I saying, that I ought not to say,—"

"Miss Cox was once engaged to be married to me, that's all," blurted out Carleton. "But go on; I've no right to her now, any more than the rest of you."

"I beg ten thousand pardons," cried the distressed Strémof.

"Go on with your description, and you are forgiven," said Carleton, emphatically.

"There was, of course, our hostess, a believer from whom her admiring husband can hardly keep his eyes—even when she is fulminating against his sex's tyranny. Then, two single ladies—friends who live together—who, I am told, have great wealth and a beautiful establishment, and are generous patrons of the arts. The young lady who decorates interiors; she who makes bonnets; she who grows mushrooms; the one who has kennels, and raises prize dogs for the market; one who gives lessons in whist; another who has an emporium for men's shirts; a girl of nineteen who has been coaching male students conditioned in chemistry; a firm of pretty florists; an artist or two; a *littérateuse*; a law student; a lecturer on *bric-à-brac*, in parlors—as you say."

"I beg your pardon, Baron Strémof," put in Clarkson, politely. "'Tonsorial artists' and 'chiroprodists' have parlors; *we* have drawing-rooms."

"Thanks, Mr. Clarkson; but I have to unlearn in one city of America what they teach me in another," said Strémof, gaily. "Have I told you all, I wonder? I heard that several of these young women are in receipt of incomes, earned by themselves, that would support a book-keeper, his wife, and children, in humbler circumstances; that they have great aptitude for business, great energy, and in every case behave with the greatest dignity and prudence. I wonder what old Tolstoi would say to a society like this. He would hail it with delight, *le vieux maître!*"

"That is not all 'unrest and hysteria,' eh, Carleton?" said Gordon. "Were any of these ladies prominent in the discussion of the afternoon, Strémof?"

"Several spoke briefly and gracefully. The longest speech, and it seemed to me the smoothest and best considered, came from the young lady who — er — is Miss Irving's 'chum.' She is really astonishingly suave, and looks to be hardly more than a school-girl. Miss Irving was called upon, but excused herself on the ground that she had not yet formulated her ideas sufficiently to be of weight in the discussion."

"Not yet?" said Gordon, bewildered.

When he had last seen Marion, she had been like a young archangel, pluming his wings for flight into this debate.

"She avowed, very modestly and charmingly, that some of her opinions had been modified recently, and that she was not prepared to try to influence others by her own uncertainties."

"Did — ahem — Miss Cox — say anything about *her* views having modified?" asked Carleton, who had been pondering gloomily.

"Ah — not that I observed," said Strémof.

"Thank you," said Carleton, relapsing into reticence.

"I am accorded the privilege of visiting their bachelor establishment to-morrow afternoon, at tea-time," went on the Russian.

Carleton and Gordon exchanged covert glances.

"They receive, as I understand, at that hour on Thursdays, quite frankly, without a chaperon. But Mrs. Clyde or somebody is sure to be there, *on dit*; and already their little five-o'clocks are very popular."

The rest of the evening in Carleton's rooms dragged, perceptibly. Before they broke up, Clarkson took occasion for a word apart with Gordon.

"I ought to thank you for indirectly putting me into renewed intercourse with my Cousin Kit — Katherine," he said. "Since I undertook those inquiries for you, that in the light of subsequent events I could readily understand — by the way, it was lucky the faculty of Somerville had nothing but good to say of their ex-professor, was n't it? 'T would have been deucedly awkward if she had not been a fit person for the judge to marry."

"Very awkward," said Gordon.

"Has n't turned out extra well, has it? But nobody could suppose a high-spirited creature like Miss Irving would stay there and play second fiddle in that house. Noticed how sort of down in the mouth Irving J. has seemed, lately? Fellows about the courts say it's because he has got the gray mare domesticated! But where did I begin? Ah! about my cousin Kitty. Katherine, dear soul, passed through town last week, and I danced attendance on her at her hotel; and by George, Gordon, she's

kept wonderfully fresh. I'm an oldster, beside her. To tell you the truth, if I had n't put all such notions out of my mind, I believe I'd propose to Kitty to lecture to *me* for the remainder of my days. But I doubt if she'd have me; she's just the model of a quiet, contented young old-maid, not an ounce of morbid stuff about her; and I could n't add anything to her happiness, of course."

STRÉMOF, who had engaged Gordon to walk home with him, waited no longer than until they had reached the half-deserted streets, before entering upon a subject that transformed his buoyant manner into one of sober earnest.

"I came here, to-night, Gordon, to get this opportunity to consult you about a matter of great importance. I don't know whether you have surmised what feeling I took out of town with me, and have brought back stronger for absence from its source."

Gordon felt a big throb of the heart. It was the first time what seemed a possibility had been presented to him as a thing likely to happen; and it was not agreeable.

"You observed from the first what a strong hold upon my imagination Miss Irving has. She seems to be the ideal woman I have been seeking, to aid me in carrying out all the plans for my fellow-men that I have cherished from boyhood. Call me a fanatic if you choose, it is in my blood. My father, a dear friend and disciple of Tolstoi, is full of it. I have a young sister who shares Miss Irving's progressiveness — how she would welcome her! It is n't vain of me to tell you that my position at home and my expectations would not be beneath Miss Irving's notice. I shall have large estates, wide interests, great opportunities of control of human destinies. When we first met, Miss Irving told me, with delightful frankness, of her vivid interest in my country, its problems, its people, its literature. Of me, she was good enough to say that I am more like an American than any foreigner she ever met. So I do not think that I displease her, personally; and I know that she charms me, utterly. Now, I am well aware of your former claim on her; but if that is renounced, finally, definitely, I ask you whether I have not the right to try my chance."

"You have every right," said Gordon, mechanically, though he felt a noise like rushing water in his brain.

"I thought you would say so," exclaimed Strémof, with innocent egotism. "I must tell you in all sincerity that I do not expect to woo her as an ordinary lover woos. I expect to set before her my life-work as a chief attraction. I hope to convince her of my sincerity. I can offer to her father every assurance of my

fitness to ask her to be my wife : but, I forget — it is no longer a question of offering to the father — I shall have to ask *her* to weigh me in the balance, and see if I be found wanting. It is in fact a comrade — a fellow-missionary — that I am seeking to take home with me ; but that will not prevent my loving her, and being to her what one of her own countrymen would be. Smile at me, if you like, Gordon, *mon ami* — I shall not resent it. I have, no doubt, a way of expressing myself fervently, that you self-contained Americans do not understand. But I am sincere, *voilà tout*."

"I believe you, Strémof," said his companion, upon whom it was now clearly incumbent to make appropriate answer. "And it's no use my telling you I understand your feelings. That would be highly superfluous."

"But you see that I could not go on further, without this sanction from you?" cried Strémof, whose radiant zeal made him eager for the relief of speech. "You, who, of all the men I have met in this wonderful inspiring country, are the one I should first choose to be my friend always."

"You are very good," responded Gordon, secretly possessed of a desire to end their friendship then and there by some such indefensible act as knocking Strémof down.

But this was not because he did not, in spite of bitter rivalry, appreciate and admire the honest spirit of his unconscious opponent. He was overpowered by the new idea that danger, like this now threatened, could have come to him from such a quarter. Such a thing as Marion's loving, or giving her hand to, any man of their common acquaintance in New York had never suggested itself. He knew her too well; there was no other possible Richmond in the field! She was cold, fastidious, a dreamer of dreams, isolated by her fancies from risk of impressionability from ordinary sources. It was only some great quixotic enterprise, some task to work out, some definite career to accomplish, that could tempt her. And here was this winning and ardent thoroughbred, appearing to offer just what, under the peculiar circumstances, might prove to be a welcome outlet for her energies.

"I do not ask you, my dear Gordon, to give me your good wishes," pursued the young man. "It is too much ; because, whatever the cause of your separation from the lady, I well know

you cannot be pleased to think of another man winning that prize."

"Confound his impudence ! " was Gordon's thought, as he assented with some unintelligible monosyllable that might have meant anything.

It was perhaps well for both of them that the conversation came to an end in their arrival at the door of Gordon's lodgings. He did not ask Strémof to go in, nor did the latter seem to expect it.

"*Vous ne m'en voulez pas, Gordon ?*" he said, as they parted, with a boyish appeal that upon another subject would have won a cordial response. "You won't keep a grudge for me? You think I have been, as you say, 'fair and square.'"

"Altogether fair and square," said Gordon, giving him his hand.

Strémof, humming *Carmen's* song, heard at his first meeting with Marion, fared gaily off into the night. Gordon, on his door-stone, watched the blithe fellow disappear, and then mounted his stairs, feeling as if a leaden weight were attached to each foot. Opening his desk, he took out, as he had done on a former occasion, Marion's photograph, and again gazed at it, but with a different feeling:

"You did not reclaim this from me!" he said to her, in spirit. "You knew you could trust it with me. And to prove that you were right, I now surrender it."

A fire was burning behind a wire-gauze screen upon his hearth. Removing the screen, he realized for the first time the chill of his fingers and of his heart.

Bending down, he threw the photograph upon the coals. Strangely enough, it fell erect, and shriveled from below, leaving her lovely eyes gazing at him untouched.

He could not resist an impulse to pluck away the fragment, and, scorching his fingers in the act, thrust the remainder of the card into destruction.

"*Finis !*" he said, aloud, the smart of his burn recalling him from dreamland to the infirmities of poor physical nature.

After this, he knew, it would be no more in him to make a step in her direction until she should ask it, than for the obelisk in the park to wander forth to pay court to Diana on the tall tower.

WHERE THE TEAK-WOOD GROWS.

AN ELEPHANT LIFTING TIMBER.

IN the heart of untrodden jungles, on thick-wooded hillsides, leaning over the brinks of precipices, where tropical creepers twist like snakes choking the life out of younger growths, where orchids flaunt aloft, and strange vines bloom, there the teak-wood grows. Against its corrugated bark tigers and leopards sharpen their claws, and under its thick shade strange beasts rest by day.

That atom of animate destruction, the white ant, has passed it by. Other growths have reared their heads out of the jungle around it, have grown, have lived their day, died, and rotted back to the roots which supplied them with life. In comparison man has been a midget, a mote in the sun, hunting his fellow animals with flint-headed arrows and stone axes, flitting, passing, gone; but the great oaks have grown, have spread their arms benignantly over the dust of tiny shapes beneath, and, planted in dignity, have stood as emblems of strength and power in meditations lasting one, two, three, five, and six hundred years. They have secreted the units of time in their hearts as a maiden hides the thoughts of her first love. Days have come as thick as the snows that fall on Kunchinjinga, or as the waves crowding one another to the shores of the Bengal Sea. And then, as if to give color to the superstition of the hill-man long since gone with his tribe to the land where shadows fall deeper than those cast by the teak-tree in the jungle, out of these emblems of strength has grown a weakness that has overthrown a nation.

The first oak of Burmah to be felled by a white man was symbolic of the nation's fall, and when the visitor to Mandalay is shown the king's palace, and reads the inscription on one side of a bungalow-like veranda: "King Theebaw sat in this opening with his two Queens and the Queen Mother when he gave himself up to General Prendergast on the 30th day of November, 1885," if he cares to continue the fancy, he will notice that on each side of this opening the oaken carvings are broken and defaced, as if the events which changed a dynasty had leaned upon the teak-wood, and it had fallen beneath the weight.

The gathering of this timber store has been an industry ever since man of any color inhabited the country. Teak grows only in India and Burmah, and in old palaces and temples it has held indestructible place for many generations. From the color of sandal-wood it changes with age to walnut-brown. Big unpainted bungalows standing upon pillars of the wood, sided with it, shingled with it, latticed with it, defy heat and rain, and grow rich upon their poverty of oil and varnish. They stand, as brown as autumn, out of green compounds against summer itself. Vines wrap them, flowers garnish them, years add moss and lichen, but nothing destroys save flame. Railroad car-wheels, spikes for laying track, pegs for bolts, implements of all sorts, are made of teak. No one save a shipwright knows just how many parts of a ship are built from this muscle of nature, but every one who has walked the deck of bark or steamer has a consciousness that no amount of holystoning, or dragging of cargo over, or wear and tear of feet and traffic, can in an ordinary sense affect a teak-wood floor.

The Burmese wood-carver knows his art is almost hewn in stone when he coaxes leaf and flower, sacred cow and festival-cart, grotesque sprites and elves, gods and Buddhas, out of rugged trunks. The little prow of the sampan shaped like a wishbone, the stern of the paddy-boat as brown with age as the naked figure upon it is with the elements, the strange plinths of stranger pillars, the embellishments of the temples, the playthings of the children—all these are carved from teak.

But it is a strange industry. To those who know how the Norway pine is marketed, and how the big timber of Maine and Wisconsin and the far West is dragged by oxen and horses from the forests, it seems strange to see the teak-

AN ELEPHANT AT WORK IN THE TEAK-YARD.

wood handled by elephants. They are imported from lower to upper Burmah for this industry, and they march hundreds of miles into the jungle to remote teak districts. They push logs with trunk and tusks, and pull them by chains or ropes attached to the huge *shawback*, a sort of harness going round the big body and broad chest, and deposit them in streams to make the long journey by river to the mills along the banks below. Slow journeys these must be. There are no ice gorges, no "jams" under gray skies whose clouds are torn by skirling winds, when waters are chill and huge black logs rush like sheep after one another, helter-skelter, jostling the waters aside into impatient foam, and blocking a riverway. But the teak-logs set adrift by these slow giants float down jungle-skirted streams. Strange creatures come down to drink at night, and wild peacocks shrill at the dull procession dribbling by without so much as a ripple in the wake. The sun beats hot by day, the Southern Cross tilts over to the azure by night, and bats as big as little foxes hang like live fruits from the boughs, or drop into the heavy air on velvet wings, to weave a witches' lace across the star-filled nights. There are quicksands below, and sucking mudbanks,

and strong, swirling under-currents. At the end of the long journey other elephants wait to pull the rudderless crafts ashore, to pile them with their fellows, and finally almost to feed them to the saw.

To any one for whom machinery has a fascination there is nothing stranger than the first glimpse of elephants at work about it. Amidst the hissing swish of belting, the buzz of saws, the multitudinous separate rattles mingled into a universal roar and vibrating through a big saw-mill, the ponderous figures of these slow-paced helpers present a curious sight. One elephant places the log upon a movable platform to be squared, while another waits with restless eyes and flapping ears until the saw has done its work, and then, taking a twist in an attached rope, slips the loop of it deftly over a big tusk, and leads the log away. Another piles timber, lifting the long piece between tusks and trunk, and pushing it into place with the latter if the pile is low, or with a broad forehead if the height demands it. Fetching and carrying, lifting and stacking, pushing and pulling, these docile and patient giants do their work without complaint, week in and week out. Sometimes the *mahout* (*oozee* it is in Burmese) walks

FLEPHANT IN SHAWBACK HARNESS, IN THE TEAK-WOOD YARD, RANGOON, BURMAH.

Beside the beast, sometimes he sits on its big neck or broad back. But his indolent figure never seems to be necessary, for one cannot watch an elephant at work very long without acquiring the conviction, however mistaken, that the intelligent direction of his labor is all his own.

The world over — except in America — timber is conserved by government. Nowhere else is nature's great storehouse depleted and swept clean by ignorant minds and misdirected hands. Who that has visited France has failed to observe the artificial forests planted in lines as straight as an army dressing ranks, or to notice with bewilderment those dancing diagonals of timber opening away from car-windows like lanes of dryads, or corn-rows glimpsing in bewitching green? On the other side of the Pyrenees the Spanish peasant carefully cuts the season's growth of twigs from fruit-bearing trees, and transforms them into charcoal for fuel, the sticks of which are the size of lead-pencils. The German forester, before he can secure a position under government in the Schwarzwald, must know what soil nourishes the huge fibers of the forest, what rocks are their companions, what enemies come on foot or wing, or bore silently at the roots. He must know why a tree dies — must learn to read the pallor of a leaf, the signs of drooping life about a stalwart stem. He is a practical geologist and botanist, turning his knowledge to account. But the American is clearing-mad. He must chop to live. He is a mighty man of muscle, equipped for forestry with a strong ax and arm. In northern Wisconsin and Michigan he makes bonfires in the fields out of his abundance of timber, while his prairie-stranded brother in Minnesota and Dakota burns twisted hay through an almost arctic winter. Here and there through the primeval forests the lumberman cuts rude paths. Sometimes he is wise in woodcraft, but his lands are his own, and he owes no duty to future generations. His grandchildren will burn coal, or move south in winter. He leaves the fuel, the waste, from this work for kindlings in the broken solitude behind him, and a chance spark from a locomotive passing in a whirl of dead leaves, or the premeditated deviltry of ignorance, sets the fire which destroys thousands of feet of timber where he has cut hundreds, for the deadfall feeds the flames. In the far West the lines of transcontinental railroads run through incalculable waste. Over the Rockies, over the Selkirks, over the Gold Range, the Canadian Pacific is girdled and guarded by ghosts. Gray as the past, dead as Adam, these phantom forests lift their bones as bleached and

sapless as the skeletons of our once countless herds of buffalo that have passed into tradition.

But age grows wise, and to the comparatively untouched jungle of upper Burmah the Englishman has brought his habit of economy. It took generations to teach him this, no doubt, but he has had Europe for his experienced guide. Therefore, as soon as Burmah became a British possession, government took upon itself the protection of the timber industry. Government "kills" all trees that are destined for the Bombay-Burmah Trading Corporation, whose annual cut is one hundred thousand tons. Girdled trees stand three years before being felled, for a green teak-log sinks like a plummet.

There are two of these great oaks standing to-day that have been dignified by name. They were growing when Columbus discovered America, and were old when the house of the present empress of India reckoned its membership only among the commonalty. They are called The Two Brothers, and keep lonely watch over the priestless temple of Aloung-dah-katapoh. The nearest spot where man dwells is one hundred miles away, and unbroken jungle lies between. According to native tradition, a priest of great holiness died there, and the temple sprang up by magic, with a recumbent Buddha of colossal size lying within. At the idol's head, one of the Brothers measures twenty feet in circumference, and has a clean stem of sixty feet up to its spreading arms. Pilgrims come here as devout as any who ever visited the shrine of Thomas à Becket at Canterbury, or looked at the picture of the Virgin of Guadalupe-Hidalgo so mysteriously printed upon a leathern apron. These expeditions into the jungle are pilgrimages indeed, and according to his means the pilgrim carries treasure to the shrine. The colossal figure is overlaid with gold-leaf, pasted on in squares, as a few faithful Buddhists paste their paper prayers over some stone heart, in the row of a hundred idols sitting in the valley beyond Nikko. For such the drums in the Shinto temple beat in vain, for the gods of their fathers, though deserted, are still strong to faith.

Last year a robbery was committed at Aloung-dah-katapoh. The god had been covered with gold, slowly but surely, to the depth of three or four inches, and some one — a foreigner presumably — hacked and chipped the precious metal off in many places, and carried the treasure away. No one knew the circumstances of this theft, nor when it was committed, but as soon as it was discovered by some one passing, and word taken to civilization, a special pilgrimage was organized, and the losses of the god were made good.

AS IT HAPPENED.

DRAWN BY FRANCIS DAY.

"SHE DRANK HER ICED TEA IN SILENCE."

HER hair was pale; her eyes were meekly blue; she was nineteen, and had been out a year; she sketched in water-colors "a little," and read books of her mother's choosing; at society chit-chat she made a poor show, and slang upon her lips was devoid of both vulgarity and piquancy. She did not flirt—this was partly because she was shy, partly because she had always been so very well chaperoned, partly because she did not care for men, and because no man had ever loved her or pretended to, but chiefly because she had not given it a thought, and had she desired to flirt, would not have known how. And her name was Lulie. No one thought she would marry well. She herself did not think she would.

Her first evening at Montrose she spent on the piazza listening to Mrs. Blake on county scandals. Not that county scandals interested her, oh, no; but she had a way of listening to people; besides, there was nothing else to do. Van Antwerp, the only man, she took for granted was in love with Beatrice — Beatrice, the only other girl, reciprocating, as was meet; and they had gone rowing. She could see their boat, a horizontal dash of black upon the river.

At tea she wore a white gown with blue ribbons, and ate her bread and ham and drank her iced tea in silence, while Van Antwerp looked her over in a friendly way, and Beatrice ignored her. After tea she took a book of poetry from the center-table in the parlor, and read it by a coal-oil lamp, while candle-bugs crawled down her back. Through a window opposite she heard a distant murmuring, and saw a white form and a black one close together in the moonlight. She was not envious; she was too humble to be envious; she had sat too long and frequently against the wall the previous winter not to have become self-depreciative.

She went on calmly reading:

Straightway I was 'ware,
So weeping, how a mystic Shape did move
Behind me, and drew me backward by the hair;
And a voice said in mastery, while I strove,
"Guess now who holds thee?" "Death!" I said.

But there,
The silver answer rang, "Not Death, but Love."

Although her esthetic sense approved the fancy and her ear the rhyme, in her heart she did not understand one word of it.

Another girl in Lulie's place would have written at once to her father for money to go home, and yet another — and a wiser — would have perceived the possibilities of the situation, and stayed on at any hazard. Lulie was of neither sort; she never rebelled; she never perceived; she never "grappled with her evil star," nor any star. Some people have the elasticity of rubber balls, which rebound, and others that of sodden snow-balls, which stick where they have fallen.

Beatrice was charming, selfish, and giddy-headed, pretty by nature and beautiful by design. Each of her several seasons had added something to all this. Her gowns, if not from Worth, and her hats, if not from Virot, were built on the lines of those great artists. Her skin was creamy and rose-tinted; her hair was rust-red to the roots; and on her dressing-table stood a bottle of peroxide of hydrogen, and a box of pasty red stuff marked conspicuously "Pour les ongles"; and she always took an hour, and sometimes longer, to dress, but then her dressing justified it. I can best describe her by saying that she looked like one of Ehrhart's girls. Ehrhart's girls, however, have no hearts; and Beatrice had one.

Van Antwerp was a catch, in a calculating mother's and a sentimental daughter's sense; this saves the trouble of a flattering description. He had been in love, so-called, with many women, and the oftener he loved the less he was inclined to marry. He fell in love with Beatrice because he happened to be idle, and she charming and designing; he fell out of love with her again because she fell in love with him.

Civilization breeds shams. In medieval times when a man hated another man he never rested till he killed him; when he loved a woman — even to the extent of a nineteenth century flirtation — he won her if he died for it: these things were the realities of life. Now we hate and forbear, love and forswear, and the realities of life are — well, the things that can be bought with money. Flirtation — I am speaking psychically — is one of the most of shams. Love, of all the gods, is the most jealous of his dignity: trifle with him, and the Furies will avenge him.

The modern game of flirtation is rarely a draw. The woman holds the master cards, and if she keeps her head — or her heart — cool, the game is hers. If the man happens to fall in love, and is a catch, she may marry him; if he does n't, or is n't, she may dismiss him with a blessing, and rest assured that, in either case, years afterward, when he gets her wedding-cards, he will smoke a pipe over them, and tell himself, with all sincerity, that she is the only woman he ever loved. But if she should be the one to fall in love the game is lost. She is in

the anomalous position of trying to keep what she never had. She knows it, and goes to pieces. She loses nerve, and the *insouciance*, and charming independence that so won him at the start, and takes to clinging. He wearies of her; but she clings the closer. His *Dulcinea* becomes his old man of the sea. He begins to hate her, and looks around for outside sympathy and deliverance. This is the time for the other woman — any other woman,

Be she brown, or fair, or so
That she be but somewhat young.

This, in fact, was the time when Lulie — Lulie, as innocent of intention as the mouse that nibbles a match and sets a house on fire — came to Montrose.

Had Van Antwerp met Lulie in town during the season he would undoubtedly have passed her by. Now she was as welcome as a breeze to a ship becalmed at sea. As his tête-à-têtes with Beatrice became fewer, he grew more and more gregarious; but when his *penchant for la solitude à deux* returned it was Lulie whom he sought as a party to it. This, at first, was for no other reason than because she was another woman.

One evening he took her driving, and her hat brim collided with his. It was a warm evening, she took off her hat, a big leghorn with pink roses, and laid it on her knee. He talked of books, and found that her taste was the same as his. He said that Stevenson and Kipling were his favorites among contemporary story-writers. She said she thought their stories "very pretty." He said he was fond of poetry — of Swinburne, Byron, Meredith, and others, but that Browning made himself incomprehensible by acting up to the epigram that language was invented for the concealment of thought, and she agreed with him again. They came home through the twilight, when the trees along the road cast a vague gloom which was not definite shadow, and the golden west was streaked with bronze, and a rose-colored moon was rising in the purple east. All this, and the fact that she was a woman, led him to quote erotic poetry with personal applications. The wind had blown a color to her cheeks, and had tossed the tendrils of her hair; but the profile turned toward him was as innocent of coquetry as the profile of a virgin by Burne-Jones. He looked at her, and in his heart there awakened an enthusiasm for her coldness.

That night Beatrice wore her prettiest gown, and was her best and brightest; but Van Antwerp heeded not. She understood enough of the human heart to know that it is not to be understood; therefore she could not tell whether his indifference was real or feigned. Later, when they went up-stairs, she took her comb

and curl-papers to Lulie's room, and in the course of conversation hinted that Van Antwerp was a flirt.

A week or two passed. During this time Beatrice learned to know hate, regret, despair, the stings of wounded vanity and despised love, and the agony of trying to seem interested in old women's gossip when her ears were strained for distant whisperings and her eyes for vanished forms. But Lulie remained unsuspiciously tranquil, and Van Antwerp felt growing in his heart a joy as sweet as it was new.

Lulie, as I have hinted, was fond of sketching. Van Antwerp, in a surprisingly short time, developed a taste for watching her sketch, although his artistic taste could not indorse the result. One day they found a natural arbor on the shore formed by a persimmon-tree, a sugar-berry-tree, and a cedar. She sat down in the shade, and began to wrestle with pearl-gray sky and sunlight on a sail. He stretched himself at full-length upon the sand, and talked of the craze affected by some artists for purple shadows, both in flesh and nature, and described a picture that he had seen of sirens grouped upon a rock, among the grinning skulls of perished victims, waving their arms to passing ships, while the purple bloom of twilight, deepening in the distance, glazing the white flesh and bleaching bones, gave to the scene a charm of unreality and mystery. She said she thought it must be "lovely." Then he studied the freckles on her nose,—there were ten, not counting several little ones,—and thought that innocence was more beautiful than beauty, and silent sympathy more eloquent than wit; that ideal love was not merely a poet's fancy, and that life was gloriously worth the living.

This is the simple story of how Van Antwerp fell in love with Lulie. Ennui, a desire for sympathy, propinquity in the nick of time—all had a hand in it. He fell in love as *Romeo*, I take it, did with *Juliet*—he was primed for a great love by a little one. Beatrice maintains to this day that it was all on account of Lulie's scheming; but one cannot trust the judgment of a jealous woman.

Nevertheless, Beatrice needs a word of pity. One evening, when Lulie had gone up-stairs

to dress, she waylaid Van Antwerp in the hall. He was embarrassed and impatient, dreading possible reproaches. She raised her face to him; her cheeks looked impertinently red under her sad eyes.

"Van," she said, using her old name for him. "you love her!"

He did not reply; he seemed to be looking through her and beyond her, and there was a smile upon his lips that was beautiful to see. Then she turned and walked away, out of the house, toward the sunset, trailing her crisp skirts in the early dew. His rushlight had masqueraded as a star until a star had risen and shamed it; her bud of promise had been eaten by worms before the time of blooming. That was all there was of it.

When Van Antwerp told Lulie that he loved her he did it rather badly, he who had practised the art of love-making, in every fashionable summer-resort east of the Alleghenies, on debutantes and women of the world galore. He had loved before, 't is true, but never unto matrimony. In this lay his embarrassment. She who had never listened to a word of love was frightened and bewildered. But at last they understood each other.

"Life is a lovely fairy-tale," says Andersen. Yes, a fairy-tale, but lovely only for the Prince and Cinderella, not for the godmother (a tool), the parents and the stupid crowd (mere supes), and the ugly sisters gnashing their teeth in envy, hatred, malice, and all uncharitableness—above all, not for the ugly sisters! My heart bleeds for the ugly sisters. In this case there was only one, and she was prettier than Cinderella, and her heart was just as loving, and her feet were smaller—undeniably. But it is the same old tale.

After a while Beatrice went her way; and Lulie went hers, and Van Antwerp went Lulie's. Beatrice thought evil things of Lulie; Lulie and Van Antwerp thought delightful things of each other, but of Beatrice, not at all; and I think, as I have always thought, that men are children who deliberately break their toys, and cry for others—cheaper or dearer, it does n't matter—that they see in the shop windows.

Nannie A. Cox.

TO A MOCKING-BIRD.

THE name thou wearest does thee grievous wrong:
No mimic thou; that voice is thine alone.
The poets sing but strains of Shakspeare's song;
The birds, but notes of thine imperial own.

Henry Jerome Stockard.

EDMUND CLARENCE STEDMAN.

LANDOR is generally held to be the last of the Greek writers, but the race never dies out, if its distinction is admitted to reside not merely in its rhetorical habit, but in its spirit of alertness and vivacity. The combination in Landor of classic transparency and conciseness with such Elizabethan brawn as belongs to his "conversations" is itself a proof of the complex nature which the most Attic of writers may possess. Sainte-Beuve was a classic author, and so was Matthew Arnold, yet you have to reckon with an enormous fund of romantic sensitiveness in the former, and the English critic, for all his serenity and power of intellectual detachment, was one of the most modern of men. Hence it seems to me that a quick intelligence will perceive in Mr. Stedman not exclusively the classic temperament underlying his affection for the Greek anthology, nor the purely contemporaneous taste which inclines him to his present labors upon the new edition of Poe, but a happy blending of both impulses.

This meeting of the two lines of development is the more natural, perhaps, because there is really nothing more modern than the vein of feeling which we commonly associate with the greatest of past civilizations. The old conception of antique life as a statuesque affair of academic robes and frigid poses has disappeared before a closer acquaintance with the pictures of an entirely unaffected society which the old poets and prose-writers present. It is with the more confidence, then, that traits are ascribed to Mr. Stedman which would hardly be credited, on a superficial view, to a man of letters so thoroughly imbued, as he is known to be, with the multifarious colors of the present day. These observations might seem to refer only to his work. They are, however, in perfect agreement with the more or less personal consideration inspired by the portrait on the frontispiece page which these lines accompany. In and out of his books Mr. Stedman brings with him the same stimulating atmosphere—produced on one side by the precision and clarity of the older tradition to which I have referred, on the other, by his immediate response to the appeal of the moment.

The exact accent of that response is one of the most interesting points in Mr. Stedman's character. His sympathy is boundless, and he has flung the mantle of his critical cordiality over many writers whom a less genial judge

would leave to the doubtful shelter of their own thin diction. No one has been kinder to the minor poet on both sides of the Atlantic. But while he bends to do this, he never seems to sacrifice his equilibrium. His patience with the "stained-glass poets," as he named them, of the Victorian era has never diminished the value of his analysis of their betters. This is due to a very great extent to the classic strain in his temperament, to the impersonal animus of all his judgments. That is to say, there is no trace of time or of place in his dealings with the literary topics which have occupied so much of his time. He is cosmopolitan to the core.

As a literature grows it inevitably sheds many of its most national idiosyncrasies, its fiber belonging less to the nation as its makers belong more to the world at large, through recognizing its standards and paying heed to its opinions. There is no such mellowness, there is no such indigenous flavor, in Tennyson or in Arnold as go to weave the spell of Spenser or of Herrick. There is no such deep-throated laughter in Balzac as there is in the Rabelais whom he uselessly sought to echo, and no polished *boulevardier* of the day, no matter how great his gift, could hope to catch the rich Gaulish note of Brantôme's gossip. The transition sometimes implies a gain, more often not, but it always involves a difference which has its distinct significance while leaving comparisons harmless and even gracious. For example, in a great deal that has contributed to the establishment of American letters it is obvious that the delightful streaks of humor by which it is rendered peculiar are as racy, as local, as the hills and woods from which our authors have drawn some of their most potent inspiration. Mr. Stedman's vivacity is essentially that of a citizen of the world; without being especially caustic, he is yet incisive, compact, beyond the usual measure of American wit, and his whole air is of a culture thoroughly independent of geographical conditions. He has done a great deal to modernize American literature, to purge it of Americanisms, and to express in it the tacit knowledge of laws formulated by neither one school nor the other, which is one of the surest tests of scholarship. This has not resulted in any cooling of his emotions, as witness his "Alice of Monmouth," or any of his war poems, and the gusto of the delightful ballad which was one of his earliest poetic successes. Nor has it modified his Americanism, and by that is signified not the stress of some

moving episode, like the civil war, but a changeless, spontaneous intuition for American figures and for the American character. The charming "Huntington House," which appeared in these pages recently, illustrates the quality very aptly. The ladies Huntington themselves hardly could have brought home to the imagination a more convincing touch of the sentiment and environment of their village and time than is conveyed in that spirited poem.

For spirited Mr. Stedman always is, regardless of his theme. His vitality is inexhaustible, and he is animating, whether he is musing over the quaint sedateness of old New England gentility, whether he is breathing the sweet, still air of a Greek eclogue, or is turning the leaves of a singer as *macabre* as Poe. The critical address on poetry which forms his latest published volume might not unfairly be classed as a treatise, yet where, in a production of that scientific nature, will you find an equally diversified and epigrammatic stream of eloquence, an elucidation of the poetic ministrations handling those sacred mysteries with so much felicity of imagery and phrase, with so much deftness and point? Mr. Stedman's faculty has ever taken this free and entertaining direction. He has a poet's insight into the beauties of poetry. He has also the poet's gift of irony, of banter, a circumstance which materially extends the scope of his art as a critic; for along with such metaphors of grace and tact as he has invented in his tributes to the genius of Shelley and Keats, he is capable also of such a sentence as that in which he summed up, once for all, some years ago, the afternoon-tea movement in English poetry. "Five thousand socialists are bawling around St. Paul's, and English poets are writing triolets." Despite his sincere regard for the younger poets of England and America, Mr. Stedman is never averse to giving them the good-humored rap on the knuckles which they need. He is interested in, and himself handles with facility, the mechanism upon which some of the daintiest of modern verse has been founded. He speaks of Gautier with warmth, and has not only a poet's admiration for Musset and Banville, but looks with a poetic curiosity upon all the ingenious experiments which have been made upon the midslopes of the French Parnassus. But it is only necessary to hear him defend what is defensible in Browning—a task which needs neither an enthusiast nor an *advocator diaboli*, but a critic of Mr. Stedman's loyalty and discrimination—to realize how keenly his ear is attuned to the deepest, purest, most elemental strains in poetry. He has always appreciated Whitman. He delights in Tennyson's almost Oriental delicacy of touch. He delights equally in the sledge-hammer strokes of Browning. This is not only a mat-

ter of taste, of acumen; it is a matter of temperament, and in reverting to Mr. Stedman's perception of the tumultuous ichor in Browning's poetic veins one comes back less to criticism than to his instinctive love for what is ever is strong and charged with human as well as poetic passion. His own disposition is never to give the motive too keen an edge, and he never essayed in his youth the drama which every poet is believed to have brought forth. It is more probable that it was a comedy than the regulation five-act play of horrors and despair. But youth is catholic in its admiration, and if it may be said, in all respect, of the eyes which look from the portrait herewith presented with so much of the steadiness and kindliness of maturity, that they have unfailingly regarded the world with the light of youth, the impartiality with which they apprehend every phase of emotion will then be understood.

Mr. Stedman is always just a trifle in advance of the latest thing, and this makes it a little difficult to keep up with him. The most energetic of young men are not more ardent, more speedily aware of the new book, the new play, than the man who has seen the evolution of a whole generation of poets. The difference is that the discovery comes to the veteran without effort, and often, as has been said, in advance of the rest. Look into his works on the English and American poets of the century; look into the great anthology of American prose and verse in which he divides with another critic (Miss Ellen M. Hutchinson) the honor of marshaling for the first time in our history an adequate representation of our literature. The survey discloses many names which, until the publication of these volumes, were but slightly known, if known at all, to the readers who have since given them a wide reputation. It would be difficult to say how many of the newer poets of America have profited by Mr. Stedman's encouragement and advice. And their gratitude to him draws an added stimulus from the engaging way in which the advice is proffered. Authority goes with scholarship, and Mr. Stedman has both, but in spite of his emphasis it cannot be said of him that he is pedagogic. If he ever prints the translation from the Greek upon which I believe he has long been engaged, it is certain to prove the antithesis of a pedantic version. The passage from one of the pastorals which is included in his last volume shows how flexible his spirit and style are when working in a substance well-calculated to test a translator's poetic feeling as well as his accuracy. Mr. Stedman is never the professor, yet it is conceivable that he would occupy a chair of literature in some university with great satisfaction to his students. The easy play of his discursive method, enriching every stage of his discourse with the happiest

and most illustrative of allusions, makes him a model among poetic mentors.

If he has never worn the master's robes it has been due probably to his deep-rooted fondness for the habiliments of Bohemia. He wore them, metaphorically at least, in the early days of his life in New York, when Pfaff's was a literary shrine in which all the poets of that time gathered, and his "Diamond Wedding" was an appropriate offering to its muse. He wears them now in the same figurative sense when the revels of the Centurions and the Players require it, and at any time he has a ready reply to a salutation couched in one of Béranger's ringing lyrics, or a fragment from Murger's party-colored work.

But in seeking for a closing word on Mr. Stedman it is necessary to choose some loftier interpreter than either of these, for his significance is of a more serious character. One thinks

of him as the friend of new interests, of new thoughts, of new ideals. One thinks of him more often as the contemporary and intimate of the leaders whose work he has shared in the formation of American literature. Lowell and Longfellow were his friends. Of Whittier he has written more clearly and more justly than could have been possible for any one who had not grasped through companionship and kindred experiences the Quaker poet's point of view. His first years of literary craftsmanship brought him in contact with men like Bayard Taylor and Ripley, and for a long time he worked side by side with John R. G. Hassard, one of the finest critics of his period. Like all the members of this famous company, he stands for what is most admirable in American letters. That his influence will be felt in the development of the latter is one of the most gratifying thoughts that arise in the presence of his portrait.

Royal Cortissoz.

ECHOES OF THE PARLIAMENT OF RELIGIONS.

THE first lesson given to us by the Religious Congress was the consciousness of our Christian divisions. I must say that nowhere have I been so struck by the variety and apparent irreconcilability of these divisions as in this country. Not only the internal differences between doctrines divide people, and keep them apart from one another, but even the mere exterior fact of going to one church and not to another. The church, no longer as a spiritual congregation, but as a building, seems to make people feel that they are different from people who go to another building, and that they belong to a different class of human beings. How many seem to believe that they live in order to go to church, and not that they go to church in order to learn how to live! If people would only realize that they have to meet in life and not in church, how unimportant would be the fact that they come from different churches, compared with the fact of their meeting in the same life! Never has this been more beautifully demonstrated than at that memorable scene of the opening session of the Religious Congress on September 11, 1893. How low must have fallen the barriers which separated a Presbyterian from a Methodist when they saw sitting next to one another an archbishop of the Greek Church, a Buddhist from Ceylon, a Catholic bishop, a Confucianist from Japan! How small certain people must have felt with their little

sectarian flag in front of that wonderful platform overshadowed by the banner of brotherhood! These men need not have said a word: they were eloquent enough by their appearance; it was a silent proclamation of unity — not unity as an aim we have to strive for, but unity as an actual force, as an energy in the Greek sense of the word: a latent power which expects to be used, and which must be and will be used, for its possibilities are unlimited.

But they did not remain silent: they began to speak, these men of different nations, different religions, different churches, and all at once we saw that underlying their different forms of faith was one common feeling — that universal striving of man, the same man, toward one and the same divinity. People understood (and how many were astonished in doing so!) that the same faith and hope and love could be expressed through different religious forms, just as the same feelings and ideas can be expressed through different words of different tongues.

That was the second lesson we learned — the changelessness of certain fundamental qualities of human nature by which the equality of men is secured through all the varieties of their physical organization, in spite of all the differences of form in which their spiritual strivings express themselves. It became manifest that the bond which unites the human family is not religion, but religious feeling; for if we say "religion," we inevitably must ask "What religion?" and thousands of answers

will divide humanity into thousands of classes; but if we say "religious feeling," there is no misunderstanding possible. "What religious feeling?" *The religious feeling, for there is but one.*

Yes, religious feeling, independently of how it crystallizes itself in the great variety of human souls, is the common field on which we all must meet to recognize the great equality of the human soul.

Now look how inconsistent those Christians are who, in the name of establishing a *Christian* brotherhood on earth, refuse to recognize as brothers, not only their fellow-men of other religions, but even their Christian brothers of other denominations. They act in the name of a religion, and they forget that religion is the result of religious feeling, and that the latter is proper to the heathen just as to themselves; but as they cannot deny the existence of religious feeling in a Buddhist, they evidently prefer to drop their own rather than to keep anything in common with him. They do not realize that, in putting their fellow-man of another religion out of *their* family, they put themselves outside the pale of the great *human* family; for the heathen by their exclusion does not lose what he had in common with them, while they voluntarily reject their natural similitude with him; and as that similitude consists in the community of religious feeling, they consequently (or, rather, *in*consequently) keep for themselves a religion without religious feeling. "Religion" becomes a shallow word, empty of sense, and "Church" becomes synonymous with the "quarantine" which keeps them safe from all pernicious contact.

The "declassification"—if I may say so—of our human brother was, then, the third lesson we learned at the Religious Congress. We learned morally to undress our fellow-man, to despoil him of those qualifications in which the prejudices of our education had so wrapped him that his human soul had finally disappeared under the clothing of national, political, or religious denominations. All that had to vanish before the banner of brotherhood; the shell was broken, the kernel appeared. We saw that in the Creator's eyes we had no denominations; that before God we

were only men and nothing else, and, as such, brothers by the fact of our birth, and not because we belong to the same religion. That is what so many Christians were afraid of; and still, why should they be? Does the universal brotherhood not embrace the Christian brotherhood? Is the human brotherhood ~~not~~ the final aim prescribed by Christianity? Or do some people think that by including heathens in their brotherhood they renounce Christianity? Absurd as the question may seem, it is the logical result to which some people have to come if they persist in their ideas.

I will simply ask those who are afraid of losing their Christianity by extending the limits of their love, whether they think that Christianity is great because with its teaching of brotherhood it has inoculated humanity as with something new or supernatural? Did Newton *introduce* the law of gravitation into the world? No; he pointed it out—as French people would say, "he put his finger on it," and it was enough to make him great. So with Christianity. It did not *introduce* brotherhood into the world; it pointed it out, and made the acknowledgment of it compulsory. It did not impose on human nature anything supernatural which was not in nature before; and thank God it did not, for man would not be able to fulfil a prescription were it outside of nature's limits. So, my Christian friends who are afraid of loving *too* broadly, you may be right as to Christianity,—I mean Christianity as you understand it,—but pray do not forget that those whom you are afraid of loving do not hate you, or if some of them do, it is not to be supposed that you would like to resemble them in their errors: you would not like to give them the right to reproach Christianity with wrong similar to that which you condemn in them.

We will not discuss, my friends, but in the name of that Christian love which animates you, let us join together in a wish which certainly will help the establishment of that universal peace for which you, as much as anybody, are longing. Intolerance, my friends, has reigned long on earth; now let us join our prayers, and hope that the time will come when tolerance will be tolerated.

Serge Wolkonsky.

AUBREY DE VERE.

UBREY de Vere has made himself known to lovers of literature by his labors in both prose and poetry, but chiefly through the latter. He is sprung from a family, long resident in Ireland, of the old Norman stock, and derived from his father, Sir Aubrey de Vere, the friend of Wordsworth, a predisposition to verse; nor are the few stirring sonnets and the dramas of his father yet forgotten, though obscured by the splendor of the great poetic age in which he lived.

Another son, Sir Stephen, the present baronet, has shown a share of the family gift both in original verse and in a recent translation of Horace, undertaken as a diversion of old age; but he is better known for the important service he performed in securing proper regulations for emigrant ships in the middle of the century. The family has been loyal to Ireland, and a large part of Aubrey de Vere's verse is devoted to the celebration of the historical and mythic legends, the piety, humanity, and sorrow of his own land. He belongs to the generation of Tennyson, having been born in 1814, but the voice in his verse is that of the "large language,"—of Wordsworth, Coleridge, and Shelley,—and echoes with an earlier day whose song has long fallen silent in our books; and there mingles with this strain of our most noble modern English speech the indefinable melody and the simple and spirited quality which seem indigenous to all Irish poetry.

Here, however, it is not meant to describe or praise his verse, but only to pay some brief tribute to the man, as we print his portrait, and to the life he has led in self-devotion to high and humane ends, in scenes and among men that make his reminiscences of unusual and lasting value, as is illustrated by the fragments of them that are given in these pages. As a boy he was the guest of Wordsworth, and the friendships which began with this and other eminent names make a roll of the century in England of astonishing fullness and brilliancy. He became a Roman Catholic in early manhood, at the era of the Oxford movement, and the church has been, perhaps, the chief poetic inspiration granted him. Several of his volumes deal with her legends, glories, and aspirations with an amplitude and a loftiness not elsewhere to be found in our literature, and with a pure fervor such as characterizes only the best of the "books of the spirit" that are so rare in the English tongue. The religious and poetic instincts united to lift his thought into a region almost Platonic, as respects the principles, the abstract motives, and ends of life, as is seen in his essays, which are bathed in a difficult air, while in his poetry the same elements take on an extraordinarily picturesque detail, and an individuality often heroic. The matter exceeds the style, as is inevitable, in all but the greatest, in such themes; but it does not excel the temper—liberal, refined, and lowly—in which it is humanized and made part and parcel of our nature, appealing to its own ideal. Such serious aims the poet certainly has; and if the touch of sympathy be present (and what can there ever be when that is lacking?), he succeeds.

One reads but little, however, in these "Recollections" without discovering a strongly marked personality, wholly apart from those "ideas" which his other works chiefly seek to illumine. The kindly nature; the strong sense of humor; the mind laboriously just in thought, and delicate, while frank, in appreciation; the cheerful enjoyment of varied life; the piety toward friends as well as toward heaven, and much else, will now for the first time, as here familiarly revealed, aid those who have enjoyed his very impersonal prose and verse to make near acquaintance with the man who has won their regard; and they will follow the completion of his work with more than friendly interest.

G. E. W.

RECOLLECTIONS OF AUBREY DE VERE.

II. YOUTH.

ERALD GRIFFIN, a friend of mine in youth, lived about four miles from us in a village called Pal-las. He was a man of remarkable genius, and of a character yet more remarkable, though his life was too short to allow either to be recognized widely. He was the youngest of four brothers, whose parents had emigrated to America. As a boy he lived with two brothers, both of them physicians, whose talents and conduct eventually made them eminently successful in their profession; but in early years their career was a struggling one. The boy had a high spirit of independence. He resolved to be no longer a burden to them, to cast himself upon the huge world of London, and there make his way as he might. Knowing that his brothers would not sanction a design apparently so hopeless, he took his departure without an adieu; and for a considerable time they did not know where he was. At first he supported himself by reporting for newspapers, and afterward by writing short dramatic pieces for the small theaters. He could thus, however, win but a precarious existence, and during several years seems to have been in danger of starving, for he never allowed his brothers to know of his difficulties. Later he wrote tales illustrative of Irish life in the lower and middle classes, entitled "Holland Tide," "Tales of the Munster Festivals," etc. All at once to his great surprise his little spark of local reputation burst out into a flame. His "Collegians" appeared: it met with a great and immediate success. Some of the critics pronounced him the best novelist of the time next to Sir Walter Scott; his publisher sent him £600, and he despatched the whole of that sum at once to his parents in America. "The Collegians" has been frequently reprinted, and presents the best picture existing of Irish peasant life, at once the most vivid and the most accurate. Its comic parts are the most comic, and its tragic the most tragic, to be found in Irish literature. The tale is founded on a terrible crime perpetrated in the county of Limerick early in this century. A young man of gentle birth fell in love with a beautiful and virtuous peasant girl, married her secretly, got tired of her, and drowned her in the Shannon. For a considerable time it was impossible to

arrest the murderer; his capture was described to me by a near relative of mine, the magistrate who arrested him. He had received secret information, and led a body of police to the house of the murderer's parents at a late hour of the night. Apparently there had been a dinner party in that house, for on the door being opened after a slight delay he was received in the hall by its mistress, a tall and stately lady in a black velvet dress. She addressed him with quiet scorn, informed him that her house, a hospitable one, had been favored by many guests, but none resembling those who had come at that unusual hour to visit it; that she knew his errand; that her son had not been in that house for many weeks; but that he was welcome to search for him as they pleased. They searched the house in vain — they next searched the offices. When on the point of retiring one of the party remarked a ladder within the stable, the top of which leaned against a small door in the wall. The policemen refused to mount it, for they said that if the murderer was hid on the premises he must be behind that door and would certainly stab the first to enter. The magistrate mounted. The search was again in vain, and all had descended from the loft except the last policeman, who, as he approached the door, carelessly prodded with his bayonet the straw with which the floor was covered. A loud scream rang out from beneath it, and the murderer leaped up. He had been grazed, not wounded, and if he had held his peace must have escaped. His scream was almost immediately reëchoed by a distant one louder and more piercing. It came from one who knew her son's voice well. That magistrate told me that the most terrible thing he had ever witnessed was the contrast between that mother's stately bearing at first and the piteous abjectness of her later appeals as on her knees she implored him to spare her son.

The guilt was conclusively proved, and the murderer was sentenced to be hanged; but in those times justice was not always impartially administered, and the peasantry were certain that a gentleman never would be hanged. He requested that he should be taken to the place of execution in a carriage, but his crime had excited universal abhorrence, and none of the livery stables in Limerick would supply one. One was procured from a distance on the morn-

ing of the execution, and the unhappy man entered it. When midway on the bridge in Limerick that spans a small arm of the Shannon, the horses stopped, and no efforts could induce them to go farther. The crowds were more certain than ever that somehow there would be an escape: a gentleman could not be hanged. The horses plunged more and more furiously, but would not advance. The murderer fell into an agony of terror. He exclaimed, "Let me out, and I will walk!" He walked to the place of execution, and was hanged.

The "Colleen Bawn," which had an extraordinary success at one of the London theaters, was a dramatic condensation of "The Collegians." I went to see it, but could not remain for more than ten minutes. All the refinement which, not less than strength, marks the original, and especially the scenes that describe the Irish peasantry, had vanished, and a vulgar sensationalism had taken its place. This vulgarity has been so common in the delineations of Ireland, whether in novels or on the stage, that the ordinary English conception of the Irish peasant is the opposite of the truth in many cases: at least it wholly ignores that delicacy, pathos, and sympathy which characterize the humbler and the better among them, and remind us that manners are a tradition, and that in the centuries gone by many a political convulsion placed nobility "in commission" among the poor. In Gerald Griffin's day, when whatever crime might be stimulated by violent passions, or whatever exaggeration might mingle with a generous "Nationalist" enthusiasm, the preaching of that vulgarest of all things, Jacobinism, had never been heard, a man of genius like him could not fail to feel the charm both of the Irish character and the Irish manner, a thing then so much valued that "bad manners to you" was an ordinary malediction. Many of his poems illustrate Irish peasant life with singular grace and pathos; and to become the Irish Burns, as he once told me, was long the great object of his ambition.

After the publication of "The Collegians," Gerald Griffin took up his abode once more in the small dispensary house of his brother at Pallas. My father thought that he would there find little room for his books, and many interruptions of his studious hours. He invited him to pass the winter at Curragh Chase, placing two rooms at his disposal, and telling him that he would find quiet in the woods, and a large command of books in the library; but Gerald declined the invitation. He built an arbor in his brother's garden, and there, I think, made a study of Homer. He had a great knowledge of early Irish history, and we all expected from him a long series of historic romances illustrating Ireland as Scott's had illustrated Scotland.

An unexpected obstacle frustrated that hope. He was a remarkably religious man. Prosperity, which weakens religion in many Irishmen, deepened it in him. Whatever ambition belonged to him in youth left him early: things spiritual remained to him the sole realities, and literature was of worth only so far as it reflected them. He startled his friends by asserting that strong passion, one of the chief attractions in imaginative literature, did little but mischief. It was in vain that those friends, clerical as well as secular, maintained that in wise hands it should have an elevating tendency: he clung to his doctrine all the more because it involved self-sacrifice, well aware that it must be fatal to the success of literature such as that for which his gifts and his experience had especially fitted him. He wrote no more popular novels, though a later production, "The Invasion," recording one of the Danish piratical descents on Ireland, is full of admirable description. One day his brother found the fireplace black with the cinders of papers recently burned. He had just destroyed the whole of his manuscripts, verse and prose alike, and answered all inquiries by stating that he had devoted the rest of his life to the instruction of little peasant boys, as one of the "Christian Brothers" — the humblest of all religious communities. He labored assiduously for a few years at Cork; there, a few years later, I saw his grave, and heard his fellow-laborers declare that if Ireland had ever had a saint, Gerald Griffin was one. No doubt his choice was the best, not only for himself, but for the children who came under an influence so benign. But the country he loved so well lost its chance of an Irish Burns, or an Irish Scott; and the unfriendly critic will say, "So fares it with Irish gifts: the lower hit their mark, the highest miss it, sometimes by going to one side of it, and as often by going above it!" Macready, later, brought upon the stage a drama called "Gisippus," written by Gerald in early youth. I think it proved a success, and the £300 paid for it brought out a new edition of Gerald's works. In his religious retreat he found a peace and solemn happiness of which he wrote in rapturous terms. In person he was dignified; and his face was eminently handsome, as well as refined and intellectual.

My recollections in connection with these, my early years, are chiefly rural and sylvan. They come to me fragrant with the smell of the new-mown grass in the pleasure-grounds, the breath of the cows as they stood still to be milked, rolling their eyes in quiet pleasure, with a majestic slowness such as the Greeks attributed to the eyes of Juno. No change was desired by us, and little came. The winds of early spring waved the long masses of daffodils till they made a confused though

rapturous splendor in the lake close by, just as they had done the year before; and those who saw the pageant hardly noted that those winds were cold. Each spring the blackbird gave us again his rough, strong note, and the robin's, as the season advanced, gained a roundness and fullness like that of the thrush. Each year we watched the orderly succession of the flowers, and if the bluebell or the cowslip came a little before or after its proper time, we felt as much aggrieved as the child who misses the word he is accustomed to in the story heard a hundred times before. Each spring there came again the contented cooing of wood-doves far away, and that tremulous pathos of the young lamb's bleat, which seemed hardly in harmony with his gladness as he bounded over the pastures illuminated by the sudden April green. Each year the autumn replaced the precipitate ardors of the spring with graver joys and sedater fruitions—its golden harvests, and all those darker colors which decorate though sadly the funeral feast of the year. The maple slowly as of old relinquished his fires, and there was the falling leaf, and the frightened flutter of the poplar's gilded tablets, in place of the thickening leaves and deepening shadows of the vernal woodlands; but beyond these woodlands a remoter landscape was once more seen through clearer air. In youth the enjoyment we derive from nature is less consciously the enjoyment of its beauty than it is in later life or in memory. We then think perhaps less of the scene than of the incident connected with it, less of the tree than of our triumph when we first climbed it, less of the flower than of the one for whom it was gathered; but beyond all these incidental joys associated with nature there is an unconscious joy in her beauty, the better, no doubt, for being unconscious. In the home of our childhood there was the more of this incidental enjoyment, because, owing to its size, there was always so much of improvement going on in it. One of its approaches was three miles long, and it passed three lakes, one surrounded by meadows, pastures, and groves, another by woods which had never been planted by man, though perhaps often cut down, and successively renewed—a portion of ancient Ireland's "forest primeval." Through those woods my father was never tired of making new drives and walks. The most interesting of these was the "Cave Walk," so called from a deep cave retiring back from a long line of cliff crowned with wood, matted over with ivy, and so perpendicular that it looked like the walls of a castle. I used often to descend into that cave merely for the sake of enjoying, on reascending, and approaching its mouth, the embalmed and delicious air into which the breath of unnumbered flowers and leaves and

streams, seen or invisible, seemed to have been melted down. One felt as if life required nothing more for its satisfaction than the quiet breathing of such air—a great healing to body and spirit alike.

With my father landscape-gardening was one mode of taking out the poetry which was so deeply seated within him; and if he had lived in a garret he would probably have written more verse. His love of nature was one of his strongest instincts, though hardly stronger than his love of really high art. Most of our enjoyments cost us much, and most of our affections, whether associated with the household life or with our country, cause us so much pain, either in the way of regret or of anxiety, as abundantly to remind us that they were accorded to us even more as a school of duty than as a source of enjoyment. But nature is a very disinterested benefactress: she gives much and demands little; she touches the human heart with a hand of air so light that it leaves behind no burden of responsibility. The fallen tree seldom has a tear dropped on it; the faded flower never—or never for its own sake; and in our wanderings from river to river, or from vale to vale, we never reproach ourselves with inconstancy. There at least

We've but to make love to the lips we are near.

For that reason a wise man should put a finer edge upon his appreciation of nature than on most of his sensibilities. My father probably owed much of this, the most unalloyed of his enjoyments, to his mother's generosity, amounting as it did to a self-sacrifice almost heroic. She had seen how much boys, and especially an only son,—as my father was,—suffer from the influences of home, enervating when unmixed, and the adulation of dependents, never so seductive as when it comes (such was then the case in Ireland) not from self-interest so much as from affection. She sent her only child, then about ten years old, to the charge of a tutor on the banks of Windermere. All the night before his departure the boy heard his mother's sobs, but she persisted, and, when the years of separation were past, reaped the reward. His tutor was not much of a scholar; but he was dutiful, upright, and brave, and he instilled those virtues into his pupil, or protected their growth in him. The wild and witching scenery all around taught him another lore. Gleams from Windermere, always his favorite among the lakes, were probably with him amid the most striking, though hardly less lovely, scenes among which his mature life was chiefly cast; and unconsciously may have interpreted them to him. Nature's grander features create in a responsive imagination those great ideas

of loveliness and of sublimity which, once elicited within us, enable us to detect and enjoy those natural attributes wherever they exist, though less strongly manifested.

The improvements which my father was always making in his country-seat were stimulated also by his desire to do good. They gave a very large amount of enjoyment to the poor, who regarded him in return with reverence and gratitude. We young ones became thus much more widely acquainted than we should otherwise have been with the humbler class, and many a remembered and often quaint incident brings back that intercourse to me. I may as well mention one of them. At one time the work in progress consisted in the removal and planting out of large trees under the superintendence of a certain Ulysses D——, who in that art was a specialist, though without education. He was full of odd sayings, such as, "We would like to go to heaven; but we would not like to go there *too soon*!" Once he remarked to me: "It is a pleasure to find that the older we get the better we get. When I was a young man I was continually cursing, and now I curse mighty little. Neither priest nor parson could make any hand of me. It was a lady that cured me — Mrs. Oldworthy. I was planting a tree, and a big one; and was after saying to the men, 'Three bounces each man round that tree, to stiffen the earth!' Now there was a laborer among them who could not bounce rightly because he was wearing a great-coat. Then I began to curse him most terribly, and never heard Mrs. Oldworthy coming up behind me. Said she, 'I've heard great cursing in my life, but I never heard cursing like that!' I was greatly frightened, and answered: 'Sure, ma'am, it is only for his own good, and for the good of his innocent children, that I am cursing him; for if Mr. Oldworthy saw him working in a great-coat, he'd turn him out of the concern, and they would all starve together.' Then she gave me a wonderful answer: 'Sir,' she said, 'it's a wonder to me that you would not think more of your own soul than of another man's body!' Since then I've been dropping the fashion."

Our store of amusing incidents was always increased when my eldest brother returned from Cambridge at vacation time. We used to hear much of two among the younger Fellows, who united great scholarship and a strong sympathy with the undergraduates. These two were Julius Hare, the great friend of Walter Savage Landor, and Connop Thirlwall, afterward bishop of St. David's, the latter of whom I never think of without a grateful recollection of the grief which I heard him express at the destruction of the monasteries in England. It was a sentiment which I had not expected from one

who was opposed to the traditional and ecclesiastical school of English theology. Some of the anecdotes which I then or later heard respecting Cambridge matters related to the head of one of her chief colleges, a man justly honored for his learning and piety, but often criticized for the prosaic character of his mind and for a certain minuteness which petrified his erudition. Two of the undergraduates were discussing his "dryasdust" ways in the college library after a fashion a little irreverent, when a Fellow walked up to them. He was a somewhat pompous man, and his reproof was true to his character. "You are probably ignorant, young gentlemen, that the venerable person of whom you have been speaking with such levity is one of the profoundest scholars of our age — indeed, it may be doubted whether any man of our age has bathed more deeply in the sacred fountains of antiquity." "Or come up drier, sir," was the reply of the undergraduate. Another anecdote indicates that the venerable man's simplicity was equal to his scholarship. After fifty years' seclusion within the walls of his college it struck him that it was time for him to see a little of the world, and he accepted an invitation from an early pupil who was entertaining a large party in a great country-house. At dinner he sat next to the young lady of the house. Their conversation fell upon baths, and she happened to mention that she took a shower-bath every morning to invigorate her system, adding, when he inquired what a shower-bath was, that it resembled a very small round room; that the bather took his or her stand in the center of it, and upon pulling a string was drenched by a sudden flood of water from above. Next morning the recluse rose at his usual hour, six o'clock, and, being of an inquisitive temper, thought it well to explore carefully what he had never seen before, a large country-house. On pulling open a door he found himself at the entrance of a very small circular apartment, one of those in which housemaids store away old brushes and household articles past their work. In the center of it stood a plaster cast of the Venus of Medici. The venerable man recoiled, closed the door, and walked in the park till summoned by the breakfast bell. He took his seat, and his host asked whether he would have tea or coffee. But he had reflected on what good manners imperatively required; and his answer was: "My lord, I can neither partake of tea, or coffee, or any other refection, until I have first tendered my humblest apologies to the interesting young lady whom I now see dispensing the chocolate, and on whose sanitary ablutions this morning as she stood in her shower-bath I was so unfortunate as unwittingly to intrude."

It was in the earlier half of September, 1831,

that I met first the man of the greatest intellect that I have ever known, and between whom and myself there sprang up what may be called a friendship at first sight, he being then in the twenty-seventh year of his life, and I in the eighteenth of mine. My new friend was Professor Hamilton, better known as Sir William Rowan Hamilton, "Astronomer Royal" in the Dublin University. I had often heard of him as the prodigy of that university, one who on entering it had sent in an essay written in fourteen or fifteen different languages, most of them Oriental, Greek being the latest which he had learned; and who during his course at Trinity College had successively carried off every prize open to his competition whether in classics or in science. At the age of twenty-two he had published a mathematical essay, "Systems of Rays," of which one of the chief men of science then living pronounced that "it had made a new science of mathematical optics."

It was impossible for the most careless observer not to be struck by him at once. One's first impression was that he was a great embodied intellect rather than a human being. Wordsworth wrote of Coleridge as "the rapt one of the godlike forehead," but it could not have been more marvelous than Hamilton's. The moral expression of his countenance corresponded with the intellectual. What it indicated was, when there was nothing to disturb him, an unbounded reverence. It was as if his consciousness of the greatness of what is above us rendered him but half conscious of the things around. The nobility of his forehead, which alone arrested one's attention, imparted a grandeur to the whole face, the other features of which had nothing remarkable about them. His figure was not tall, and had nothing of grace or distinction about it. His voice was rather a singular one, generally low-toned, but leaping up occasionally into a higher key upon some slight excitement. It need hardly be said that with his habitual reverence there went a corresponding humility as regards himself, and an invariable courtesy in his intercourse with all others. He seemed always to think it likely that he might be mistaken, while in every neighbor, however full of infirmities, it was the human being that he saw, and one invested with all the rights and dignities which belong to humanity. Another quality which belonged pre-eminently to him was his absolute absence of all disguise. Some one remarked of him, "Hamilton is simply transparent; his thoughts are as visible to you as the leaves of a tree close by and sun-smitten. It would be impossible for him to tell a lie even if he wished to do so; and he could no more conceal a thought than he could tell a lie." In that entire unguardedness there was something both attractive and pa-

thetic: it was like a fragment from a world higher than ours, a virtue hardly suited to a world like ours, in which the unprotected must so often become the prey of the fraudulent and the wicked. Of Sir William Rowan Hamilton I may state Wordsworth's opinion. One night while we stood beside his little domestic lake Rydal, as it glistened in the beam of a lough moon, Wordsworth said, "I have known crowds of clever men, as every one has; not a few of high abilities and several of real genius: yet I have only seen one whom I should call wonderful — Coleridge." He then added, "But I should not say that; for I have known one other man, a fellow-countryman of yours, who was wonderful also — Sir William Rowan Hamilton, and he was singularly like Coleridge."

One of the things most remarkable in Sir William Rowan Hamilton was the combination of qualities both mental and moral, seldom united. In Coleridge the metaphysical power existed in not less strength than the imaginative; and though no doubt he owed great duties to so great a faculty, and effected much to spiritualize the metaphysics of his age, every lover of poetry must lament that he did not for another dozen years give himself mainly to poetry. Wordsworth once said to me that Coleridge's twenty-sixth year was his "annus mirabilis," and that if he had not then suffered himself to be drawn aside from poetry he must have proved the chief poet of modern times. But Sir W. R. Hamilton's combination of the mathematical gift with that for languages, and of both with the metaphysical, was a union more rare. I used to see him reading the most arduous works of Plato in the original Greek, wholly unconscious that the room was dinning by a somewhat noisy company. When he had soared into a high region of speculative thought — and it was there only that he was quite at home — he took no note of objects close by. A few days after our first meeting, we walked together on a road a part of which was overflowed by the river at its side. Our theme was the transcendental philosophy, of which he was a great admirer. I felt sure that he would not observe the flood, and made no remark on it. We walked straight on till the water was half-way up to our knees. At last he exclaimed: "What's this? We seem to be walking through a river; had we not better return to the dry land?" Both at Adare and Curragh Chase I used to sit up with him in his bedroom till near sunrise, while he held such discourse as, I suppose, was the best compensation I could have had for never hearing that of Coleridge. His mirthfulness, however, was almost as strong as the speculative power. Once, just after he had admitted that some passages in Coleridge's writings were

as obscure as they were profound, adding, however, that by patient attention he had followed the meaning of those passages, excepting one in "Aids to Reflection," I answered: "I know a lady who seems to have found no difficulty in his works — Mrs. —, that very gay and fashionable person you met lately. She spoke of the 'Aids to Reflection,' and I replied that it was a great book, I believed, but a long and difficult one. She answered, 'I will take it up to my room after breakfast.' She did so; brought it down at luncheon time, and told me she had read it, thought it a very pleasant book, and had found nothing difficult in it." He laughed till he could no longer stand. I early observed that his abstracted habits, while they kept him as ignorant of the world as he was indifferent to it, did not prevent his occasionally exercising a keen, if fitful, appreciation of character. He would refer to past incidents, which at the time he had not seemed to remark, with a singular, though never uncharitable, insight. His absence of self-confidence, as regards judgments on all subjects, was indicated by some unconscious modes of expression such as, "I seem to myself to think." His profound convictions respecting the Christian revelation, and also the truths of a spiritual philosophy, acquired an additional force from their contrast with his self-distrust in lighter matters. To all reasonable objections he listened with a deference which looked like a provisional and tentative consent. He approved strongly of Coleridge's revival of the scholastic terms "subjective" and "objective," though perhaps he would have been more careful than was Coleridge that the larger and more solid prerogative of the objective, where the latter was not confounded with the merely material, should not suffer from the aggressions of the subjective. I remember his once saying: "It is no conceit in a poet if he sees much more of interest in his own poetry than others see; with his associations it must possess more: but he should remember that the merit which it possesses at once for himself and for others is all the merit that belongs to it objectively." Theology interested him quite as much as philosophy; and at a somewhat later time, when "Church Principles" began to be strongly asserted, he said that on philosophical grounds they had great claims on our religious consideration, and that he hoped to write an essay showing that on the reasoning of Butler's "Analogy," they were in affinity with Christian ideas. When, however, some of those who had adopted High Church principles had made their submission to the Roman Catholic Church, he seemed to me to turn his attention away from that subject. His early training had, I think, given him in a degree the traditional prepossessions against the Roman Catholic Church

common among Irish Protestants, not unconnected with class distinctions and political conflicts. These I did not share, being already an ardent disciple of Edmund Burke, who asserted that there was no religious body in Europe which represented or at least resembled the early Christian Church so much as the Irish Catholic Church of his own day. I looked upon her as deeply wronged in the past, and as placed by the consequent political agitations of recent times under circumstances unfavorable to a right estimate of her religious character.

I could not, of course, but be drawn yet nearer to Sir William R. Hamilton by the profound affection which he felt for my sister almost from the first time that they met, a love recorded in several poems included in the admirable life of him by the Rev. R. P. Greaves. His sympathies were perhaps at first drawn to her in part by the discovery that she had for several years felt the same enthusiasm for Coleridge as a poet which he himself had felt for him as a philosopher. If reverence, gratitude, and a cordial friendship could have been an adequate return for love, he might have been well satisfied; but we must remember *Leolf's* reply to *Elgiva*¹ when she had asked, "Is gratitude, then, nothing?" It was this: "To me it is nothing, being less than love." Such love as his, however, whether fortunate or unfortunate in its immediate issues, could not but in the long run have proved "its own reward." She survived him for many years after he had entirely fulfilled the early promise of his youthful genius, and enjoyed many years of deserved admiration, and ennobling happiness; and to the end she retained the same gratitude for that early affection which I also felt at the time, and have never ceased to feel. She only met him once after he returned to his labors at the Observatory. I was more fortunate, and frequently visited him there, especially during my undergraduate course in the Dublin University.

When each examination was over I hurried to the Observatory, and soon found the philosopher in his study, or in his garden, laid out by Bishop Brenkley, his predecessor, of whom he always spoke with a filial reverence. "I am afraid I offended him," he said, "the first time we met. I, then a youth of eighteen, sat next him at some public luncheon. We did not speak, and I felt as if good manners required that I should break the silence. My eye happened to rest on a large map of Van Diemen's Land which hung on the wall. I turned to him and said, 'Pray, my lord, were you ever in Botany Bay?' The bishop turned half round to me with a displeased look, and only replied, 'Eat your soup, sir; eat your soup!' He evi-

¹ Sir Henry Taylor's "Edwin the Fair."

dently thought I was inquiring whether he had ever been transported. Such a thought had never entered my head."

Sir W. R. Hamilton kept a headstrong horse to which he had given the name of "Comet," and used to gallop it in circles, or perhaps in ellipses, round the lawn. On one occasion he mounted him in Dublin, just after a curious mathematical problem had suggested itself to him. The horse took a mean advantage of his abstraction, and ran away. "When I found it impossible to stop him," he said, "I gave him his head, and returned to the problem. He ran for four miles, and stood still at my gate—just as the problem was solved!" Another time, when the country was disturbed, I found him practising with a pistol. "It occurred to me," he said, "that if the Observatory were attacked I ought to know how to defend it." He had fixed a deal board on the garden wall, traced a black circle on it, and marked the center of that circle by a blue periwinkle stuck in a hole. "Now you shall fire," he said, "and we shall see which of us can get nearest to the mark." I had never fired a pistol before, and fired almost at random. By an odd chance the bullet went through the heart of the periwinkle, leaving the outward leaves stuck upon the board. We were both amazed, and I considered myself a heaven-born genius in regard to this new accomplishment. Why will not the successful stop in time? I fired again and again, but never could hit the flower, the circular space, the board, or, I believe, the wall itself!

The Royal Astronomer did not look through his telescopes more than once or twice a year! He used to say, "That is my deputy's business. The stars move all right; but what interests me is the high mathesis that accounts for their movements." He was so much occupied with the purely abstract part of science that its material phenomena interested him only so far as they revealed laws. This characteristic was remarkably illustrated by one of his best-known discoveries, that of "Conical Refraction." He read a mathematical paper before the Royal Irish Academy demonstrating that under certain possible circumstances beams of light would be refracted, not as had ever been previously observed, but in the form of a cone. His statement was heard with wonder, and he was invited to verify his discovery by the aid of some instrument invented for that purpose; but he declined to make such an attempt, remarking that no experiment could add a certainty to mathematical demonstration. A considerable time afterward the desired instrument was constructed by Professor Lloyd; and after the discovery had been forgotten by most of those who had heard it announced, the radiant stranger leaped into palpable existence. When in-

formed of the fact, Hamilton dryly made answer "I told you so." It was on the heights of mathematics that he breathed freely, and I used to see him writing his calculations from morning till late in the evening almost without stirring from his chair, as rapidly as another could have written notes of invitation, and flinging each of the long foolscap sheets on the ground beside him; and I have been assured by competent authorities that there existed but few mathematicians in Europe capable of reading and understanding what had thus been so easily written. Many volumes of those compositions are said to exist in an unpublished form. I remember his telling me that on one occasion he had escaped from a fit of severe depression by resolutely rising into those regions of what he called "planetary contemplation"; but I believe that on that occasion his meditations had belonged to the metaphysical yet more than to the mathematical order.

His domestic life was brightened by children to whom he was devotedly attached, though his devotion to them sometimes combined with it an odd form of speculative interest. "That little boy," he once said, pointing to a boy of about five or six years old, "ran up to me the other day, and cross-questioned me about the mysteries in the doctrine of the Trinity. 'How,' he demanded, 'can there be three, and yet only one?' I answered, 'You are too young for such matters; go back to your top.' He flogged it about the passages a score of times, then returned to me and said, 'I have found it all out—this is the explanation,' and propounded his theory. 'You are wrong,' I answered; 'you are too young to understand the matter; go and play.' He returned three times more, successively, and each time propounded a new explanation, and received the same answer. But now listen! His four explanations of the mystery were the four great heresies of the first four centuries! He discovered them all for himself. I did not give him the slightest assistance. What an intellect!"

The next year I repeated my visit, and Hamilton told me another tale of his boy, but with less of paternal triumph. "I said to him last night when he was going to bed, 'To-morrow Aubrey de Vere will be here: shall you not be glad to see him?' He mused for some time, and then made answer, remorsefully: 'Thinking of Latin, and thinking of trouble, and thinking of God, I had forgotten Aubrey de Vere.'"

In those days I saw Hamilton under various circumstances. On one occasion we made an expedition together among the "wooded walls" of Wicklow's mountains, and ended by drinking their health. Then did our

. . . flowing cups pass swiftly round
With no allaying Thames,

though we brimmed them frequently, and only in part from the Power's Court cascade. When he looked at the mountains he made as good remarks on them as Wordsworth could have made; when he was soaring in the region of mystical philosophy, he saw them no more than if he had been tracking the Sahara sands; and when I told him amusing stories he flung himself on the heather in convulsions of laughter. Our wanderings ended at the hospitable country-house of the Provost of Trinity College at Killiney, after leaving which he addressed to me a sonnet commemorative of them, of which I was very proud, and which included this striking line on music,

Problems of harmony proposed and solved,

which confirms the assertion often made that between music and mathematics there exist important relations. He introduced me to various friends worthy of his friendship. One of these was a lady who sang with remarkable pathos. She boasted to me that when she sang her first song to him he paid her no compliments, but stood listening while the tears ran down his cheeks. Another of these friends was the Irish poetess Felicia Hemans, whose poetry, rich in felicitous diction and metrical harmony, and always sustained by high thoughts and sentiments natural and elevated, if not now remembered as it deserves to be, was honored by the praise of Wordsworth, who assigns to her a place among the poets whose successive deaths are the theme of that "Extemporary Effusion" which stands high among his later poems. She had passed a summer at Dove Cottage, close to Windermere, and there seen much of him; and when we called on her in Dublin she had just received a manuscript copy of his "Yarrow Revisited," copied for her by Wordsworth's daughter Dora. She read it to us, not in the musical chant which to him was natural, but with singular sweetness, significance, and an especial pathos when she came to the passages which marked that love borne by the poet, neglected so long, for him who had been from his youth "the whole world's favorite."

But a time was approaching in which themes such as occupied the great mind of Sir W. R. Hamilton were to lose their interest for all except a few, and all other utterances to be lost in one great political battle-cry. The cry was "Repeal of the Union." The great democratic battle had begun.

The low rumbling on the horizon became louder by degrees, and the interval between the flash and the sound became shorter. When, at the Clare election, Sir Edward O'Brien, a late surviving Irish chief, the lineal descendant of

the greatest among the Irish kings, and a great proprietor passionately loved by his tenants, saw them vote against him and the other tenants follow their example, he declared in amazement that the country was not fit for a gentleman to live in.

The old order changeth, yielding place to new,

was a warning more loudly proclaimed as the Repeal agitation went on. An election took place in the county of Limerick, and both sides prepared for the conflict. Nearly all the proprietors were banded together against Repeal and O'Connell, including the few who had advocated Catholic Emancipation. The candidate on the opposite side was a man of ancient family, excellent character, and not, I think, a Repealer, but it suited the Repeal game to support him, in order to separate the tenants from their landlords. Of these the most powerful by far was a certain nobleman, the Earl of K——, whose territories, 60,000 acres, with a rental of £46,000 per annum, extended through a large part of three counties, and included much of those Desmond lands, some 600,000 acres of which had been confiscated by Queen Elizabeth in a single day. He was also, I believe, descended in the female line from the "White Knight," to whom that title had been given after a battle fought, many centuries previously, by the "White Knight's" father, the Earl of Desmond.

The despotic temper of the Earl of K—— was no doubt increased by scenes which he had witnessed as a boy. When he was but fourteen, during a great social gathering at his father's residence, a profligate neighbor, one of the county gentry, though a married man, induced a daughter of the house to elope with him. The moment the crime was discovered the earl, accompanied by the boy, went in pursuit of the criminal. After several days' pursuit the outraged father arrived, late in the night, at an inn which the fugitives had reached a few hours previously. He got out of his carriage, accompanied by his young son, and with a pistol in each hand mounted the stairs. A door was pointed out to him. It was locked; but the earl kicked it open. A man rushed forward; the earl fired two pistols, and the betrayer fell dead at his feet. The earl was arraigned for this act before the Irish House of Lords, and made no defense. The peers walked processionally in their robes, and each, as he passed the throne, laid his hand on his breast and pronounced the verdict, "Not guilty, upon my honor." A few years later the boy witnessed another important event. He had become a young officer; the Irish rebellion of 1798 burst out, and with several other

persons of importance he was suddenly captured, and detained as a hostage. When fortune turned against the insurgents, in the first rage of disappointment a massacre ensued, and he had a narrow escape from death.

When the family estates had become his own, the earl is said to have ruled with a sway almost as absolute as that of one of his forefathers, who, as was reported, transported several persons to America on his own sole authority. The later earl also was impatient of "the law's delays," and it was rumored that if a tenant had, in his opinion, seriously misbehaved, he simply gave directions that his house should be pulled down about his ears. Notwithstanding, he was regarded as a "beneficent despot," and the handsome houses of his tenants, whose rents were never called exorbitant, excited the envy of all the neighboring farmers. He built two churches in the neighboring town, a Catholic one and a Protestant one; and near them stood a "hospital for decayed gentlemen and gentlewomen," supported by a charge on the estate of £1200 per annum. He gave an immense amount of employment, and was honored proportionately by the laboring class. He had been for a long time kept out of the family residence by the protracted life of his mother. On her death he sent at once for an architect. "Build me," he said, "a castle. I am no judge of architecture; but it must be larger than any other house in Ireland; and it must have an entrance tower named the 'White Knight's Tower.' No delay! It is time for me to enjoy." When the castle was half finished a wealthy manufacturer built a huge chimney in the square of the town, which crouched beneath the hill on which that castle stood. The earl sent him orders to pull it down or depart, two invitations which the man of business declined. The earl drove down into the town, and, as usual, a crowd collected about his carriage. He said: "I am come to wish you good-by, boys. This place is but a small place, and there is not room in it for me and that man [pointing to the factory]. He says the law is on his side, and I dare say it is. Consequently I go to England to-morrow morning." During the night the lord of industry received a visit from uninvited guests; the next morning no smoke went over the towers and the woods, and on the third day he had taken his departure. The great castle was finished, and there was one great house-warming.

No gathering of the sort ever succeeded in those stately halls. What succeeded was the Limerick election. As that election drew near a rumor grew up that the fidelity of the tenants was not to be relied on; but few believed it. A neighbor of ours, himself a nobleman of

large landed possessions, went to the new castle to consult with its lord, who greeted him with the inquiry, "Is — in the field?" "No," was the answer; and the questioner resumed: "Then I set up my old friend M——," naming a popular country gentleman worth £10,000 per annum, who had lately built a house suitable to that income, on visiting which his friend the castle commented on it thus: "The house is pretty; but what is the use of it? It is too large to hang at your watch-chain, and too small to live in." When the two peers had discussed the political symptoms of the day the Earl of K——, dashing his hand loudly on the table, exclaimed: "Sir, I will tell you the simple truth of the case. The Irish people are gone mad! My father returned fourteen members of parliament [he meant the Irish parliament], and it is with difficulty that I return eight!" The loyalty of the tenant-vote was next touched upon. "That matter is settled," the earl replied. "I have sent orders that the whole of my county of Limerick tenants shall ride into Limerick on the first day of election, and be the first to vote. Once they have set the example the other fellows of course will follow it. I shall go into Limerick myself." He did so two days before the election, and each day he gave a grand banquet to the county gentlemen.

The earl occupied the house of his friend, Lord ——, which, with the palace of the Protestant bishop, occupied one side of a court opening into a wide street. At the open window the earl sat with the candidate he favored. They were big and burly men both, and in high good humor, now quaffing a bottle of champagne, now leaning out and chaffing with the city mob, which cheered them to the echo, for it united the old Irish taste for chieftainship with the novel aspiration after democratic power. The rest of the room was filled with a fluctuating throng of country gentlemen, who brought in the latest news, and then amused themselves with the humors of the crowd. The appointed hour was sounded from the bells of St. Mary's Cathedral, as merrily as on that morning when Sarsfield crossed the Shannon and burst the Dutch cannon. In mile-long cavalcade the K—— tenantry rode down Limerick's chief street; another and larger crowd cheered them and their fine horses, and doubtless that acclaim sent an exhilaration into their heads as potent as the fumes of champagne could have created there. After an hour or two a dullness began to spread over that gay apartment, and many talked in whispers. The earl soon perceived that all was not right, and its usual sternness returned to his strong face. "You are hiding something from me," he exclaimed; "something has gone wrong; what has happened?" After a pause a gentleman

Aubrey

De Vere

moved forward, and replied, "My lord, what has gone wrong is this: the K—— tenantry have voted." "What of that?" "My lord, they have voted with the enemy to a man! The other tenants are following their example. The election is lost."

I record these things as they were described to me by those who witnessed them. The earl traveled back to his castle all night; at early dawn he reached it; but it is doubtful whether the White Knight's Tower, as he drove beneath it, smiled upon a defeated chief. During the whole of that day he sat alone, speaking to none, and seen by none. Late the second night the bell of his bedroom rang without intermission, and a short time afterward mounted couriers were scouring all parts of his estates, commanding the attendance at a certain specified hour of all the tenantry in occupation of its 60,000 acres. When the ap-

pointed hour arrived, he sat enthroned on the dais, at one end of a gallery a hundred feet long; his official persons were ranged near him in a line at each side of that gallery. What he intended to say to his tenants has often been guessed at, but will never be known. The tenants thronged in at the lower end of the gallery, advancing nearer each moment, as their numbers increased, to where the earl sat. His eye was fixed upon them with that look for which it was famed, but he spoke no word. Suddenly its expression changed: he leaped from his seat, raised his arms on high, and exclaimed: "They are come to tear me in pieces; they are come to tear me in pieces!" The next night but one he was in a madhouse. There he continued to live for many years, faithfully attended by a devoted wife: but he is said never to have had a lucid interval.

Aubrey de Vere.

THE FLIGHT OF SONG.

HOW may the poet sing
When Song is far away?
He has no charm to bring,
No power of yea or nay,
To lure that peerless wing,
To bid it go or stay.
How may the poet sing,
With Song so far away?

Bind — and sweet Song is dumb;
She droops, she dies.
Loose her — no echoes come
From her far skies.
Farther she mounts, and higher;
Elate, elusive still,
She knows alone one will —
Her own desire.
O lingering delay!
When, lo! on one glad day,
Into the heart she slips
With swift surprise!
Her touch upon the lips,
Upon the eyes,
And all life's pulses thrill,
And all the world is spring —
Is spring in Paradise:
Then may the poet sing!

Ina Coolbrith.

THROUGH WESTERN CHINA IN LIGHT MARCHING ORDER.

ACROSS ASIA ON A BICYCLE.

VI. AN INTERVIEW WITH THE PRIME MINISTER OF CHINA.¹

OUR departure from Lan-chou was not, we thought, regretted by the officials themselves, for we heard that apprehension was expressed lest the crowds continuing to collect around the telegraph-office should indulge in a riot. However, we were loath to leave our genial friends for the society of opium-smokers, for we were now in that province of China which, next to Sechuen, is most addicted to this habit. From dusk till bed-time, the streets of the villages were almost deserted for the squalid opium dens. Even our soldier attendant, as soon as the wooden saddle was taken from his sore-backed government steed, would produce his portable lamp, and proceed to melt on his needle the wax-like contents of a small, black box. When of the proper consistency, the paste was rolled on a metal plate to point it for the aperture in the flute-shaped pipe. Half the night would be given to this process, and a considerable portion of the remaining half would be devoted to smoking small pinches of tobacco in the peculiar Chinese water-pipe. According to an official note, issued early in 1882, by Mr. Hart,

Inspector-General of Chinese Customs, considerably less than one per cent. of the population is addicted to opium-smoking, while those who smoke it to excess are few. More to be feared is the use of opium as a poison, especially among Chinese women. The government raises large sums from the import duty on opium, and tacitly connives at its cultivation in most of the provinces, where the traders and mandarins share between them the profits of this officially prohibited drug.

This part of the great historic highway on which we were now traveling, between the two bends of the Hoang-ho, was found more extensively patronized than heretofore. Besides the usual caravans of horses, donkeys, and two-wheeled vans, we occasionally met with a party of shaven-headed Tibetans traveling either as emissaries, or as traders in the famous Tibetan sheep-skins and furs, and the strongly-scented bags of the musk-deer. A funeral cortege was also a very frequent sight. Chinese custom requires that the remains of the dead be brought back to their native place, no mat-

¹ The accompanying pictures are from photographs taken by the authors.

ter how far they may have wandered during life, and as the carriage of a single body would often be expensive, they are generally interred in temporary cemeteries or mortuary villages, until a sufficient number can be got together to form a large convoy. Mandarins, however, in death as in life, travel alone and with retinue. One coffin we met which rested upon poles supported on the shoulders of thirty-two men. Above on the coffin was perched the usual white rooster, which is supposed to incorporate, during transportation, the spirit of the departed. In funeral ceremonies, especially of the father, custom also requires the children to give public expression to their grief. Besides many other filial observances, the eldest son is in duty bound to render the journey easy for the departed by scattering fictitious paper-money, as spirit toll, at the various roadside temples.

Singan-foo, the capital of the Middle Kingdom, under the Tsin dynasty, and a city of the first importance more than two thousand years ago, is still one of the largest places in the empire, being exceeded in population probably by Canton alone. Each of its four walls, facing the cardinal points, is over six miles long and is pierced in the center by a monumental gate with lofty pavilions. It was here, among the ruins of an old Nestorian church, built several centuries before, that was found the famous tablet now sought at a high price by the British Museum. The harassing mobs gathered from its teeming population, as well as the lateness of the season, prompted us to make our sojourn as short as possible. Only a day sufficed to reach Tong-quan, which is the central stronghold of the Hoang-ho basin, and one of the best defended points in China. Here, between precipitous cliffs, this giant stream rushes madly by, as if in protest against its sudden deflection. Our ferry this time was not the back of a Chinese coolie nor a jolting ox-cart, but a spacious flat-boat made to accommodate one or two vehicles at a time. This was rowed at the stern, like the gondolas of Venice. The mob of hundreds that had been dogging our foot-steps and making life miserable, during our brief stop for food, watched our embarkation. We reached the opposite shore, a mile below the starting-point, and began to ascend from the river-basin to the highlands by an excavated fissure in the famous "yellow earth." This gives its name, not only to the river it discolors, but, from the extensive region comprised, even to the emperor himself, who takes the title of "Yellow Lord," as equivalent to "Master of the World." The thickness of this the richest soil in China, which according to Baron Richthofen is nothing more than so much dust accumulated during the course of

ages by the winds from the northern deserts, is in some places at least two thousand feet. Much ingenuity has been displayed in overcoming the difficulties offered to free communication by the perpendicular walls of these yellow lands. Some of the most frequented roads have been excavated to depths of from forty to one hundred feet. Being seldom more than eight or ten feet wide, the wheeled traffic is conducted by means of sidings, like the "stations" in the Suez Canal. Being undrained or unswept by the winds, these walled-up tracks are either dust-beds or quagmires, according to the season; for us, the autumn rains had converted them into the latter. Although on one of the imperial highways which once excited the admiration of Marco Polo, we were now treated to some of the worst stretches we have ever seen. The mountain ascents, especially those stair-like approaches to the "Heavenly

A CHINESE SEEDING-DRILL.

Gates" before reaching the Pe-chili plain, were steep, gradeless inclines, strewn with huge up-turned blocks of stone, over which the heavy carts were fairly lifted by the sheer force of additional horse-flesh. The bridges, too, whose Roman-like masonry attests the high degree of Chinese civilization during the middle ages, have long since been abandoned to the ravages of time; while over the whole country the late Dungan rebellion has left its countless ruins.

The people of Shan-si province are noted for their special thrift, but this quality we observed was sometimes exhibited at the expense of the higher virtue of honesty. One of the most serious of the many cases of attempted extortion occurred at a remote country town, where we arrived late one evening, after learning to our dismay that one of our remarkably few mistakes in the road had brought us just fifty miles out

of the way. Unusually wearied as we were by the cross-country cuts, we desired to retire early. In fact, on this account, we were not so observant of Chinese formality as we might have been. We did not heed the hinted requests of the visiting officials for a moon-light exhibition, nor go to the inn-door to bow them respectfully out. We were glad to take them at their word when they said, with the usual hypocritical smirk, "Now, don't come out any farther." This indiscretion on our part caused them, as well as ourselves, to suffer in the respect of the assembled rabble. With official connivance, the latter were now free, they thought, to take unusual liberties. So far, in our dealings with the Chinese, we had never objected to anything that was reasonable even from the native point of view. We had long since learned the force of the Chinese proverb that, "in order to avoid suspicion you must not live behind closed doors"; and in consequence had always recognized the common prerogative to ransack our private quarters and our luggage, so long as nothing was seriously disturbed. We never objected, either, to their wetting our paper windows with their tongues, so that they might noiselessly slit a hole in them with their exceptionally long finger nails, although we did wake up some mornings to find the panes entirely gone. It was only at the request of the innkeeper that we sometimes undertook the job of cleaning out the inn-yard; but this, with the prevalent superstition about the "withering touch of the foreigner," was very easily accomplished. Nor had we ever shown the slightest resentment at being called "foreign devils"; for this, we learned, was, with the younger generation at least, the only title by which foreigners were known. But on this particular night, our forbearance being quite exhausted, we ejected the intruders bodily. Mid mutterings and threats we turned out the lights, and the crowd as well as ourselves retired. The next morning the usual exorbitant bill was presented by the innkeeper, and, as usual, one half or one third was offered and finally accepted, with the customary protestations about being under-paid. The innkeeper's grumblings incited the crowd which early assembled, and from their whispers and glances we could see that trouble of some kind was brewing. We now hastened to get the wheels into the road. Just then the innkeeper, at the instigation of the crowd, rushed out and grabbed the handle-bars, demanding at the same time a sum that was even in advance of his original price. Extortion was now self-evident, and, remonstrance being of no avail, we were obliged to protect ourselves with our fists. The crowd began to close in upon us, until, with our backs against the adjoining wall, we drew our weapons, at which the onward movement

ENTERING TONG-QUAN BY THE WEST GATE.

changed suddenly to a retreat. Then we assumed the aggressive, and regained the wheels which had been left in the middle of the road. The innkeeper and his friend now caught hold of the rear wheels. Only by seizing their queues could we drag them away at all, but even then before we could mount they would renew their grasp. It was only after another direct attack upon them that we were able to mount, and dash away.

A week's journeying after this unpleasant episode brought us among the peanuts, pigs, and pig-tails of the famous Pe-chili plains. Vast fields of peanuts were now being plowed, ready to be passed through a huge coarse sieve to separate the nuts from the sandy loam. Sweet potatoes, too, were plentiful. These, as well as rice balls, boiled with a peculiar dry date in a triangular corn-leaf wrapper, we purchased every morning at daybreak from the pots of the early street-venders, and then proceeded to the local bake-shops, where the rattling of the rolling-pins prophesied of stringy fat cakes cooked in boiling linseed oil, and heavy dough biscuits cleaving to the urn-like oven.

MONUMENTS NEAR ONE-SHE-CHIEN.

FURNACE FOR BURNING WASTE PAPER BEARING WRITTEN CHARACTERS.

It was well that we were now approaching the end of our journey, for our wheels and clothing were nearly in pieces. Our bare calves were pinched by the frost, for on some of the coldest mornings we would find a quarter of an inch of ice. Our rest at night was broken for the want of sufficient covering. The straw-heated *kangs* would soon cool off, and leave us half the night with only our thin sleeping-bags to ward off rheumatism.

But over the beaten paths made by countless wheelbarrows we were now fast nearing the end. It was on the evening of November 3, that the giant walls of the great "Residence," as the people call their imperial capital, broke suddenly into view through a vista in the surrounding foliage. The goal of our three-thousand-one-hundred-and-sixteen-mile journey was now before us, and the work of the seventy-first riding day almost ended. With the dusk of evening we entered the western gate of the "Manchu City," and began to thread its crowded thoroughfares. By the time we reached Legation street or, as the natives egotistically call it, "The Street of the Foreign Dependencies," night had veiled our haggard features and ragged garments. In a dimly lighted courtyard we came face to face with the English proprietor of the Hotel de Peking. At our request for lodging, he said, "Pardon me, but may I first ask who you are and where you come from?" Our unprepossessing appear-

ance was no doubt a sufficient excuse for the precaution. But just then his features changed, and he greeted us effusively. Explanations were now superfluous. The "North China Herald" correspondent at Pao-ting-foo had already published our story to the coast.

That evening the son of the United States minister visited us, and offered a selection from his own wardrobe until a Chinese tailor could renew our clothing. With borrowed plumes we were able to accept invitations from foreign and Chinese officials. Polite cross-examinations were not infrequent, and we fear that entire faith in our alleged journey was not general until, by riding through the dust and mud of Legation street we proved that Chinese roads were not altogether impracticable for bicycle traveling.

The autumn rains had so flooded the low-lying country between the capital and its seaport, Tientsin, that we were obliged to abandon the idea of continuing to the coast on the wheels, which by this time were in no condition to stand unusual strain. On the other hand the house-boat journey of thirty-six hours down the Pei-ho River was a rather pleasant diversion.

Our first evening on the river was made memorable by an unusual event. Suddenly the rattling of tin pans, the tooting of horns, and the shouting of men, women, and children, aroused us to the realization that something extraordinary was occurring. Then we noticed that the full moon in a cloudless sky had already passed the half-way mark in a total eclipse. Our boatman now joined in the general uproar, which reached its height when the moon was entirely obscured. In explanation we were told that the "Great Dragon" was endeavoring to swallow up the moon, and that

MISSIONARIES AT TAI-YUEN-FOO.

A CHINESE BRIDE.

the loudest possible noise must be made to frighten him away. Shouts hailed the reappearance of the moon. Although our boatmen had a smattering of pidjin, or business, English, we were unable to get a very clear idea of Chinese astronomy. In journeying across the empire we found sufficient analogy in the various provincial dialects to enable us to acquire a smattering of one from another as we proceeded, but we were now unable to see any similarity whatever between "You makee walkee look see," and "You go and see," or between "That belong number one pidjin," and "That is a first-class business." This jargon has become a distinct dialect on the Chinese coast.

On our arrival in Tientsin we called upon the United States Consul, Colonel Bowman, to whom we had brought several letters from friends in Peking. During a supper at his hospitable home, he suggested that the viceroy might be pleased to receive us, and that if we had no objection, he would send a communication to the *yamen*, or official residence. Colonel Bowman's secretary, Mr. Tenney, who had been some time the instructor of the viceroy's sons, and who was on rather intimate terms with the viceroy himself, kindly offered to act as interpreter. A favorable answer was received the next morning, and the time for our visit fixed for the afternoon of the day following. But two hours before the appointed time a message was received from the viceroy, stating that he was about to receive an unexpected official visit from the *phantai*, or treasurer, of the Pe-chili province (over which Li-Hung-Chang himself is viceroy), and asking for a postponement of our visit to the following morning at 11 o'clock. Even before we had finished reading this unexpected message, the booming of cannon along the Pei-ho River announced

the arrival of the *phantai's* boats before the city. The postponement of our engagement at this late hour threatened to prove rather awkward, inasmuch as we had already purchased our steamship tickets for Shanghai, to sail on the *Fei-ching* at five o'clock the next morning. But through the kindness of the steamship company it was arranged that we should take a tug-boat at Tong-ku, on the line of the Kai-ping railroad, and overtake the steamer outside the Taku bar. This we could do by taking the train at Tientsin, even as late as seven hours after the departure of the steamer. Steam navigation in the Pei-ho River, over the forty or fifty miles' stretch from Tientsin to the gulf, is rendered very slow by the sharp turns in the narrow stream—the adjoining banks being frequently struck and plowed away by the bow or stern of the large ocean steamers.

When we entered the consulate the next morning, we found three palanquins and a dozen coolies in waiting to convey our party to the viceroy's residence. Under other circumstances we would have patronized our "steeds of steel," but a visit to the "biggest" man in China had to be conducted in state. We were even in some doubt as to the propriety of appearing before his excellency in bicycle costume; but we determined to plead our inability to carry luggage as an excuse for this breach of etiquette.

The first peculiarity the Chinese notice in a foreigner is his dress. It is a requisite with them that the clothes must be loose, and so draped as to conceal the contour of the body. The short sack-coat and tight trousers of the foreigner are looked upon as certainly inelegant, if not actually indecent.

It was not long before we were out of the foreign settlement, and wending our way

MONUMENT NEAR CHANG-SHIN-DIEN.

persons of importance he was suddenly captured, and detained as a hostage. When fortune turned against the insurgents, in the first rage of disappointment a massacre ensued, and he had a narrow escape from death.

When the family estates had become his own, the earl is said to have ruled with a sway almost as absolute as that of one of his forefathers, who, as was reported, transported several persons to America on his own sole authority. The later earl also was impatient of "the law's delays," and it was rumored that if a tenant had, in his opinion, seriously misbehaved, he simply gave directions that his house should be pulled down about his ears. Notwithstanding, he was regarded as a "beneficent despot," and the handsome houses of his tenants, whose rents were never called exorbitant, excited the envy of all the neighboring farmers. He built two churches in the neighboring town, a Catholic one and a Protestant one; and near them stood a "hospital for decayed gentlemen and gentewomen," supported by a charge on the estate of £1200 per annum. He gave an immense amount of employment, and was honored proportionately by the laboring class. He had been for a long time kept out of the family residence by the protracted life of his mother. On her death he sent at once for an architect. "Build me," he said, "a castle. I am no judge of architecture; but it must be larger than any other house in Ireland; and it must have an entrance tower named the 'White Knight's Tower.' No delay! It is time for me to enjoy." When the castle was half finished a wealthy manufacturer built a huge chimney in the square of the town, which crouched beneath the hill on which that castle stood. The earl sent him orders to pull it down or depart, two invitations which the man of business declined. The earl drove down into the town, and, as usual, a crowd collected about his carriage. He said: "I am come to wish you good-by, boys. This place is but a small place, and there is not room in it for me and that man [pointing to the factory]. He says the law is on his side, and I dare say it is. Consequently I go to England to-morrow morning." During the night the lord of industry received a visit from uninvited guests; the next morning no smoke went over the towers and the woods, and on the third day he had taken his departure. The great castle was finished, and there was one great house-warming.

No gathering of the sort ever succeeded in those stately halls. What succeeded was the Limerick election. As that election drew near a rumor grew up that the fidelity of the tenants was not to be relied on; but few believed it. A neighbor of ours, himself a nobleman of

large landed possessions, went to the new castle to consult with its lord, who greeted him with the inquiry, "Is — in the field?" "No," was the answer; and the questioner resumed, "Then I set up my old friend M——," naming a popular country gentleman worth £10,000 per annum, who had lately built a house suitable to that income, on visiting which his friend the castle commented on it thus: "The house is pretty; but what is the use of it? It is too large to hang at your watch-chain, and too small to live in." When the two peers had discussed the political symptoms of the day the Earl K——, dashing his hand loudly on the table, exclaimed: "Sir, I will tell you the simple truth of the case. The Irish people are gone mad! My father returned fourteen members of parliament [he meant the Irish parliament], and it is with difficulty that I return eight! The loyalty of the tenant-vote was next touched upon. "That matter is settled," the earl replied. "I have sent orders that the whole of my county of Limerick tenants shall ride into Limerick on the first day of election, and be the first to vote. Once they have set the example the other fellows of course will follow it. I shall go into Limerick myself." He did so two days before the election, and each day he gave a grand banquet to the county gentlemen.

The earl occupied the house of his friend, Lord ——, which, with the palace of the Protestant bishop, occupied one side of a court opening into a wide street. At the open window the earl sat with the candidate he favored. They were big and burly men both, and in high good humor, now quaffing a bottle of champagne, now leaning out and chaffing with the city mob, which cheered them to the echo, for it united the old Irish taste for chieftainship with the novel aspiration after democratic power. The rest of the room was filled with a fluctuating throng of country gentlemen, who brought in the latest news, and then amused themselves with the humors of the crowd. The appointed hour was sounded from the bells of St. Mary's Cathedral, as merrily as on that morning when Sarsfield crossed the Shannon and burst the Dutch cannon. In mile-long cavalcade the K—— tenantry rode down Limerick's chief street; another and larger crowd cheered them and their fine horses, and doubtless that acclaim sent an exhilaration into their heads as potent as the fumes of champagne could have created there. After an hour or two a dullness began to spread over that gay apartment, and many talked in whispers. The earl soon perceived that all was not right, and its usual sternness returned to his strong face. "You are hiding something from me," he exclaimed; "something has gone wrong; what has happened?" After a pause a gentleman

ENGRAVED BY R. G. TIETZE, FROM A PHOTOGRAPH BY FREDERICK HOLLVER.

Aubrey

De Vere

moved forward, and replied, "My lord, what has gone wrong is this: the K——tenantry have voted." "What of that?" "My lord, they have voted with the enemy to a man! The other tenants are following their example. The election is lost."

I record these things as they were described to me by those who witnessed them. The earl traveled back to his castle all night; at early dawn he reached it; but it is doubtful whether the White Knight's Tower, as he drove beneath it, smiled upon a defeated chief. During the whole of that day he sat alone, speaking to none, and seen by none. Late the second night the bell of his bedroom rang without intermission, and a short time afterward mounted couriers were scouring all parts of his estates, commanding the attendance at a certain specified hour of all the tenantry in occupation of its 60,000 acres. When the ap-

pointed hour arrived, he sat enthroned on the dais, at one end of a gallery a hundred feet long; his official persons were ranged near him in a line at each side of that gallery. What he intended to say to his tenants has often been guessed at, but will never be known. The tenants thronged in at the lower end of the gallery, advancing nearer each moment, as their numbers increased, to where the earl sat. His eye was fixed upon them with that look for which it was famed, but he spoke no word. Suddenly its expression changed: he leaped from his seat, raised his arms on high, and exclaimed: "They are come to tear me in pieces; they are come to tear me in pieces!" The next night but one he was in a madhouse. There he continued to live for many years, faithfully attended by a devoted wife; but he is said never to have had a lucid interval.

THE FLIGHT OF SONG.

HOW may the poet sing
When Song is far away?
He has no charm to bring,
No power of yea or nay,
To lure that peerless wing,
To bid it go or stay.
How may the poet sing,
With Song so far away?

Bind — and sweet Song is dumb;
She droops, she dies.
Loose her — no echoes come
From her far skies.
Farther she mounts, and higher;
Elate, elusive still,
She knows alone one will —
Her own desire.
O lingering delay!
When, lo! on one glad day,
Into the heart she slips
With swift surprise!
Her touch upon the lips,
Upon the eyes,
And all life's pulses thrill,
And all the world is spring —
Is spring in Paradise:
Then may the poet sing!

Ina Coolbrith.

THROUGH WESTERN CHINA IN LIGHT MARCHING ORDER.

ACROSS ASIA ON A BICYCLE.

VI. AN INTERVIEW WITH THE PRIME MINISTER OF CHINA.¹

OUR departure from Lan-chou was not, we thought, regretted by the officials themselves, for we heard that apprehension was expressed lest the crowds continuing to collect around the telegraph-office should indulge in a riot. However, we were loath to leave our genial friends for the society of opium-smokers, for we were now in that province of China which, next to Sechuen, is most addicted to this habit. From dusk till bed-time, the streets of the villages were almost deserted for the squalid opium dens. Even our soldier attendant, as soon as the wooden saddle was taken from his sore-backed government steed, would produce his portable lamp, and proceed to melt on his needle the wax-like contents of a small, black box. When of the proper consistency, the paste was rolled on a metal plate to point it for the aperture in the flute-shaped pipe. Half the night would be given to this process, and a considerable portion of the remaining half would be devoted to smoking small pinches of tobacco in the peculiar Chinese water-pipe. According to an official note, issued early in 1882, by Mr. Hart,

Inspector-General of Chinese Customs, considerably less than one per cent. of the population is addicted to opium-smoking, while those who smoke it to excess are few. More to be feared is the use of opium as a poison, especially among Chinese women. The government raises large sums from the import duty on opium, and tacitly connives at its cultivation in most of the provinces, where the traders and mandarins share between them the profits of this officially prohibited drug.

This part of the great historic highway on which we were now traveling, between the two bends of the Hoang-ho, was found more extensively patronized than heretofore. Besides the usual caravans of horses, donkeys, and two-wheeled vans, we occasionally met with a party of shaven-headed Tibetans traveling either as emissaries, or as traders in the famous Tibetan sheep-skins and furs, and the strongly-scented bags of the musk-deer. A funeral cortège was also a very frequent sight. Chinese custom requires that the remains of the dead be brought back to their native place, no mat-

¹ The accompanying pictures are from photographs taken by the authors.

ter how far they may have wandered during life, and as the carriage of a single body would often be expensive, they are generally interred in temporary cemeteries or mortuary villages, until a sufficient number can be got together to form a large convoy. Mandarins, however, in death as in life, travel alone and with retinue. One coffin we met which rested upon poles supported on the shoulders of thirty-two men. Above on the coffin was perched the usual white rooster, which is supposed to incorporate, during transportation, the spirit of the departed. In funeral ceremonies, especially of the father, custom also requires the children to give public expression to their grief. Besides many other filial observances, the eldest son is in duty bound to render the journey easy for the departed by scattering fictitious paper-money, as spirit toll, at the various roadside temples.

Singan-foo, the capital of the Middle Kingdom, under the Tsin dynasty, and a city of the first importance more than two thousand years ago, is still one of the largest places in the empire, being exceeded in population probably by Canton alone. Each of its four walls, facing the cardinal points, is over six miles long and is pierced in the center by a monumental gate with lofty pavilions. It was here, among the ruins of an old Nestorian church, built several centuries before, that was found the famous tablet now sought at a high price by the British Museum. The harassing mobs gathered from its teeming population, as well as the lateness of the season, prompted us to make our sojourn as short as possible. Only a day sufficed to reach Tong-quan, which is the central stronghold of the Hoang-ho basin, and one of the best defended points in China. Here, between precipitous cliffs, this giant stream rushes madly by, as if in protest against its sudden deflection. Our ferry this time was not the back of a Chinese coolie nor a jolting ox-cart, but a spacious flat-boat made to accommodate one or two vehicles at a time. This was rowed at the stern, like the gondolas of Venice. The mob of hundreds that had been dogging our foot-steps and making life miserable, during our brief stop for food, watched our embarkation. We reached the opposite shore, a mile below the starting-point, and began to ascend from the river-basin to the highlands by an excavated fissure in the famous "yellow earth." This gives its name, not only to the river it discolors, but, from the extensive region comprised, even to the emperor himself, who takes the title of "Yellow Lord," as equivalent to "Master of the World." The thickness of this the richest soil in China, which according to Baron Richthofen is nothing more than so much dust accumulated during the course of

ages by the winds from the northern deserts, is in some places at least two thousand feet. Much ingenuity has been displayed in overcoming the difficulties offered to free communication by the perpendicular walls of these yellow lands. Some of the most frequented roads have been excavated to depths of from forty to one hundred feet. Being seldom more than eight or ten feet wide, the wheeled traffic is conducted by means of sidings, like the "stations" in the Suez Canal. Being undrained or unswept by the winds, these walled-up tracks are either dust-beds or quagmires, according to the season; for us, the autumn rains had converted them into the latter. Although on one of the imperial highways which once excited the admiration of Marco Polo, we were now treated to some of the worst stretches we have ever seen. The mountain ascents, especially those stair-like approaches to the "Heavenly

A CHINESE SEEDING-DRILL.

Gates" before reaching the Pe-chili plain, were steep, gradeless inclines, strewn with huge up-turned blocks of stone, over which the heavy carts were fairly lifted by the sheer force of additional horse-flesh. The bridges, too, whose Roman-like masonry attests the high degree of Chinese civilization during the middle ages, have long since been abandoned to the ravages of time; while over the whole country the late Dungan rebellion has left its countless ruins.

The people of Shan-si province are noted for their special thrift, but this quality we observed was sometimes exhibited at the expense of the higher virtue of honesty. One of the most serious of the many cases of attempted extortion occurred at a remote country town, where we arrived late one evening, after learning to our dismay that one of our remarkably few mistakes in the road had brought us just fifty miles out

of the way. Unusually wearied as we were by the cross-country cuts, we desired to retire early. In fact, on this account, we were not so observant of Chinese formality as we might have been. We did not heed the hinted requests of the visiting officials for a moon-light exhibition, nor go to the inn-door to bow them respectfully out. We were glad to take them at their word when they said, with the usual hypocritical smirk, "Now, don't come out any farther." This indiscretion on our part caused them, as well as ourselves, to suffer in the respect of the assembled rabble. With official connivance, the latter were now free, they thought, to take unusual liberties. So far, in our dealings with the Chinese, we had never objected to anything that was reasonable even from the native point of view. We had long since learned the force of the Chinese proverb that, "in order to avoid suspicion you must not live behind closed doors"; and in consequence had always recognized the common prerogative to ransack our private quarters and our luggage, so long as nothing was seriously disturbed. We never objected, either, to their wetting our paper windows with their tongues, so that they might noiselessly slit a hole in them with their exceptionally long finger nails, although we did wake up some mornings to find the panes entirely gone. It was only at the request of the innkeeper that we sometimes undertook the job of cleaning out the inn-yard; but this, with the prevalent superstition about the "withering touch of the foreigner," was very easily accomplished. Nor had we ever shown the slightest resentment at being called "foreign devils"; for this, we learned, was, with the younger generation at least, the only title by which foreigners were known. But on this particular night, our forbearance being quite exhausted, we ejected the intruders bodily. Mid mutterings and threats we turned out the lights, and the crowd as well as ourselves retired. The next morning the usual exorbitant bill was presented by the innkeeper, and, as usual, one half or one third was offered and finally accepted, with the customary protestations about being under-paid. The innkeeper's grumblings incited the crowd which early assembled, and from their whispers and glances we could see that trouble of some kind was brewing. We now hastened to get the wheels into the road. Just then the innkeeper, at the instigation of the crowd, rushed out and grabbed the handle-bars, demanding at the same time a sum that was even in advance of his original price. Extortion was now self-evident, and, remonstrance being of no avail, we were obliged to protect ourselves with our fists. The crowd began to close in upon us, until, with our backs against the adjoining wall, we drew our weapons, at which the onward movement

ENTERING TONG-QUAN BY THE WEST GATE.

changed suddenly to a retreat. Then we assumed the aggressive, and regained the wheels which had been left in the middle of the road. The innkeeper and his friend now caught hold of the rear wheels. Only by seizing their queues could we drag them away at all, but even then before we could mount they would renew their grasp. It was only after another direct attack upon them that we were able to mount, and dash away.

A week's journeying after this unpleasant episode brought us among the peanuts, pigs, and pig-tails of the famous Pe-chili plains. Vast fields of peanuts were now being plowed, ready to be passed through a huge coarse sieve to separate the nuts from the sandy loam. Sweet potatoes, too, were plentiful. These, as well as rice balls, boiled with a peculiar dry date in a triangular corn-leaf wrapper, we purchased every morning at daybreak from the pots of the early street-venders, and then proceeded to the local bake-shops, where the rattling of the rolling-pins prophesied of stringy fat cakes cooked in boiling linseed oil, and heavy dough biscuits cleaving to the urn-like oven.

MONUMENTS NEAR ONE-SHE-CHIEN.

FURNACE FOR BURNING WASTE PAPER BEARING WRITTEN CHARACTERS.

It was well that we were now approaching the end of our journey, for our wheels and clothing were nearly in pieces. Our bare calves were pinched by the frost, for on some of the coldest mornings we would find a quarter of an inch of ice. Our rest at night was broken for the want of sufficient covering. The straw-heated *kangs* would soon cool off, and leave us half the night with only our thin sleeping-bags to ward off rheumatism.

But over the beaten paths made by countless wheelbarrows we were now fast nearing the end. It was on the evening of November 3, that the giant walls of the great "Residence," as the people call their imperial capital, broke suddenly into view through a vista in the surrounding foliage. The goal of our three-thousand-one-hundred-and-sixteen-mile journey was now before us, and the work of the seventy-first riding day almost ended. With the dusk of evening we entered the western gate of the "Manchu City," and began to thread its crowded thoroughfares. By the time we reached Legation street or, as the natives egotistically call it, "The Street of the Foreign Dependencies," night had veiled our haggard features and ragged garments. In a dimly lighted courtyard we came face to face with the English proprietor of the Hotel de Peking. At our request for lodging, he said, "Pardon me, but may I first ask who you are and where you come from?" Our unprepossessing appear-

ance was no doubt a sufficient excuse for the precaution. But just then his features changed, and he greeted us effusively. Explanation was now superfluous. The "North China Herald" correspondent at Pao-ting-foo had already published our story to the coast.

That evening the son of the United States minister visited us, and offered a selection from his own wardrobe until a Chinese tailor could renew our clothing. With borrowed plumes we were able to accept invitations from foreign and Chinese officials. Polite cross-examinations were not infrequent, and we fear that entire faith in our alleged journey was not general until, by riding through the dust and mud of Legation street we proved that Chinese roads were not altogether impracticable for bicycle traveling.

The autumn rains had so flooded the low-lying country between the capital and its seaport, Tientsin, that we were obliged to abandon the idea of continuing to the coast on the wheels, which by this time were in no condition to stand unusual strain. On the other hand the house-boat journey of thirty-six hours down the Pei-ho River was a rather pleasant diversion.

Our first evening on the river was made memorable by an unusual event. Suddenly the rattling of tin pans, the tooting of horns, and the shouting of men, women, and children, aroused us to the realization that something extraordinary was occurring. Then we noticed that the full moon in a cloudless sky had already passed the half-way mark in a total eclipse. Our boatman now joined in the general uproar, which reached its height when the moon was entirely obscured. In explanation we were told that the "Great Dragon" was endeavoring to swallow up the moon, and that

MISSIONARIES AT TAI-YUEN-FOO.

A CHINESE BRIDE.

the loudest possible noise must be made to frighten him away. Shouts hailed the reappearance of the moon. Although our boatmen had a smattering of pidjin, or business, English, we were unable to get a very clear idea of Chinese astronomy. In journeying across the empire we found sufficient analogy in the various provincial dialects to enable us to acquire a smattering of one from another as we proceeded, but we were now unable to see any similarity whatever between "You makee walkee look see," and "You go and see," or between "That belong number one pidjin," and "That is a first-class business." This jargon has become a distinct dialect on the Chinese coast.

On our arrival in Tientsin we called upon the United States Consul, Colonel Bowman, to whom we had brought several letters from friends in Peking. During a supper at his hospitable home, he suggested that the viceroy might be pleased to receive us, and that if we had no objection, he would send a communication to the *yamen*, or official residence. Colonel Bowman's secretary, Mr. Tenney, who had been some time the instructor of the viceroy's sons, and who was on rather intimate terms with the viceroy himself, kindly offered to act as interpreter. A favorable answer was received the next morning, and the time for our visit fixed for the afternoon of the day following. But two hours before the appointed time a message was received from the viceroy, stating that he was about to receive an unexpected official visit from the *phantai*, or treasurer, of the Pe-chili province (over which Li-Hung-Chang himself is viceroy), and asking for a postponement of our visit to the following morning at 11 o'clock. Even before we had finished reading this unexpected message, the booming of cannon along the Pei-ho River announced

the arrival of the *phantai's* boats before the city. The postponement of our engagement at this late hour threatened to prove rather awkward, inasmuch as we had already purchased our steamship tickets for Shanghai, to sail on the *Fei-ching* at five o'clock the next morning. But through the kindness of the steamship company it was arranged that we should take a tug-boat at Tong-ku, on the line of the Kai-ping railroad, and overtake the steamer outside the Taku bar. This we could do by taking the train at Tientsin, even as late as seven hours after the departure of the steamer. Steam navigation in the Pei-ho River, over the forty or fifty miles' stretch from Tientsin to the gulf, is rendered very slow by the sharp turns in the narrow stream — the adjoining banks being frequently struck and plowed away by the bow or stern of the large ocean steamers.

When we entered the consulate the next morning, we found three palanquins and a dozen coolies in waiting to convey our party to the viceroy's residence. Under other circumstances we would have patronized our "steeds of steel," but a visit to the "biggest" man in China had to be conducted in state. We were even in some doubt as to the propriety of appearing before his excellency in bicycle costume; but we determined to plead our inability to carry luggage as an excuse for this breach of etiquette.

The first peculiarity the Chinese notice in a foreigner is his dress. It is a requisite with them that the clothes must be loose, and so draped as to conceal the contour of the body. The short sack-coat and tight trousers of the foreigner are looked upon as certainly inelegant, if not actually indecent.

It was not long before we were out of the foreign settlement, and wending our way

MONUMENT NEAR CHANG-SHIN-DIEN.

through the narrow, winding streets, or lanes, of the densely populated Chinese city. The palanquins we met were always occupied by some high dignitary or official, who went sweeping by with his usual vanguard of servants, and his usual frown of excessive dignity. The fact that we, plain "foreign devils," were using this mode of locomotion, made us the objects of considerable curiosity from the loiterers and passers-by, and in fact had this not been the

and torn. The room itself was filled with mandarins from various parts of the country, waiting for an audience with his excellency. Each wore the official robe and dish-pan hat, with its particular button or insignia of rank. Each had a portly, well-fed appearance, with a pompous, dignified mien overspreading his features. The servant by whom we had sent in our Chinese visiting-cards returned and asked us to follow him. Passing through several rooms, and

OPIUM SMOKERS IN A STREET OF TAI-YUEN-FOO.

case, we should have felt rather uncomfortable. The unsympathetic observation of mobs, and the hideous Chinese noises, had become features of our daily life.

The *yamen* courtyard, as we entered, was filled with empty palanquins and coolie servants waiting for the different mandarins who had come on official visits. The *yamen* itself consisted of low one-story structures, built in the usual Chinese style, of wood and adobe brick, in a quadrangular form around an inner courtyard. The common Chinese paper which serves for window-glass had long since vanished from the ravages of time, and the finger-punches of vandals. Even here, at the *yamen* of the prime minister of China, dirt and dilapidation were evident on every hand. The anteroom into which we were ushered was in keeping with its exterior. The paper that covered the low walls and squatty ceiling, as well as the calico covering on the divans, was soiled

then along a narrow, darkened hallway, we emerged into an inner courtyard. Here there were several servants standing like sentinels in waiting for orders; others were hurrying hither and thither with different messages intrusted to their care. This was all there was to give to the place the air of busy headquarters. On one side of the courtyard the doors of the "foreign reception" room opened. Through these we were ushered by the liveried servant, who bore a message from the viceroy, asking us to wait a few moments until he should finish some important business.

The foreign reception-room in which we were now sitting was the only one in any official residence in the empire, and this single instance of compliance with foreign customs was significant as bearing upon the attitude toward western ideas of the man who stands at the head of the Chinese government. Everything about us was foreign except a Chinese divan in one

LI-HUNG-CHANG.
FROM A PHOTOGRAPH SENT TO THE AUTHORS BY THE PRIME MINISTER.

corner of the room. In the middle of the floor stood a circular sofa of the latest pattern, with chairs and settees to match, and at one end a foreign stove, in which a fire had been recently lighted for our coming. Against the wall were placed a full-length mirror, several brackets, and some fancy work. The most interesting of the ornaments in the room were portraits of Li-Hung-Chang himself, Krupp the gun-maker, Armstrong the ship-builder, and the immortal "Chinese Gordon," the only foreigner, it is said, who has ever won a spark of admiration from the Chinese people.

While we were waiting for the viceroy, his

second son, the pupil of Mr. Tenney, came in and was introduced in the foreign fashion. His English was fluent and correct. He was a bright, intelligent lad of nineteen years, then about to take his first trial examinations for the Chinese degree of scholarship, which, if attained, would make him eligible for official position. Although a son of the viceroy he will have to rise by his own merit.

Our conversation with the viceroy's son extended over ten or fifteen minutes. He asked many questions about the details of our journey. "How," said he, "could you get along without interpreter, guide, or servant, when

every foreigner who goes even from here to Peking has to have them?" He questioned us as to whether or not the Chinese had ever called us names. We replied that we usually traveled in China under the *nom de Chinois*, *yang queedsa* (the foreign devils), alias *yeh renn* (the wild men). A blush overspread his cheeks as he said: "I must apologize for my countrymen; I hope you will excuse them, for they know no better." The young man expressed deep interest in America and American institutions, and said if he could obtain his father's consent he would certainly make a visit to our country. This was the only son then at home with the viceroy, his eldest son being minister to Japan. The youngest, the viceroy's favorite, was, it was said, the brightest and most promising. His death occurred only a few months before our arrival in Tientsin.

We were holding an animated conversation when the viceroy himself was announced. We all stood to show our respect for the prime minister whom General Grant included among the three greatest statesmen of his day. The viceroy was preceded by two body-servants. We stood before a man who appeared to be over six feet in height, although his head and shoulders were considerably bent with age. His flowing dress was made of rich colored silk, but very plain indeed. Any ornamentation would have been a profanation of the natural dignity and stateliness of Li-Hung-Chang. With slow pace he walked into the room, stopped a moment to look at us, then advanced with outstretched hand, while a faint smile played about his features and softened the piercing glance of his eyes. He shook our hands heartily in the foreign fashion, and without any show of ceremony led the way into an adjoining room, where a long council-table extended over half the length. The viceroy took the arm-chair at the head, and motioned us to take the two seats on his left, while Mr. Tenney and the viceroy's son sat on his right. For almost a minute not a word was said on either side. The viceroy had fixed his gaze intently upon us, and, like a good general perhaps, was taking a thorough survey of the field before he opened up the cannonade of questions that was to follow. We in turn were just as busily engaged in taking a mental sketch of his most prominent physical characteristics. His face was distinctly oval, tapering from a very broad forehead to a sharp pointed chin, half-obsured by his thin, gray "goatee." The crown of his head was shaven in the usual Tsing fashion, leaving a tuft of hair for a queue, which in the viceroy's case was short and very thin. His dry, sallow skin showed signs of wrinkling; a thick fold lay under each eye, and at each end of his upper lip. There were no prominent cheek-bones or al-

mond-shaped eyes, which are so distinctive seen in most of the Mongolian race. Under a scraggy mustache we could distinguish a rather benevolent though determined mouth; while his small, keen eyes, which were somewhat sunken, gave forth a flash that was perhaps like a flickering ember of the fire they once contained. The left eye, which was partly closed by a paralytic stroke several years ago, gave him a rather artful, waggish appearance. The whole physiognomy was that of a man of strong intuition, with the ability to force his point when necessary, and the shrewd common sense to yield when desiring to be politic.

"Well, gentlemen," he said at last, through Mr. Tenney as interpreter, "you don't look any the worse for your long journey."

"We are glad to hear your excellency say so," we replied; "it is gratifying to know that our appearance speaks well for the treatment we have received in China."

We hope our readers will consider the requirements of Chinese etiquette as sufficient excuse for our failure to say candidly that, if we looked healthy, it was not the fault of his countrymen.

"Of all the countries through which you have passed, which do you consider the best?" the viceroy then asked.

In our answer to this question the reader would no doubt expect us to follow etiquette, and say that we thought China was the best; and, perhaps, the viceroy himself had a similar expectation. But between telling a positive lie, and not telling the truth, there is perhaps sufficient difference to shield us from the charge of gross inconsistency. We answered, therefore, that in many respects, we considered America the greatest country we had seen. We ought of course to have said that no reasonable person in the world would ever think of putting any other country above the Celestial Empire; our bluntness elicited some surprise, for the viceroy said:

"If then you thought that America was the best why did you come to see other countries?"

"Because until we had seen other countries," we replied, "we did not know that America was the best." But this answer the viceroy evidently considered a mere subterfuge. He was by no means satisfied.

"What was your real object in undertaking such a peculiar journey?" he asked rather impatiently.

"To see and study the world and its peoples," we answered; "to get a practical training as a finish to a theoretical education. The bicycle was adopted only because we considered it the most convenient means of accomplishing that purpose."

The viceroy, however, could not understand

A CHINAMAN SCULLING ON THE PEI-HO.

how a man should wish to use his own strength when he could travel on the physical force of some one else; nor why it was that we should adopt a course through Central Asia and north-western China when the southern route through India would have been far easier and less dangerous. He evidently gave it up as a conundrum, and started out on another line.

"Do you consider the Shah of Persia a powerful monarch?" was his next question.

"Powerful, perhaps, in the oriental sense," we replied, "but very weak in comparison with the Western nations. Then, too, he seems to be losing the power that he does have—he is compelled to play more and more into the hands of the Russians."

"Do you think that Russia will eventually try to take possession of Persia?" the viceroy interrupted.

"That, of course, is problematical," we answered, with the embarrassment men of our age might feel at being instigated to talk politics with a prime minister. "What we do know, for certain, is that Russia is now, with her Transcaspian railroad, within about forty miles of Meshed, the capital of Persia's richest province of Khorasan; that she now has a well-engineered and, for a great portion of the way, a macadamized road to that city across the Kopet Dag mountains from Askabad, the capital of Russian Transcaspia; and that half that road the Persians were rather forcibly invited to construct."

"Do you think," again interrupted the viceroy, whose interest in the Russians now began to take a more domestic turn, "that the Russians would like to have the Chinese province of Ili?"

To this question we might very appropriately have said, "No"; for the reason that we

thought Russia had it already. She is only waiting to draw it in, when she feels certain that her Siberian flank is better protected. The completion of the Transsiberian railroad, by which troops can be readily transported to that portion of her dominion, may change Russia's attitude toward the province of Ili. We did not, however, say this to his excellency. We merely replied that we believed Russia was seldom known to hold aloof from anything of value, which she thought she could get with impunity. As she was now sending cart-load after cart-load of goods over the border, through Ili, into northern and western China, without paying a cent of customs duty, while on the other hand not even a leaf of tea, or thread of cotton passed over the Russian line from China without the payment of an exorbitant tariff; and as she had already established in Kuldja a postal, telegraph, and Cossack station, it would seem that she does not even now view the province of Ili as wholly foreign to the Russian empire.

At this the viceroy cleared his throat, and dropped his eyes in thoughtful mood, as much as to say: "Ah, I know the Russians; but there's no help for it."

At this point we ventured to ask the viceroy if it were true, as we had been informed, that Russia had arranged a treaty with China, by which she was entitled to establish consuls in several of the interior provinces of the Chinese empire, but he evaded the question with adroitness, and asked:

"Did n't you find the roads very bad in China?"

This question was creditable to the viceroy's knowledge of his own country, but to this subject we brought the very best Chinese politeness we could muster. We said that inasmuch as China had not yet adopted the bicycle, her

ON THE PEI-HO.

moved forward, and replied, "My lord, what has gone wrong is this: the K——tenantry have voted." "What of that?" "My lord, they have voted with the enemy to a man! The other tenants are following their example. The election is lost."

I record these things as they were described to me by those who witnessed them. The earl traveled back to his castle all night; at early dawn he reached it; but it is doubtful whether the White Knight's Tower, as he drove beneath it, smiled upon a defeated chief. During the whole of that day he sat alone, speaking to none, and seen by none. Late the second night the bell of his bedroom rang without intermission, and a short time afterward mounted couriers were scouring all parts of his estates, commanding the attendance at a certain specified hour of all the tenantry in occupation of its 60,000 acres. When the ap-

pointed hour arrived, he sat enthroned on the dais, at one end of a gallery a hundred feet long; his official persons were ranged near him in a line at each side of that gallery. What he intended to say to his tenants has often been guessed at, but will never be known. The tenants thronged in at the lower end of the gallery, advancing nearer each moment, as their numbers increased, to where the earl sat. His eye was fixed upon them with that look for which it was famed, but he spoke no word. Suddenly its expression changed: he leaped from his seat, raised his arms on high, and exclaimed: "They are come to tear me in pieces; they are come to tear me in pieces!" The next night but one he was in a madhouse. There he continued to live for many years, faithfully attended by a devoted wife, but he is said never to have had a lucid interval.

Aubrey de Vere.

THE FLIGHT OF SONG.

HOW may the poet sing
When Song is far away?
He has no charm to bring,
No power of yea or nay,
To lure that peerless wing,
To bid it go or stay.
How may the poet sing,
With Song so far away?

Bind — and sweet Song is dumb;
She droops, she dies.
Loose her — no echoes come
From her far skies.
Farther she mounts, and higher;
Elate, elusive still,
She knows alone one will —
Her own desire.
O lingering delay!
When, lo! on one glad day,
Into the heart she slips
With swift surprise!
Her touch upon the lips,
Upon the eyes,
And all life's pulses thrill,
And all the world is spring —
Is spring in Paradise:
Then may the poet sing!

Ina Coolbrith.

THROUGH WESTERN CHINA IN LIGHT MARCHING ORDER.

ACROSS ASIA ON A BICYCLE.

VI. AN INTERVIEW WITH THE PRIME MINISTER OF CHINA.¹

OUR departure from Lan-chou was not, we thought, regretted by the officials themselves, for we heard that apprehension was expressed lest the crowds continuing to collect around the telegraph-office should indulge in a riot. However, we were loath to leave our genial friends for the society of opium-smokers, for we were now in that province of China which, next to Sechuen, is most addicted to this habit. From dusk till bed-time, the streets of the villages were almost deserted for the squalid opium dens. Even our soldier attendant, as soon as the wooden saddle was taken from his sore-backed government steed, would produce his portable lamp, and proceed to melt on his needle the wax-like contents of a small, black box. When of the proper consistency, the paste was rolled on a metal plate to point it for the aperture in the flute-shaped pipe. Half the night would be given to this process, and a considerable portion of the remaining half would be devoted to smoking small pinches of tobacco in the peculiar Chinese water-pipe. According to an official note, issued early in 1882, by Mr. Hart,

Inspector-General of Chinese Customs, considerably less than one per cent. of the population is addicted to opium-smoking, while those who smoke it to excess are few. More to be feared is the use of opium as a poison, especially among Chinese women. The government raises large sums from the import duty on opium, and tacitly connives at its cultivation in most of the provinces, where the traders and mandarins share between them the profits of this officially prohibited drug.

This part of the great historic highway on which we were now traveling, between the two bends of the Hoang-ho, was found more extensively patronized than heretofore. Besides the usual caravans of horses, donkeys, and two-wheeled vans, we occasionally met with a party of shaven-headed Tibetans traveling either as emissaries, or as traders in the famous Tibetan sheep-skins and furs, and the strongly-scented bags of the musk-deer. A funeral cortege was also a very frequent sight. Chinese custom requires that the remains of the dead be brought back to their native place, no mat-

A ROBBERY ON THE FRENCH COAST.

(ARTISTS' ADVENTURES.)

WITH PICTURES BY THE AUTHOR.

"EVENING, good people. Can I get food and lodging here?"

I stood erect on the threshold. In the dark room I could just make out two indistinct figures, and I myself must have made a curious silhouette against the tragic field of sunset, with my

slouch hat over one eye, my painter's knapsack on my back, and my iron-tipped staff in my hand. I must have presented the somewhat portentous appearance of a vagabond who has prowled all the day long in the sun, and now demands a night's rest.

I had been on the march since daybreak, examining the coast, its woodlands, beaches, and rocks. A whole day of open air and freedom! First there was the start from Royan, with a knapsack, packed over-night, bursting with all kinds of provisions, not to speak of the canvases, color-box, sketching-stool, and easel firmly lashed on top, and strapped down with thongs and buckles enough to suit an exploring tour in Africa. Then, in the clear dawn, came the turnpike edged with green trees, villas still deep in slumber, and the far plains all moist with dew, their lines softened by the morning mist. In the gaiety of the morn came the more scattered houses on the turnpike, a hotter sunshine, the footpath in the pine-woods, the deep peace of great forests, and the silent dunes where here and there the sun would lay broad touches of sunshine. Ah, what ravines full of flowers, what shady hollows, what hill-tops where one drew in deep breaths of the balmy smell of immortelles and wild flowers, mingled with the sea-breeze!

Suddenly the woods came to an end, and the trees detached themselves in a mass on the clear horizon. Out there was the immense abyss of light, and now, flashing like a diamond lying flat beneath the stupendous sky at the foot of the dunes, appeared the azure sea.

Delightful is the profession of painter on such days. I filled my eyes to the brim with light, I absorbed light, I intoxicated myself with fresh

open air. The first complete contact with nature made a deep impression on me. I had just arrived from Paris, where I had been caught in the machinery of a competition for the Prix de Rome. For two whole months I had vegetated in a bedroom ten feet square, a veritable hothouse, at the end of that court of the École des Beaux Arts which seems like the exercising-yard of a prison rather than a nursery of artists.

Utterly absorbed in the salmon and brown tones of my Polynices, and the tobacco-colored beard of Œdipus pronouncing his curse, I forgot the rest of the world; the universe, so far as I was concerned, consisted of that corner of Paris, with its smothering streets shaken every instant by the trembling note of cabs and the roar of the omnibus. I was free of all these botherations, having, besides, very completely lost the Prix de Rome. A clever competitor had given a richer salmon tint to the carnations in his flesh painting, and endured the son of Laius with a beard more agitated by tragic thrills than nature could show. So the next day I rejoined my family at the seaside, and now I had arrived, like a rat blinking its eyes at the mouth of its hole, having before me—what a contrast!—real sunshine, real sky, gulls in the boundless blue, flights of sails aslant on the horizon, and, in the enormous heights of the sky, gentle clouds with the tones of water-colors! Everywhere about me, rising from the ground like incense, the powerful fragrance of pines and tamarisks made its way to my very soul, while the vast azure high sea unfurled its billows on the golden strand at my feet.

What color-notes! What a palette! Corot's favorite hour had passed, and the mists were gone. I lingered here and there, and the sun rose in the heavens, drowning everything with its rays, making the rocks flame, and causing the distance to vibrate. I breakfasted between two studies at a double-quick. I was hunting down color-notes that could not be caught, feverishly striving to seize this rock's reflection in the blue water, and the changing iridescence of yonder billows shot with sunlight under the broiling rays of noon, thus forgetting both distances and fatigue.

Farther on, after long walks in the sun, I plunged into the coolness of woods and dales. Then the ocean once more, rocks up which one had to climb, dunes one could surmount

of the way. Unusually wearied as we were by the cross-country cuts, we desired to retire early. In fact, on this account, we were not so observant of Chinese formality as we might have been. We did not heed the hinted requests of the visiting officials for a moon-light exhibition, nor go to the inn-door to bow them respectfully out. We were glad to take them at their word when they said, with the usual hypocritical smirk, "Now, don't come out any farther." This indiscretion on our part caused them, as well as ourselves, to suffer in the respect of the assembled rabble. With official connivance, the latter were now free, they thought, to take unusual liberties. So far, in our dealings with the Chinese, we had never objected to anything that was reasonable even from the native point of view. We had long since learned the force of the Chinese proverb that, "in order to avoid suspicion you must not live behind closed doors"; and in consequence had always recognized the common prerogative to ransack our private quarters and our luggage, so long as nothing was seriously disturbed. We never objected, either, to their wetting our paper windows with their tongues, so that they might noiselessly slit a hole in them with their exceptionally long finger nails, although we did wake up some mornings to find the panes entirely gone. It was only at the request of the innkeeper that we sometimes undertook the job of cleaning out the inn-yard; but this, with the prevalent superstition about the "withering touch of the foreigner," was very easily accomplished. Nor had we ever shown the slightest resentment at being called "foreign devils"; for this, we learned, was, with the younger generation at least, the only title by which foreigners were known. But on this particular night, our forbearance being quite exhausted, we ejected the intruders bodily. Mid mutterings and threats we turned out the lights, and the crowd as well as ourselves retired. The next morning the usual exorbitant bill was presented by the innkeeper, and, as usual, one half or one third was offered and finally accepted, with the customary protestations about being under-paid. The innkeeper's grumblings incited the crowd which early assembled, and from their whispers and glances we could see that trouble of some kind was brewing. We now hastened to get the wheels into the road. Just then the innkeeper, at the instigation of the crowd, rushed out and grabbed the handle-bars, demanding at the same time a sum that was even in advance of his original price. Extortion was now self-evident, and, remonstrance being of no avail, we were obliged to protect ourselves with our fists. The crowd began to close in upon us, until, with our backs against the adjoining wall, we drew our weapons, at which the onward movement

ENTERING TONG-QUAN BY THE WEST GATE.

changed suddenly to a retreat. Then we assumed the aggressive, and regained the wheels which had been left in the middle of the road. The innkeeper and his friend now caught hold of the rear wheels. Only by seizing their queues could we drag them away at all, but even then before we could mount they would renew their grasp. It was only after another direct attack upon them that we were able to mount, and dash away.

A week's journeying after this unpleasant episode brought us among the peanuts, pigs, and pig-tails of the famous Pe-chili plains. Vast fields of peanuts were now being plowed, ready to be passed through a huge coarse sieve to separate the nuts from the sandy loam. Sweet potatoes, too, were plentiful. These, as well as rice balls, boiled with a peculiar dry date in a triangular corn-leaf wrapper, we purchased every morning at daybreak from the pots of the early street-venders, and then proceeded to the local bake-shops, where the rattling of the rolling-pins prophesied of stringy fat cakes cooked in boiling linseed oil, and heavy dough biscuits cleaving to the urn-like oven.

MONUMENTS NEAR ONE-SHE-CHIEN.

FURNACE FOR BURNING WASTE PAPER BEARING WRITTEN CHARACTERS.

It was well that we were now approaching the end of our journey, for our wheels and clothing were nearly in pieces. Our bare calves were pinched by the frost, for on some of the coldest mornings we would find a quarter of an inch of ice. Our rest at night was broken for the want of sufficient covering. The straw-heated *kangs* would soon cool off, and leave us half the night with only our thin sleeping-bags to ward off rheumatism.

But over the beaten paths made by countless wheelbarrows we were now fast nearing the end. It was on the evening of November 3, that the giant walls of the great "Residence," as the people call their imperial capital, broke suddenly into view through a vista in the surrounding foliage. The goal of our three-thousand-one-hundred-and-sixteen-mile journey was now before us, and the work of the seventy-first riding day almost ended. With the dusk of evening we entered the western gate of the "Manchu City," and began to thread its crowded thoroughfares. By the time we reached Legation street or, as the natives egotistically call it, "The Street of the Foreign Dependencies," night had veiled our haggard features and ragged garments. In a dimly lighted courtyard we came face to face with the English proprietor of the Hotel de Peking. At our request for lodging, he said, "Pardon me, but may I first ask who you are and where you come from?" Our unprepossessing appear-

ance was no doubt a sufficient excuse for this precaution. But just then his features changed, and he greeted us effusively. Explanations were now superfluous. The "North China Herald" correspondent at Pao-ting-foo had already published our story to the coast.

That evening the son of the United States minister visited us, and offered a selection from his own wardrobe until a Chinese tailor could renew our clothing. With borrowed plumes we were able to accept invitations from foreign and Chinese officials. Polite cross-examinations were not infrequent, and we fear that entire faith in our alleged journey was not general until, by riding through the dust and mud of Legation street we proved that Chinese roads were not altogether impracticable for bicycle traveling.

The autumn rains had so flooded the low-lying country between the capital and its seaport, Tientsin, that we were obliged to abandon the idea of continuing to the coast on the wheels, which by this time were in no condition to stand unusual strain. On the other hand the house-boat journey of thirty-six hours down the Pei-ho River was a rather pleasant diversion.

Our first evening on the river was made memorable by an unusual event. Suddenly the rattling of tin pans, the tooting of horns, and the shouting of men, women, and children, aroused us to the realization that something extraordinary was occurring. Then we noticed that the full moon in a cloudless sky had already passed the half-way mark in a total eclipse. Our boatman now joined in the general uproar, which reached its height when the moon was entirely obscured. In explanation we were told that the "Great Dragon" was endeavoring to swallow up the moon, and that

MISSIONARIES AT TAI-YUEN-FOO.

A CHINESE BRIDE.

the loudest possible noise must be made to frighten him away. Shouts hailed the reappearance of the moon. Although our boatmen had a smattering of pidjin, or business, English, we were unable to get a very clear idea of Chinese astronomy. In journeying across the empire we found sufficient analogy in the various provincial dialects to enable us to acquire a smattering of one from another as we proceeded, but we were now unable to see any similarity whatever between "You makee walkee look see," and "You go and see," or between "That belong number one pidjin," and "That is a first-class business." This jargon has become a distinct dialect on the Chinese coast.

On our arrival in Tientsin we called upon the United States Consul, Colonel Bowman, to whom we had brought several letters from friends in Peking. During a supper at his hospitable home, he suggested that the viceroy might be pleased to receive us, and that if we had no objection, he would send a communication to the *yamen*, or official residence. Colonel Bowman's secretary, Mr. Tenney, who had been some time the instructor of the viceroy's sons, and who was on rather intimate terms with the viceroy himself, kindly offered to act as interpreter. A favorable answer was received the next morning, and the time for our visit fixed for the afternoon of the day following. But two hours before the appointed time a message was received from the viceroy, stating that he was about to receive an unexpected official visit from the *phantai*, or treasurer, of the Pe-chili province (over which Li-Hung-Chang himself is viceroy), and asking for a postponement of our visit to the following morning at 11 o'clock. Even before we had finished reading this unexpected message, the booming of cannon along the Pei-ho River announced

the arrival of the *phantai's* boats before the city. The postponement of our engagement at this late hour threatened to prove rather awkward, inasmuch as we had already purchased our steamship tickets for Shanghai, to sail on the *Fei-ching* at five o'clock the next morning. But through the kindness of the steamship company it was arranged that we should take a tug-boat at Tong-ku, on the line of the Kai-ping railroad, and overtake the steamer outside the Taku bar. This we could do by taking the train at Tientsin, even as late as seven hours after the departure of the steamer. Steam navigation in the Pei-ho River, over the forty or fifty miles' stretch from Tientsin to the gulf, is rendered very slow by the sharp turns in the narrow stream — the adjoining banks being frequently struck and plowed away by the bow or stern of the large ocean steamers.

When we entered the consulate the next morning, we found three palanquins and a dozen coolies in waiting to convey our party to the viceroy's residence. Under other circumstances we would have patronized our "steeds of steel," but a visit to the "biggest" man in China had to be conducted in state. We were even in some doubt as to the propriety of appearing before his excellency in bicycle costume; but we determined to plead our inability to carry luggage as an excuse for this breach of etiquette.

The first peculiarity the Chinese notice in a foreigner is his dress. It is a requisite with them that the clothes must be loose, and so draped as to conceal the contour of the body. The short sack-coat and tight trousers of the foreigner are looked upon as certainly inelegant, if not actually indecent.

It was not long before we were out of the foreign settlement, and wending our way

MONUMENT NEAR CHANG-SHIN-DIEN.

persons of importance he was suddenly captured, and detained as a hostage. When fortune turned against the insurgents, in the first rage of disappointment a massacre ensued, and he had a narrow escape from death.

When the family estates had become his own, the earl is said to have ruled with a sway almost as absolute as that of one of his forefathers, who, as was reported, transported several persons to America on his own sole authority. The later earl also was impatient of "the law's delays," and it was rumored that if a tenant had, in his opinion, seriously misbehaved, he simply gave directions that his house should be pulled down about his ears. Notwithstanding, he was regarded as a "beneficent despot," and the handsome houses of his tenants, whose rents were never called exorbitant, excited the envy of all the neighboring farmers. He built two churches in the neighboring town, a Catholic one and a Protestant one; and near them stood a "hospital for decayed gentlemen and gentlewomen," supported by a charge on the estate of £1200 per annum. He gave an immense amount of employment, and was honored proportionately by the laboring class. He had been for a long time kept out of the family residence by the protracted life of his mother. On her death he sent at once for an architect. "Build me," he said, "a castle. I am no judge of architecture; but it must be larger than any other house in Ireland; and it must have an entrance tower named the 'White Knight's Tower.' No delay! It is time for me to enjoy." When the castle was half finished a wealthy manufacturer built a huge chimney in the square of the town, which crouched beneath the hill on which that castle stood. The earl sent him orders to pull it down or depart, two invitations which the man of business declined. The earl drove down into the town, and, as usual, a crowd collected about his carriage. He said: "I am come to wish you good-by, boys. This place is but a small place, and there is not room in it for me and that man [pointing to the factory]. He says the law is on his side, and I dare say it is. Consequently I go to England to-morrow morning." During the night the lord of industry received a visit from uninvited guests; the next morning no smoke went over the towers and the woods, and on the third day he had taken his departure. The great castle was finished, and there was one great house-warming.

No gathering of the sort ever succeeded in those stately halls. What succeeded was the Limerick election. As that election drew near a rumor grew up that the fidelity of the tenants was not to be relied on; but few believed it. A neighbor of ours, himself a nobleman of

large landed possessions, went to the new castle to consult with its lord, who greeted him with the inquiry, "Is — in the field?" "No," was the answer; and the questioner resumed, "Then I set up my old friend M——," naming a popular country gentleman worth £10,000 per annum, who had lately built a house suitable to that income, on visiting which his friend at the castle commented on it thus: "The house is pretty; but what is the use of it? It is too large to hang at your watch-chain, and too small to live in." When the two peers had discussed the political symptoms of the day the Earl of K——, dashing his hand loudly on the table, exclaimed: "Sir, I will tell you the simple truth of the case. The Irish people are gone mad! My father returned fourteen members of parliament [he meant the Irish parliament], and it is with difficulty that I return eight!" The loyalty of the tenant-vote was next touched upon. "That matter is settled," the earl replied. "I have sent orders that the whole of my county of Limerick tenants shall ride into Limerick on the first day of election, and be the first to vote. Once they have set the example the other fellows of course will follow it. I shall go into Limerick myself." He did so two days before the election, and each day he gave a grand banquet to the county gentlemen.

The earl occupied the house of his friend, Lord —, which, with the palace of the Protestant bishop, occupied one side of a court opening into a wide street. At the open window the earl sat with the candidate he favored. They were big and burly men both, and in high good humor, now quaffing a bottle of champagne, now leaning out and chaffing with the city mob, which cheered them to the echo, for it united the old Irish taste for chieftainship with the novel aspiration after democratic power. The rest of the room was filled with a fluctuating throng of country gentlemen, who brought in the latest news, and then amused themselves with the humors of the crowd. The appointed hour was sounded from the bells of St. Mary's Cathedral, as merrily as on that morning when Sarsfield crossed the Shannon and burst the Dutch cannon. In mile-long cavalcade the K—— tenantry rode down Limerick's chief street; another and larger crowd cheered them and their fine horses, and doubtless that acclaim sent an exhilaration into their heads as potent as the fumes of champagne could have created there. After an hour or two a dullness began to spread over that gay apartment, and many talked in whispers. The earl soon perceived that all was not right, and its usual sternness returned to his strong face. "You are hiding something from me," he exclaimed; "something has gone wrong; what has happened?" After a pause a gentleman

ENGRAVED BY R. G. TIETZE, FROM A PHOTOGRAPH BY FREDERICK HOLLYER.

Aubrey

De Vere

rapturous splendor in the lake close by, just as they had done the year before; and those who saw the pageant hardly noted that those winds were cold. Each spring the blackbird gave us again his rough, strong note, and the robin's, as the season advanced, gained a roundness and fullness like that of the thrush. Each year we watched the orderly succession of the flowers, and if the bluebell or the cowslip came a little before or after its proper time, we felt as much aggrieved as the child who misses the word he is accustomed to in the story heard a hundred times before. Each spring there came again the contented cooing of wood-doves far away, and that tremulous pathos of the young lamb's bleat, which seemed hardly in harmony with his gladness as he bounded over the pastures illuminated by the sudden April green. Each year the autumn replaced the precipitate ardors of the spring with graver joys and sedater fruitions—its golden harvests, and all those darker colors which decorate though sadly the funeral feast of the year. The maple slowly as of old relinquished his fires, and there was the falling leaf, and the frightened flutter of the poplar's gilded tablets, in place of the thickening leaves and deepening shadows of the vernal woodlands; but beyond these woodlands a remoter landscape was once more seen through clearer air. In youth the enjoyment we derive from nature is less consciously the enjoyment of its beauty than it is in later life or in memory. We then think perhaps less of the scene than of the incident connected with it, less of the tree than of our triumph when we first climbed it, less of the flower than of the one for whom it was gathered; but beyond all these incidental joys associated with nature there is an unconscious joy in her beauty, the better, no doubt, for being unconscious. In the home of our childhood there was the more of this incidental enjoyment, because, owing to its size, there was always so much of improvement going on in it. One of its approaches was three miles long, and it passed three lakes, one surrounded by meadows, pastures, and groves, another by woods which had never been planted by man, though perhaps often cut down, and successively renewed—a portion of ancient Ireland's "forest primeval." Through those woods my father was never tired of making new drives and walks. The most interesting of these was the "Cave Walk," so called from a deep cave retiring back from a long line of cliff crowned with wood, matted over with ivy, and so perpendicular that it looked like the walls of a castle. I used often to descend into that cave merely for the sake of enjoying, on reascending, and approaching its mouth, the embalmed and delicious air into which the breath of unnumbered flowers and leaves and

streams, seen or invisible, seemed to have been melted down. One felt as if life required nothing more for its satisfaction than the quiet breathing of such air—a great healing to body and spirit alike.

With my father landscape-gardening was one mode of taking out the poetry which was so deeply seated within him; and if he had lived in a garret he would probably have written more verse. His love of nature was one of his strongest instincts, though hardly stronger than his love of really high art. Most of our enjoyments cost us much, and most of our affections, whether associated with the household life or with our country, cause us so much pain, either in the way of regret or of anxiety, as abundantly to remind us that they were accorded to us even more as a school of duty than as a source of enjoyment. But nature is a very disinterested benefactress: she gives much and demands little; she touches the human heart with a hand of air so light that it leaves behind no burden of responsibility. The fallen tree seldom has a tear dropped on it; the faded flower never—or never for its own sake; and in our wanderings from river to river, or from vale to vale, we never reproach ourselves with inconstancy. There at least

We've but to make love to the lips we are near.

For that reason a wise man should put a finer edge upon his appreciation of nature than on most of his sensibilities. My father probably owed much of this, the most unalloyed of his enjoyments, to his mother's generosity, amounting as it did to a self-sacrifice almost heroic. She had seen how much boys, and especially an only son,—as my father was,—suffer from the influences of home, enervating when unmixed, and the adulation of dependents, never so seductive as when it comes (such was then the case in Ireland) not from self-interest so much as from affection. She sent her only child, then about ten years old, to the charge of a tutor on the banks of Windermere. All the night before his departure the boy heard his mother's sobs, but she persisted, and, when the years of separation were past, reaped the reward. His tutor was not much of a scholar; but he was dutiful, upright, and brave, and he instilled those virtues into his pupil, or protected their growth in him. The wild and witching scenery all around taught him another lore. Gleams from Windermere, always his favorite among the lakes, were probably with him amid the most striking, though hardly less lovely, scenes among which his mature life was chiefly cast; and unconsciously may have interpreted them to him. Nature's grander features create in a responsive imagination those great ideas

of loveliness and of sublimity which, once elicited within us, enable us to detect and enjoy those natural attributes wherever they exist, though less strongly manifested.

The improvements which my father was always making in his country-seat were stimulated also by his desire to do good. They gave a very large amount of enjoyment to the poor, who regarded him in return with reverence and gratitude. We young ones became thus much more widely acquainted than we should otherwise have been with the humbler class, and many a remembered and often quaint incident brings back that intercourse to me. I may as well mention one of them. At one time the work in progress consisted in the removal and planting out of large trees under the superintendence of a certain Ulysses D——, who in that art was a specialist, though without education. He was full of odd sayings, such as, "We would like to go to heaven; but we would not like to go there *too soon*!" Once he remarked to me: "It is a pleasure to find that the older we get the better we get. When I was a young man I was continually cursing, and now I curse mighty little. Neither priest nor parson could make any hand of me. It was a lady that cured me — Mrs. Oldworthy. I was planting a tree, and a big one; and was after saying to the men, 'Three bounces each man round that tree, to stiffen the earth!' Now there was a laborer among them who could not bounce rightly because he was wearing a great-coat. Then I began to curse him most terribly, and never heard Mrs. Oldworthy coming up behind me. Said she, 'I've heard great cursing in my life, but I never heard cursing like that!' I was greatly frightened, and answered: 'Sure, ma'am, it is only for his own good, and for the good of his innocent children, that I am cursing him; for if Mr. Oldworthy saw him working in a great-coat, he'd turn him out of the concern, and they would all starve together.' Then she gave me a wonderful answer: 'Sir,' she said, 'it's a wonder to me that you would not think more of your own soul than of another man's body!' Since then I've been dropping the fashion."

Our store of amusing incidents was always increased when my eldest brother returned from Cambridge at vacation time. We used to hear much of two among the younger Fellows, who united great scholarship and a strong sympathy with the undergraduates. These two were Julius Hare, the great friend of Walter Savage Landor, and Connop Thirlwall, afterward bishop of St. David's, the latter of whom I never think of without a grateful recollection of the grief which I heard him express at the destruction of the monasteries in England. It was a sentiment which I had not expected from one

who was opposed to the traditional and ecclesiastical school of English theology. Some of the anecdotes which I then or later heard respecting Cambridge matters related to the head of one of her chief colleges, a man justly honored for his learning and piety, but often criticized for the prosaic character of his mind and for a certain minuteness which petrified his erudition. Two of the undergraduates were discussing his "dryas dust" ways in the college library after a fashion a little irreverent, when a Fellow walked up to them. He was a somewhat pompous man, and his reproof was true to his character. "You are probably ignorant, young gentlemen, that the venerable person of whom you have been speaking with such levity is one of the profoundest scholars of our age — indeed, it may be doubted whether any man of our age has bathed more deeply in the sacred fountains of antiquity." "Or come up drier, sir," was the reply of the undergraduate. Another anecdote indicates that the venerable man's simplicity was equal to his scholarship. After fifty years' seclusion within the walls of his college it struck him that it was time for him to see a little of the world, and he accepted an invitation from an early pupil who was entertaining a large party in a great country-house. At dinner he sat next to the young lady of the house. Their conversation fell upon baths, and she happened to mention that she took a shower-bath every morning to invigorate her system, adding, when he inquired what a shower-bath was, that it resembled a very small round room; that the bather took his or her stand in the center of it, and upon pulling a string was drenched by a sudden flood of water from above. Next morning the recluse rose at his usual hour, six o'clock, and, being of an inquisitive temper, thought it well to explore carefully what he had never seen before, a large country-house. On pulling open a door he found himself at the entrance of a very small circular apartment, one of those in which housemaids store away old brushes and household articles past their work. In the center of it stood a plaster cast of the Venus of Medici. The venerable man recoiled, closed the door, and walked in the park till summoned by the breakfast bell. He took his seat, and his host asked whether he would have tea or coffee. But he had reflected on what good manners imperatively required; and his answer was: "My lord, I can neither partake of tea, or coffee, or any other refectation, until I have first tendered my humblest apologies to the interesting young lady whom I now see dispensing the chocolate, and on whose sanitary ablutions this morning as she stood in her shower-bath I was so unfortunate as unwittingly to intrude."

It was in the earlier half of September, 1831,

that I met first the man of the greatest intellect that I have ever known, and between whom and myself there sprang up what may be called a friendship at first sight, he being then in the twenty-seventh year of his life, and I in the eighteenth of mine. My new friend was Professor Hamilton, better known as Sir William Rowan Hamilton, "Astronomer Royal" in the Dublin University. I had often heard of him as the prodigy of that university, one who on entering it had sent in an essay written in fourteen or fifteen different languages, most of them Oriental, Greek being the latest which he had learned; and who during his course at Trinity College had successively carried off every prize open to his competition whether in classics or in science. At the age of twenty-two he had published a mathematical essay, "Systems of Rays," of which one of the chief men of science then living pronounced that "it had made a new science of mathematical optics."

It was impossible for the most careless observer not to be struck by him at once. One's first impression was that he was a great embodied intellect rather than a human being. Wordsworth wrote of Coleridge as "the rapt one of the godlike forehead," but it could not have been more marvelous than Hamilton's. The moral expression of his countenance corresponded with the intellectual. What it indicated was, when there was nothing to disturb him, an unbounded reverence. It was as if his consciousness of the greatness of what is above us rendered him but half conscious of the things around. The nobility of his forehead, which alone arrested one's attention, imparted a grandeur to the whole face, the other features of which had nothing remarkable about them. His figure was not tall, and had nothing of grace or distinction about it. His voice was rather a singular one, generally low-toned, but leaping up occasionally into a higher key upon some slight excitement. It need hardly be said that with his habitual reverence there went a corresponding humility as regards himself, and an invariable courtesy in his intercourse with all others. He seemed always to think it likely that he might be mistaken, while in every neighbor, however full of infirmities, it was the human being that he saw, and one invested with all the rights and dignities which belong to humanity. Another quality which belonged pre-eminently to him was his absolute absence of all disguise. Some one remarked of him, "Hamilton is simply transparent; his thoughts are as visible to you as the leaves of a tree close by and sun-smitten. It would be impossible for him to tell a lie even if he wished to do so; and he could no more conceal a thought than he could tell a lie." In that entire unguardedness there was something both attractive and pa-

thetic: it was like a fragment from a world higher than ours, a virtue hardly suited to a world like ours, in which the unprotected must so often become the prey of the fraudulent and the wicked. Of Sir William Rowan Hamilton I may state Wordsworth's opinion. One night, while we stood beside his little domestic lake, Rydal, as it glistened in the beam of a low-hung moon, Wordsworth said, "I have known crowds of clever men, as every one has; not a few of high abilities and several of real genius; yet I have only seen one whom I should call wonderful — Coleridge." He then added: "But I should not say that; for I have known one other man, a fellow-countryman of yours, who was wonderful also — Sir William Rowan Hamilton, and he was singularly like Coleridge."

One of the things most remarkable in Sir William Rowan Hamilton was the combination of qualities both mental and moral, seldom united. In Coleridge the metaphysical power existed in not less strength than the imaginative; and though no doubt he owed great duties to so great a faculty, and effected much to spiritualize the metaphysics of his age, every lover of poetry must lament that he did not for another dozen years give himself mainly to poetry. Wordsworth once said to me that Coleridge's twenty-sixth year was his "*annus mirabilis*," and that if he had not then suffered himself to be drawn aside from poetry he must have proved the chief poet of modern times. But Sir W. R. Hamilton's combination of the mathematical gift with that for languages, and of both with the metaphysical, was a union more rare. I used to see him reading the most arduous works of Plato in the original Greek, wholly unconscious that the room was dinned by a somewhat noisy company. When he had soared into a high region of speculative thought — and it was there only that he was quite at home — he took no note of objects close by. A few days after our first meeting, we walked together on a road a part of which was overflowed by the river at its side. Our theme was the transcendental philosophy, of which he was a great admirer. I felt sure that he would not observe the flood, and made no remark on it. We walked straight on till the water was half-way up to our knees. At last he exclaimed: "What's this? We seem to be walking through a river; had we not better return to the dry land?" Both at Adare and Curragh Chase I used to sit up with him in his bedroom till near sunrise, while he held such discourse as, I suppose, was the best compensation I could have had for never hearing that of Coleridge. His mirthfulness, however, was almost as strong as the speculative power. Once, just after he had admitted that some passages in Coleridge's writings were

as obscure as they were profound, adding, however, that by patient attention he had followed the meaning of those passages, excepting one in "Aids to Reflection," I answered: "I know a lady who seems to have found no difficulty in his works — Mrs. —, that very gay and fashionable person you met lately. She spoke of the 'Aids to Reflection,' and I replied that it was a great book, I believed, but a long and difficult one. She answered, 'I will take it up to my room after breakfast.' She did so; brought it down at luncheon time, and told me she had read it, thought it a very pleasant book, and had found nothing difficult in it." He laughed till he could no longer stand. I early observed that his abstracted habits, while they kept him as ignorant of the world as he was indifferent to it, did not prevent his occasionally exercising a keen, if fitful, appreciation of character. He would refer to past incidents, which at the time he had not seemed to remark, with a singular, though never uncharitable, insight. His absence of self-confidence, as regards judgments on all subjects, was indicated by some unconscious modes of expression such as, "I seem to myself to think." His profound convictions respecting the Christian revelation, and also the truths of a spiritual philosophy, acquired an additional force from their contrast with his self-distrust in lighter matters. To all reasonable objections he listened with a deference which looked like a provisional and tentative consent. He approved strongly of Coleridge's revival of the scholastic terms "subjective" and "objective," though perhaps he would have been more careful than was Coleridge that the larger and more solid prerogative of the objective, where the latter was not confounded with the merely material, should not suffer from the aggressions of the subjective. I remember his once saying: "It is no conceit in a poet if he sees much more of interest in his own poetry than others see; with his associations it must possess more: but he should remember that the merit which it possesses at once for himself and for others is all the merit that belongs to it objectively." Theology interested him quite as much as philosophy; and at a somewhat later time, when "Church Principles" began to be strongly asserted, he said that on philosophical grounds they had great claims on our religious consideration, and that he hoped to write an essay showing that on the reasoning of Butler's "Analogy," they were in affinity with Christian ideas. When, however, some of those who had adopted High Church principles had made their submission to the Roman Catholic Church, he seemed to me to turn his attention away from that subject. His early training had, I think, given him in a degree the traditional prepossessions against the Roman Catholic Church

common among Irish Protestants, not unconnected with class distinctions and political conflicts. These I did not share, being already an ardent disciple of Edmund Burke, who asserted that there was no religious body in Europe which represented or at least resembled the early Christian Church so much as the Irish Catholic Church of his own day. I looked upon her as deeply wronged in the past, and as placed by the consequent political agitations of recent times under circumstances unfavorable to a right estimate of her religious character.

I could not, of course, but be drawn yet nearer to Sir William R. Hamilton by the profound affection which he felt for my sister almost from the first time that they met, a love recorded in several poems included in the admirable life of him by the Rev. R. P. Greaves. His sympathies were perhaps at first drawn to her in part by the discovery that she had for several years felt the same enthusiasm for Coleridge as a poet which he himself had felt for him as a philosopher. If reverence, gratitude, and a cordial friendship could have been an adequate return for love, he might have been well satisfied; but we must remember *Leolf's* reply to *Elgiva*¹ when she had asked, "Is gratitude, then, nothing?" It was this: "To me it is nothing, being less than love." Such love as his, however, whether fortunate or unfortunate in its immediate issues, could not but in the long run have proved "its own reward." She survived him for many years after he had entirely fulfilled the early promise of his youthful genius, and enjoyed many years of deserved admiration, and ennobling happiness; and to the end she retained the same gratitude for that early affection which I also felt at the time, and have never ceased to feel. She only met him once after he returned to his labors at the Observatory. I was more fortunate, and frequently visited him there, especially during my undergraduate course in the Dublin University.

When each examination was over I hurried to the Observatory, and soon found the philosopher in his study, or in his garden, laid out by Bishop Brenkley, his predecessor, of whom he always spoke with a filial reverence. "I am afraid I offended him," he said, "the first time we met. I, then a youth of eighteen, sat next him at some public luncheon. We did not speak, and I felt as if good manners required that I should break the silence. My eye happened to rest on a large map of Van Diemen's Land which hung on the wall. I turned to him and said, 'Pray, my lord, were you ever in Botany Bay?' The bishop turned half round to me with a displeased look, and only replied, 'Eat your soup, sir; eat your soup!' He evi-

¹ Sir Henry Taylor's "Edwin the Fair."

An order to discontinue recruiting, issued on the score of economy,¹ April 3, 1862, is offered as evidence of "a desire for the failure of the campaign."

THESE quotations are from what McClellan wrote in his "Own Story," long after the war. He did not at the time fully realize "the length to which these men were prepared to go in carrying out their schemes," but he saw the "conspiracy," and felt that it was part of his mission to "save the country" from it. With a conspiracy embracing the President and Cabinet to have his army defeated, and an opposing army in his front exceeding his own in numbers, two-, three- or fourfold, according to his estimate, and bent like his own Government upon his destruction, McClellan's task had certainly become, as he expressed it, "the greatest any poor weak mortal ever had to do." With the Union and the Confederacy in bitter hostility to each other, McClellan, with an army raised by the one to put down the other, felt that he was called upon to use that army in such a way as to defeat the purposes of both. No wonder he did not advance! He had no political aims — at that time at least — and no sinister purpose. But, laboring under an overruling hallucination, he not only failed as a leader, but made a record that is inconsistent with his real character. The reasons which he gives for his refusal to advance are that

it was not till late in November, 1861, that the Army of the Potomac was in any condition to move, nor even then were they capable of assaulting entrenched positions. By that time the roads had ceased to be practicable for the movement of armies. . . . Any success gained at that time in front of Washington could not have been followed up, and a victory would have given us the barren

¹ At that time there was a military force of 637,126 men in the service, and it was the general impression that this force was sufficient to put down all armed resistance to the Government.

² Events have not proved the wisdom of the plan in all particulars. In November Halleck was sent to command in Missouri, and Buell in Kentucky, and McClellan says that when Buell arrived in Kentucky "he found a complete state of disorganization; not only so, but that nothing was being done to mend the matter and no steps being taken to prepare the troops for the field." Nevertheless, in his letter of instructions, dated November 7, to Buell, he said, "Throw the mass of your forces by rapid marches by Cumberland Gap, or Walker's Gap, on Knoxville, in order to occupy the railroad at that point, and thus enable the loyal citizens of Eastern Tennessee to rise, while you at the same time cut off the enemy's communication between Eastern Virginia and the Mississippi." This service was further directed in a letter from McClellan to Buell on the 12th of November, and McClellan states that he "constantly urged Buell to send a column to that region." To "throw the mass of his forces on Knoxville," Buell, with wagon transportation of which he had but little, would have had to march in mid-winter, with troops

possession of the field of battle with a longer and more difficult line of supply during the rest of the winter.

The general assertions made in July that he would "crush the rebels in one campaign" and in October that the "crushing defeat of the rebel army at Manassas" was the great object, and that the advance of that army should not be postponed beyond November 25, were not verified. But another cause of delay was that after McClellan became General-in-chief, November 1, his

plan comprehended in its scope the operation of all the armies of the Union, the Army of the Potomac as well. It was my intention, for reasons easy to be seen, that its various parts should be carried out simultaneously, or nearly so, and in coöperation along the whole line. If this plan was wise,² and events have failed to prove that it was not, then it is unnecessary to defend any delay which would have enabled the Army of the Potomac to perform its share in the execution of the whole work.

This "plan" required that

the Western armies should commence their advance so much earlier than that of the Army of the Potomac as to engage all the Confederate Western forces on their own ground, and thus prevent them from reinforcing their army in front of Richmond.

That was done effectually. The "Western armies" were active, and kept the opposing forces so fully occupied that there was no transfer of their troops from West to East.

To say nothing of minor affairs, Garfield, of Buell's army, by a difficult campaign, ending in the battle of Middle Creek, January 10, drove Humphrey Marshall out of eastern Ken-

"disorganized" and "not prepared for the field," a distance greater than from Washington to Richmond, cross a formidable range of mountains in which the enemy held the gaps, and use wagon roads worse than those in Virginia which McClellan pronounced at that season impracticable "for the movement of armies." But supposing that "the mass" of Buell's forces had been pushed through to Knoxville, it could not have been supported or supplied, and with the great railroad, a vital artery, running through Knoxville and connecting eastern Virginia with the southwest, the enemy could — and with no military operations going on in Virginia certainly would — have concentrated by rail an overwhelming force at Knoxville, and a surrender or a Moscow retreat would have been the result. To establish and maintain a force in east Tennessee was even at that early date well known to be one of the most important of the Union's military measures. But it could not be done at that time, and was accomplished some two years later, only by the direct operations of one army and the coöperation of another army, both better prepared and equipped than Buell's at that time. This part of McClellan's plan, being impracticable, was unwise. Hence the wisdom of the plan cannot pass as a defense of the delay of the Army of the Potomac.

LI-HUNG-CHANG.
FROM A PHOTOGRAPH SENT TO THE AUTHORS BY THE PRIME MINISTER.

corner of the room. In the middle of the floor stood a circular sofa of the latest pattern, with chairs and settees to match, and at one end a foreign stove, in which a fire had been recently lighted for our coming. Against the wall were placed a full-length mirror, several brackets, and some fancy work. The most interesting of the ornaments in the room were portraits of Li-Hung-Chang himself, Krupp the gun-maker, Armstrong the ship-builder, and the immortal "Chinese Gordon," the only foreigner, it is said, who has ever won a spark of admiration from the Chinese people.

While we were waiting for the viceroy, his
Vol. XLVIII.—116.

second son, the pupil of Mr. Tenney, came in and was introduced in the foreign fashion. His English was fluent and correct. He was a bright, intelligent lad of nineteen years, then about to take his first trial examinations for the Chinese degree of scholarship, which, if attained, would make him eligible for official position. Although a son of the viceroy he will have to rise by his own merit.

Our conversation with the viceroy's son extended over ten or fifteen minutes. He asked many questions about the details of our journey. "How," said he, "could you get along without interpreter, guide, or servant, when

to the Peninsula. Having laid down these conditions, the council said:

If the foregoing cannot be, the army should then be moved against the enemy behind the Rappahannock at the earliest possible moment.

On March 13, the day that the council of war reported, the President, though not giving the plan his approval, authorized its execution by a letter, as follows, from the Secretary of War to McClellan:

The President, having considered the plan of operations agreed upon by yourself and the commanders of army corps, makes no objection to the same, but gives the following directions as to its execution:

1. Leave such force at Manassas Junction as shall make it entirely certain that the enemy shall not repossess himself of that position and line of communication.

2. Leave Washington entirely secure.

3. Move the remainder of the force down the Potomac, choosing a new base at Fortress Monroe or anywhere between here and there; or at all events move such remainder of the army at once in pursuit of the enemy by some route.

It must be noted the fourth condition of the council of war was not that the force to be left to cover Washington should be sufficient to make the capital secure, or prevent its capture; but it was to "be such as to give an *entire feeling of security for its safety from menace*." Manifestly this condition was impossible of fulfilment, and nothing but blind reliance upon a higher than human power could have led McClellan to transfer the army to the Peninsula with the consequences of that condition staring him in the face; especially as the President had added his positive order to "leave Washington entirely secure."

After enunciating the four conditions upon which the transfer of the Army of the Potomac might be made, the council said: "If the foregoing cannot be, the army should then be moved against the enemy behind the Rappahannock at the earliest possible moment." That is to say, the council of war recommended to McClellan two plans of campaign, the first or Peninsula plan to be adopted only in case four distinctly stated conditions could be fulfilled. If not, then the second, or overland, plan of moving directly "against the enemy behind the Rappahannock at the earliest possible moment" was recommended. If the state of things upon which the council based its recommendation of the first plan did not exist, then its recommendation was unquestionably for the second plan. By McClellan's approval of the council's report, he was committed to the observance of the conditions embodied in it, and

the question is, Did he know they could be fulfilled? The answer must be, **Certainly not.** It is only necessary to read the conditions in the light of the facts of the time, to decide that. It follows that by the recommendation of the council of war, and his own approval of that recommendation, McClellan was bound to move directly "against the enemy behind the Rappahannock at the earliest possible moment." That was the plain logic of the case. But he says in his "Own Story," that "as early as December, 1861, I had determined not to follow the line of operations leading by land from Washington to Richmond, but to conduct a sufficient force by water," etc. It will be remembered also that on January 31 the President ordered that by February 22 the Army of the Potomac should advance by the overland route. To this McClellan objected, and on February 3 the President wrote him saying: "You and I have distinct and different plans for a movement of the Army of the Potomac—yours to be down the Chesapeake . . . mine to move directly to a point on the railroad southwest of Manassas." McClellan submitted a strong argument in favor of his plan, and said, in opposition to the President's plan, "In the unprecedented and impassable condition of the roads, it will be evident that no precise period can be fixed upon for the movement on this line." In consequence of McClellan's urgency in support of his own plan, and his assertion of inability to fix any "precise period" for movement under the President's plan, the latter, when the report of the council of war was laid before him with McClellan's approval, authorized, though he did not approve, the movement to the lower Chesapeake. That the President's inability to endure further delay was a moving cause of his sanction, is shown by the last words of his letter heretofore quoted, authorizing the transfer. "At all events," he says, "move *such remainder of the army at once in pursuit of the enemy by some route*."

As McClellan moved his army to the Peninsula without the fulfilment of the conditions stipulated by his council of war, and against the judgment of the President, it is plain that he was still acting according to the dictates of his mission from God, to save the country in his own way.

But no sooner had he in person, and the larger part of his army, gone to the Peninsula, than a feeling that Washington was insecure took possession of the authorities,—that is to say, the failure of the fourth condition expressed itself,—and the President directed two of his military advisers, General E. A. Hitchcock and Adjutant-General L. Thomas, to examine and give a distinct opinion, whether General Mc-

Clellan had complied or not with the order of the President in relation to the entire security of Washington. The opinion, dated April 2, was that the order of the President "has not been fully complied with"; and on April 4 the President directed that McDowell's First Corps, consisting of Franklin's, McCall's, and King's divisions, then in front of Washington, should be detained for the defense of the capital. In response to McClellan's complaints of the withdrawal of Blenker's division and McDowell's corps, the President wrote him April 9:

Blenker's division was withdrawn from you before you left here, and you, . . . as I thought, acquiesced in it — certainly not without reluctance. After you left I ascertained that less than 20,000 unorganized men, without a single field battery, were all you designed to be left for the defense of Washington and Manassas Junction;¹ and part of this even was to go to General Hooker's old position. General Banks's corps, once designed for Manassas Junction, was diverted and tied up on the line of Winchester and Strasburg, and could not leave it without again exposing the Upper Potomac and the Baltimore and Ohio Railroad. . . . My explicit order that Washington should . . . be left entirely secure had been neglected. It was precisely this that drove me to detain McDowell.

Notwithstanding the President's explanation, McClellan regarded the detention of McDowell's corps as "*the most infamous thing that history has recorded.*" Franklin's division, however, was, at McClellan's urgent request, sent to him after only a week's detention, and McCall's division was, for like reason, sent to him while he was on the Chickahominy. But notwithstanding the fact that the best two thirds of McDowell's corps joined McClellan, he alleged that he had been deprived of *that corps*, and that is the main specification in support of the charge that a "conspiracy of traitors who are willing to sacrifice the country and its army for personal spite and personal aims" was at work to secure his defeat "by withholding the means necessary to success."

His feeling against the supposed conspirators and traitors was of course intensely bitter, and he attributed his failure to their machinations. In his "Own Story," he specifies the particular act of the executive which caused the fail-

ure of the Peninsular campaign. It was this: On May 18, the Secretary of War addressed a letter to McClellan in answer to a call for McDowell's force to be sent by water, in which he said:

The President is not willing to uncover the capital entirely; and it is believed that even if this were prudent, it would require more time to effect a junction between your army and that of the Rappahannock² by the way of the Potomac and York rivers than by a land march. In order, therefore, to increase the strength of the attack upon Richmond at the earliest moment, General McDowell has been ordered to march upon that city by the shortest route.

He is ordered, keeping himself always in position to save the capital from any possible attack, so to operate as to put his left wing in communication with your right wing, and you are instructed to coöperate so as to establish this communication as soon as possible, by extending your right wing to the north of Richmond.

McClellan says:

This order rendered it impossible for me to use the James River as a line of operations, and forced me to establish our depots on the Pamunkey and to approach Richmond from the north. *Hercin lay the failure of the campaign.* . . . As it was impossible to get at Richmond, and the enemy's army covering it, without crossing the Chickahominy, I was obliged to divide the Army of the Potomac into two parts, separated by that stream.

The facts of record are at variance with the foregoing quotation. The *Merrimac* was not destroyed till May 11, and prior to that date the Confederates held Norfolk and the James River. McClellan of his own free will had established his depots on the Pamunkey before the President's order of May 18 was received — before it was even made. He had taken locomotives and cars in his transports for the purpose of using the railroad from White House to Richmond as his line of operations. Though free and vigorous in his protests against such action on the President's part as he did not like, McClellan at the time did not allege that the letter of May 18 forced him to the Pamunkey as a base,³ or that he had any objection to that base. It was the base he had intended to use in his favorite plan of advancing by Urbana.

ton secure from "menace" or capture. He left at Manassas and Washington — or ordered there — all that he deemed necessary to garrison those places, and also posted a force under Banks in the Shenandoah Valley.

² The forces gathered under McDowell on the Washington overland line after McClellan went to the Peninsula were named the Army of the Rappahannock.

³ In McClellan's testimony before the committee on the conduct of the war, the following appears: "*Question:* Could not the advance on Richmond from Williamsburg have been made with better prospects of

¹ It is a fair presumption that an order from the President to McClellan to leave Washington entirely secure empowered McClellan to judge what would constitute entire security. But an "entire feeling of security from menace" — indeed an entire feeling of security from capture — could not prevail in Washington after the Army of the Potomac had been transferred to the Peninsula, and though McClellan was in or near Washington some two weeks after his movement, with its conditions, had been sanctioned, he had, so far as appears, no understanding or even discussion with the Executive as to the force which would make Washing-

McClellan in person arrived at the White House May 16, and wrote his wife: "Have just arrived over horrid roads. No further movement possible till they improve." The next day, May 17, he wrote her: "I expect to have our advance parties near [enough to] Bottom's Bridge to-day"; he added that all the bridges were burned, but that the river was fordable, so the difficulty was "not insuperable by any means," showing that he did not know that the Chickahominy was going to be a serious obstacle. On the 18th he wrote: "We will go to Tunstall's or perhaps a little beyond it, and will now soon close up on the Chickahominy, and find out what Secesh is doing. *I think he will fight us there, or between that and Richmond.*"

It is not only true that McClellan established his depots on the Pamunkey of his own accord, but it is further true that it was his intention before leaving Washington to establish them there. In a report to the Secretary of War, dated March 19, he said:

I have the honor to submit the following notes on the proposed operations of the active portion of the Army of the Potomac. The proposed plan of campaign is to assume Fort Monroe as the first base of operations, *taking the line of Yorktown and West Point upon Richmond as the line of operations*, Richmond being the objective point. It is assumed that the fall of Richmond involves that of Norfolk, and the whole of Virginia; *also that we shall fight a decisive battle between West Point and Richmond. . . . It is also clear that West Point should as soon as possible be reached and used as our main depot.*

Here the objective, the base, and the line of operations (upon which he expected a *decisive battle "between West Point and Richmond"*) are laid down with mathematical accuracy by McClellan himself before starting from Washington; and he indicated no purpose, and expressed no wish, to change the base or line until the enemy turned or was turning his right flank late in June. Nothing but hallucination growing out of his higher-law mission could have induced McClellan, in face of these facts, to write after the war that he was "forced" by

the Secretary's letter of May 18 to "establish our depots on the Pamunkey, and to approach Richmond from the north"; and to add, speaking of the army after it had been driven to the James by the enemy, "it was at last upon its true line of operations,¹ which I had been unable to adopt at an earlier day in consequence of the Secretary of War's peremptory order of May 18, requiring the right wing to be extended to the north of Richmond."

The "decisive battle between West Point and Richmond," predicted by McClellan, was fought, beginning June 26, by the enemy in full force attacking the right flank of the Army of the Potomac after it had lain six weeks astride of the Chickahominy. McClellan was forced to the James River, which had come into possession of our gunboats, after the fall of Norfolk and destruction of the *Merrimac*, May 11. Even before the attack his mind seems to have been fastened, not upon taking Richmond, but upon "saving" the Army of the Potomac and the country. At 6:15 P. M., on June 25, he telegraphed Stanton:

I have just returned from the field, and find your despatch in regard to Jackson. Several contrabands, just in, give information confirming the supposition that Jackson's advance is at or near Hanover Court House, and that Beauregard arrived with strong reinforcements in Richmond yesterday. I incline to think that Jackson will attack my right and rear. The rebel force is estimated at two hundred thousand. . . . This army will do all in the power of men to *hold their position and repulse any attack*. I regret my great inferiority of numbers. . . . If the result of the action, which will probably occur to-morrow, or within a short time, is a disaster, the responsibility cannot be thrown on my shoulders; it must rest where it belongs.

On the 28th he sent a long telegram to the Secretary of War reporting the disaster, and closed it by saying, no doubt with the assumed conspiracy of "traitors" and his mission to "save" the country still uppermost in his mind,

The Government has not sustained this army. If you do not do so now the game is lost. *If I*

success by the James River than by the route pursued, and what were the reasons for taking the route adopted?

"Answer: I do not think that the navy at that time was in a condition to make the line of the James River perfectly secure for our supplies. The line of the Pamunkey offered greater advantages in that respect. The place was in a better position to effect a junction with any troops that might move from Washington on the Fredericksburg line. I remember that the idea of moving on the James River was seriously discussed at that time. But the conclusion was arrived at that under the circumstances then existing the route actually followed was the best. I think the *Merrimac* was destroyed while we were at Williamsburg."

¹ After McClellan reached the James he said in a communication to the President, July 4, "Our communications by the James River are not secure. There are points where the enemy can establish themselves with cannon or musketry and command the river, and where it is not certain that our gunboats can drive them out. In case of this, or in case our front is broken, I will still make every effort to preserve at least the *personnel* of the army," and added, July 7, "I have been anxious about my communications. Had long consultation about it with Flag-Officer Goldsborough last night."

This is the line to which he says he changed base as the "true line of operations."

save this army now, I tell you plainly I owe no thanks to you or to any other persons in Washington. You have done your best to sacrifice this army.

This was the language of a man laboring under a deep-seated hallucination. On June 26, the day the battle opened, he telegraphed to his wife:

You may be sure that your husband will not disgrace you, and I am confident that God will smile upon my efforts and give our arms success.

On June 11 he wrote her:

I must be careful, for it would be utter destruction to this army were I to be disabled.

Even after the Seven Days' fight was over, he was still in pursuance of the sacred mission imposed upon him alone of saving the army and the country.

On July 17 he said:

I did have a terrible time during that week, for I stood alone without any one to help me.

On July 8 he says:

I have written a strong, frank letter to the President. . . . If he acts upon it the country will be saved—

and at midnight he added,

I am alone with you and the Almighty, whose good and powerful hand has saved me and my army.

And as late as August 23 he wrote her:

I take it for granted that my orders will be as disagreeable as it is possible to make them unless Pope is beaten, in which case they will want me to save Washington again.

But the most striking proof of McClellan's hallucination is afforded by his so-called "Harrison's Bar letter" of July 7. He begins by saying to the President, who was then at his camp,

You have been fully informed that the rebel army is in our front, with the purpose of overwhelming us by attacking our positions, or reducing us by blocking our river communications.¹ I cannot but regard our condition as critical—

and then tells the President that

the time has come when the Government must determine upon a civil and military policy covering the whole ground of our national trouble.

¹ Yet after the war he says in his "Own Story" that at last the army, being on the James, was upon "its true line of operations."

² The editor of McClellan's "Own Story" denies that "the letter was written in consultation with friends at the North as a political document"; and says, p. 489,

Thereupon he proceeded to lay down a definite course for the Government to pursue in the broad field of its "civil and military policy." It is easy to understand, as McClellan says in his "Own Story" of the President's treatment of the letter, that after "he read it in my presence," he did not allude "further to it during his visit, or at any time after that."

This letter under the circumstances is one of the most extraordinary productions on record.² When McClellan wrote it he was not General-in-chief. His only functions were those of the commander of the Army of the Potomac, and that army, worsted in a seven days' fight, had been driven to the cover of the gunboats on James River, and, as McClellan himself reported, was in danger of being cut off from supplies, and overwhelmed by an attack in front. In this condition of affairs he addressed a carefully prepared letter to the President, laying down a civil and military policy for the United States, covering among other things the question of slavery, and urging the extremity of his own military situation as an argument for the adoption of his views upon political as well as military policies. In a letter to his wife of August 30, McClellan said, "You know that I have a way of attending to most other things than my own affairs." No better proof of that could be offered than his "Harrison's Bar letter," written under the hallucination that he was the chosen savior of the country. Engaged in actual war, with the cause he was fighting for at stake upon the use of his sword, he proceeded to "save the country" with his pen.

From what the President saw and heard at Harrison's Bar, and with McClellan's letter in his pocket, it must have been with a heavy heart that he returned to Washington on July 9. According to McClellan, the Army of the Potomac, the mainstay of the Union, far away upon the Peninsula, was besieged, with its line of communication by James River insecure, its front in danger of being overwhelmed, and the rebel army victorious, and 200,000 strong, between McClellan and Washington, in the finest season for military operations.

On the 11th the President ordered that General Halleck "be assigned to command the whole land-forces of the United States as general-in-chief, and that he repair to this capital." Halleck reached Washington July 23, and was confronted by the great military problem then pressing for solution. Pope's "Army

"No one of McClellan's most intimate personal friends at the North knew even of the existence of this letter, until rumors about it came from members of Mr. Lincoln's cabinet."

This goes to show that the letter was evolved by McClellan's own sense of his mission.

of Virginia," some 40,000 strong, made up of McDowell's, Frémont's, and Banks's forces, was in front of Washington, and McClellan's Army of the Potomac, about 90,000 effective, was beleaguered in the Peninsula, and the rebel army, estimated by McClellan at 200,000 men, was between them. The Union forces were to be united, and Washington was to be protected. McClellan maintained that he should be heavily reinforced, but whether he could after his repulse take Richmond against the enormous force he thought opposed to him was a matter of grave doubt, and if he could, might it not result in an exchange of capitals — the enemy giving up Richmond, and taking Washington? Before deciding the momentous question that met him at the threshold of his new office, Halleck, the day after his arrival in Washington, started to the Peninsula to confer with McClellan. He reached Harrison's Bar July 25, had a full conference with McClellan, and on his return to Washington made a report — July 27 — to the Secretary of War, the correctness of which McClellan never disputed.

In that report Halleck says:

I stated to the general that the object of my visit was to ascertain from him his views and wishes in regard to future operations. He said that he proposed to cross the James River at that point, attack Petersburg, and cut off the enemy's communications by that route south, making no further demonstration for the present against Richmond. I stated to him very frankly my views in regard to the danger and impracticability of the plan, to most of which he finally agreed.

I then told him that it seemed to me a military necessity to concentrate his forces, with those of General Pope, on some point where they could at the same time cover Washington, and operate against Richmond, unless he felt strong enough to attack the latter place with a strong probability of success, with the reinforcements which could be given to him. He expressed the opinion that with 30,000 reinforcements he could attack Richmond with a "good chance of success." I replied that I was authorized by the President to promise only 20,000, and that if he could not take Richmond with that number, we must devise some plan for withdrawing his troops from their present position to some point where they could unite with those of General Pope without exposing Washington. He thought there would be no serious difficulty in withdrawing his forces for that purpose, but the movement he said would have a demoralizing influence on his own troops, and suggested the propriety of their holding their present position till sufficient reinforcements could be collected. I told him that I had no authority to consider that proposition, and that he must decide between advising the withdrawal of his forces to some point, to be agreed upon, to meet General Pope, or to advance on Richmond with the reinforcements which the President had offered; that I was not sufficiently advised in regard to the posi-

tion of our forces, and those of the enemy, to say how many additional troops could be given to him with safety, but that the President had decided that question by fixing his reinforcements at 20,000, and I could promise no addition to that number.

I inferred from his remarks that under these circumstances he would prefer to withdraw and unite with General Pope; but I advised him to consult his officers, and give me a final answer in the morning. He did so, and the next morning informed me that he would attack Richmond with the reinforcements promised. He would not say that he thought the probabilities of success were in his favor, but that there was "a chance," and he was "willing to try it." In regard to the force of the enemy, he expressed the opinion that it was not less than 200,000, and I found that in this estimate most of his officers agreed. His own effective force was, officers and men, about 90,000, which, with, 20,000 reinforcements, would make 110,000. I had no time or opportunity to investigate the facts upon which these estimates were based, and therefore can give no opinion as to their correctness. His officers, as I understood, were about equally divided in opinion in regard to the policy of withdrawing or risking an attack on Richmond.

It is plain from this that McClellan's plan was not to resume his advance upon Richmond, but to put his army across James River to cut the enemy's communications with the South. He would not say that he thought the probabilities of success "were in his favor," in case of another advance against that city, but merely that there was a "chance." That he meant nothing more than this is supported by the statement in a letter to his wife, August 8, "My only hope is that I can induce the enemy to attack me." The Government was not willing to take the "chance," and the result was his withdrawal from the Peninsula. This, of course, was a severe blow to him. Prior to this he does not appear even to have thought evil of Halleck. July 25, before Halleck arrived, McClellan wrote to his wife, "I think Halleck will support me." August 1, after Halleck's return to Washington, he wrote, "I have a very friendly letter from Halleck this morning"; but his relations with the Government had not improved. August 2 he said in a letter to his wife,

When you contrast the policy I urge in my letter to the President with that of Congress and of Mr. Pope, you can readily agree with me that there can be but little natural confidence between the Government and myself. We are the antipodes of each other.

By August 4 he received Halleck's order to withdraw the Army of the Potomac, and then, though not characterized as a "conspirator" or traitor, Halleck was put down as one of that "herd," and was denounced as a suspicious

character and as hopelessly stupid. August 4 McClellan wrote his wife, "Halleck has begun to show the cloven foot"; August 8, "I strongly suspect him"; August 10:

Halleck is turning out just like the rest of the herd. . . . The absurdity of Halleck's course in ordering the army away from here is that it cannot possibly reach Washington in time to do any good, but will necessarily be too late. I am sorry to say that I am forced to the conclusion that H. is very dull and very incompetent. Alas! poor country!

and finally, in his "Own Story," written twenty years after the war, he says:

Of all men whom I have encountered in high position, Halleck was the most hopelessly stupid. It was more difficult to get an idea through his head than can be conceived by any one who never made the attempt. I do not think he ever had a correct military idea from beginning to end.

His superiors were all "incapables," or "conspirators," and it belonged to him alone to save the country. After the withdrawal from the Peninsula was begun, in pursuance of the orders of August 4, McClellan says:

It was continued with the utmost rapidity until all the troops and material were *en route* both by land and water on the morning of the 16th; [and he adds] late in the afternoon of that day, when the last man had disappeared from the deserted camps, I followed with my personal staff in the track of the grand Army of the Potomac, bidding farewell to the scenes still covered with the marks of its presence, and to be forever memorable in history as the vicinity of its most brilliant exploits.

This touching picture was drawn in his official report of August 4, 1863, and repeated in his "Own Story." No one can dispute the individual heroism and fortitude of the men composing the Army of the Potomac in that campaign, but this great general, one of the purest and most intelligent of men, must have been laboring under a delusion when he pronounced the failure of the Army of the Potomac in the Peninsula to be more "brilliant" than the subsequent exploits of that army in capturing Richmond and all the opposing forces.

Pope's defeat carried consternation from Bull Run to Washington for the second time, and McClellan was again called to power, notwithstanding the bad relations between him and the Government. His Peninsula campaign had failed, his army had been brought back to Washington against his will, and Halleck had superseded him as Commander-in-chief. Adversity partly dispelled his hallucination, and he entered with vigor and ability upon the per-

formance of his new duties as commander of the defenses of Washington. The capital, however, was not in danger. Its intrenchments were formidable,¹ as McClellan knew before he left the city in the spring; the battles that had been fought had not been without heavy losses to the enemy, and though Pope's army was defeated, it was far from destroyed. Only a little more than one corps of the Army of the Potomac had been seriously engaged under Pope. They had suffered severely, but had lost neither spirit nor organization. The other corps of the Army of the Potomac were intact and in good order, having had no engagements since the Seven Days' fight on the Peninsula nearly two months before.

McClellan wrote his wife, September 2:

Pope is ordered to fall back upon Washington, and as he reenters everything is to come under my command again. A terrible and thankless task. Yet I will do my best with God's blessing to perform it. God knows that I need His help. Pray that God will help me in the great task now imposed upon me. . . . I only consent to take it for my country's sake and with the humble hope *God has called me to it.*

Here again was an earnest and honest conviction of a sacred mission.

McClellan with great promptness and industry gathered up his forces, and with good generalship marched forth to give battle to Lee, who was moving into Maryland. He won the battles of South Mountain September 14, and Antietam September 17, but the functions of the subordinate general were again supplanted by those of the savior of the country. September 5 he wrote his wife:

The case is desperate, but with God's help I will try unselfishly to do my best, and, if He wills it, accomplish the *salvation of the nation*. . . . How weary I am of this struggle against adversity! But one thing sustains me—that is my trust in God. . . . Truly God is trying me in the fire.

It is noteworthy that in a despatch to his wife, dated September 7, McClellan said:

The feeling of the Government toward me I am sure is kind and trusting. I hope with God's blessing to justify the great confidence they now repose in me, and will bury the past in oblivion.

September 20, after Antietam, he wrote:

I feel some little pride in having with a beaten and demoralized army defeated Lee so utterly and *saved the North so completely*. . . . Since I left Washington, Stanton has again asserted that I, not Pope, lost the battle of Manassas, No. 2.

¹ In his "Own Story," p. 196, he calls them "numerous well-built and well-armed fortifications."

I am tired of fighting against such disadvantages, and feel that it is now time for the country to come to my help and remove these difficulties from my path. . . . I feel that I have done all that can be asked in twice saving the country. If I continue in its service, I have at least the right to demand a guarantee that I shall not be interfered with. I know I cannot have that assurance so long as Stanton continues in the position of Secretary of War, and Halleck as general-in-chief.

The subordinate general who admitted on the 7th the "kind feeling" and "great confidence of the Government," and buried "the past in oblivion," after two weeks of success was again the savior of the country, demanding the dismissal of his two military superiors, the Secretary of War and the General-in-chief!

September 22 he wrote his wife:

I am confident that the poison still rankles in the veins of my enemies at Washington, and that so long as they live it will remain there.

It will be remembered that in a telegram to Stanton of June 28, during the Seven Days' fight, he said:

If I save this army now, I tell you plainly I owe no thanks to you or to any other persons in Washington. You have done your best to sacrifice this army.

This probably is some of the "poison" to which he refers, because in a letter of July 20 he said in relation to the bitter charge just made:

Of course they will never forgive me for that. I knew it when I wrote it.

It was no doubt true that McClellan had bitter enemies in Washington. His own conduct rendered that inevitable, and, as shown by the quotation just made, he knew that he had said what they could "never forgive." It was a life and death struggle between him and them. But the trial really took place before the tribunal of public opinion. McClellan was defeated there, not by the action of his enemies in Washington, but by his own inaction in the field. Having defeated Lee and driven him across the Potomac, the Government and the public demanded an active pursuit, and, in refusing that, McClellan lost his case. Antietam was fought on the 17th of September. On the 18th the rebel army recrossed the Potomac into Virginia. McClellan would not pursue for various reasons — want of transportation, of clothing and equipage, etc., and because

the entire army had been greatly exhausted by unavoidable overwork, fatiguing marches, hunger,

a want of sleep and rest, [he] did not feel authorized to cross the river with the main army, over a very deep and difficult ford, in pursuit of the retreating enemy, known to be in strong force on the south bank, and thereby place that stream, which was liable at any time to rise above a ford stage, between my army and its base of supply.

The Government and the public, believing that the advantage gained ought to be followed up, and that the rebel army, far from Richmond, must be quite as greatly reduced in numbers and supplies, and as much worn out by marching and fighting, as the Army of the Potomac, insisted upon an active continuation of the campaign. McClellan insisted upon rest and further preparation. On September 22 he telegraphed Halleck:

As soon as the exigencies of the service will admit of it, this army should be reorganized. It is absolutely necessary, to secure its efficiency, that the old skeleton regiments should be filled up at once . . .

And on September 27 he said in a long report:

This army is not now in condition to undertake another campaign, nor to bring on another battle unless great advantages are offered. . . . The new regiments need instruction. . . . My present purpose is to hold the army about as it is now, rendering Harper's Ferry secure and watching the river closely, intending to attack the enemy should he attempt to cross to this side. . . . When the river rises so that the enemy cannot cross in force, I purpose concentrating the army somewhere near Harper's Ferry and then acting according to circumstances.

He was waiting for the river to rise so that the enemy could not get at him, when the Government was thankful that it remained low, expecting him to get at the enemy. He said further:

I rather apprehend a renewal of the attempt in Maryland, should the river remain low for a great length of time and should they receive considerable addition to their force. . . . In the last battles the enemy was undoubtedly greatly superior to us in numbers, and it was only by very hard fighting that we gained the advantage we did.

On September 29 he wrote his wife:

I think Secesh has gone to Winchester. . . . If he has gone there I will be able to arrange my troops more with a view to comfort, and if it will only rain a little so as to raise the river, will feel quite justified in asking for a short leave.

All this was in the season for offensive operations, and when the Government wanted activity. It gave McClellan's enemies in Wash-

ington and elsewhere the very advantage they desired. It was not then in their power to destroy him, but it was in his power to destroy himself, by losing again the confidence of the Government and the public, and reviving the discontent at his inactivity that had so nearly proved fatal to him during the preceding autumn and winter. By October 6 the President's patience was exhausted, and Halleck telegraphed McClellan on that day:

The President directs that you cross the Potomac, and give battle to the enemy or drive him south.

But McClellan did not move. On October 25 the President in his own name telegraphed McClellan:

I have just read your despatch about sore-tongued and fatigued horses. Will you pardon me for asking what the horses of your army have done since the battle of Antietam that fatigues anything.

Possibly the rebuke in this despatch was unmerited, but the President's telegram shows the feeling that McClellan's delay had aroused. McClellan was aware of the impatience prevailing throughout the country as well as in Washington, and wrote his wife October 25, "I see there is much impatience throughout the country for a move"; but fidelity to the great task intrusted to him by God of *saving the country*, in his own way, was uppermost in his mind.

The many questions and disputes, the nature and spirit of which may be inferred from the President's telegram about fatigued horses, that arose between McClellan and the Washington authorities at that time revived the doubts, which his advance to Antietam had nearly removed, concerning his fitness for aggressive operations, and increased the strength and bitterness of his enemies. On October 28 Halleck reported to the Secretary of War: "In my opinion there has been no such want of supplies in the army under General McClellan as to prevent his compliance with the orders to advance against the enemy." At last McClellan "fixed upon the 1st of November as the earliest date at which the forward movement could be commenced"—*thirty-three days after the battle of Antietam!* By November 2 he was on the march in grand style, with fair promise of an active and successful campaign. Ripened by experience, he was at his best. But his advance had for the second time been too long delayed for his own good. On November 7 he received an order relieving him from command of the Army of the Potomac, and his military career closed forever.

McClellan believed to the day of his death

that the enemy outnumbered him, and that the Government was controlled by a conspiracy to prevent him from succeeding, lest he should destroy the military power of the Confederacy and end the war before slavery was abolished. To save the country from danger within and without, he had to make sure of saving the Army of the Potomac, and that required him not to attack the army opposed to him, except under specially favorable circumstances. Instead of forcing the fighting, he was led to the policy of over-caution, and of waiting to take advantage of the audacity or blunders of the enemy. On the other hand, the task which had been assumed by the Northern people and the Government was to suppress by force of arms, and in the shortest possible time, a flagrant rebellion. Their policy was essentially and necessarily offensive war of the most aggressive kind. When McClellan said July 27, 1861, he would "crush the rebels in one campaign," he was exactly in harmony with the Government and the public. They gave him what they thought ample means, and there never was a day during his command that the Government and the Northern people did not desire him to defeat the "rebels." It was for that purpose they put themselves into his military custody. Many of his supporters were alienated by his failure to fight as they expected, but no Union man, in the Government service or out of it, sought or desired the failure of his campaigns or battles. For a year before he was relieved from duty his military operations were not conducted in accordance with the policy of the Government, and that year, notwithstanding some successes, was one of disaster and disappointment to the North. These, in general terms, are the considerations that gave weight to the demands of Stanton and other opponents of McClellan that he be relieved from command regardless of his professional ability, his early promise, his services in organizing the Army of the Potomac, and the advantages he had gained or might be about to gain in encounters with the enemy. Lincoln's opinion of McClellan's fitness for the occasion was, in the end, probably about the same as Stanton's; but it is not likely that he would have acted upon it, if Stanton and others had not urged him. His kindness of heart was in the way, and he was constitutionally reluctant to make changes, especially at such a time; or, as he expressed it, he did not like to "swap horses while crossing a stream."

Though an earnest religionist, McClellan was not a fanatic. The mission with which he thought he was charged was a function of his military command, and ended with it. Like a patriot and a good soldier, he accepted deposition gracefully, and his relief from duty did not cause a ripple of disorder in the noble Army

of the Potomac, with which he was popular to the last.

In his book, "The Peninsula," General Webb says: "This then to be the first deduction from the narrative of the events of 1861 and 1862: General McClellan did not give to the will of the President, and the demands of the people, that weight in the formation of his plans of campaign to which they were entitled."

Probably the author did not express his meaning accurately in the foregoing quotation. Strictly construed, the criticism is not correct. The formation of his plans of campaign is one of the things in which the general cannot rest upon "the people," nor even upon the President, though of course the latter must always be im-

PLICITLY obeyed. The formation of plans of campaign is a professional matter of the highest importance. It belongs to the soldier, not to the civilian, and the general is bound to proceed in that duty of his office according to his own judgment and conscience. The plan of campaign is one of the things which by its nature must be kept from "the people," as long as possible lest it become known to the enemy. McClellan's failure to give weight to the will of the President and the demands of the people in *this particular* was not his mistake. The trouble was that, from an honest conviction of his own high mission, he put himself above both President and people in all matters relating to the war. In short, he acted conscientiously as the chosen savior of his country, instead of a subordinate soldier of the Republic.

James B. Fry.

SOPHIE GERMAIN.

AN UNKNOWN MATHEMATICIAN.

F a thin circular sheet of metal be fastened firmly at the center by a clamp, and if a violin bow be drawn across its edge, a musical note will be produced. The plate is thrown into vibration by the bow; the vibration does not all come up at once and all go down at once, but it divides itself into some even number of sectors, say six or eight, and as one sector goes up the sector on each side of it goes down. The line between two adjacent sectors goes neither up nor down, but remains at rest. If sand be scattered evenly over the plate before the musical note is produced, it will be shaken off the parts which are most in motion, and it will collect in the lines of rest, or "nodal lines," as they are called. Different musical notes cause the plate to be differently divided up, and the state of vibration of the plate is made plain to the eye by the lines of sand marked out on it. This experiment, a very striking one, which is still performed in all physical laboratories, was exhibited at Paris, soon after its discovery by Chladni, in 1808. It created a great sensation, and a commission was appointed to repeat it with various modifications, and to make a report upon it. The Institute of France, at the suggestion of Napoleon, offered its grand prize for a mathematical discussion of the phenomenon. There were not wanting great mathematicians in Paris at that time — Lagrange, Laplace, Legendre, Poisson, Fourier, but none of them were inclined to undertake this question; Lagrange, in fact, had said that it could not be solved by any of the then known mathematical methods. The offer was twice renewed by the Institute, and in 1816 the prize was conferred upon a woman, Mlle. Sophie Germain. It is very remarkable that so great a distinction as to have received the prize of the Institute of France for a pro-

found mathematical discussion should not have preserved the name of Sophie Germain from oblivion, but it has not done so. There are probably not a score of persons in this country who have ever heard of her, and in her own country she is not usually mentioned among its famous women. As proof that women may be pure mathematicians, Mrs. Somerville has had, outside of Italy and Russia, to stand alone. This is unfortunate, for the detractors of her sex have maintained that her work, though exceedingly profound, was not remarkable for originality. That charge cannot be brought against Sophie Germain. She showed great boldness in attacking a physical question which was at that time entirely outside the range of mathematical treatment, and the more complicated cases of which have not yet submitted themselves to analysis. The equation of elastic laminæ, which is still called Germain's equation, formed the starting-point of a new branch of the theory of elasticity. In her later years Sophie Germain turned her attention to questions of philosophy, and high German authority has recently discovered that her philosophical writings contain the germ of the Positive Philosophy of Comte. It is a curious thing that a woman so deserving of recognition has not received it in a fuller degree; it must be looked upon as one of those accidents by which the distribution of praise for merit is too often badly regulated. A mathematician, so remote is his subject from the ordinary concerns of men, has to be a very great mathematician indeed to be so much as heard of by the general public. Sophie Germain, besides deserving remembrance on account of her contributions to science, had a charming personality, and the few details that have been preserved concerning her life will not be found to be without in-

terest. The authority for them is an article by Libri, the Italian mathematician, which appeared in the "Journal des Débats" at the time of her death. Later writers, including the author of the biography prefixed to the new edition of her philosophical works, which was published in 1879 (Paris: P. Ritti), have added little that is important to his account.

On April 1, 1776, in a modest house in the Rue Saint Denis, in Paris, Marie Sophie Germain was born. Her parents were Ambroise François Germain and Marie Madeleine Gruguelu. Not much can be said about her family. It is only known that her father, a skilful goldsmith, belonged to the cultivated and liberal bourgeoisie, and that he was the partizan, if not the friend, of the philosophers and the political economists. It is plain that she must have passed her earliest years in a family in which there were plenty of serious subjects for conversation. She soon exhibited great maturity of intellect, and remarkable depth of feeling. Her gloomy anticipations concerning the future of her country were a distinct cause of suffering to her, and she sought for some occupation sufficiently absorbing to distract her attention from her fears. At the age of thirteen she was one day turning over the pages of Montluca's "History of Mathematics" in her father's library, when she came upon the eloquent account of the death of Archimedes — how he was so absorbed in the consideration of a geometrical figure that he heard nothing of the taking of Syracuse, or of the plundering of the city, and that, when a Roman soldier appeared before him, he met death at his hands without raising his eyes from his work. She conceived a sudden passion for a science which could procure such absolute concentration and such total oblivion from the cares and griefs of life, and she resolved at that moment to devote herself to the study of mathematics. That resolution she carried out. She had no teachers, she had few books, but she had an unlimited store of energy. She studied by day and by night. Her family were alarmed at so much ardor, and endeavored to turn her attention to more ladylike pursuits. They tried the plan of putting out her fire and taking away her clothes at night, but she was found in the morning wrapped up in blankets, absorbed in her studies in a room so cold that the ink was frozen in the inkstand. It is a curious coincidence that Mrs. Somerville, at that very same

time, in her little village in Scotland, was obliged to wrap herself up in blankets to pursue her studies before breakfast, because her whole day had to be devoted to the practice of music and painting, and to her lessons at the shop of the pastry-cook.¹ Before a strength of will so remarkable at her age Sophie Germain's family at last yielded, and she was allowed to dispose of her time and her talents at her pleasure.

But no matter what the energy brought to bear upon them, the higher mathematics present a long and toilsome course of study to any one who wishes to master them. Sophie Germain carried on this laborious work with constantly increasing satisfaction. Toward the end of her life, she still spoke with animation of the happiness she experienced when she first found herself in a position to take up the Differential Calculus of Cousin. But soon a new difficulty presented itself. It was absolutely necessary to her further progress that she should read certain works which were written in Latin, and she did not understand that language. Unaided and alone, she proceeded to learn it, and in a short time she was able to read the works of Euler and Newton. Her ambition at this time took a wider range, and, carried away by the philosophical spirit which held sway in the great encyclopedia, she extended her reading over the entire field of the sciences, and laid the foundations for that work which, forty years later, was to secure her a place among the founders of the Positive Philosophy.

In 1794 the École Polytechnique was founded. Lagrange, Prony, Fourcroy, Monge, were among its lecturers. Sophie Germain was then eighteen years of age. Anxious to profit by so valuable a means of instruction, she procured for herself students' note-books specially of the courses in chemistry of Fourcroy, and in analysis of Lagrange. She did more. The students were in the habit of handing in to the professors, at the end of a course, their observations in writing on the lectures which they had attended. Under the supposed name of a student, Le Blanc, she sent her note-books to Lagrange. He noticed them, publicly praised them, found out their real author, and, having made her acquaintance, became the friend and counselor of the young mathematician. The circumstances under which she was discovered, the approbation of the illustrious author of the "Mécanique Analytique," her youth, some details concerning her studies — all this excited at-

¹ The general law that women's learning must be got by heroic measures, if at all, is not yet obsolete. Ellen Watson, the highly gifted young woman, Clifford's pupil, who died at the Cape of Good Hope at an early age, did all her studying before breakfast, because she was required to spend the day-time in teaching her younger brothers and sisters; and the very last number of the

"Nineteenth Century" contains an account of a girl whose sympathetic family secure her two uninterrupted hours every day for an afternoon nap on account of her delicate health, not knowing that her afternoon sleepiness is due to hours of hard work before breakfast — work for which, it goes without saying, she would not dare to ask for two uninterrupted hours in the afternoon.

tention, and procured for her sympathetic friends. Soon she had established relations, either directly or by correspondence, with all the learned men of the period. Every one was solicitous of the honor of being presented to her, learned works were dedicated to her, and her house became a center for the brilliant conversation of the most distinguished men of the day.

Some years later, Gauss's great work on the "Theory of Numbers" appeared. Mlle. Germain at once turned her attention to this subject. She made numerous researches in it, and, under the pseudonym of Le Blanc, she sent her notes to the celebrated professor of Göttingen, persuaded, she writes, that "he will not disdain to enlighten with his advice an enthusiastic amateur of that science which he cultivates with such brilliant success." M. Le Blanc was far from being a simple amateur, and Gauss was soon well aware of it. His answer contained a warm recognition of her talents, and a friendly intercourse was kept up between them for several years without his becoming aware of the sex of his correspondent.

In 1808 Sophie Germain contended for the prize offered by the Institute for the best memoir giving the mathematical theory of elastic surfaces, and comparing it with experience. She deduced the equation of those surfaces from a certain hypothesis concerning the forces of elasticity, but there was an error in her mathematics, and her equation was not correct. Lagrange, to whom the paper had been referred, deduced from the same hypothesis the equation which is still recognized as the correct one. She did not receive the prize. Two years later she sent in a second memoir, in which the same equation is correctly given, and a more complicated hypothesis leads to the equation for the state of things which obtains at the boundaries of the elastic plate. Her theoretical solution she had also confirmed by a long series of experiments. This paper received honorable mention. Nothing daunted, she tried a third time, and received the prize, although the commission was not absolutely satisfied with the rigor of her demonstration. Germain's equation for elastic plates is still the fundamental equation of the theory. Her boundary-equations have not stood the test of time; Poisson, fourteen years later, gave a different set of boundary-equations based upon a different hypothesis, and Kirchoff, in 1850, showed that neither hypothesis was tenable, and that neither set of equations was correct.

In 1824 she sent another paper to the Institute entitled, "On the Employment of the Thickness in the Theory of Elastic Surfaces." This paper was given to a commission, consisting of Poisson, Prony, and Laplace, to re-

port on. They never brought in their report, and she was never able to regain possession of the manuscript. Only a few years ago it was discovered among the papers of Prony, and it was reprinted entire, in a supplement to Liouville's "Journal des Mathématiques."

Not spoiled by her success, Sophie Germain continued her studies with all her former enthusiasm. She attended the sessions of the Academy of Sciences, kept herself abreast of the scientific researches of her contemporaries, and found time to perform various friendly offices for her acquaintances. She contributed to the "Annales de Physique et de Chimie" an examination of the principles which lead to the laws of movement of elastic solids. In this paper she establishes, in opposition to Poisson, that no hypothesis in regard to the molecular constitution of bodies is necessary in a discussion of elasticity. Her views on this subject have been abundantly confirmed. Two papers of hers in "Crelle's Journal" — one on the curvature of surfaces, and one on the theory of numbers — were composed by her during the noise of the cannon of July, 1830. Her hope of finding a profound absorption in the study of mathematics had not been disappointed.

There are many testimonials to the charm of her character and of her conversation. She was imbued with a pure love of science, and she was remarkably indifferent to her own fame. She rejoiced when ideas which she had let fall in conversation were appropriated by others. It made no difference, she said, from whom an idea came; it was only of consequence that it should be true and useful. Fame she defined to be the small space which one occupies in the brain of his neighbors — a definition which Schopenhauer has since repeated. Virtue she looked upon as a sense of order, which the cultivated understanding must admire, even when the heart does not love it. Her conversation was full of gaiety and freshness, and bore constant marks of originality of thinking, and of a poetic handling of her thoughts. She died at the age of fifty-five. Her grave at Père la Chaise, fifteen steps from that of Comte, is in a neglected condition. The railing is rusty, the stone has fallen, the border of box is wild and overgrown.

The philosophical writings of Sophie Germain were given to the world two years after her death, by her nephew, Lherbette. Besides some detached thoughts, they consist of a long article entitled, "Considerations on the State of the Sciences and of Letters at the different Periods of their Culture." Her main idea is the extension of the principles of law, and of the harmonious interaction of causes which prevail in the physical sciences, to the re-

gions of politics, of morals, and of art—the same idea which Comte expounded with much greater detail in his “Cours de Philosophie Positive.” Comte’s indebtedness to Condorcet and to Saint-Simon has frequently been mentioned. It is only recently that it has been discovered how distinctly he was anticipated in the main features of his system by Sophie Germain. Dühring, in his “Critical History of Philosophy from its Beginnings to the Present Time” (third edition, Leipsic, 1878), says, after

giving a full abstract of her work, “One sees from the above that the Positivism which, without the use of the word, one finds in the writings of Sophie Germain, contains the essential features of that which has hitherto been associated with the name of Auguste Comte.” The “Zeitschrift für Philosophie” has had two long articles by Göring entitled: “Sophie Germain as the Predecessor of Comte.” Her “Considerations” are still very interesting reading, and they would well repay translation.

Christine Ladd Franklin.

TOPICS OF THE TIME.

The New “Life of Napoleon.”

AN ANNOUNCEMENT TO THE READERS OF “THE CENTURY MAGAZINE.”

INTO the midst of the drama of the French Revolution—upon a scene of social and political wreck, of confusion, and of carnage, such as the world had never before witnessed,—entered a youthful figure, slight, pale, emaciated, and of a foreign name and race. This singular and poignant personality suddenly became the center of the entire action, and put forth a force which dominated virtually every group and class, and which, gathering up the passion of the people into an ordered military impulse, turned France from a self-destroying mob into a thoroughly equipped army, and hurled that army like a thunderbolt against the conquered and amazed enemies of the new republic.

The Revolution in every outward manifestation by him suppressed or transformed, we see Napoleon Bonaparte rising by his single might from power to power and from rank to rank, until he lifts from the ground and places upon his own head the crown of empire. He transforms and glorifies France by magnificent material improvements, at the same time depriving her of the last vestige of liberty. He inflicts order at home and dominion abroad with equal severity, administering both wise and unwise laws by tyrannous and unwise methods. He defends his country and his own prestige with a fury and ruinous excess which make lasting peace impossible. Tearing to pieces the political and social fabric of Continental civilization, never to be restored to its original texture and condition, he soars in his ambitions not only to the dream, but strangely near to the accomplishment, of universal rule.

We see this extraordinary force exerting itself, near and far, upon men, events, and institutions, with a rapidity and to an extent unknown hitherto among mankind: a gigantic spirit acting freely on an unprecedented field without hindrance of conscience, sentiment, precedent, or law, until all Christendom, and a large part of heathendom, seem to revolve about one untrammelled and well nigh unopposable will.

Again we see this same figure, mentally and morally always the same, notwithstanding the physical changes that adulterating art records from year to year—we see this same figure as suddenly as it came disappearing from the theater of great events; the world-con-

queror and king of kings conquered and exiled. We see him again flashing back unimpeded from his origin in the Mediterranean to the height of empire; again beaten to the ground and flung upon a distant rock of the Atlantic, there to rot soul and body out in disdain, despair, and agony.

We see him, as he said, “wallowing in glory,” and once more steeped in sublime misfortune; beloved and praised as has been no other human ruler; despised and vilified as has been no other human being; but praised, blamed, or appreciated, to him we see ascribed the most tremendous purely human energy ever crowded into human form.

To attempt to describe the origin, temperament, acts, and lasting effects, beneficent or harmful, of a personality and career thus astounding and unparalleled could never prove a slight task, and it is one which from the nature of things could not well be satisfactorily performed before the present time.

The realization of the fact that in no language exists a reasonable, complete, consecutive, unprejudiced life of Napoleon, based upon sufficient and competent documents and memoirs, was the origin of the scheme of publishing in THE CENTURY such a life. Professor William M. Sloane of Princeton has produced a work answering this description. He has written with historical fairness, and absence of partizan bias. His history is marred neither by adulation nor abuse. His work corrects the blind and absurd hero-worship inculcated by certain popular but unscientific biographers, while doing full justice to the character and genius of the man, and to his part in the advance of human society.

Every resource of THE CENTURY MAGAZINE has been brought to bear to enrich the narrative with pictorial illustrations not unworthy of the subject. European and American collections have been ransacked for portraits of the period, and for the most trustworthy pictures by contemporaries of the events described. To these have been added some of the greatest modern masterpieces of French art dealing with Napoleonic events. In addition, commissions have been given to French and American artists for illustrative designs, and artists have been sent to various localities to make drawings of buildings and places as they now exist. The theme creates an opportunity for the most interesting and most brilliant pictorial series of a historical character yet presented in the pages of a magazine, and the con-

ductors of *THE CENTURY* intend to avail themselves of this opportunity to the fullest extent.

Perhaps the most original and surprising feature of Professor Sloane's work is the detail given concerning the early years of Bonaparte. His thoroughly Corsican origin and training, the curious events of his youth as a Corsican agitator and patriot, his youthful experience as a man of letters, the effect upon his character and history of his Corsican adventures and relations—all these matters have failed to receive due attention in any biography of the Emperor.

The first instalment of the new "Life of Napoleon" will be given in *THE CENTURY* for November, accompanied by a striking portrait of the boy Napoleon which has just been brought to light through the researches of the art department of the magazine.

Is Bimetallism Desirable?

THE theory of bimetallism, as expounded by its advocates in this and other countries, is summed up accurately and concisely by Mr. M. G. Mulhall, a well-known English statistician, in the following four propositions:

1. That the general level of prices depends on the quantity of money compared with the work it has to do.
2. That the demonetization of silver has caused a general scarcity of money and a fall in prices.
3. That the fall in prices is injurious to the interests of mankind.
4. That it is expedient for the principal nations to put gold and silver on an equal footing.

These propositions Mr. Mulhall takes up in regular order, and opposes each of them with statistical evidence which seems to be conclusive. We propose to summarize his evidence for the benefit of our readers who may not have had the pleasure of reading his article in the "Contemporary Review" for June last. On the first point he quotes the teachings of the best-known English economists to the effect that it is a fallacy to suppose that the range of prices depends upon the quantity of money, and then gives figures of the world's commerce, and of the volume of money employed in its transaction, to confirm those teachings. The figures show that during the forty years between 1849 and 1889 the commerce of the world was quadrupled, while the volume of money had only trebled, and the price level was at the end of the period barely one per cent. lower than at the beginning, though in 1859 it was 20 per cent. higher, remaining 19 per cent. higher in 1869, reaching its normal point in 1879, and falling one per cent. below it in 1889. The secondary part which money plays in national exchanges is shown by the fact that 97 per cent. of the banking business of England is done by checks, and only 3 per cent. by money. In the United States about 5 per cent. is done in money. The quantity of bullion carried over sea in 1890 was only 5 per cent. of the value of sea-borne merchandise, against 9 per cent. for the decade ending 1870, showing an economy of 45 per cent. in the relative use of gold as a medium of exchange during the last twenty years.

In regard to the contentions of the second proposition, that the demonetization of silver has caused a scarcity of money and fall of prices, Mr. Mulhall gives figures showing that the world has always as much money as it requires for the transaction of business,

that there is always an immense reserve of uncoined gold which can be drawn upon if more coin is needed, and that this uncoined supply is much larger at present than it ever was before. In 1800, out of a total of 2730 tons, 908 tons were coined; in 1848, out of a total of 3575 tons, 1125 were coined; in 1890, out of a total of 3820 tons, 5640 were coined. That the banks of the world are not suffering for the want of coin he shows by giving the figures of the specie-reserve (mostly gold) of the European and United States banks for the last three decades. In 1870 the total was 151,000,000 pounds sterling; in 1880, 251,000,000; in 1890, 450,000,000.

On the third point, that a fall in prices is injurious to mankind, Mr. Mulhall is particularly effective. He quotes the declarations of Newmarch that the "object of all scientific methods applied to commerce is cheapness, and the tendency of commerce is toward decline, by reason of the enlarging power of production"; says the bimetallists "refuse to see that a reduction in prices does not necessarily mean a loss to the producer, whilst it extends the market of production"; and then cites several instances which are convincing. One of these is that of Gillott's steel pens. The original cost of these was ten shillings a dozen, and the industry then employed five hands; now the cost is a penny a dozen, and the daily output is 2,500,000 pens. The fall in prices, instead of being injurious in England, has been attended by every sign of national prosperity. In 1869 the ratio of paupers was 41 per thousand of population, and in 1889 only 27 per thousand. In 1869 the savings-banks deposits were £53,000,000; in 1889 they were £645,000,000. Yet during this period the price level had fallen from 119 to 99.

Scarcely less striking figures, not included in Mr. Mulhall's article, can be given for the United States. Between 1880 and 1890 the savings-banks deposits increased from \$967,000 to \$1,636,000,000, and the *per capita* wealth of the country increased from \$870 to \$1039. Between 1840 and 1891 prices of merchandise fell about 3 per cent., but during the same period wages rose 104 per cent. Since 1840 the annual product of gold has been over eight times what it was annually in the previous eighty years. The rise of 104 per cent. in the price of labor is the strongest possible argument against the claim that gold has appreciated because of its alleged scarcity; if it had appreciated, a day's labor, which, as Bagehot says, "is a main element in almost all kinds of production, and the principal one in many," would command to-day a smaller price in gold instead of a higher price than ever before in the world's history—more than double what it commanded fifty years ago. A very interesting analysis of the benefit which this rise in wages, amounting to 14 per cent. between 1873 and 1891, has been to the laboring man is made by Mr. Charles C. Jackson of Boston, in a valuable and instructive pamphlet, entitled "Has Gold Appreciated?" Remarking that while wages in the United States rose 14 per cent., the cost of things an average citizen has to buy, as food, fuel, shelter, and clothing had fallen 10 per cent., he adds:

Now take the case of a man who in 1873 got in greenbacks the equivalent of \$2 a day in gold, and suppose that his daily expense for food, etc., was then just \$2 in gold. In 1891 he would have got \$2.28 a day, and his outgo for these necessities would have been only \$1.80,

leaving him a surplus of 48 cents a day to go against any debt he owed, or for luxuries. Evidently the fall in prices had created a lessening of his burden, not an increase of it. Why should the fall in prices be thought a calamity?

On the final point, the expediency of a double standard, Mr. Mulhall travels over ground which we have made familiar to our readers in discussing various aspects of the monetary situation. He says, as we have said, that in process of time "gold has come to be found more convenient and suitable as a standard of value than silver," and consequently has been adopted by the world as its medium of exchange. He gives figures showing that silver has fallen in value from 60 pence per ounce in 1861-70 to 30 pence in 1894, thus losing half its value, and thus making it hardly an honest proceeding to establish bimetalism, and allow a man to pay his debts in silver. If such a thing were to be done, he says the mortgages of the United Kingdom, which amount to about 2,800,000,000 pounds sterling, could be discharged at a loss of half that sum, or more than double the national debt.

The bimetalists may say that they do not favor a double standard at the present ratio of gold to silver; but as Mr. Mulhall points out, they refuse to suggest any given ratio between the two metals. They also refuse to give the name of any article of importance on which the variation in price, rise or fall, since 1873 may not be accounted for, and exactly measured, by other changes without any regard to the ratio of gold to silver. Mr. Edward Atkinson has asked in vain for the name of one such article. These questions go to the very foundation of the whole subject, and they should be answered, or the advocacy of bimetalism should cease. That advocacy is encouraging the free-silver men to keep up their agitation, and the result is continued uncertainty and uneasiness about our monetary standard. So serious did doubt on this point become among foreign investors in our securities, in June last, that President Cleveland felt called upon to make formal declaration that so far as he had the power, the national credit should be protected at all hazards, and the quality of our money kept equal to the best. We cannot preserve our credit, and keep our money so good that all the world will have confidence in our securities, unless we stop this silver agitation, and this will continue as long as unwise talk about bimetalism continues.

The Nation and its Tollers.

EVERYBODY who has followed the history of great railway strikes in this country, beginning with the desperate and bloody one of 1877, and closing with that which centered in Chicago in July last, must have been struck with the steadily growing tendency of the people to look to the National government as the proper source of restraining and protecting power. He must have been struck also with the fact that in the minds of the people the duty of preserving law and order is so supreme that almost any exercise of power and authority to that end is regarded as justifiable. When President Cleveland, in the performance of this duty, issued his two proclamations and detailed the regular army to maintain the law and preserve property from destruction, there was practically no dissenting voice audible in the chorus of approval which swelled up from

all sections of the country. So unanimous and hearty was the support which the people gave him that the United States Senate caught the patriotic spirit of the moment and found unanimously a resolution of approval; and the House of Representatives followed with similar action. Partizanship was forgotten in a great wave of patriotic devotion to the nation as the supreme power in the land—a power whose first and highest exercise must be the preservation of the liberty of all the people.

In the popular chorus of the people the voice of the South was notably distinct and strong. The old doctrine of State rights was openly repudiated, and in its place was proclaimed the doctrine that ours is a government composed of States, all of which must yield to the central power whenever the exercise of that power is necessary to the national welfare. There is no trace of a tendency toward centralization in this, any more than there was in the patriotic fervor of war times. The people simply show that in times of peril to the nation, when its welfare and its very existence depend upon the maintenance of its laws, they stand in a solid mass behind the National government in the exercise of its undoubted powers as the supreme ruler in the land. Instead of there being anything in this revelation to cause apprehension, it is one of the most reassuring signs of progress that could be desired. It shows that the national feeling is growing and deepening with time, and that in every section of the country to-day the love of the nation is higher and stronger than the love of any part of it.

This is the first and most noteworthy lesson of our great labor-disturbances. There is a second which is closely akin to it, and that is that the people have no longer much toleration for high officials who are willing to trifle with the laws whose execution is placed in their hands. Many who have in the past been careless about the qualifications of candidates for important executive office have been made to realize that it is a risky business under popular government to trust the execution of laws to men who have little respect for law, or, what amounts to the same thing, are in sympathy with those who wish to overthrow all law. Government is a serious business, even in a great, prosperous, and free country, but there have been many voters who have hitherto been unable to bring themselves to take that view of it. These have learned a lesson which they will never forget.

A third moral which can be drawn is that we need in this country an American laboring class, instead of a foreign laboring class. Our readers have not forgotten the series of articles on American labor which we published in this department of *THE CENTURY* in 1893. We said in the first article of that series:

In the earlier days of the republic the American mechanic was everywhere known as one of the sturdiest representatives of American character. He was an honest man, a good workman, a loyal, faithful citizen. To-day he is almost an extinct species. As a nation we lead the world in mechanical skill, yet we are the only nation in the world that has almost ceased to produce its own mechanics. We not only take the great mass of ours from other countries, but we accept their poorest specimens, and, having accepted them, we allow them to control the field against our own sons. The consequences of this policy, already momentous, are destined to become more so as time advances. We are not only bringing up our sons in idleness, not only *depriving our experiment in popular government of the invaluable support of a great body of con-*

servative citizens of American birth, but we are accepting in place of such a body one that is composed of and controlled by men of foreign birth, whose instincts and character are not merely un-American but often anti-American. This body, acting frequently as a unit throughout the country, is able to paralyze all business and industry, and to bring the nation itself almost to the brink of social revolution and industrial war.

This view has been greatly strengthened and confirmed by the events of the present year. It is evident when two proclamations by the President and the use of National and State troops must be resorted to in order that law may be maintained, property preserved from destruction, and human life guarded, that there is something the matter with that element of the population against which such measures have to be taken. While all the rest of the people are upholding law and order, how does it come about that the laboring classes are in so many instances seeking to overthrow law and order? It is because, as we said in 1893, our laboring class is not as a body American, but anti-American. That it is becoming more American through experience we are glad to believe. The refusal of so many labor-unions to obey the order for a universal "sympathetic" strike in July last was evidence of this. Still the fact remains that we are not training up a class of American laborers, and until we do that we shall continue to

have labor troubles which will require the international power for their suppression.

Edwin Booth—the Man.

THE daughter of Edwin Booth has concluded to make what may be considered a most costly and so memorial gift to the world—none other than the record of the inner life of the great actor as made by him to those nearest to him, in letters written throughout a time to his child, and to many of his intimate friends. Selections from Mrs. Edwina Booth Grossmann's reminiscences of her father, and from his letters, at her permission, printed in this number of *THE CENTURY*. They are, indeed, a revelation of the man both exalted and inspiring. The dominance over his career of the spiritual influence of a noble and gifted woman is here indicated; and it is seen that this influence extended far beyond her lifetime, always lifting the artist in him to noble exertion toward a lofty ideal.

In the letters to Mr. Bispham, printed in *THE CENTURY* for November and December, 1893, the character of Edwin Booth's private character was shown; in the present series we get closer to the heart of the man. Such a spirit remaining hopeful, helpful, and pure, in such trying conditions and under a storm of sorrows—nothing that any one may say can add to the ennobling lesson.

OPEN LETTERS.

The Methods of the Rioting Striker an Evidence of Degeneration.

THE doctrines of communism, socialism, and nihilism are essentially atavistic doctrines, inasmuch as they revert to a state of society existing thousands and thousands of years ago, when all mankind were savages. It is only by a study of primitive folk as we find them to-day that we are enabled to form any idea of our own status before civilization raised us to our present elevated position. It will hardly be necessary, in order to demonstrate this proposition, to cite more than one instance of communism as we now find it existing in a primitive race of people, though many such could be cited. Therefore I will call attention only to a single tribe of communists, the Aleutians, living on our own continent. It is a mistaken idea to suppose that, in the inception of his history, man was isolated and lived apart from his fellow-beings; that "the first individual reproduced himself in male and female, and of this couple, created superb and vigorous, intelligent and beautiful, was born the first family, which expanded into a tribe, then into peoples and nations." This was a theory taught years ago, before paleontology became a science and taught us otherwise. Our pithecoïd ancestors began with a communal life, and, instead of the individual being the father of the society, the society has been the father of the individual. Says Reclus:

Communal was the habitation, and communal the wives with their children; the men pursued the same prey, and devoured it together after the manner of wolves; all felt, thought, and acted in concert. Everything leads us to believe that at the outset collectivism was at its maximum and individualism at its minimum. The communal dwelling appears to us to have been the support of the collective life, and the great medium of the earliest civilization.

In the *kachims* of the Aleutians we see the antitypes of the communal dwelling-places of our savage ancestors; likewise, their customs and their beliefs have their archetypes in the political and social economics of our primitive forebears. It is to some such state of savage irresponsibility that the doctrines of Bellamy and his followers would hurry us in the end, if they were carried out to their full extent. Man would have to lose, necessarily, that individuality and responsibility which he has acquired through thousands of years of inherited experiences. Could he do this, man might attain to the Utopia described by Bellamy, and become the autotype of the ant and the bee and others of the social hymenoptera. But he can never do it without losing that which makes him so immeasurably superior to the savage—his civilization. Civilization, in its purity, demands an individualism totally inconsistent with the tenets and doctrines of communism and socialism. The innate ego of civilized man is too self-assertive to allow him to banish it for any length of time, and, as his psychical development is always on the increase, it will ever be growing stronger and stronger. The surroundings demanding the communistic customs of our savage ancestors no longer exist, and a belief in any such doctrine at the present time is unquestionably an instance of psychical atavism. Fortunately for civilization, the majority of mankind are not degenerate; therefore these atavistic tendencies of the minority are held in check. Every now and then, however, the degenerate element bursts through the restraining bonds of social laws and customs, and makes its savage nature apparent in the strike or the boycott, accompanied, as they always are, by riots and lawlessness. Any man has the right to stop work whenever he wishes, if he is not under contract and can le-

gally do so, but no man has a right to stop another man from working if he so desires. Such an act would be clearly anti-social, therefore criminal. It is here that the strike shows that it is the offspring of degeneration, for the strikes of to-day are invariably accompanied by anti-social acts that at once place them among the *instrumenta belli* of the savage. Arson, murder, and theft belong to the cardinal virtues according to the tenets laid down by savages and moral imbeciles, and arson, murder, and theft invariably march in the van of the strike. Communism or socialism must necessarily form a factor in any movement of labor against capital. This fact is always bitterly denied by the more conservative and politic of the labor leaders, yet the active strikers who engage personally in the strike unhesitatingly assert that their main object is to place themselves more nearly on a par with their wealthy employers. Now, having shown that communism is an atavistic doctrine, and that the strike invariably carries with it an element of communism, and is therefore necessarily atavistic, let us examine into the causes which produce this strange desire to revert to the customs, habits, and beliefs of our barbarous progenitors. The causes of degeneration are manifold, and cannot be enumerated in a paper like this. Suffice it to say that insufficient food, intemperance, and a disregard for the bars of consanguinity in marital relations are the prime factors in the production of degenerate beings. I have shown elsewhere that degeneration is the cause of the various forms of sexual perversion with which civilized man is afflicted (*vide New York Medical Record*, September 16, 1893: "Exfemination and Viraginity"), and that it is likewise main factor in the production of a distinct type of abnormal man, the congenital criminal (*vide New York Medical Record*, January, 1894: "Criminal Anthropology," and *American Naturalist*, June, 1894: "The Recidivists"). When we come to examine the personnel of a striking mob, we at once discover that it is made up to a great extent of foreigners and the descendants of foreigners. And when we examine each individual, we will discover that he differs more or less from normal man, and that these abnormalities in face and figure form a distinct type. These abnormalities are the unmistakable signs of degeneration. Of course I have reference to *the strike in which lawlessness is evinced*; throughout this article I mean no other.

The struggle for existence among the lower classes of Europe has been exceedingly hard. On account of the numerous wars which have occurred during the last millenary period, the burden of taxation has been very heavy, rents have been very high, and the consequent struggle of the laboring classes for a bare existence has been very severe. Physical development has been retarded, and even turned back, and psychical atavism has made its appearance. Both mind and body have retrograded. Instead of advancing toward a higher civilization, the peasantry of most of the European nations have dropped back. The phenomenon of atavism occurs in feeble types, not in strong, healthy, well-developed types. Microcephalism, occurring, as it most frequently does, among ignorant, ill-nourished, unhealthy people, is an example. Dolichocephalism, and a flattening of the cranial arch, with corresponding loss of capacity in the skull—types that we see everywhere among the individuals now being discussed,

are other examples of this tendency of atavism to seize on weakened and unhealthy subjects.

Degeneration finds victims among the rich as well as among the poor, but among the wealthy the atavistic abnormalities are generally psycho-sexual in character. The rich become effeminate, weak, and immoral, and the lower classes taking advantage of this moral lassitude, and, led on by their savage inclinations, undertake strikes, mobs, boycotts, and riots. If it were not for the restraining influence of the sober, level-headed middle classes,—the true police of the world,—civilization would be swept from the face of the globe, and men would become savages like the communal tribes of the Aleutian Islands. The native-born American working-man, descended from Anglo-Saxon ancestors, has not yet been attacked by degeneration. In this fruitful land his struggle for existence has been easy; consequently his physical and psychical beings have not been held in check and turned back by the exigencies of his surroundings, but, on the contrary, have been greatly developed. He takes broad and elevated views of sociological questions. He recognizes the fact that each man is the architect of his own fortune, and that success depends on the intrinsic worth of each individual. In fact, he is the product of a higher civilization, which decrees that the individual, and not the commune, is the great desideratum. He knows that labor is a marketable commodity, and that it will always bring its own price unless the market becomes overstocked. And now we come to the key of the whole situation. The labor-market is, to a certain extent, overstocked. The country has become filled with laborers, the vast majority of whom are degenerate foreigners, who are ready for any form of lawlessness and riot, suggested by their essentially anti-social natures. A mere casual survey of the various strikes which have occurred in the United States during the last decade will show that an overwhelming majority of the individuals constituting the strike are foreigners, and descendants of foreigners. It is true that there are native-born descendants of Anglo-Saxon ancestors in the ranks of the strikers, but they are few in number, and are uniformly led on by emotions and desires founded on higher principles than those which actuate their foreign associates. These men are amenable to reason, and do not commit acts of lawlessness unless forced to do so by their anarchistic fellow-strikers. The fear of bodily harm or the fear of being considered a coward have made many a law-abiding man a criminal.

The psychical habitudes of a few of the individuals under discussion have been inherited from ancestors who have always been of low types, but the majority of them are *bona fide* degenerates, made so by inheritance as well as by their surroundings.

The Russian and Bohemian laborers who immigrate to America are, and always have been, semi-civilized, but the Italians, Germans, Huns, Poles, Frenchmen, and Austrians who are to be found among rioting laborers are clearly a degenerate class of human beings. The anthropologist can detect the physical signs of degeneration in these people at a glance. Their physical characteristics mark them out at once to be abnormal types of the human race with such a striking family resemblance that individuals of entirely different nationalities look alike. This same family resemblance

is to be found among congenital criminals. In point of fact, the congenital criminal and the anarchist, both victims of degeneration, differ very little. The congenital criminal's anti-social acts are generally individual, while the anti-social acts of the communistic anarchist are communal or collective. Of the two individuals, I consider the communist by far the more dangerous to society. In conclusion, let me say that I believe that the immigration laws are wholly to blame for the labor riots which agitate this country. Immigration is practically unrestricted, and year after year Europe pours into the United States multitudes of degenerate human beings, who, incited by the freedom of American institutions, and without the deterrent fear of summary punishment, immediately give free rein to their atavistic imaginations, and, whenever they think that the favorable moment has arrived, plunge into anarchy and lawlessness. These people are savages, and should not be treated as civilized beings. They are not amenable to those arguments which would undoubtedly prevail were they civilized men and women; consequently it is folly to argue with them. Their ideas of social economics are totally different from those of the civilized world, and the sooner the world recognizes this fact the better will it be for civilization. When the Indians out West go on the war-path, we know how to control them. The psychologist considers the anarchist as being no better than the Indian.

James Weir, Jr., M. D.

"WAVELAND," OWENSBOROUGH, KY.

Secret Societies in Politics.

EVER since the disappearance of William Morgan, in 1826, there has been a strong sentiment in this country adverse to secret societies of all kinds. This opposition has enlisted many sincere and patriotic men; but it must be confessed that its force has been gradually waning. The social and beneficial orders against which the warfare is chiefly directed have been in existence among us for many years; for many good works we are constrained to give them credit; the mischiefs which they were expected to perpetrate have not appeared; the apprehensions of good men concerning them do not seem to be well founded. On the score of taste many of their performances may be criticized, and it is easy to show that they might become very dangerous; but the public mind rests in the conviction that most of them are, in fact, innocent if not useful institutions.

The original secret society is the family. Its sacredness depends on its secrecy. With the largest part of its concerns the public has no business. The newspapers of this country are doing their best to destroy all the barriers of privacy within which the family ought to be sheltered,—every man to whom domestic life is sacred must be always alert and resolute to keep the reporter out of his closet and his bedroom,—but in spite of the newspapers the rights of secrecy must be affirmed, and we may hope that, by a remnant of our society, they will be maintained. Other social groups are formed for purposes of companionship and mutual help, and to these, so long as they confine themselves to such purposes, the rights of secrecy may be freely yielded.

But when any organization undertakes to influence or direct public affairs, there must be no more secrecy. The first law of public business is the law of publicity.

What concerns the whole public the whole public has a right to know all about. A group of citizens, meeting in secret, and scheming to impose their will by direct or indirection upon the community, is as much out of place in a republic as a cinder in the eye or a tumor on the brain. What these people are trying to do directly concerns me; my freedom, my security, my welfare are to be affected by their action: yet I am not permitted to know anything about their designs; I cannot discuss their measures with them; I must simply accept what they in their secret conclaves decree.

All free government is based upon free discussion. The motive power is public opinion, and public opinion is formed by public debate, by an open canvass of all measures proposed and candidates nominated. No other method is safe. The whole community ought to be thoroughly informed respecting all questions of public policy. The sovereignty resides in the whole people; the attempt of a portion of the people to impose their will upon the rest without consulting them is simple usurpation. The majority may rule, but not until the minority has had a fair chance, in open debate, to traverse the arguments of the majority and to utter its protest. The attempt to control government through secret organizations is a flat repudiation of the fundamental principle of a free republic.

Such a secret organization confesses by its very existence its lack of faith in truth. Its purposes are evidently such as would not prosper in a fair debate. This will be found true, I believe, of all secret political societies. Take the case of the one which is now very much in evidence—the anti-Catholic society known as the "A. P. A." Its oath binds its members to two practical measures: to disfranchise, so far as office-holding is concerned, all Roman Catholics; and to prevent, so far as possible, all Roman Catholics from getting an honest living by their labor. It is evident that these measures would not bear discussion. Any organization which came before the public to advocate them would be overwhelmed with popular indignation. But by covering all the operations of the society with the veil of secrecy, and prevaricating about these oaths, multitudes of men are induced to support this scheme. What men would be ashamed to do in the daylight, they can be persuaded to do in the darkness. In politics it is always those whose deeds are evil who prefer darkness to light. The conclusion is irresistible that any political organization whose methods are secret is cherishing nefarious purposes.

Those who adopt the method of secrecy thereby confess their belief that the people outside their pale cannot be trusted with the truth. Such a belief will lead to a frugal dispensation of the truth within the pale. No fair discussion will be allowed in the secret conclave; a species of terrorism will enforce unanimity and stifle dissent. Under such a regimen the most grotesque falsehoods can be propagated. Secret political societies are always marvelous disseminators of delusion. Statements which would be blown to the winds if they were made in public can be kept in active circulation for months through the agency of such societies. As vehicles for the distribution of cowardly slander and defamation nothing could be more effective.

The point of view of those persons who adopt these methods may be best gained by considering the replies which they make to criticisms like the above. It is cer-

tainly worth while to give careful heed to these replies. They throw light upon the problem before us. They show what kind of elementary instruction in political ethics is needed, just now, by a million or more of American voters. Let me state some of these defensive arguments as they have come to me, with such answers as they seem to require.

One querist wishes to know whether, in a game of chess, I am in the habit of informing the man on the other side of the board of the move that I intend to make. Another suggests that such societies as I have described are no more secret than an army; that armies operate secretly, that they have countersigns, and the like. These comparisons probably indicate the conceptions which underlie most secret political organizations. The notion is that in civil society we are all seeking to beat one another in a stupendous game, or that we are natural enemies, arrayed against one another and trying to exterminate one another. It is true that there is much in current politics which is based upon one or the other of these notions. But it is, perhaps, worth while to try to comprehend that this is not the real foundation of civil society. Not to discuss the analogy of the game, let us consider the other similitude. It is true that an army, engaged in war, does resort to concealment and stratagem; but what is the business of an army? Its business is killing people. That is the only reason of its existence. It is a costly and elaborate machine for destroying human beings. Therefore, when war is proclaimed, many of the ordinary social and moral laws are set aside. *Inter arma silent leges*. Truth, the fair bond of society, is banished; falsehood, deception, trickery are weapons freely used. The state of war is not the normal state of human society; the normal relations of human beings are discarded and reversed when people go to war. It is this abnormal and unsocial state of war to which appeal is made for the justification of secret societies in politics. It must be admitted that they do conform exactly to that analogy, and this fact seals their condemnation.

What is the real basis of civil society? I will not suggest a very lofty idea of these relations; but to put the matter on the lowest possible basis, we may say that the people of any town or city are business partners. There is a great company or corporation, and we are all members of it. A vast amount of property is owned in common — the streets, the parks, the markets, the city buildings, the school-houses, the water-works, and a great deal more. We are partners, also, in the business of keeping the peace, in the business of making the ordinances by which the city is governed, in the business of choosing the officers, in the business of keeping the water and the air free from infection, and of making the city where we live a healthy and pleasant place of residence. The same kind of partnership exists with regard to the interests of the State and the nation. All these great interests are ours in common. It is only by coöperating with one another intelligently and harmoniously that we can secure them.

What, now, would be the consequence if, in any great partnership concern, part of the members should stealthily combine, holding secret meetings, and plotting against others; trying to deprive some or all of their copartners of their fair share of the gains or ad-

vantages; secretly scheming to prevent others from holding any official position or having anything to do with the management? Would it be good policy, in a business partnership, to encourage that kind of secret plotting of members against one another? Would not a company afflicted with such intestine warfare speedily go to pieces?

The lowest conception that any man can form of civil society is that which we are considering; and such secret leagues as now exist in this country, by which citizens of one way of thinking are conspiring to take away the advantages of citizenship from citizens of another way of thinking, and to deprive them, so far as they can, not only of their civil rights, but also of the means of existence, are destructive of the very foundations of society; they are not only anti-social, they are inhuman; they are attempts to lead society back toward barbarism and anarchy.

Washington Gladden.

Is the Friction Between Employed and Employer Diminishing?

THE friction between labor and capital is quite similar to that between the commission-house and the jobber, the jobber and the retailer, the retailer and the consumer. It exists between the manufacturer and the seller of raw material, the farmer and the purchaser of his products, the shipper and the transporter. Between all these classes friction arises from the sale or exchange of their products.

The opinion is widely entertained that the friction between the laboring-man and his employer is more productive of evil, and will probably be more bitter and prolonged, than the conflict between other classes. In our judgment this opinion should be amended. Bitter as the conflict is between labor and capital, is it much more so than the conflict between the freight-shipper and many of the transportation companies? Is not each class mentioned trying to get the largest return for the least thing or effort?

Is the conflict between workingman and employer increasing or diminishing? Are the two classes approaching any nearer to a right working-basis or remuneration? For ages the working-man was a slave, and received no wages whatever. Then the wage-system was introduced. Is this the final condition? By some political economists the wage-system is regarded as permanent. That it is very unsatisfactory to the working-classes must be admitted. They desire more ample remuneration. They are told, however, by one school of economists that the rate is fixed by existing capital, and that to increase wages is simply impossible unless the price of raw material and of other necessary things in production is diminished. Of course, if all capital were actually employed, if no manufacturer could add to his capital by borrowing, wages could not be raised until after further and profitable production; but this hypothesis of a limited fund for the payment of wages does not correspond with the reality. A large amount of capital is unemployed, and the credit of many producers is sufficient to obtain it if they desire; if they did borrow, larger wages doubtless could often be paid, and yet enough would be left when the product was sold to pay every outlay, beside a fair return for themselves.

That the wage-system is not the final and permanent mode of rewarding labor is shown by the creation of other modes of remuneration. Even if these failed, it does not follow that the wage-system is permanent. But few social principles are stamped with perpetuity. On the other hand, the general discontent is a strong indication that the wage-system will be modified or supplanted. The newer modes of rewarding labor are coöperation and division of profits on an agreed basis; in other words, the system of industrial partnership. To profit-sharing do many of the more recent English writers confidently look for a permanent settlement of this long and trying conflict.

What is the underlying principle of an industrial partnership? The rendering of an adequate and just reward for the service or thing received. What is the underlying principle of supply and demand? The getting of the most for the least thing or effort. The idea of justice is not involved in the latter principle. Supply and demand is a hard, coarse, selfish, joyless principle, as many admit. Ought working-men and their employers to be imperiously bound by it? Ought the working-man to strive to get all he can, and the employer, on the other hand, to reduce wages to the lowest possible limit? Will the society which seeks to apply such a principle be happier than the society which gives a fair return for a service or thing rendered? Is not the existing discontent a clear indication that the wage-system is faulty, whatever the economists may say?

We do not hesitate to maintain that the principle of exchanging on the basis of justice is to be preferred to the other mode of exchange. It should not be forgotten that fair equivalents are often given and received by the operation of demand and supply; otherwise this principle would not have been so long or so universally applied. Unhappily, fair equivalents are not always exchanged; and even when they are, justice is not necessarily an element in the transaction. The terms of exchange are fair because neither party will give more; the idea underlying the transaction is not justice, but of giving the least possible for the largest return. Surely justice is absent in such an exchange.

Moreover, the principle of a just exchange is obtaining wider and wider recognition among employers and employed. In France, especially, its application has been highly satisfactory. In this country it was adopted several years ago, when the sliding-scale was introduced among coal-miners and workers in the iron-mills. The amount of remuneration where the scale prevails is determined by the price obtained for the product. For several years the working-men in the Fairbanks Scale Works at St. Johnsbury, Vermont, have been shareholders and participants in the profit of the business. In many concerns, in addition to the regular remuneration, a bonus is given annually, or at a fixed period, based on the profits of the business. Among some of the Minneapolis flour-mills such a bonus is paid at the end of the fifth year. This plan insures a high degree of fidelity and continued service. Merchants and banks in many cases give a bonus based on the profits of business. In his testimony before the English Trade-Union Commission in 1867, Mr. A. S. Hewitt outlined a plan of dividing the profits of production with the persons employed. Looking outside of these two classes, we see that much of the

contention between other classes converges toward the recognition of the same principle—the getting of a fair equivalent for the service or thing given. For the recognition of this principle shippers are eagerly contending, and in many cases, too, the railroad companies. The rule of charging what freights will bear is of this nature. The recognition of the principle by cities in regulating the rates for carrying persons may be mentioned. Municipal governments have not attempted to base the price on the principle of demand and supply, but on the worth of the service. So, too, is the principle recognized in condemning lotteries. They are declared to be illegal because a fair equivalent is not given for the tickets sold; and the courts very generally are cutting up by the roots the most generally practised kinds of stock and produce speculation for the same reason—the lack of an adequate consideration to sustain the contract. The newspapers of the day, in a more or less formal manner, maintain the same position; and so do many thoughtful men, in public addresses, pamphlets, books, and magazine articles. If space permitted, we could show from many sources how the principle of a just remuneration is working into the intelligence and conscience of the world.

When this principle is generally recognized, the next difficulty will be to apply it. To do this, let us believe, will not be so difficult as the securing of its general recognition. Of course the venerable objection will be made that it is impracticable to apply this principle. This objection has always been made to applying every new thing. Fortunately for mankind, no objector's dictum is conclusive. We readily admit that if the two classes were willing to adopt the principle, yet, in truth, one class sought to get as much, and the other as little, as possible, the friction between them would not be lessened. But when they are truly willing to apply this principle,—of giving and receiving a fair return,—they will have no serious difficulty, either through themselves or through third persons, in reaching satisfactory bases of settlement.

So long as the rewarding of labor is almost everywhere not on a just basis, what hope exists of ever reducing the antagonism between the two classes? To suppose that it will become less is to maintain the proposition that people will remain content with a wrong basis of remuneration. So long as the principle is active of taking advantage of all circumstances on both sides to crowd the price of labor up or down without regard to considerations of justice, so long shall we live under a modified form of slavery. Oh, it is said, the two classes are free to contract. This is true theoretically, but not actually. The working-man who has only five cents in his pocket is not, in truth, free to decline a lower price for his labor. It is mere mockery to say that he is free. The only freedom left to him is to starve. The slave always had as much freedom even when building the pyramids. The existing system, therefore, is not one of perfect freedom. The capitalist has the advantage, like the owner of a faro table. The players have some chances, but the owner of the table has more. It is true that the laboring-man would improve his lot immensely by saving his earnings whenever he could, and by exercising more faithfulness and skill. But when he has done his utmost, his employer is the stronger of the two, as is the faro-bank owner, and the most likely to win. When the

worker accumulates enough so that he need not take part in the game, then he is free, and not before. While he is not, he must play, whatever be the result, knowing, however, that something must be given him by his employer, otherwise the latter could make no use of his gains.

Another sign of diminishing friction is the better management of trade-union societies. These institutions are the outcome of the factory-system and the division of labor. When every man supplied his own wants there was no organizing of men, but when capital was massed in large quantities, and many men were drawn under the same roof, what was more natural than for them to confer and form an association to protect and advance their own interests? If the employer mourns over the formation of these societies, let him remember how much they have been caused by himself. They are a necessary counterbalance to aggregated capital. This is imperious enough now, and we fear would be more so if trade-union societies did not exist. Anyhow, many improvements may be seen in the management of these societies. In the beginning they were rude affairs, officered often by ignorant and prejudiced men who were constantly blundering. Realizing their ignorance and inability to manage wisely, persons outside their own number were frequently chosen, and who on many occasions abused their trust. As labor-unions have grown older, their members have learned more, and better men have been chosen leaders. The consequences of striking are more intelligently considered than they were a few years ago. It must be remembered too that many of these societies have been formed on the eve of a strike; that it was not the consequence of forming the society, but the society was a consequence of the intention of the members to strike. Especially that was the origin of many trade-union societies in this country.

Moreover, many of the regulations of these societies are better than they were in the beginning. The rule relating to apprenticeship, for example, which smacked so strongly of monopoly in labor, has been modified by many societies. On another occasion these changes may be more fully described.

Another improvement is in the treatment of the working-man by employers concerning agreements for labor. The employer in this country was shocked when his workmen first appeared to confer with him about their remuneration, especially when they appeared as a committee representing others. In more than one case the employer absolutely refused to say one word to them. Such action on their part savored of an equality which he had no desire to acknowledge. Though stoutly believing in a theoretical constitutional equality, he did not believe in importing it into the shop. The English employer regarded the matter at first in the same way, but before long recovered his senses. He soon perceived that a committee representing a thousand or more workmen was intrusted with a highly important business. The committee did not come to bargain concerning a few dollars, but concerning thousands. The American manufacturer has not reached this round in his education. Perhaps he would not be so unwilling to hold an interview with his workmen if he had never been a workman himself. Happily, this feeling is becoming lighter—a hopeful change

for the establishing of better relations between the two classes.

The working-man is suspicious of his employers. He does not know how profitable is the business, for the books are sealed. He sees a fine house and accompaniments, and he concludes that his employer is a rich man. He cannot help saying, "I have done much toward making this man's wealth"; and he has. When, therefore, wages are reduced because business is unprofitable, or when the working-man asks for an advance and is refused for the same reason, he is skeptical concerning the truth of such replies. In England, long ago, manufacturers opened their books and sought to convince their workmen of the truth of their statement, and with the best effect. In many cases workmen were convinced of the unreasonableness of their demands, wholly or in part. Consequently strikes have been fewer and briefer, and settlements, through arbitration, effectual. In this country the manufacturer is rarely willing to make such an exposition. In some cases it might prove ruinous, especially if his business were unprofitable; he might be on the edge of bankruptcy, and such an exhibit would have the effect of utterly destroying his credit. In other cases secrets of business essential to success might be divulged. Nevertheless, the more generally this can be done without dangerous exposure to the employer, the more easily can he convince his workmen of the truth of his statements. As all are co-workers in production, they are entitled to a fair division, all things considered, and any mode of concealing profits and of preventing such a division will intensify the conflict between them. Either the division of labor must not be carried so far, or if it is, a fair return must be made for the services rendered, and the same principle should be applied in every exchange.

If the conflict between the employed and the employer seem violent, let us consider that we see only one part of the battle-field whereon all the opposing classes of producers and exchangers are contending. In France the way of peace has been found; in England the worst is probably over; and in the light of our own and of foreign experience, can we not see, if we choose to look, how to lessen the conflict? Between the contending parties is a moral basis of settlement,—the rendering of a fair equivalent for the service or thing given,—and whenever this basis shall be adopted, the terms of permanent settlement will be the short closing act to the long and pathetic drama of ill-requested toil.

Albert S. Bolles.

The Consular Service and the Spoils System.

BY AN EX-MINISTER TO BELGIUM AND TO RUSSIA.

MY observation has long since led me to the conclusion that the consular service of the United States would be much improved by being made more permanent in its personnel.

It requires several years of service to make a thoroughly efficient consul. It takes some time even to study the conditions of the country in which he is posted, and to obtain the facilities for procuring knowledge which may be used for the advancement of commercial relations with his own country. It is of the utmost importance that such an officer should be familiar with at least one of the other commercial languages

of the world, but it too frequently happens that our consuls are unacquainted with any other language than their native tongue, a circumstance which very much impairs their usefulness.

It is evident that under our present system of changing these officers on the advent of every new administration, the American consul has neither a fair chance to become conversant with any other language, nor the chance to equip himself for his duties as thoroughly as he usually finds his colleagues from other countries at the same post. If the appointee is intelligent, and takes an interest in his duties, he is far more useful to the Government at the expiration of four years than at any shorter period of his service.

Ordinarily nothing is more deluding and disappointing than an American consular position, and I have often wondered, considering the precariousness of its tenure and the insignificance of its rewards, how so many of my countrymen who were at all fitted for its duties could be found to accept it. It is a species of banishment, where one is separated from opportunities and forgotten by friends, and it is attended by many sacrifices, and has few appreciable advantages to the holder of the office.

My own opinion is that the consular service should be put on a footing similar to the army and navy; that a man ought to be prepared for the service by some fixed rules, and when he has entered, should not be subject to removal for political reasons. He should also be transferred from one post to another, according to his merits, and the best interests of the service.

More than this, justice would require that such an officer, spending his life in foreign lands in the public service, should, like an officer of the army and navy, be allowed a decent retiring pension after a certain age and number of years of service.

What I have said with reference to the inexpediency of removing consular officers for political reasons applies, in my judgment, with equal force to secretaries of embassy and legation. Our diplomatic service suffers from lack of what may be called continuity in the routine work. This condition would be ameliorated if we had some men always attached to our missions who have a competent knowledge of foreign languages, and know something about the methods of doing business in the different foreign offices. It is sometimes very embarrassing and a great disadvantage not to be *en rapport* with these methods. A young man fit to be a secretary of legation, and who has his way to make in the world, acts, in my judgment, very much against his own interests and prospects in life if he accepts one of these secretaryships on a meager salary, with a certainty that after a few years he will be thrown out. It would doubtless be better for the service if our secretaries held office by a more permanent tenure.

Lambert Tree.

"The Century's" American Artist Series.

EASTMAN JOHNSON. (See page 816.)

EASTMAN JOHNSON, whose picture, "The Nantucket School of Philosophy," is engraved in this number of THE CENTURY, is one of the ablest and best known of American portrait-painters, and a painter of genre whose work is not only remarkable for technical excellence, but is also invested with much sympathetic feel-

ing in the presentation of scenes from every-day life. He was born at Lovell, Maine, July 29, 1824, and when a child was taken by his parents to Augusta, where he obtained his education at the high school. There was a teacher of drawing in the high school, and Mr. Johnson in his boyhood acquired a certain degree of skill with the pencil. He took up drawing in earnest when about seventeen years of age. During a winter spent in Portland he became intimately acquainted with the parents of the poet Longfellow, and with the latter's sister, Mrs. Pierce, and drew their portraits. In 1845 he accompanied his father to Washington, D. C., and during his sojourn there made a large number of portraits in crayon. Among his sitters were John Quincy Adams, Mrs. Madison, Daniel Webster, Mrs. Alexander Hamilton, and Robert C. Winthrop. In 1846 he went to Boston, where he remained three years, making portraits in crayon and pastel, including those of Longfellow and his children, Emerson, Sumner, Hawthorne, and President Felton of Harvard. In 1849 he went to Europe. He spent about two years in the Royal Academy at Düsseldorf, a short time in London, and four years at The Hague. From The Hague he went to Paris, but was called home after about a year's residence in that capital, having then spent six or seven years abroad. On his return, he settled in Washington, spending two summers in travel and study in the Northwest, and came to New York in 1858. He had a studio in the old University building in Washington Square for fourteen years, removing thence in 1872 to his present home in West Fifty-fifth street.

Mr. Johnson began painting genre subjects while abroad, and his career as an artist has been one of industry and success. One of the first of his pictures to bring him reputation was "The Old Kentucky Home," now in the permanent collection of the Lenox Library, New York, to which it was presented, together with his "Sunday Morning," by Mrs. R. L. Stuart. "Corn Husking," one of the most important of his pictures, and one that completely realizes what we are wont to speak of as "American genre," is owned by Mr. Potter Palmer of Chicago. "The Cranberry Harvest," "The Peddler," "Fiddling his Way," "The Old Stage-Coach," "What the Shell Says," "Two Men," and "The Pension Agent," are some of the pictures that made his fame as a painter, and have given him popularity. At the Paris Exposition of 1867 he exhibited "The Old Kentucky Home"; at that of 1878, "Corn Husking"; and in 1889, "Two Men." He received from the jury of award a bronze medal for the last-named picture. He has painted a large number of excellent portraits, and is a regular exhibitor at the current exhibitions. He was elected a National Academician in 1860, and a member of the Society of American Artists in 1881. Mr. Johnson's painting, in whatever field, is characterized by individual technical treatment, and is in general marked by excellent qualities of color.

William A. Coffin.

The Origin of "O. K."

[We are permitted to print the following from a private letter from Professor W. S. Wyman of the University of Alabama, to a friend in the faculty of Vanderbilt University.]

The current, but erroneous, account of the origin

F. O. K. is as follows: "General Andrew Jackson was an illiterate man, and so, when he was President of the United States, he used to label documents which he approved with the initials O. K., which he took to be the initials of 'All correct' (oll korrekt)."

This story is attributed to Seba Smith, a literary gentleman of the last generation who wrote letters from Washington under the pseudonym of "Major Jack Downing." There is probably no truth in this. I have in my library a copy of "Major Jack Downing's Letters from Washington," and I do not find the story in that book.

It is, however, probably true that General Jackson did indorse with the symbols O. K. public documents which he approved. General Jackson was no scholar, it is true, but he was not so ignorant as to think that "all correct" was spelled "oll korrekt."

If you will examine the autograph letters of General Jackson now in the archives of the Tennessee Historical Society, you will find that he could write fairly for a man who had small educational advantages in early life.

The true explanation of O. K. is probably as follows: There is a tradition among the intelligent Choctaws of the old stock who once lived in Mississippi that General Jackson borrowed the expression O. K. from the Choctaw language.

The Choctaws and the Chickasaws speak the same tongue. In the language of these two peoples there is no copulative verb that corresponds to "be" in English (*esse* in Latin). A substitute for this is found in the emphatic word *okéh*, which ends every assertion in Choctaw. An example will illustrate this.

The English sentence, "The Choctaw Indian is a good fellow," would be in Choctaw,

{	<i>Hattak uppeh</i>	
{	Man body	
{	<i>hoomah chahtah achoolmah okéh.</i>	
{	red Choctaw good	it-is-all-so.

 Here *okéh* serves as the verb of assertion. It means, "It is true," "It is so," "It is all right," etc.

General Jackson was frequently among the Choctaws and Chickasaws before he became famous. He must have heard this expression often.

He probably adopted it in early life as a very expressive kind of slang, and used it after he became President as a private symbol (O. K.) to indicate approval. Strong confirmation is found for this theory of the origin of O. K. in a fact mentioned in "Parton's Life of Jackson," Vol. I, page 136. The following entry on the records of the court of Sumner County, Tennessee, was probably written by Jackson himself, who was attorney in the case:

"October 6, 1790, Andrew Jackson, Esq., proved a bill of sale from Hugh McGary to Gasper Mansker, for a negro man, which was O. K." ("A common western mistake," says Mr. Parton, "for O. R., which means 'Ordered Recorded.' Thence, perhaps, the saying, 'O. K.'")

Parton is surely wrong in his conjecture that this O. K. was a "common mistake" for O. R. (ordered recorded). It is highly probable that this O. K. in the record of the Sumner County Court is the very expression used by Jackson to signify that the bill of sale was "all right."

This theory of the origin of O. K. is, if not true, at least well invented, as the Italians say.

There are other Choctaw words that have been naturalized in the folk-speech of the Southern States.

The word "bobashilly" ("barbashilly," "bomashilly," so variously pronounced), in the sense of "friend," "comrade," "brother," is very common in Alabama and Mississippi. I suppose you have heard it often. This word is Choctaw. *Ittebahpashille* is the classic expression in Choctaw and Chickasaw. It means "friend," "comrade" (literally, "he that sucks the same breast"—hence, "brother"). The word "bayou" is another American word of Choctaw origin. This word is incorrectly referred by all our dictionaries to the French word *boyau*, which means a "gut," "an entrail." The English word "gut" is sometimes used for a channel of water, but the French word *boyau* was never so used.

Walking.

APROPOS of "Walking as a Pastime," an old tramp begs leave to differ with Mr. Eugene Lamb Richards on one or two points. Do *not* carry a knapsack or pack. If you do, you cannot rest yourself by shifting the weight, and a load on the back inclines you forward. Take a small satchel, with a strap by which it may hang from the shoulder. Put into it just as little as you can get on with. At the end of the first day remove the extra shoes, brushes, blacking, oil, razors, medicines, etc., and carefully burn them, or give them to tramps. My own outfit, with which I have trod many roads on two continents, is: a nightgown, extra shirt, comb, tooth-brush, map, novel, note-book, pen or pencil, knife, and watch. Sometimes I add a rubber coat. Why carry extra clothes, except in Africa? You can buy them everywhere, and you can have your washing done between two days. Again, an umbrella is a poor walking-stick, for it does not balance in the hand. It is heavy and thick, yet so fragile that it breaks when you kill snakes with it or use it as an alpenstock. Yet, again, the light madras or percale shirt is at least as good as the flannel one, for the latter is heavy, and shrinks. As to shoes, Mr. Richards's are sensible and excellent, but I have walked hundreds of miles in ready-made gaiters, and have never had a blistered foot. It needs only that the shoe be soft and ample. On lonely roads I go barefoot, sometimes. If Americans would walk more they would be bigger, happier, healthier, and tougher. Dudes, especially, should be encouraged to walk, because they are quickly killed by exercise.

IN LIGHTER VEIN.

Sence de S'render.

MOS' ebbry t'ing hab change er heap sence slabery
days am gone,
Mos' all de ole-time doin's am no mo';
En on de ole plantation, whar dis darky fus wuz
bawn,
Dar ain't er t'ing dat 's lack hit wuz befo'.

Ole massa en ole missus dey am sleepin' 'neaf de sod,
In de fam'ly bury'n' g'roun' down by de foad,
Whar win' sighs froug de cedars, en' hit wave de
gol'enrod,
En' whar de weepin' willers allus growed.

Young massa went ter furrin' parts, ercross de rollin'
deep,
En dar he stayed er ye'r er two, erbout;
W'en at de ole plantation he come back ter git er peep,
He want ter tu'n de ole place wrong side out.

He focht er reg'lar rigiment ob buckra folk f'om town,
En dey sot ter work ter spile de place:
De big 'ouse dar, so gran' en' w'ite, dey meck er dingy
brown,
En changed t'ings all erbout at lightnin' pace.

Dem sinners cut de grove all up, en done er sight er
harm,
En whar de grape-vine swing done use ter be,
Dey stan's er big stun 'ooman dar, widout er single
arm,
En nary rag ob close dat I could see.

But, wust ob all, de kitchin whar Malviny use ter cook
Dem good t'ings dat we hab befo' de war,
Wuz all tu'n'd topsyturvy, en dey meck de ole room
look
Too gran' fer her ter be er-bossin' dar.

Dey kivered up de fireplace so deep en wide en high,
En all de pots en kittles guv erway;
En den dey focht er monstus stove dey call er
range—oh, my!
I nebber dremp I 'd lib ter see dat day.

En arter dat we tuck our duds en move 'em all erway
Ter dis hyah leetle cabin by de road,
Whar me en mer ole 'ooman hab done settle down ter
stay,
Twel we go ter de mauster's 'tarnal 'bode.

Edward A. Oldham.

My Grandma's Gown.

WITH lavender bestrewn,
You send my fancy straying
As to a ghostly tune
Of distant viols playing,
Because, fair garment, kept
Within your linen cover,
In you my grandma stepped
A measure with her lover.

In clouds of quaint old lace,
Whose hue Time's touch has yellowed,
You have the royal grace
Of grandeur softly mellowed.
How beat her heart apace
To hear your silken rushes;
How must her mirrored face
Have bloomed with conscious blushes!

How youthful was the smile
Beneath the stately powder;
How did the patch beguile
Which vanity allowed her!

Lace-hid, her snowy breast
Heaved with a shy elation,
When fancy bravely guessed
A lover's admiration.

O slender oval waist,
Where soon his arm might linger,
O gentle hand that graced
His ring upon its finger;
O slipper, tapping swift;
O eyes so eager glancing,
Impatient soon to drift
In music to the dancing!

Ah, many years have passed,
And many loves have perished;
Yet this frail gown at last
Lies here, unharmed and cherished.
They say I look like her:
He begged of me to wear it;
But, somehow, I prefer
No other maid should share it.

Her sweetheart viewed it o'er,
With roses on their faces,
He dared to stoop before,
And kiss the trembling laces.
Nay, stay, sweet memory, laid
Safe in your linen cover,
Sacred to one fond maid,
And one true-hearted lover.

Louise Morgan Still.

Outlines.

A MAN walked six miles to see a great tree. His friend laughed at him. Said he, "I have a larger tree in my own yard." Said the man, "But you have not the six miles."

A MAN lay upon the grass, peering at it and amoe; it, studying it curiously and intently with a magnifying glass. His friend passed by and asked, "What do you do there?"

Said the man, "I am traveling in a foreign land."

A MAN sat for his picture. When the picture was made he said, "This does not look like me." But the picture-maker and all the man's friends contended that it was an exact likeness.

Not long after that he overheard a talk in which some one was being reviled and ridiculed. He was much amused; but soon it came to his ears that it was himself of whom the talk had been. Then he said, "This makes twice I did not know my own picture."

A MAN journeyed into a far country, where he found the people to be much wiser than his own people. On his return home he so related. But this greatly offended his own people, who reviled him, and cast stones at him.

Then a second traveler went, and brought back the same report. Him they threw into prison.

Then a third traveler went, who came back saying that these foreign people were greatly superior in all ways. Him they hanged.

Then they chose one to go and report truly, giving him much money wherewith to travel. He pretended to go, but he abode quietly in his own house, and ate and drank. And after a time he appeared in the streets, and declared that the three travelers were all liars, and that those foreigners were as barbarians. Whereat they applauded, and gave him much honor, and made him one of their chief rulers.

FRANZ LISZT.

TRANSLATION.

"When Steinway comes here we will have a thoroughgoing talk about the new construction of his concert grand."

FRANZ LISZT.

Wenn Steinway
hierher kommt, werde
ich mit ihm ein
sach und fach Mäthiges
Clavier-gespräch
führen, betreff, der
neuen Construction
seiner Flügel
10^{ten} März - 1894.

"WHEN STEINWAY COMES."

THAT talk must have been worth hearing.

Liszt had declared and proved that the piano could reproduce every effect of tone-color characteristic of an orchestra. Steinway had invented a piano which possessed a tone enormously powerful, and yet exquisitely sensitive — the orchestral piano. Liszt had divined the artistic advantages in power and tone-color to be derived from the free use of the arm from shoulder to finger-tips, and had elaborated his orchestral technic from the standpoint of the virtuoso and interpretative artist. He made the piano noble by discovering its resources. He explored the peculiarities of its resonance, and applied them practically in the harmonic construction of his compositions. Steinway explored the same phenomena, compared them with those characteristic of the instruments which make up an orchestra, mastered and applied the scientific laws involved, and rev-

lutionized piano-making. He created an instrument in which every detail, no matter how small, is made to bear its part in the production of a tone unequalled in majesty and purity. "Our great masters, in writing the grandest of their compositions, seem to have had a presentiment of the ideal piano realized by you," wrote Wagner.

The house of Steinway, in its German beginning and its American maturity, is between forty and fifty years old. The little shop in Varick Street, where father and sons worked together at the bench, had been open two years when the New York Crystal Palace Exposition offered an opportunity for prize competition. Seated in his studio at Steinway Hall, surrounded by souvenirs of the great musicians of Europe, himself America's most famous teacher, William Mason loves to tell how he came to "adopt the Steinways." To insure per-

fairness
and free-
dom from pre-
judice, he and
his fellow judges had

the names on the competing pianos covered with sheets, and determined and affixed the awards in ignorance of the makers of the instruments examined. When the wraps were pulled off, the prize pianos proved to be all "Steinways." The Steinway pianos entered the Paris Exposition of '67 with several radical improvements. Here Hector Berlioz, attracted by their noble tone and orchestral resources, interested himself heart and soul to secure their recognition. The first medal of the Exposition formed but a small part of the success of the hour. Washburn, then American minister, congratulated the House on the new distinction it had conferred on American industries. Steinbeis purchased a Steinway grand for the Royal Permanent Exhibition at Wurtemberg, to be used as a model to improve German piano-making. Fétis wrote a glowing critique upon American tone. Pianists like Henselt and Marmontel testified to the "justified" success of the "Steinways."

The Rothschilds, Gustave Doré, royalty itself—Alexander of Russia and Isabella of Spain—became purchasers. The Royal Society of Fine Arts, Berlin, the Royal Academy of Fine Arts, Stockholm—called Theodore and William Steinway to their membership. An enormous demand for Steinway pianos ensued; but Berlioz, poor, noble, and proud, could not be rewarded for his generous assistance. Resolved to preserve a memorial of so noble a relationship, Mr. Steinway induced Berlioz to sit to Perraud for his bust. Three bronzes were cast and the model destroyed. Of these, one was presented to the composer, one to M. von Asantchewski, of St. Petersburg, and the third is in Steinway Hall. Royal courts are

constitutional tribunals of taste endowed by the nations that maintain them with the function of recognizing and amassing valuable objects. Their favor carries with it the weight of national approval. The appointment of Steinway & Sons piano-makers to the majority of the courts of Europe is a measure of the artistic value of Steinway pianos. They are the valued possessions of almost every crowned head in the world. Even the Oriental monarchs of Turkey, China, and Japan are purchasers. "His Majesty [the Sultan] was very much pleased with the tone of the instrument," wrote Hakkey Bey. "The best proof of his satisfaction is that he has ordered me to write for a second piano. I hope you will see that the tone be as fine."

The Queen Regent of Spain lately purchased two Steinway grands, after listening to one played by the pianist Albinez, at a court musicale. The Emperor and Empress of Germany, after watching the men set up their new Steinway grand at the Marble Palace, sent for William Steinway, then in Berlin, to explain the Steinway construction. The Order of the Red Eagle conferred upon him followed the audience. Oscar, King of Sweden and Norway, personally procured the Royal Swedish medal for Steinway & Sons. Last autumn, the two daughters of the Princess of Wales purchased, for a birthday surprise for their mother, the Steinway upright which had been placed on the *Teutonic* for the use of Paderewski. The castles of Queen Victoria and of the English princes contain a very large number of Steinway pianos. The concert piano of the Court of Italy has been for many years a Steinway. Innumerable court concerts had worn the original instrument, when Sgambati, on being commanded to give a series of court recitals, interested himself to obtain a new one, "with which," he writes, "their majesties were extremely charmed." The *St. Cecilia Society* of Rome, founded by Palestrina in 1584, elected Mr. Steinway an honorary member.

Since the Centennial Exposition, when Sir William Thompson was a member of the jury of awards, the Steinway has yearly become a more perfect exponent of scientific law applied to the creation of a work of art. The duplex scale, a most artistic application of the laws of nodal points and of sympathetic vibration, has always been associated with the friendship of Helmholtz and Steinway. But the delicate scientific observations and tests preceding this great invention were made in New York. Helmholtz awaited their outcome with great interest and warmly proclaimed their successful result. He declared the duplex scale to be so pure as to produce harmonic combination-tones,—hitherto the peculiar perfection of bowed instruments. After the World's Fair in Chicago, Helmholtz visited the Steinway factory, and left a little note about the bridge, scale, and sound-board—"Points that interested me, agreeing as they do with the results of my acoustic studies"; adding that "in the ear, on the tympanic membrane, there exists the identical apparatus for the transmission of the air vibrations to the structural parts of the organs of hearing—viz., hammer, anvil, and stirrup, with a similar arching of the surface—that you have applied so successfully to your pianos." Helmholtz's experiments with strings were performed

The enthusiastic devotion of its makers constantly perfects it in both these hitherto opposing ideals. Their genius is pledged to carry it forward to the limit of human possibility.

The favorite piano of royalty is America's piano. There is no difference in workmanship between the concert grand of Her Majesty the Queen of England and Empress of India, and the tiny Steinway upright that adorns the little parlor of a thrifty American wage-earner. One is as well made as the other. But America's merchant princes have Steinways such as royalty does not possess. One was sent out a year or so ago made of satinwood inlaid

on a Steinway. The scientific precision of construction, which produces the elasticity and carrying power of its tone, has often introduced it into the acoustic laboratory. When Edison needed, for a special purpose, a piano possessing a firm tone, free from impurities arising from construction and from the upper partials of the harmonic series, he experimented with many pianos of different makes, and finally wrote the letter shown here.

The purity, sweetness, and power of the Steinway tone is the result of ceaseless research and experiment, in which neither money nor time are ever spared. To-day the Steinway piano is the only one that unites the noble singing tone of the German School with the sensitiveness, delicacy, and elasticity of the French—that is, equally congenial to the genius of a Rubinstein, an Essipoff, a Joseffy, and a Paderewski.

Yours
Thomas A. Edison

A LETTER FROM EDISON.

with turquoises, the total cost of which was over \$50,000. It is the most valuable piano in the world. Pianos, like the cherubim of Solomon's temple, of "carved wood overlaid with pure gold"; pianos in cases of tortoiseshell, inlaid with rare woods; pianos exquisitely painted, whose value is measured only by the fame of the artists whose brushes adorned them, go out from Steinway Hall. Such are the

pianos embellished by Alma-Tadema, Poynter, and Kaemmerer. The suggestions for decorations accompanying this article are from

recent sketches kindly loaned by the American artist, Mr. Edwin H. Blashfield.

The Steinway is preëminently the piano for a poor man because it lasts so well. The House keeps a record of the number and the purchaser of each piano, and feels a sincere interest in the career of its offspring. Many of the old pianos return for exchange. We relate, exactly as it was told us by the original possessor, because it

parties, thundered their wrath in sonatas, and comforted their grief in hymn-tunes on that piano. Many were the dancing-parties in which the Steinway did its part, many the home frolics impossible without it. After awhile hard times came. The eldest daughter must earn her living as teacher, and the old piano, battered and bruised, followed her to her new home. She spent sixty-five dollars — obtained by selling her personal ornaments — on repairs. It was certainly a poor woman's piano now. On its worth largely depended her chance for her livelihood. It went into a little music-room, and piano lessons were given on it all day, and piano practice filled in the moments between, until the time came when a new grand could replace it. Years enough had elapsed to bring this music-teacher a pupil, poorer, but just as earnest and ambitious as herself. To her she presented her old companion, and now the new owner and her three brothers, all German musicians, sat before it, and played with the energy of sound constitutions to their hearts' content. They also prospered in their profession. In the fall of '93 the original possessor visited her former scholars, and found the eldest brother in the act of accompanying a violin pupil on the old piano, which seems likely to be useful for an indefinite future. Thirty-four years of incessant usefulness is a good record for a poor man's piano. In this case, the purchase-money procured the professional outfit which brought success to four human lives. *The Steinway is the poor man's piano, because it is a friend for a lifetime.*

NOTE. Readers interested in pianos can obtain other literature and information on the subject by writing to Steinway & Sons, 107-9 East 14th Street, New York City.
